HOLLAND BUILDING, ST. LOUIS, MO. SCIMITAR BUILDING, MEMPHIS, TENN.

THE

SIMPLEX

One-Man Type Setter

Costs $300.00

LET US TELL YOU ALL ABOUT IT

IF a publisher installs a Simplex Machine, paying $300 down, the balance being paid out of what the machine saves each month from his pay-roll, then the Simplex has cost him only $300. Without the Simplex he would have continued to pay out that extra money for hand work, and had nothing to show for it. ¶ Lots of publishers are doing this with the Simplex.

Read this letter, for instance:

Gentlemen: *Greeley, Colo., Sept. 18.*

I shall make my last payment on the Simplex machine the first of next month. I consider it has paid for itself out of the saving in the pay-roll, had I set the usual amount of type after getting it. As a matter of fact, I have set more than double that I formerly set, and one man three days a week did all my work up to the time of starting the daily edition. With the exception of a single piece which was carelessly damaged, my machine is as good to-day as when it was set up. We are running a five column folio daily now, and the operator puts in nine hours a day and six days in the week. *Yours truly,* *C. H. WOLFE.*

¶ Why isn't this a good example to follow? Put some of your pay-roll into your plant, and save money at the same time.

The UNITYPE COMPANY

200 Monroe St., Chicago :: 148-156 SANDS ST., BROOKLYN, N. Y. :: 410 Sansome St., San Francisco

JANUARY FIRST—A DAY OF RECKONING

THE MYTHICAL PROFIT AND LOSS ACCOUNT

ATTHEWS

Have you ever considered **WHAT YOUR TOTAL EARNINGS OUGHT TO BE** annually? **THEY OUGHT TO BE AT LEAST** twenty per cent. of the total capital invested [owned and borrowed] in your business—exclusive of your own salary. **WHY? BECAUSE!** Ten per cent. of your total capital is the least that any investor would recognize as a fair annual return from capital invested in a **MANUFACTURING** risk. Eight per cent. of your total capital [or ten per cent. of your plant] is consumed by [average] depreciation annually. Two per cent. of your total capital is consumed by [average] bad debts and other contingencies annually. **WILL YOURS BE ANYWHERE NEAR IT?** or will they be only a little more than enough to cover depreciation and bad debts, and thereby leave comparatively no return on your investment? The value of **"FUNDAMENTAL PRINCIPLES OF ASCERTAINING COST OF MANUFACTURING"** can perhaps be appreciated better when reckoning the mythical profit and loss account than at any other time, because it clearly explains many of the most vital reasons **WHY THE MAJORITY OF PRINTING PLANTS DO NOT EARN EVEN ENOUGH TO PAY PROPRIETOR'S SALARY, BAD DEBTS AND DEPRECIATION,** and because it will undoubtedly show ways and means of **INCREASING** future earnings, no matter how good or bad they may be now. **FUNDAMENTAL PRINCIPLES OF ASCERTAINING COST OF MANUFACTURING** is "a book in which the underlying principles of the problem of cost in printing are more nearly ascertained and explained than any other work has ever succeeded in doing."—*Press and Printer*, **BOSTON.** And it has been extraordinarily

ENDORSED THROUGHOUT THE ENGLISH SPEAKING WORLD

Seeing it is "caviare to the general" British printers should study it.—*British Colonial Printer and Stationer*, **LONDON, ENG.** Even though it cost many times what it does, it would still prove a dividend-paying investment.—*Fredk. M. Sheldon, Esq.*, **VERMONT.** Master printers would find this book a source of information that would be a revelation—*The American Printer*, **NEW YORK.** It is the ablest exposition of the subject I ever saw.—*Paul Nathan*, **NEW YORK.** It is a very able treatment of a much abused and apparently unknown condition of affairs in the printing business.—*W. F. Powers, Esq.*, **NEW YORK.** With the aid of this splendid book, if the system is carried out, we will see fewer printing offices for sale.—*Scientific American*, **NEW YORK.** It is a work of great erudition, and if a printer will study it he will find it the best investment he has ever made.—*Geo. E. Matthews, Esq.*, **BUFFALO, N. Y.** The book contains some new and rather original ideas, which, in our judgment, are worth the price.—*Buffalo Audit Co.*, **BUFFALO, N. Y.** I wish every printer had a copy; it would do more toward putting the printing business on a firm and paying foundation than anything else.—*W. C. Nunemacher, Esq.*, **ATLANTA, GA.** There is no question but that a fixed cost, such as you outline, is essential in figuring cost.—*G. F. Watts, Esq., Baker-Vawter Co.*, **CHICAGO.** The craft is in as sore need of it as ever in the days of old were the tribes of Israel in need of the burning words of the prophets.—*Inland Printer*, **CHICAGO.** Ideas of the value of those presented are not to be picked up on every hand—*National Printer-Journalist*, **CHICAGO.** I consider it one of the finest books I ever read on this subject—*Wyatt Shallcross, Esq.*, **ST. LOUIS.** It is a practical mental photographic digest of items of cost as they are employed in the printing business.—*The Progressive Printer*, **ST. LOUIS.** I was very much surprised at the vast amount of useful knowledge it contains.—*Walter B. Woodward, Esq., Woodward & Tiernan Co.*, **ST. LOUIS.** I believe it will mark an era in the "business end" of the printing trade if those most vitally interested will take time to study the book.—*Chas. Gillette, Esq.*, **MILWAUKEE.** The book is very helpful, full of truisms, and has rendered a great service to the printing fraternity generally.—*W. Hodgson, Esq.*, Brisbane, **AUSTRALIA**; and many others from **ENGLAND, SCOTLAND, CANADA, MASSACHUSETTS, CONNECTICUT, NEW YORK, NEW JERSEY, PENNSYLVANIA, MARYLAND, DISTRICT OF COLUMBIA, NORTH CAROLINA, SOUTH CAROLINA, VIRGINIA, WEST VIRGINIA, GEORGIA, TENNESSEE, LOUISIANA, TEXAS, OHIO, INDIANA, ILLINOIS, MICHIGAN, WISCONSIN, MISSOURI, MINNESOTA, NEBRASKA, KANSAS, COLORADO, MONTANA, WASHINGTON, CALIFORNIA, AUSTRALIA.**

Published by J. Cliff. Dando, Philadelphia, Pa., U. S. A. Shipped by prepaid express C. O. D. or on receipt of price, $10, to any part of the world.

ADDITIONAL GUARANTEE:—If you find it contains nothing of value which you have not already applied in operating your business, you are privileged to return it within 30 days and price will be refunded. It is **ABSOLUTELY INVALUABLE** to those who have not been in the printing business very long and also to those who contemplate being in it some day, as well as to the majority who have been in it all their lives.

A TEN DOLLAR INVESTMENT THAT WILL YIELD MORE INCOME THAN A TEN THOUSAND DOLLAR UNITED STATES GOLD BOND. CUT THIS OUT AND READ IT EVERY TIME YOU RECKON YOUR [MYTHICAL] PROFIT AND LOSS ACCOUNT, FOR YOU ARE LOSING MONEY THAT COULD BE SAVED EVERY DAY YOU ARE WITHOUT "FUNDAMENTAL PRINCIPLES OF ASCERTAINING COST OF MANUFACTURING"

THE OPTIMUS
THE OPTIMUS

"If you buy any one of four or five presses you will make no mistake," is a thoughtless utterance, founded in ignorance, and misleading. Only the ill-informed and the indifferent give voice to it.

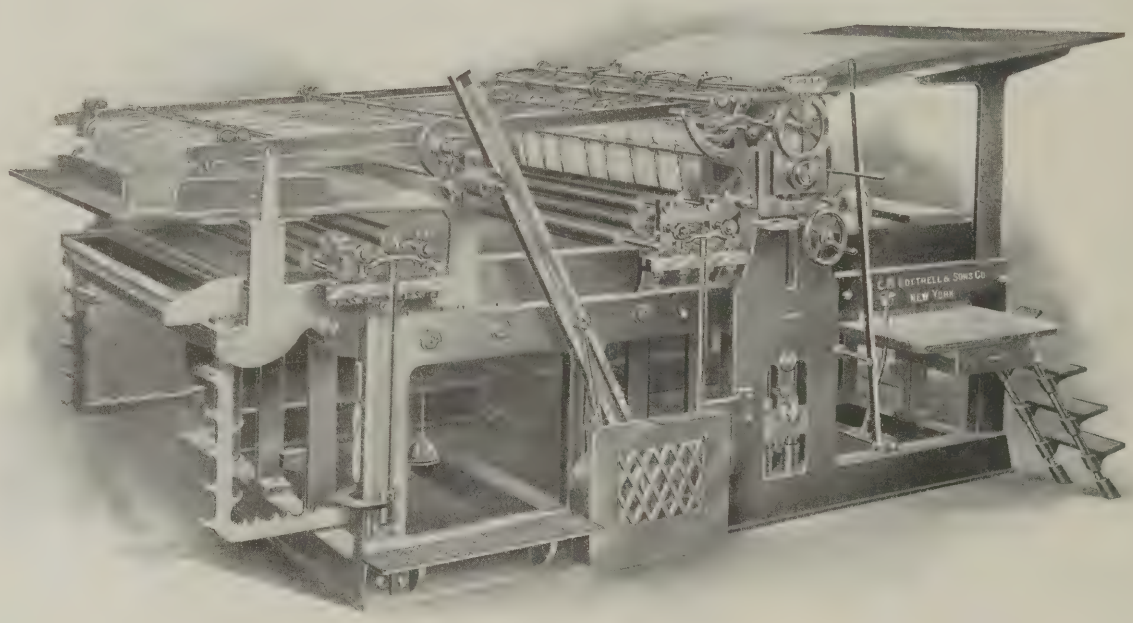
There is a difference in presses. While they may resemble each other a little in appearance, and possess a few things in common, they are as diverse in their methods of attaining results as are men. To only the interested observer will this be startlingly apparent. And as with men, so will one be better than its fellows, and most worthy of praise and emulation.

As such a press, better than all others, and more desirable, we submit the Optimus. It is not as good as any other; it is Better, and the Best. An order is not expected unless we prove it. The buyer is judge and jury. Whether we fully satisfy him or not, he will know more about the Optimus than he ever did before, and will respect it. He will better know what to look for in any press.

THE OPTIMUS

SET IN BARNHART BROS. & SPINDLER'S CASLON OLD ROMAN

The "Cottrell" High Speed Two Revolution Press



Specially designed For the exacting demands of three color printing where perfect register is absolutely necessary. New features have been added for facilitating the production of the finest work.

The press is furnished with our Patent Convertible Sheet Delivery which can be set to deliver the sheets printed side up, or it can be changed to the regular fly delivery in five minutes time. The convertible delivery is operated by a variable speed crank motion which dispenses with the fly spring, thus saving the power required to compress the spring, at the same time making the motion more simple and convenient.

Over a Million of Money in Monotypes

A NEW YEAR'S GREETING TO THE PRINTERS OF AMERICA

IT is with feelings of gratification that, standing upon the threshold of a new year, we review the comparatively short period that has intervened since the Wood & Nathan Company took hold of the Monotype machine as selling agent.

Our gratification has many phases. We take it that we have not only demonstrated that the printing trade will gladly welcome and employ a machine having the remarkable possibilities which we saw the Monotype to possess, but that we also have demonstrated to an ever increasing number of leading printers the fact that, as regards economy and high quality, the product of that machine is approached by none other so far devised. There is also a third source of gratification in our having

achieved a record hitherto unparalleled in the history of the printing trade by having sold, in so short a space of time, over *One Million Dollars' worth.*

This very noteworthy result has led the directors of the Lanston Monotype Machine Company to arrange to take over the entire manufacture of their machine, appropriating the sum of $500,000 in cash, which is now being expended, so that the factory of the Monotype in equipment and size shall be second to none in the United States.

In conclusion, we are happy to say that the Monotype has not only fulfilled all of the claims made to us by its builders on behalf of it, but has far exceeded, in its practical workings, the hopes of even the most sanguine member of the Lanston Monotype Machine Company.

Feeling that we have served with great satisfaction not only the interests of the concern whom we represent, but also that of the printing fraternity, it is with enthusiastic confidence as to the future that we extend the season's greetings to our many friends, the printers of America.

5 (*a*) QUALIFICATIONS OF THE EDITOR:

Natural.
a. Active Sympathies.
"Far wiser he, whose sympathetic mind
"Exults in all the good of all mankind."—Goldsmith.
b. Strong, Refined Sensibility.
"Sensibility gives welcome to all excellence, has eyes and hospitality for merit in corners."—Emmerson.
"Virtue and taste are built on the same foundation of sensibility."—Goldsmith.
c. Quickness of Perception, Intuition and a clearness of thought, good judgment, penetration and sagacity that are not liable to permit of mistake or of being easily deceived. These, with knowledge and a hint ever so small as to present, coming or probable events constitute all there is to what is the true "nose for news," the knowing what is news, where it is to be found, and being there on time to get a scoop on others.
d. Love of Truth and Justice.
e. Fearlessness.
f. Untiring Industry.
g. Tact.
h. Sound judgment.
i. Power of concentration and close application.

5 (*b*). EDUCATION:

a. Thorough.
b. Practical.
c. Broad.
d. Ethical.
e. Philanthropic.
f. Patriotic.
g. Philosophical.

5 (*c*) PREPARATION AND SPECIAL STUDIES OF THE EDITOR:

a. First, after a thorough, broad, practical education are these two, inspiration and zeal. No man can accomplish much without his heart is inspired with a love

for his work and a feeling that it is the greatest and grandest in the world for him and the result of the right kind of inspiration is an unflagging zeal that is able to face and overcome all difficulties. With inspiration and zeal one can overcome even natural deficiencies.

(*b*) Knowledge of the requirements and methods of the calling.

For inspiration and the awakening of zeal there is no method more effective than the reading and the study of the lives of those of great and accomplished merit in the calling and who stand as beacon lights to all who follow. Whose lives remind us that

"We can make our lives sublime
And departing leave behind us
Footprints on the sands of time."

There is a double benefit in studying the biographies of the great editors, for their work, methods, teachings, and with regard to the profession give us the best possible instruction as to all of its requirements. No student of journalism can do better than to carefully read and study the work in this calling and the expressed views with regard thereto, of its greatest exponents.

(1) Study the biographies, writings, works and methods of great editors; Benjamin Franklin, Horace Greeley, Geo. D. Prentice, Sam Bolles, William Cullen Bryant, John Greenleaf Whittier, Charles A. Dana, Henry W. Grady.

Next to the study of the lives of the great editors of the past is the study of the great newspapers of the day. Newspaper students are fortunate in that they are not compelled to go away from home to study the great masters. They can have their latest works in their own homes fresh every day in the week.

(2) Study Model Newspapers: New York *Times,* Brooklyn *Eagle,* Springfield, Mass., *Republican,* Chicago *Record-Herald,* Chicago *Tribune* and Chicago *Chronicle,* St. Louis *Globe-Democrat,* New Orleans *Picayune,* Portland *Oregonian.*

These newspapers cover most effectively every department of newspaper work and are rare models. It may be objected that these are metropolitan papers, but a metropolitan paper is not so very different from the local paper in this day. Universal telegraph service has limited the breadth of circulation of all newspapers and made nearly all in an important sense local. The Brooklyn Eagle is one of the very best local papers in the country although it is in a large city and it sets a splendid example to all local papers in allying itself with all the local interests of the people. About the only difference now between a metropolitan and a local paper is that the city paper makes the most of its general news, while the local paper must put locals, personals, neighborhood and state news first and give to these nearly the entire space devoted to the news columns. There are no rules in the one that do not prevail in the other with regard to the preparation of matter, the gathering and writing news stories and the treating of all questions of education, local improvements, good government and morals, sanitation and so on throughout the vast unlimited field of newspaper work and usefulness.

Along with the study of the masters and all branches and methods of the work: news gathering, reporting, handling of correspondence, editing, special writing, etc., as well as the methods of getting out a tasty, well arranged, well printed paper, that will be welcomed for its clearness, brightness and beauty as well as for all the complete news, sprightly, attractive articles and departments as an awaited visitor and wise friend and counselor in every home, in every workshop, office and study there must be special preparation.

5 (*c*). Special Preparation and Studies.

Language, or the power of clear, forcible expression.

Every editor should have a thorough knowledge of his own language and should not be content with its study alone, but should study the language from which it has been principally derived and built up. The man who never studies but one language is not likely to be a master thereof. Yet it is the language of the everyday people and of the home that the newspaper man most needs and its thorough command is the highest kind of an equipment. News that is fit to print in the newspaper is that which appeals to the interests, to the sympathies, the hearts, lives and minds of all the people. All the professions, trades and callings have special publications to treat and give the news as to their fields of activity, knowledge and thought.

Every newspaper man should be well founded in grammar and rhetoric and should have ever at hand and be a careful student of Webster's Latest Unabridged, and, if possible, the Standard and the Century Dictionary and a work on Synonyms. Other works that should be read and studied with a view of securing the best possible vocabulary of words and acquiring a clear and forcible style of expression are White's "Everyday English" and "Words and their uses," some standard history of English and American literature. Read and study as to style of expression and use of words, Shakespeare's Merchant of Venice, King Lear, Richard Third, and Hamlet, Dickens' David Copperfield and Little Dorritt, Goldsmith's Deserted Village and Vicar of Wakefield.

I mention these as being fountains of pure English as appealing to the passions and sympathies of mankind, as simple and strong in expression and because they have come first to mind, not excluding many others.

Dickens was a newspaper reporter and acquired his style from his work. A newspaper story well told is a good deal like any other well written story, only in the newspaper the climax comes first and then the incidents and plots are developed afterwards to the extent of their importance and the space that can be given thereto in the newspaper. The importance of a newspaper story depends like that of any other story not necessarily on the prominence of the characters or actors or of the matter involved, but on the appeal that is made to the interests and sympathies. Mrs. Chadwick was not a prominent or important character until her financial operations were revealed, but the obtaining of money in the manner she pursued is of very much interest to all who rely on banks or men of wealth for the care and handling of their surplus funds.

Every editor should have a very practical kind of religion, but whether religious or not he should be a thorough student of the Bible.

(3) Study History of American Journalism.

(4) Make Special Study of News, General and State, as to its importance and bearing on the people and the public. Practice both the writing and condensation of News Stories. Make a special study of Reporting, Interviewing and the condensation or abbreviation of articles; Localizing, neighborhood news and correspondence and editing the same; Newspaper Departments, as to method of conducting, their comparative importance, their arrangement and limitations.

(5) Advertising so far as its preparation and proper presentation is concerned has become one of the important news features of a paper, as all effective advertising is designed to give information As it is also intended to carry conviction, to convince and lead to action, it trenches directly

upon the editorial department and should be carefully studied by every aspirant to the editorial calling.

(6) Illustrations belong to the news department and cartoons are only editorial pictures. These are either suggested or approved by the editor and hence demand special study in preparing for the work.

(*c*) GOVERNMENT.

Newspaper editors have much to do with the discussion of and directing public sentiment as to, governmental affairs in this Republic, and should be well grounded in all the principles thereof. They have also to do with all educational matters, schools, benevolent, punitive and reformatory institutions; economic questions, politics and everything else that comes within the sphere or under the control and direction of the Government, so that the following studies will be found of almost absolute necessity for the complete equipment for newspaper work:

(1) History of English Constitution.
(2) Nature and Form of the Government of the United States.
(3) Constitutional History of the Government of the United States.
(4) Constitution and General Statutes of the Editor's own State.
(5) Municipal Government.
(6) Libel and other Laws pertaining especially to the Newspaper.
(7) Equity Jurisprudence.
(8) Laws of Evidence.
(9) American Public School Systems and Methods and Means of Education thereunder, from the common schools to the State universities, especially as related to citizenship, industrial and commercial life.
(10) Monetary Institutions and Systems, and Public Corporations and the regulation thereof, and the needs of publicity with regard thereto for the protection of the people.
(11) Public Utilities—Highways and their improvement; Railways and their proper regulation and proper control; Sanitation or the securing of the Public Health, etc.
(12) Social Conditions, wealth and poverty, capital and labor, pauperism and crime, with governmental methods and regulations to control, to prevent injustice or to ameliorate suffering, and duties and relations of the public press with regard thereto.
(13) Public Improvements, building and Institutions for the whole people, such as public parks and boulevards, public libraries and beautifying of streets, public and school grounds of cities and villages.
(14) Public, Industrial, benevolent, eleemosynary, saving, reformatory, and punitive institutions and methods.
(15) Industrial Development with influence exerted by the same on civic and social conditions.
(16) Public Offices, officials and their duties, legal notices and financial reports and the publication of the same.
(17) Civil Service, with history, theories and results.
(18) Proper treatment of economic questions, with a study of the relations of the same to the people and the press and the history of economic conditions in this country and Europe.
(19) Study of the relations and mutual obligations of employes and employers—the systems of wages, profit-sharing and coöperation and the hours of work; strikes and lockouts and their effects on the public and the public rights with regard thereto and the proper regulation thereof.

(*d*) ETHICS: Public and private, as related to public officials, private citizens and the State:

(1) Read Shea's American Government, founded on the Christian Religion.
(2) Study George Washington's Farewell Address to the American People; Emerson's Essays and his Future of the Republic.
(3) Some Standard work on moral science.
(4) Read History of the Christian Religion, and study enough as to the different existing churches, denominations and religions in the United States as to know of their leading or essential tenets and differences.
(5) After careful study write an exposition of or Thesis upon Christ's Sermon on the Mount, treating especially of the relation of the principles taught therein to existing social, civic and political conditions and the duties of the newspapers toward each other and the people individually, and to society and the public in general.

(*e*) STUDY MEN AND AFFAIRS. It was long since said that the noblest study of man is man. The most useful knowledge for the newspaper maker is of men, in all their relations and callings of life, with all their aspirations, faculties, characteristics, passions, tastes, weaknesses and strength; their temptations and struggles. Get in as close touch as possible with the best minds in your city, county and State and Nation. Study the leaders, but much more the great body of every-day people, as to their lives, callings and rights.

THE PRACTICABILITY OF WOMEN IN NEWSPAPER WORK.*

ALL know the story of the young mother who said to her husband: "There is nothing in the whole wide world to compare with having a baby of your very own to love and cuddle," to which he replied pityingly:

"My dear, you have never known the joy of hearing the word 'Next' in a barber shop on Saturday night," and it is with just such masculine joy that I rise to the summons of the toastmistress.

The world would have been very different had Adam elected to put up at the entrance of the Garden of Eden a board with 'No women wanted" chalked thereon; we would not have been here and his refraining is a cause for thankfulness.

It is the practicability of women in newspaper work or something to that effect, to which I am responding; you observe that it is not "practicality"; of that we have too much perhaps in our busy lives, but this practicability is something vastly different.

I asked an erstwhile city editor the other day, wherein lay this practicability, and he replied: "They keep the men from cussin' too much, and I believe in having a lot of 'em around," but there are other things aside from "keeping the men from cussin'" that make femininity almost necessary in a newspaper office.

There are many stories they can get that even the most suave of men could not touch. Who so competent as the

*Address at the Banquet of the Ohio Women's Press Association.

newspaper woman to interview another, concerning things she would not care to discuss with a man? Who so delicate as she, in asking the questions that are calculated to wound, yet must be asked (by the city editor's orders)?

Rarely does one enter a newspaper office nowadays, without seeing a woman or two, or three, busy at work, each doing her share toward perfecting the great moral engine of which she is a part. A small part it may be, but important, whether it be clubs, society or fashions (and when the paper is off the press, who so anxious to read her favorite author, as these same women?).

There are pessimists who say that in business, married women are women marred because the eye has been knocked out in the contact with the world, but there are so many of us engaged in business that it would be an untruth, to assert that we are marred because the "I" is knocked out.

So many things can be said regarding the practicability of women in newspaper work, that it is hard to pin oneself down to the most telling, but the one thing to lay unto our hearts is the fact that much of our practicability lies in the necessity for possessing a "wide-spreading, hopeful disposition" which as Thomas Bailey Adrich says, "is our only safe umbrella in this vale of tears."

We go into the world of work with our feelings mercifully hidden by our shirt waists yet with the thought uppermost that adaptability is perfected cleverness, and that this same adaptability is a wonderful thing in this world of ours; ranking next to tact, that most precious possession. Standing on tiptoe with finger on lip to admire a lofty ideal is all very well, but it grows monotonous when obligatory, and so abandoning this attitude, we forge ahead and try to obtain that for which we are searching, and being busy in our work forget that St. Augustine slightly spoke of work as "the trifling of adults."

And again, much of our practicability lies in the necessity for our being happy, for with heavy hearts we can do nothing so I would advise following the example of the French, and think of nothing, talk about anything, and laugh at everything.

The woman who takes in washing to support nine children is happy, yet so few of us can be washerwomen with nine children, that, failing in this, why not be newspaper women, married, single, or about to enter the "blessed state"?

The work we do, (and there is not one among us who does not think her work an important part of the paper she represents), is our life, and whether or not the business manager or the editor in chief thinks we are practicable additions to the staff, we think so at least, and are cheerful in the thought that we "help some."

Josh Billings says: "When we git tew talkin' about ourselves, we seldom fail tew be eloquent, and often rise to the sublime."

THE RELATIONS BETWEEN THE NEWSPAPER AND THE ADVERTISER.

[Extracts from an address by Hon. Lafayette Young, publisher of the Des Moines *Capital,* delivered before the convention of the International Advertising Association, St. Louis.]

"The most important relation, as suggested by my theme, between the publisher and advertiser, is the cash relation—the most important relation on my side of the counter, I mean. This relation we hope may be continued, but in order that it may be continued some of the publishers know enough to know that we have to make good. We must give value received for advertising or else we cannot hope to have it permanently. I believe that advertising during the past ten years has brought to its service some of the brighest young men and women of the Republic. Within the past ten years advertising has been converted from a hap-hazard guess-work matter to a system; a system designed with some knowledge of the ends to be reached, with some knowledge of the great problems of humanity.

"One advertiser can secure public attention while another can not; they may be spending exactly the same amount of money and using the same medium, but one advertiser gets there; one advertiser finally secures attention and the other does not; and unless that particular something is present in an advertisement which is akin to magnetism in the human being, and unless that particular thing is in the department store ad it may pass and repass before the public and they will gaze at it but for a moment. I can not describe it, but I could give many instances illustrating this point. It is like the explanation given by a party as to why homely girls marry sooner than handsome girls—which is said to be a fact. The explanation given is that the homely girl has a vim and a *'come hither'* look in the eye that are missing in the pretty girl. The advertisement must have this come hither quality. I could not point out the qualifications necessary to make an advertisement meet these conditions, yet you know my idea.

"A great many years ago, when I published a country paper in Western Iowa there was a great crowd who had gathered around a grove where two outlaws were and there was a great hesitation as to forming a ring-around-the-rosy to surround them and going in after them, because they knew somebody would die, and finally they went in and two men did die, and they killed one of the outlaws in the attempt to capture him; the question then remained as to what to do with the other outlaw, and they took him up to a bridge some miles away, and I followed in order to get the news for my paper and had a young fellow working for me reporting the doings of the crowd and we were printing the papers and selling them for ten cents a copy and they got the man on the bridge and tied a rope around his neck, and contending factions were addressing the crowd—some in favor of hanging and some letting the law take its course, and finally they agreed to hang him, and this young man of mine that was working for me was beside the fellow that was going to be hanged and the man was making his farewell address when the young man missed a word and stopped him in the midst of it and asked him to repeat it again, as he didn't catch the word. Now a person with that presence of mind had but one natural course before him and that was to get into the advertising business, and he did. For fifteen or eighteen years he has been earning nearly fifteen thousand dollars a year, and the last time we met he invited me to dinner and wore a diamond as big as a door-knob. Virtue you see has its own reward.

"The relation between the newspaper and the advertiser should be most cordial, and I sometimes think that the advertiser makes a mistake in not stroking the hair once in awhile of the publisher. A considerable number of advertisers look upon the publisher as an organized enemy to be knocked down, while the publisher is one of the most agreeable persons in the world I think, subject to all flatteries and should be flattered a little. He may know a great deal, but he will take it like a girl and you may get a better rate or have that intricate rate card simplified as if by magic.

"Our friend (Mr. P. A. Conne of New York) who made a very practical speech, touched upon the circulation liar who is everywhere present, and if he can secure a recipe by which that can be remedied he will be doing the publishing fraternity the best thing that has ever been done. This can not long endure, and it must be straightened out and will be, because you men are not going to continue to pay for that which you do not get, and I might say in regard to that address, that it is like the member of a church who was listening to the new pastor deliver a sermon in which he unequivocally branded and abused horse-

racing, and this church member loved horses. As he came around to extend his congratulations another brother next to the pastor, afraid that the minister had offended this brother, whispered same to the minister, and the minister wishing to make a good start, extended his hand to the member and said he hoped he had not offended him and that he did not mean anything personal by reference to the horse racing, and the man said, 'That is all right parson; it's a damned poor sermon that don't hit somewhere.'

"This is somewhat like this reference to the publisher. It would be a very poor address by a thoroughly qualified advertising man that didn't hit the publishers somewhere; and, from organizations like this must emanate these reforms. Suppose we should reform each other and enter into a combination by which the evils of both sides shall be eliminated: I think it would be a splendid thing. You remember that quotation in Scripture that appeaared very prominently at the other World's Fair—'Let All Men Know the Truth and Truth Shall Make You Free.' These were the words of Him who spoke as never man spake. 'All Men Shall Know the Truth and the Truth Shall Make You Free.' If you could introduce the absolute truth into journalism how free the world would be, and how much better we would all be and how much more powerful the newspapers would be—being already admitted to be second to no power on earth. 'And the Truth Shall Make You Free.' You know—you realize the power of the press in the United States.

"Do you know that if the Associated Press, representing some seven or eight hundred daily newspapers, should conspire with its subscribers to give the world false news every day that it would be impossible for you ever to know the truth?

"If All Men Could Know the Truth: If this could be followed by the press, its powers would be multiplied a hundredfold.

"Now for the power of advertising:

"No one knew the value of advertising as well as P. T. Barnum he never went to Europe but what he continued sending press notices to America, showing that he had not been captured and held in the jungles for a ransom. Buffalo Bill never goes to Europe but what he floods the American papers, indicating he is still alive and on earth; otherwise he would be forgotten.

"The advertiser must understand he must continue the means by which he won his first success. The United States of America was just as great in the spring of 1897 as it was in 1899, yet between those dates George Dewey and the Cuban battle had been advertised and Uncle Sam put on his international garments and became a world's power and the war advertised the fact. He was just as great years before that time, but nobody knew it, and our international trouble informed the world. Certainly, as a nation, it pays to advertise as well as a merchant.

King Solomon said he couldn't paint the lily. You have all the wisdom, and there are times when I simply admire and take off my hat to the glorious nerve of the advertiser. I used to think an advertising man could overrun his job, but I have seen so many instances of being lead up to a contract after refusing that I have begun to doubt whether there is a limit. In my young and foolish days I was in politics a little and between the politician and the average advertising hustler, there is no great gulf. As I told a gathering of penitentiary convicts at one time on a Sabbath afternoon, I bade them to be of good cheer, because there were others. The politicians who go out to the great gatherings of farmers and tell them all indiscriminately that they are honest and the cream of the earth, when they know that those farmers do no know enough to put up a cord of wood without putting the sticks so crooked that you could throw a cat through it—I say the politicians who tell these men they are God's noble beings, have no right making faces at a convict. But to return to my subject—to any subject that may be handy. Or to imitate the Irishman who was at the horse race and somebody gave him a tip. He played every dollar on a horse, and after the race began to happen, he climbed up on a post by the fence just as the ninth horse passed him, and he saw his horse coming last, and when he came by in the rear the Irishman said, 'I am curious to know what detained you.' But I am not here for any of these purposes, nor am I like the Irishman who went to his priest and confessed to a grievous sin, and the priest said, 'how often have you committed this, my son?' And the Irishman said, 'Father, I came here to confess and not to brag.'

"I have been a solicitor, subscriber and advertiser, and I generally got away in some manner or other with the goods, and I know what a difficult problem you have and am glad to congratulate you and find out that a great many college young men have found access to your ranks, and I don't believe there is a better opening for bright young intellects than in the advertising work, and I don't believe there is a work with a better future than the great advertising work.

"Once, recently, I was asked what was the greatest thing in the world, and was asked to make a few remarks upon the subject of what was the greatest thing in the world, and you might think it would be easy to answer that question. I began to study about it, and I met a veteran of the Civil War, and I said, 'What would be the greatest thing in the world?' And he said, 'to fight a battle and be the victor on the field of battle.' And I met a painter and he said, 'to paint a picture that would live forever and put your name in the galleries of the old masters.' And I met a merchant and he said, 'to transact the business of a nation and have your sails whiten every sea and every port.' And I asked the politician, and he said, 'to be elected to the greatest office by the greatest majority.' And I met an old woman and I asked her, and she said, 'Oh, it would be to be young again; to be eighteen; to have the glow of health and youth upon my cheek, and I to be once more a bride and go to the altar of wedlock, and once more to be a mother and hear the patter of little feet—this would be the greatest thing in the world.' But I answer, my friends, that the greatest thing in the world is man himself, for whom all creatures and things are created, in whose power all other things have been placed; man, created to the image of his Maker, and who is the greatest of all men. The man who has command of himself—of every passion—a man who can say I will let you do this or I will let you do that. The man who has accomplished self-control and self-mastery is the greatest of all men. I knew a great lawyer who had been addicted to drink and he pulled out a drawer and there was a flask of whiskey in it, and I said, 'I thought you had given up drinking.' And he said, 'I have, but I just keep the damned stuff there to show it I am the boss.'

"We are in the morning hours of the twentieth century, looking back on the nineteenth, the greatest of all centuries. The twentieth century will be the crowning success of them all. Some of you will live to see this success; some of you will have departed this life before long, but we can all fight the battle of life with honor and perserverance, and when the smoke of battle clears away, may we not be found within the ramparts with broken musket, but upon the field of honor or dead upon the field of duty.

NEWSPAPER CRITICISMS

BY O. BYRON COPPER, DE SOTO, WIS.

Address all Communications for this Department to De Soto, Wis.

AS SUGGESTED in the last July's department, the NATIONAL PRINTER-JOURNALIST ad-setting contests have reached such a degree of popularity that the discussion of one is quite sufficient for the space allotted to a month's instalment of Newspaper Criticisms; therefore, we again take the liberty of placing in abeyance such other specimens as we have at hand and devoting ourselves this month exclusively to contest No. 3.

While in the present contest, as compared to our last, there has been one less competitor and a few less entries (the last mentioned fact due, no doubt, to rule 6) a close scrutiny of the specimens shown herewith is an adequate explanation of our copious gratification over contest No. 3. That nearly all those who emulated for supremacy in this instance are of the first artists of the country is evident, and that they have handled the somewhat difficult copy furnished them with almost unvarying credit in each instance is cogently demonstrated.

We believe it will be universally conceded by our readers that the excellent results of this competition surpass anything heretofore produced along this line, and we take this opportunity of heartily thanking all who by their contributions and gentlemanly compliance with all rules thereof, have been the means of making contest No. 3 so successful. Following is the summary:

No. 1.—L. Wietlispach, Streator, Ill.
No. 2.—F. L. E. Winn, Mayville, N. D.
No. 3.—B. R. Bowman, Denver, Colo.
No. 4.—W. H. Hooker, Oakland, Calif.
No. 5.—Frank Eaton, Ansonia, Conn.
No. 6.—F. L. E. Winn, Mayville, N. D.
No. 7.—F. L. E. Winn, Mayville, N. D.
No. 8.—H. C. Hull, Asheville, N. C.
No. 9.—L. E. Ovenden, Pawnee City, Neb.
No. 10.—G. W. Lytle, Sundance, Wyo.
No. 11.—B. R. Bowman, Denver, Colo.
No. 12.—L. E. Ovenden, Pawnee City, Neb.
No. 13.—J. A. Hood, Ocean Grove, N. J.
No. 14.—H. C. Hull, Asheville, N. C.
No. 15.—Alvin E. Mattson, Warren, Minn.
No. 16.—J. A. Hood, Ocean Grove, N. J.
No. 17.—Dell Shaw, Mayville, N. D.
No. 18.—J. A. Hood, Ocean Grove, N. J.

In order that correct and intelligent judgment might be rendered in these contests we have devised the following standard of perfection of advertisement composition:

SCALE OF POINTS.

Design	10
Display	10
Typography	10
White space	10
Artistic treatment	10
Harmony	10
Economy	10
Legibility	10
Originality	10
Details	10

GLOSSARY OF TECHNICAL TERMS.

DESIGN—General plan, including both border and text.

DISPLAY—Those lines which are given greatest prominence; and the appropriateness of such lines.

TYPOGRAPHY—The type employed and the taste of such employment.

WHITE SPACE—Margins occurring between the text and border, or separating the various lines or masses of type that make up the advertisement.

ARTISTIC TREATMENT—Beauty of the entire design and taste of the general arrangement.

HARMONY—General agreement of the various faces, rules, borders and ornaments.

ECONOMY—Saving of time and material in evidence.

LEGIBILITY—Clearness and distinctness: that may readily be read.

ORIGINALITY—State or quality of being original; not copied; unhackneyed, extraordinary.

DETAILS—Minute and particular points; spacing; joining of rules; uniformity of faces; margins; ornamentation; justification; punctuation, etc.

CUTTING FOR DEFECTS.

In making standard scores the maximum values of defects are as follows:

DESIGN.

Inartistic design	2 points.
Unsightly design	3 points.

DISPLAY.

Wrong lines displayed	4 points.
Failure to display important lines	3 points.
Weak display	2 points.
Superfluous punctuation of displayed lines	1 point.
Superfluous display	2 points.
Caps of one size type with lower case of another	1 point.

TYPOGRAPHY.

Inappropriate faces	2 points.
Discordant faces intermingled	3 points.
Four or more different series	3 points.
Too large a face for body	3 points.
Too small a face for body	4 points.

WHITE SPACE.

Imperfect justification	2 points.
Lack of adequate margins	3 points.
Crowded effect	2 points.

ARTISTIC TREATMENT.

General unsightliness	4 points.
Lack of taste in arrangement	2 points.
Inartistic ornamentation	3 points.

HARMONY.

Discordant faces and borders	4 points.
Inharmonious ornaments	2 points.

ORIGINALITY.

Extremely elaborate design	4 points.
Extravagance of material	3 points.
Excessive complication of rule work	2 points.
Intricate border design	1 point.

LEGIBILITY.

Use of fancy faces, or texts	2 points.
Solid masses	3 points.
Neatness of display	1 point.

ORIGINALITY.

Hackneyed design	3 points.
Plain, inartistic or common design	2 points.

DETAILS.

Evident carelessness	3 points.
Unjoined rules	1 point.
Typographical errors	4 points.
Wrong fonts	3 points.
Uneven spacing	3 points.
Worn rules and type	1 point.
Inappropriate border	1 point.
Insufficient, or superfluous, spacing	2 points.
Uneven margins about initials	1 point.
To great space between panels	1 point.
Uneven space between panels	1 point.
General defects, not enumerated	4 points.

Several of the competitors this month have complained more or less of the copy submitted for this contest, and most of the complaints were well founded. The copy was however submitted with a purpose in view, as those wise ones, who said nothing but went in to win, no doubt, realized. An undertaker's ad, we believe those who have given the matter any thought will admit, is not one of the easiest things in the world to write. The dealer depends upon the demise of his fellows for his livelihood; other people's loss is his gain. In seeking increased patronage through an advertisement he can hardly ask the accommodating public to "turn up its toes" or "kick the bucket" just to make "another little job for the undertaker;" hence the conspicuous handicap. While looking over last month's budget of papers we believe it was in the Magee *Courier* that we saw an undertaker's ad of the comic order, or rather a line or two calling attention to "a full line of undertaking goods" along with equally complete stocks of saddlery, groceries, etc. The ad which appears on the following pages set in so many different and beautiful ways by so many different and competent compositors, is but a typical country newspaper advertisement, and by virtue of its many departments, varied lines of importance and copious contents is in itself one of the most difficult pieces of composition to be met with in all printerdom, which makes obvious our reasons for having submitted it for this purpose. Nevertheless, we are gratified with the result, as before intimated.

Following is the score of the several specimens entered, based upon the standard of perfection, as outlined above:

No. 1—The awarding of first position and a certificate of excellence to the author of this handsome specimen constitutes one of the finest demonstrations of the efficacy of patience and perseverance which we have ever been able to present. In our initial contest Mr. Wietlispach, the successful contestant in the present strife, attained to the unlucky thirteenth position; in our second, tenth position, and in our third competition he

The Dead and Living
We are prepared to attend to the wants of both.
A decent burial is all you can give the first. In connection we wish to call your attention to our elegant new hearse, the only one in this county. Besides this we always carry a complete line of caskets and funeral supplies.

No. 1.

produces an ad "99 per cent pure" and carries off first honors, all because he invariably accepted criticism in the correct spirit, swallowed the bitter with the sweet, thoroughly digested both and assimilated all the good things extended. We have been able to find but two little defects in this example. First, no display line is in evidence identifying the ad with the first line of business suggested in the word "dead." Inasmuch as that the entire design is sufficiently attractive, however, to provoke a complete perusal thereof, we have not, therefore, considered that as a very serious defect in this particular instance. Second, there is a slight deficiency of frugality of time necessarily expended in its construction—we say slight, because, as the reader will note, brass-rule does not comprise the intricacy of this design, but a delicate border equipped with round and square corners, which is far more economically manipulated. Mr. Wietlispach introduces his contribution with the following letter, which is too good to keep:

Nov. 28, 1904.

Mr. O. Byron Copper, Editor Newspaper Criticisms, N. P.-J., De Soto, Wis.

DEAR SIR:—I herewith hand you my design for entrance in Contest No. 3. Although the announcement of this contest found me unusually busy, I was determined to "get in," and in order to do so I found it necessary to burn the midnight oil, *knowing* that I will be amply repaid for the time—and oil—so devoted.

As you will observe from enclosed announcement, I have gone into business for myself. I have a first-class job printing plant, consisting of three presses and other machinery, also a good assortment of up-to-date type faces, etc. I am determined to make my new venture a success—as I have all former undertakings; no failure for me. In this connection I want to say that the NATIONAL PRINTER-JOURNALIST and other trade journals have aided me wonderfully in whatever success I may have achieved in the past, and as there is still a vacancy in my "phrenological bump of construction," I will continue studying their pages, among which the N. P.-J. stands pre-eminent. If more printers would realize the benefits to be derived through close study of the pages of trade journals, there would today be *more better printers.*

Hoping Santa Claus will have no trouble in locating your socks, and stuff them so liberally as to force out the toes (if they are not already out); and wishing you continual good health, and happiness, and a large instalment of prosperity during the New Year, I am,

Yours fraternally, L. WIETLISPACH.

THE STANDARD SCORE.

AD NUMBER	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18
Design	10	10	10	9¾	10	10	9¾	9¾	9¾	10	9	9¾	8	10	9¼	9	7	6½

Mr. Wietlispach will now have to make a credit entry in his ledger, to balance "time—and oil—so devoted" on the debit side. We rejoice to hear of his business venture, and know that the successful mental attitude which he is maintaining will attract to it naught but success. We most heartily thank Mr. Wietlispach (oh! that unpronounceable, unspellable name!) for the unsolicited testimonial as inscribed above, and we also thank him (or rather thank our good and dutiful better half, who darned the darn things while we sought refuge in bed) that our socks are not out in the toes, nor in the heels either, and since we have been an exceptionally good little boy during the past fortnight, at least, (the date of this writing is the 5th of December), we anticipate the realization of Mr. W.'s best wishes. The same, to you, Brother Lawrence.

No. 2—Frank L. E. Winn, "typographic architect," of Mayville, N. D., an artist not unknown to readers of this journal, is the creator of this excellent design, which has fallen but a half point below its predecessor. According to the foregoing standard this ad has been considered perfect in all but two respects—economy and details. The design is a beautiful one but necessarily somewhat complicated. The last two light

No. 2.

face rules at the bottom have given an imperfect impression, and had one lead been transferred from the top of the matter occupying the lower portion of the inner round-cornered panel to the bottom thereof, the better effect would have been well worth the trouble. The two rules running parallel with the panels at either side of the main display line would have been more desirable conjoined with the vertical rules of said panels. The spoiled "d" in "Deadbury" is also a defective detail; nevertheless, the beautiful design, the correct display, the symmetrical typography and daintily distributed white space, the fine artistic touch predominating throughout, the perfect harmony of faces and material, the clearness and distinctness of the whole, and the high degree of originality conspicuously in evidence combine in making this design a work of art and usefulness. Mr. Winn is certainly to be congratulated upon his genius and skill with the stick and rule.

No. 3—We have here a study in simplicity, and we ask our readers to study it well before passing on to the next exhibit. Note the delicate beauty of the design—a dainty acorn-like pendant swung gracefully upon a spotless field of white and encompassed by one of the neatest of rule borders. The display of this ad has the same defect as that mentioned in the review of No. 1, and the choice of a text for the display lines of an ad is a point which we have long contended as wrong. But this is fortunately not a very hard text to read. This fact of a text for display necessitates a cut on harmony, yet we will admit that there is no striking discord in evidence; it is rather a harmonious contrast. In point of design, whiting out, artistic treatment, economy, originality and details this ad is perfect, and well deserves the high score of 98. It is brim full of its creator's individuality and art. Following is a letter from Mr. Bowman, the author of this handsome

No. 3.

type effect, which contains several hints anent advertisement composition worth the time required for the reading:

DENVER, COLO., Nov. 26, 1904.

Mr. O. Byron Copper, De Soto, Wis.

DEAR FRIEND:—The ad-setting contests of the PRINTER-JOURNALIST are always interesting and cannot fail to be of much value to all who inspect the various ideas represented by the different contestants. I have noticed that every printer who has had slightly more than an ordinary experience usually gives every piece of his work his own individuality. This might be done consciously or unconsciously, but the fact exists according to my observation. It is interesting to note that "Newspaper Criticisms" is always alive to things that exist with admirable courage. I am submitting two specimens to pass through the regular process to see what might be said of my particular individuality because I have seldom been able to make my work deceptive enough not to be recognized. In submitting these specimens I am contending that it is not necessary to make newspaper ads so commonly grotesque and neither is it essential for the good appearance of the ad to be filled up with too many discordant type faces. These principles are all well known by you, and I submit these specimens as my idea of what would be an improvement over the ordinary newspaper ad, whether used on a stereo in the daily or the moderate run of the weekly.

Very truly yours,

B. R. BOWMAN.

No. 4—This is in reality the only perfectly displayed contribution to this contest. This compositor, W. H. Hooker, an ad man on the Oakland (Calif.) *Enquirer*, realized from the context of the copy supplied that "Monsieur Balm" desired as much as anything to get the fact before the public that he possessed a new hearse, and since this was placed first in the copy it is strange indeed that Compositor Hooker

No. 4.

should have been the only contestant to grasp it. Mr. Hooker's panels are very nicely joined at the corners and the whole design accurately balanced, and we should have marked it perfect had only a nonpareil space existed between the panels. As to typography this example is most excellent, the mourning border and the Gothic to match being quite appropriate for the occasion. The ad is well whited out and artistically treated throughout, with the exception of the several short horizontal rules between the two square panels. There is no noticeable disagreement in the rules and type employed in this example, therefore a mark of ten points is given for harmony; but since panels are time-killers at their

best, the cutting on economy has necessarily been quite severe. The ad is clearly legible and very original, but there are various little defects in detail which have not escaped the critic's eye. Among these we have already cited the superfluous space between panels; the short horizontal rules between the two square panels that detract rather than add to the beauty and strength of the advertisement; and besides these there is the apostrophe in "'phone" and the comma after "Deadbury," both of which should have been omitted in this scheme; in eking out the design in one or more instances irregular spacing has been necessary, which is nevertheless a defect, and even letter-spacing of straight matter is in evidence. In the line "New Hearse," the first word bears the appearance of having been thin-spaced, while the second word is not; the spacing should have been uniform. On the whole, however, this is a very good ad, full of strength and beauty and well merits its high score of 97¼ points. Will be pleased to hear from Mr. Hooker again.

No. 5—A perfect design from Frank Eaton, typographer, at Ansonia, Conn., in which the defect in display, by that which has already been said with reference to this point, is readily observable; but the choice of type and accessories could hardly be improved. The matter is easily adapted to the allotted area, with sufficiently strong display and a commendable amount of white masses. The skillful touch of the artist

No. 5.

is conspicuous in every line and rule throughout this design, and, in the main, everything is strictly harmonious. In the composing of all such handsome pieces of work as this considerable time and more or less material is always required, however, and these old style, black, irregular faces are certainly not superlatively legible. This design is strongly earmarked with originality; but the use of the Italic with the straight of this Post Old Stylish face is, an approach upon discord, a veritable repulsion to the senses of the printer-æsthete, notwithstanding it is a common practice among modern compositors. In this particular instance the comma after "Balm" would really have been better omitted. In passing it must be added that this is a very good ad and one which would never escape notice in the columns of a newspaper.

No. 6—As the reader has doubtless guessed, this is another of Compositor Winn's artistic entries. In point of design, display and typography we can find no fault with this specimen; but, while there is adequate white space in evidence, the distribution thereof is disproportionate, that is, the central portion of the design is almost crowded in aspect, while there is a bare emptiness at each side. This design is undeniably a very pretty one but there is scarcely the high degree of artistic treatment in evidence as that in exhibit No. 2. The two lines of Gothic at the top are somewhat out of keeping with the other pleasing lines, and we wonder why in the world the same beautiful series as appears elsewhere was not also employed here. This is not an economical ad, but is full of originality and strictly legible. There are several details which merit praise, for instance, the omission of punctuation in displayed lines, the neat joining of rules, etc., but there are others less commendable, some of which have been enumerated above. The fist and the division of the word "attend," are other defects which have not escaped us. A

No. 6

judge of livestock once told the writer it was a much easier matter to criticise a high-grade animal than an inferior one, and so it is with ads; in a good design the defects show up so much more prominently than those in a poorer one. To again return to the subject, "after all is said and done" the fact remains that this specimen No. 6 is in some respects superior to several of those which have been given precedence over it, and fairly towers above the ordinary run of newspaper advertisements.

No. 7—This is the third and last sample of Mr. Winn's composition entered in this interesting struggle. As to design it is easily a quarter of a point "worse" than its immediate predecessor, yet measures up to an eminent standard. Display is so near perfection that no cut is licensed; but, since there are three different faces besides the nonpareil Modern Roman in use, so much cannot be said of this speci-

No. 7.

men, typographically. The scheme of whiting-out as in evidence is well adapted to this design, since it is conspicuously one of what is known in art as "masses," but as applied to our standard of advertisement composition, crowdedness is an evident defect. Artistic treatment and harmony are on a par, with a slight drop in economy, while due to its crowded aspect the ad is not perfectly easily read. The design is strictly a Winn product, and so far as we know, absolutely original. Rule joints and corners are not so admirably well joined as in the other specimens from this same artist and there are other slight defects noticeable. In the main, however, we fully concede this an excellent type effect and well deserving of the high score given it.

No. 8—Forsooth, we have no really bad ads in this collection, which is a more gratifying compliment than could be bestowed upon our two previous contests. Here is a specimen

by Compositor Howard C. Hull, of Asheville, N. C., which, too, like those specimens in our last instalment, demonstrates most satisfactorily the gigantic strides toward success which this compositor has made within the past few months. And it is not egotism, we hope, to add that Mr. Hull accredits much of his success to the instruction received through this journal and these occasional ad-setting contests. In point of

No. 8.

design this specimen very nearly approaches the mark of perfection, but there is the common mistake as regards display—or the failure to display—important facts. Typographically this ad is perfect in its uniform faces, and the whiting-out has been neatly executed. Without the short, heavy rules connecting the various panels an excellent harmonious effect would have resulted, and with just a third as much space between panels would have attained a higher marking in artistic treatment. As we have heretofore hinted, brass-rule panels are an expensive luxury, but very pretty things for bringing out original type ideas. Every portion of this ad is clear and distinct and easily read, and while the idea of panels of any description might be considered somewhat hackneyed in this day and age, yet Mr. Hull has lent a high degree of originality to his design, that is, in the manner in which he has adapted the matter to his design, or vice versa. The heavy cut in details, as per standard score, arises chiefly because the space between the inside panels and the outer rule-border, at the top and bottom, is not equidistant with that at the sides, together with other defects alluded to before. We rejoice in Compositor Hull's improvement, comprehensibly measured by a jump from twenty-first position in our last contest to eighth position in the present strife, and, hope to hear regularly—and we know it will be favorably—from him in the future.

No. 9—Even able judges, we do not doubt, on casual inspection will give this handsome specimen preference over at least some of the preceding designs, and the mistake will be easily excusable, for, as to looks, this specimen is almost

Deadbury, Mo.
M. BALM

No. 9.

ideal, and it is only technically that it is defective. This ad is perfect in but the two respects—whiting-out and legibility. The only pronounced defect is in display, while the degree of other defective departments may be ascertained by reference to the accompanying score. The uneven space about the initial letter is about the most damaging defect in detail. Everything is nicely balanced and there is a fine touch of art in this specimen. The use of the light faced Italic in connection with the appropriate bold display lines and artistic border gives a rather pleasing effect, but can scarcely be considered strictly harmonious. Little more than regulation time would be required in the setting of such a design as this, for this kind of panel can readily be formed of labor-saving rule without waste of time or material. L. E. Ovenden, of Pawnee City, Neb., is the father of this example and certainly deserves high praise for his skill and artistic taste in ad-composition.

No. 10—This is a peculiar example: In six out of the ten departments, as stipulated in the score, it has secured the mark of perfection; but in the other four remaining departments the markings have necessarily been sufficiently depreciatory to lower the whole degree of excellence to a point considerably beneath some of the ads of far less pleasing appearance. It is a western product, of the architectural

No. 10.

order, by G. W. Lytle, Sundance, Wyo. For nicety of design, typographical unity, correct distribution of white space, fine artistic treatment, perfect harmony and high originality this specimen is not excelled by any other exhibit in this interesting assortment; but there is an undeniable deficiency in display, inasmuch as that of the important information, which the ad was virtually intended to disseminate, none is given due prominence; since considerable time and material is required in the construction of such designs, it is, therefore, also somewhat wanting in economy. While the type has been artistically massed, the contents of the central portion are a trifle miniature, giving in this type a crowded and somewhat illegible appearance. These architectural columned effects with rule are somewhat hackneyed, but Compositor Lytle has given this design something more than a copied view. We ask the reader to note the carefulness and perfection of balance and all details, which so greatly enhance the beauty of this exhibit.

No. 11—There is no difficulty in recognizing in this design the handiwork of that skilled artist "who executes and writes about modern printing," Burt R. Bowman, of Denver, the

No. 11.

creator also of reproduction No. 3, which, by the way, is eight degrees higher in excellence than this. This eleventh example, like its "twin brother," No. 3, is perfect in white

space, and economy, while as regards harmony and legibility it is a trifle better; but in design and display it has fallen short of the excellence of its predecessor. There is monotony in the typography, too, and a less finer artistic treatment and execution of details. The reader will appreciate these assertions more readily by a careful comparison of the two samples. In these two ads, however, Mr. Bowman has given us, as he suggests, something on the order of an innovation in advertisement composition—something less grotesque in their dignified simplicity and more inviting and pleasing to the average mortal vision. Let us hope in this respect at least it may stand as a herald of the future advertisement.

No. 12—While suggesting a greater versatility perhaps, yet Compositor L. E. Ovenden, the creator of the design as shown in exhibit No. 9, has left the stamp of his individuality upon this specimen, also, the design of which is most beautiful, highly original and correctly relieved with white space. In point of display, like so many of the contributions to this collection, there is a big defect in evidence, while, with the ex-

No. 12.

ception of the error as designated in the criticism of No. 9, the choice of type is good, likewise legibility. Had the two panels been entirely independent of one another and connected only by the over and underscored "and," then the artistic treatment would, in the opinion of the writer, have been well nigh perfect. The design is somewhat extravagant. With the comma after "M. Balm," and none after "Deadbury," where there is really use of such a point, details gets a heavy cut; and there is another point in detail relative to the conjunctive "and" upon which we could hardly decide without proofs. That is whether the word would not have looked better in lower case, or without the space between letters. There's something wrong right in that locality, but we are free to confess that just what it is does not definitely occur to us at this writing.

No. 13—J. Albert Hood is the compositor of this "unlucky thirteenth" specimen, with a score of 91¾ points. Before

No. 13.

launching forth into an ex-haustive criticism of this design, we wish to state that we have been very much disappointed with Mr. Hood's entries in this contest—in these he certainly has failed to come up to the high standard of his excellent reputation established on former occasions of this kind. Mr. Hood writes:

Ocean Grove, N. J., Nov. 12, 1904.

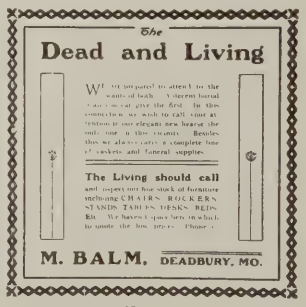
Mr. O. Byron Copper, De Soto, Wis.

Dear Mr. Copper:—I note in the November issue of the National Printer-Journalist that you have started another ad contest, in which I cannot resist the temptation to participate. So I have invaded the ad "alley," and with a few pieces of rule and some types builded an ad from the funereal copy furnished. A few proofs of the result of this typographical effort I am sending you under separate cover, and trust, if it is reproduced in that printers' journal *par excellence*, the N. P.-J., it may prove of some interest to the many clever ad compositors who will see it. Cordially yours,

J. A. Hood.

Our opinion, founded on examination of Mr. Hood's work in the past, is that he is not much given to grotesque designs. His ads are always conspicuously plain and neat and this example is no exception to the rule. The designing of this ad is, as we have previously suggested, somewhat below its creator's standard; display, typography and whiting-out are all but a very trifle defective, and the whole is somewhat short in artistic treatment. In point of harmony, however, this design strikes us as perfect—perfectly "funeralistic" in every respect—like the copy. Although there were three panels to construct, the building of this ad was not an extraordinary proposition, for panels like these, as every printer can readily appreciate, are not difficult to make, and can be manufactured to advantage with labor-saving rule. Condensed Gothic, in the smaller sizes especially, is rather illegible, and particularly where not strongly forced out by a copious background of white. This specimen is not an original one, but we ask the reader to note the fine and commendable precision with which every little detail is attended to—note the exactness with which each joint and corner connects, the regularity and eveness of the spacing and the sane omission of points where there is practically no use for punctuation. The reader must recall the words of one of our contemporaries, to the effect that it takes a great artist to produce a masterpiece with Gothic type owing to the simplicity required; therefore Brother Hood has done well, even also in this instance.

No. 14—Here is another design by Howard C. Hull, the creator also of No. 8 of this instalment. Six departments of this specimen have scored up to the perfection mark—namely design, typography, white space, harmony, legibility and originality—which speaks cogently for its excellence; but, where defects are manifest at all—chiefly in point of display, economy and details—they have been sufficient to lower the



No. 14.

design to the fourteenth position. As regards the general defects, a close perusal of the foregoing comments and careful comparison of the various specimens will be sufficient, and as regards the defects in detail we will mention the erroneously inverted corner-pieces of the border, the superfluous comma following "Balm" and the "the" at the top of the ad. This latter word should occupy a higher position between the rules inside the border—within a lead's distance of the border would have been better—in order to have the extended rules

to strike it as nearly in the center as possible. For beauty of design and fine artistic treatment this ad is but little inferior to any in this list.

No. 15—The introductory words of the preceding paragraph might very appropriately be applied in this instance also, as this design, too, is perfect in six respects, viz.: typography, white space, harmony, economy, legibility and details. The defect of display is prominent, yet the ad has been so cleverly treated and stands out so attractively that a severe cut in this respect is scarcely justified. While this example is the

No. 15.

"personification of simplicity" itself, as compared with Mr. Bowman's exhibit No. 3, the degree of "simple art" is considerably lower. The design is, of course ordinary and lacks strong originality, nevertheless it constitutes a striking type effect and is made up of appropriate material. Alvin E. Mattson, the creator of this pleasing ad is with the Warren (Minn.) *Sheaf*, and when the real facts and conditions, as expressed in the following letter, are taken into account, the score of 91¼ points for this example is indeed encouraging. Here is the letter:

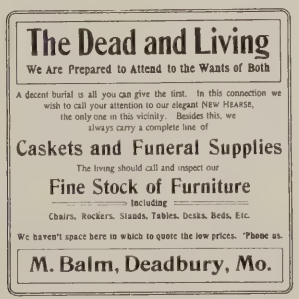
WARREN, MINN., Nov. 5, 1904.

Mr. O. Byron Copper, De Soto, Wis.

DEAR SIR:—I herewith send you the ad which I wish you to enter in the ad contest. I have had only two years' experience so I do not expect to have the best, or near the best. This is the first ad I have set without instructions of any kind. Yours truly,

ALVIN E. MATTSON.

No. 16—This is the second contribution from Compositor J. A. Hood. By reference to that already said relative to his specimen No. 13, and a comparison of the two accompanying



The Dead and Living
We Are Prepared to Attend to the Wants of Both
A decent burial is all you can give the first. In this connection we wish to call your attention to our elegant NEW HEARSE, the only one in this vicinity. Besides this, we always carry a complete line of
Caskets and Funeral Supplies
The living should call and inspect our

agreement, hence the presentation of the following "long-winded spiel" in direct opposition to the statement therein that it "is not for print:"

November 14, 1904.

O. Byron Copper, De Soto, Wis.

DEAR SIR:—The announcemnt of a third contest was received with much pleasure. If there is anything I like better than an ad contest—it is more contests.

In the ad submitted you will note that the rules that you dearly love so well, are conspicuous by their absence. Have omitted any rule-work for the simple reason that this shop hasn't any. And, secondly, would not know how to use rules if I had them. They are like ornaments—they have their uses but receive many abuses.

In contest No. 2, I remarked that the lumber ad was poor. Although I received a mild rebuke—up I jump again and say that this ad is about as bad as they make 'em. Two features I would eliminate entirely: "Living and Dead" and "A Decent Burial, etc.," There are altogether too many subjects mentioned. Leave out the undertaking line and still there would be enough for six good ads. Then the dealer would not need complain of lack of space. (Although this ad be a myth, am trying to criticise it as though it were the real thing, for such ads do appear every day.) Would be able to thoroughly describe each article and give a price, which is very essential in furniture advertising. And if he be an up-to-date advertiser he will also procure a good cut for each ad. The words "'Phone Us" may as well be left out, as they tell nothing except that the man has a telephone. The number should have been given.

The ad as given, reads more smoothly than the one I have submitted, but I saw no other way to follow the method I have lately adopted, or tried to, in setting ads, and that is: "Make the heading identify the ad with some particular line of business, and at the same time bring out a selling point.

As practically two lines of business were introduced, was compelled to introduce another display line—making three. Two would have been sufficent for an ad of this size, or even larger, and such would have been the case in my ad had not undertaking been introduced.

Perhaps you will consider my remarks a little out of place, but as they are not for print, hope you will pardon my long-winded "spiel," as you see I have ideas of my own, although they do not always harmonize with yours.

Hoping that I will not be any further behind in this contest than I was in the last, I remain, Yours truly,

DELL SHAW.

The use of rule is not absolutely necessary to an ad's perfection, but it is nevertheless an undeniable fact, not unknown to eminent art-compositors, that the use—not the abuse—of brass rule is one of the most desirable vehicles for the exploitation of originality and artistic effects, and the ad compositor who "would not know how to use rules if he had them" has yet to learn one of the most important branches of modern high-art composition. We are quite free to admit that Mr. Shaw's exhaustive criticism is not only a "little out of place," as he suggests, but an absolute "dislocation." We are quite surprised that with his profound knowledge of the correct thing in advertisement writing our friend is not enjoying at least a ten-thousand-dollar position as advertising manager for some one of the great firms of this progressive country. Unquestionably it would seem that there is always a big chance for such bright people. In the first place the copy submitted in this contest was not presented as a model

of advertisement *par excellence*, much less for the sole object of having it individually reviewed and criticised by all the compositors in Christendom; on the contrary it is a courtesy—a mere act of civility and respect due this department of the NATIONAL PRINTER-JOURNALIST, to concede that we were quite aware of the shortcomings of this particular ad, but, as suggested in the introduction, submitted it with an obvious purpose in view. Our natural inclination is to say "Pshaw!" "merely this and nothing more," and let it go at that; but the time has evidently come for a definite understanding between Mr. Shaw and this department of the NATIONAL-PRINTER-JOURNALIST, that is, as to whether he is stationed at Mayville, N. D., for the sole purpose of offering "tallow dip philosophy" for the enlightenment of trade-journal department editors or whether these departments are established and maintained for the express purpose of offering instruction to compositors, in and out of trouble, who are willing to read and listen and learn. Many of our would-be critic's comments are well founded, as we have prefatorily intimated, and entirely in accord with our own ideas of good advertising. But when he asserts that the reference to "Dead and Living, a decent burial," etc., is in the least disrespectful he manifests narrow-minded philosophism. The supposition that this ad is a mythical product, is not entirely correct since it was taken with but a few slight changes from the columns of a real newspaper, therefore representing something actually to be met with in newspaper advertisement composition. The reference to prices and illustrations (while we profess to be no great authority on advertisement writing) is, in our opinion, excellent, but the remark relative to the injunction, "'Phone us," is undoubtedly passed without a definite knowledge of conditions. We happen to know that the original of "Monsieur Balm" is connected with a rural or farmers' telephone line, on which each patron has an individual call and no number is required; but in case of a death, all the surviving relatives have to do is 'phone "M. Balm" for an up-to-date coffin and engage his elegant "new hearse," in order to bestow upon the poor departed one "a decent burial" —all of which to Dell Shaw's sensitive ears no doubt, sounds decidedly "disrespectful." How much different is the tone of this letter, containing a criticism, nevertheless, from G. W. Lytle, the compositor of exhibit No. 10:

Nov. 24, 1904.

O. Byron Copper, De Soto, Wis.

DEAR SIR:—I enclose you herewith three copies of the ad composed by me for the November contest, which I trust may reach you in time and you may find room to reproduce and criticise to the end that I may be benefited and the craft profit thereby. The amount of matter for the ad and the limited space for its display reminded me of some advertisers who have much to say and want to say it forcibly but seem unwilling to pay the printer man for enough space to display a calling card.

The NATIONAL PRINTER-JOURNALIST has been received at this office for several years and I am among the readers of the magazine whom there is no doubt but that its teachings have helped. I always look to the coming of the next number with eagerness.

Sincerely yours, G. W. LYTLE.

The only strongly marked defects in evidence in Mr. Shaw's contributed example as shown in reproduction No. 17, might be assigned to the departments of design, artistic treatment and originality. In point of display, type, white space, economy and legibility this ad is considered perfect; but the relation of the type to the border is scarcely harmonious, and a trifle less space between the two top displayed lines is a suggestion for improvement in detail. To be sure the displayed lines of an ad ought to identify it with some particular line of business, but these need not constitute the *heading* thereof.

No. 18—This specimen—the third from J. A. Hood—is most remarkably defective in the departments of design, artistic treatment and originality, with lesser defects in whiting out and details. In view of the material employed a perfectly harmonious effect would reasonably be expected, nevertheless this ad possesses a discordant aspect. It is perfect, however as regards display, typography, economy and legibility. In the main this specimen strikes us as a very ordinary and inartistic product, and certainly not representative of Mr. Hood's usual high-grade ability.

The Dead and Living

No. 18.

O. BYRON COPPER.

AN IMPROVEMENT ON FLAT RATES.

There is considerable talk about the flat rate for advertising and while perhaps it is the best plan for a largely circulated publication yet it is hardly feasible for the country weekly. A publisher of experience who has tried various rates has hit upon the following as the most satisfactory plan he has tried and it seems to be just to both parties. In making contracts it is desirable to put in a clause providing that if the agreement is cancelled, for any cause, the amount of advertising done shall be paid for according to the schedule, as frequently advertisers contract for 1,000 inches of space and are only able to use one-half or one-quarter of it. The plan is that adopted by the publisher of the Essex County (Mass.) *Mercury* as shown in the following copy of rate card:

ESSEX COUNTY MERCURY.

Established 1767.

Published at Salem, Mass.

8 pages of six columns, 20 in. long, 2 1-6 in. wide.

Subscription $1.50 per year.

ADVERTISING RATES.

For Space to be used within one year.

	Per inch.
One inch or less	50 cents.
Two to five inches	40 cents.
Six to ten inches	30 cents.
Eleven to twenty-five inches	25 cents.
Twenty-six to fifty inches	20 cents.
Fifty-one to one hundred inches	15 cents.
101 to 200 inches	12½ cents.
201 to 500 inches	10 cents.
501 to 1,000 inches	9 cents.

Special position 15 per cent additional.

Reading Notices 10 cents per line each and every time.

Orders under $2, cash. Over $2, ten per cent off for cash with order.

With a weekly local paper of a thousand circulation and above, our own opinion is that never should a rate be made lower than fifteen cents an inch and that three cents an inch should be added for each additional thousand after two thousand circulation is reached. A local paper does, at a great proportionate expense, a work for advertisers than can not be done in any other way. Where acceptable plates are furnished for the advertising, saving composition and use and wear of type, without causing extra time or cost in the make-up or on the presswork, it is fair to allow a reasonable discount, say of four or five cents an inch, for composition.

QUESTION BOX

All Questions from Printers will be Answered in this Department
Address CHARLES A. KING, Beverly, Mass.

S. K. D., Michigan.—I am comparatively new in the newspaper business and would like to discover from some friendly member of the craft if there is any remedy for wooden base electros which warp and curl and destroy not only the appearance of the paper but the peace of mind of the editor. I tried to refuse foreign advertising when on wood bases, but found that in so doing I frequently lost the advertising as well. Several of our local merchants are using the syndicate cuts and these are on wooden bases.

It is pretty difficult to make advertisers see that metal bases are preferable, especially when some of the larger dailies take them without a murmur and reblock or stereotype from the wood. This treatment is very effective: Soak the cut or electro for 24 hours in a shallow dish with kerosene oil enough to cover it. After the form has been washed unlock immediately and turn the cuts upside down until wanted for use; and keep them in dry place but away from stove or radiator. If the cut is large saw three-quarters through the base on the under side. This will not weaken it and allow for swelling. If the cuts or electros are too high rub down evenly with coarse sandpaper; if too low put in tacks. A little care in evening up the cuts before going to press will improve the average paper. A type-high gauge made from heavy brass rule is also handy to determine whether the block is type-high or not.

L. C. B., Ohio.—Enclosed you will find some souvenir cards which I am printing but am bothered a great deal with the halftones filling up. The ink is $1 halftone tint and warranted all right, and while it appears to work all right at the start the cuts constantly fill and require continual washing up. Can you name a remedy?

Presumably this job was done on a small platen press, as it shows that not many rollers passed over the form, and the cardboard is of a kind that is not likely to chip and fill the ink. If the can of ink is fresh and free from dust and there is no dust in the room it must be in the rollers. It is noticeable that a seasoned roller on a cylinder press will print all right, but on a platen press it is necessary to have a soft roller and one free from cuts or breaks to get the best results. If L. C. B. will try some new rollers, keep the room free from dust and the ink clean he will find it will remove the trouble. A little overlaying judiciously applied will also help the appearance of the printing.

C. T. A., Conn.—I am trying to print a heavy form on a platen press, but without very good results. Why cannot it be done as well as a full form printed on a cylinder? We fill our cylinder chase full of wood type and it appears to print all right.

Unless you have a very heavy press it is difficult to print a heavy cut satisfactorily and besides it will strain the press if persisted in. On a cylinder press only a strip about one-twentieth of an inch wide and the length of the cylinder is printed at once, the cylinder printing with a rolling motion, while on a platen press the whole impression is taken at once and the force must be much greater. If you must use a platen press, level your form so that each corner will show equally strong; naturally on a form of this size the center will be weak and this should be brought up by a series of overlays. If the form is low in the center, which is doubtful, it should first be underlaid. It may require a dozen overlays of tissue, each one a different size than the other. In putting on the overlays avoid using much paste and if you have a lot of scraps of thin gummed paper it makes the best kind of overlays, because there is no danger from lumps of paste bothering.

VIEW FROM NEAR COLORADO SPRINGS, COLO.

HUSTLING NOT ACCOMPLISHMENT.

Hustling is not always accomplishment. Steady, well-directed industry with the head clear and mind alert, backed by knowledge, brains, experience, skill, systematic effort, the power to comprehend, to grasp and hold the necessary demands and details of the business in mind, are worth a hundred times more than mere hustle, in newspaper editing, in business management, or the securing and the getting of printing through the office in a way to please and hold customers.

A SPLENDID CHRISTMAS NUMBER.

Editor W. W. Screws, President of the National Editorial Association, aided by his able associates, has issued another remarkable Christmas number of his Montgomery, Ala., *Advertiser*. It is even better than last year's, which we reviewed at some length, and he expresses the hope of doing still better one year hence. This is true newspaper spirit—constant progress and ever reaching for better things.

He says editorially:

In quality, in quantity, in patronage and in circulation this great edition will eclipse anything else ever undertaken by a newspaper of Alabama.

In the making of such a newspaper much thought, much skill and prodigious labor are required. The splendid force of men in the various departments of *The Advertiser* have measured up to these exactions by standing together with but one thing in view—the sucess of the Christmas Edition. They have met our expectations. If they have satisfied the readers of the paper their chief object and our chief object will have been attained.

We would speak especially of the fact that most of the matter in this fine number was prepared by Alabama writers. It is the first time in the history of the State that so much home talent has been assembled in this way. It is an exposition worthy of the State and we believe the people of the State will appreciate it.

The constant aim of *The Advertiser* is to give its readers a better newspaper tomorrow than it did today. This Christmas edition excels that of last year. The next Christmas edition, we hope, will be an improvement on this number.

In all of its efforts *The Advertiser* has had the support, the co-operation and the patronage of the people of Alabama. It has tried to deserve it. Certainly such loyalty is appreciated.

This holiday edition of *The Advertiser* will go into every home of Alabama. To these homes *The Advertiser* sends a wish for continued happiness and prosperity in the glad New Year and bespeaks a joyous season at Christmastide.

There are thoughts and suggestions in this that are worthy of being noted by progressive editors and publishers, and of being put aside for reference when planning for Christmas or other special issues.

To interest and to secure the co-operation of every one in the field of the newspaper, are two of the great elements of success and only second to the "standing together with but one thing in view" by all members of the newspaper's force. This number contains ninety-two pages, seven columns to the page. The advertising is worthy the circulation of a paper that goes, with its original stories, poems and articles by home writers and all its news, interesting information and Christmas greetings, to every home in the State.

SOME THOUGHTS ON ADVERTISING THAT APPLY TO ALL DEPARTMENTS OF A NEWSPAPER.

The reader wants to obtain the maximum of result with the minimum of effort as to methods and appliances, he is open minded.

While the editor should seek to originate as much as possible, probably the greatest value of the average paper lies in the reports it can give of what people are doing, how they are doing it, what they are trying to do, and failing.

But the editor's first aim, utility, can only be obtained by approaching his work in the right spirit. He should be optimistic, should awaken enterprise and inspire confidence. He should deliver the reader to the advertising pages unwearied and enthusiastic.

An intelligent publisher recently said to me that he believed he had increased the value of his paper to the advertiser four-fold without increasing its circulation by an improvement in the tone and helpfulness of its editorial columns. This opinion was based upon the evidence of the cash book.

The pessimistic editor, whose mourning puts the reader into the dumps or whose lack of candor awakens distrust, is doing a great deal to cancel the efforts of the advertiser.

The advertising pages should be well edited to make them as useful as possible to readers.

As to circulation, two subscribers, other things equal, are worth twice as much to the advertiser as one, and while there may be a price which it is too high to pay for readers, I doubt if that price has ever been reached in practice.

But it is readers, interested readers which the advertiser wants, not merely papers sent out.

The getting of business ideas from the printed page and acting thereon, is an acquired habit. Only a part of the people in any field make this use of a paper to start with. The advertiser and therefore the publisher have a very vital interest in promoting this habit. How shall it be done? First, by making a paper worth reading and acting upon, and second, by advertising it. Much more advertising of the contents, utility and value of the paper should be done in the columns of the paper itself, in other papers and through circulars. This should be done constantly, even among those who already take the paper as well as among those who do not.

There is a very vital relation between the number of readers of a paper, the extent of their interest in the paper, and the value of the publication and its stability as a property. The purchasing power of the interested readers is the final test of value.

But the purpose of making a good paper is to interest and help readers and the purpose of holding readers is to get and hold advertising.

Having constructed a medium which the publisher can swear by, the next task is the education of the advertiser to do business on the advertising system.

It is not enough to induce people to advertise. They should be induced to adopt the advertising method of selling goods. Many a good advertiser is lost by inducing him to hastily advertise, inefficiently.

If advertising is the modern selling machine, the conditions of the business to which it is applied must be readjusted, the business must be reorganized to adapt it to the new machinery.

If the publisher is not obtaining money under false pretenses, but is rendering a valuable service, it rests with him to prove that he is delivering the goods.

I do not believe a syndicate of leading publishers could undertake a more important and profitable work than the gathering, tabulating and digesting of data, showing when, where and how advertising yields the largest profits.

The publisher has a great incentive to impress the facts upon the distributers in his line. First, the merits of the advertising proposition generally, and second, the claims of each individual paper.

The time will probably come when no great paper will be represented by a man who cannot pass a good examination in the new science and arts of advertising and publishing.

That advertising occupies as firm a place in the distribution as does steam in the mechanical world does not seem to me to admit of a doubt, and it is equally certain that the specialized paper occupies an impregnable position where it is destined to a career of which it is now only upon the threshold.—Emerson P. Harris in an address delivered at the annual meeting of the American Trade Press Association.

ENFORCING HIGHER IDEALS.

It certainly appears, from all indications and existing conditions, that it is, at present, one of the highest and most patriotic duties of the press of America to enforce the higher ideals of life. The newspaper is by its very character, the tribune of the people. Service and loyalty to the many are the strongest cables that hold the circulation, and the circulation gives all advertising or other value, possible to the paper, so that loyalty to subscribers and readers is a matter of wise self interest, as well as of duty. The newspaper serves the many—the tax payers rather than the tax eaters. To the many the good that one does, the wisdom and helpfulness that he imparts, his uprightness, good citizenship and usefulness are all that are of any value or worthy of consideration or commendation. The mere accumulation of wealth by individuals is of no worth to the great multitude of individuals or to the public, unless that accumulation is the result of building up some useful industry or business. Mere accumulation of wealth may often prove a curse to society and to the nation. It is the useful things accomplished, and that continue to give service or employment and remuneration that are valuable to society and to the State. The very old saying that "Not accumulations, but only the character and value of the life lived, are the true evidences of high civilization," is both wise and true. It is not the money that one possesses, not the positions one holds, but what he does, that counts. Yet, forgetting this, the American people have become worshipers of money and positions, servile bowers down to the golden calf. The result has been cunningly devised systems of robbery and stock jobbing, which are, in effect, stealing, corruption and looting under the name of business or of public service. Sneak-thieving, burglary, embezzlement, highway robbery, violence, murder and other attendant crimes have resulted. This is but natural. It seems, at times, as though all business has become thievery or the obtaining of money under false pretenses and through confidence games, with little or no thought of giving or paying full value in either goods, services or money.

Food and drugs are adulterated to the extent of endangering and destroying of human lives. Lands and city lots, patent devices, mines and stocks are boomed, misrepresented as to their practicability or usefulness, salted or watered to the highest points of credulity regardless of, and a hundred times beyond, any intrinsic value, and, then, the thieving manipulators are honored and lauded for their sharpness, enterprise and success. They are coddled and worshiped for their crime-tainted millions. Is it any wonder that crimes have increased and murders multiplied tenfold, when business itself has become criminal, and public officials have become boodlers, and even fee justices in our cities have become thieves by taking illegal fees, if not by receiving, also, direct bribes. But it is said that it is an age of great benevolences, that millions are given in alms as aids for the afflicted, to establishing and maintaining all kinds of eleemosynary institutions, to build support and endow libraries, schools, universities and churches. Was it not also the same in the days of the hardy freebooters who won by reckless boldness and violence instead of chicanery and fraud? Was it not the same in the days of piracy, in the times of the robber barons, of the wars of conquest, rapine and robbery? The giving of alms and the endowment of libraries, universities and churches with a share of the fruits of robbery and even of rapine and murder, is nothing new under the sun.

It is right to prize all the good that exists but it is unwise to use the good to lull the people to sleep or to blind their eyes to the wrongs that exist, and the dangers that threaten the very foundations of society and government. No system and no man should be permitted to buy immunity for evil deeds through munificent gifts to worthy causes or institutions. Much less should men be permitted to purchase honors, applause, positions, to perpetuate their names as noble or to erect enduring monuments to themselves in the minds and hearts of the people or in history, with illy or dishonestly gotten gains. Rights, equity, justice and liberty are the heritage of the American people, and these should be held sacred and inviolate by the great American press, that, in a most important sense, also belongs to all the people.

REQUIREMENTS FOR BUSINESS CORRESPONDENTS AND NEWSPAPER MEN.

Charles R. Weiss has an article in *System* on "Requisites of Letter Writers" that applies to all business correspondents and is also directly applicable to the writers for and the contents of newspapers. He declares, "What is said and how it is said determines the value of a letter." The function of a letter writer being to say something worth saying and to say it right, he analyzes the requirements of correspondents as follows:

1. Education.
2. Command of language.
3. Sound judgment.
4. Knowledge of men.
5. Tact.
6. Enthusiasm.
7. Thoroughness.
8. Application.
9. Industry.

The more school or college education a man has the better, but if he possesses either or both and is not a keen observer of men and a diligent student of the particular business in which he is engaged, his failure is inevitable.

He adds at the close of his article some things that are of vital importance to the progressive newspaper writer or editor: "He needs to read, study and observe in season and out of season, to the end that each day's expressions may be better than those preceding."

CONCENTRATE.

Focus your ability upon one point until you burn a hole in it.

Genius is intensity. Digression is as dangerous as stagnation. He who follows two hares catches neither.

The best way to keep a gun from scattering is to put into it but a single shot.

Field crossed the ocean fifty times to lay one cable.

Grant said: "I will fight it out on this line if it takes all summer."

In thirty-six years Noah Webster wrote but one book. But that will be remembered.

It is the single aim that wins.

Only by concentration can you work out a satisfactory system. Get your mind on it and keep it there. Watch every point—take care of every detail. Follow up your men. Never

stop pounding—never let up. Hang on with a bulldog grip till you get the thing done.

No good system ever just happened. It was wrought out by the hammer of concentrated thought on the anvil of hard work.—N. Y. Trade *Review.*

COLLEGIANS, THE KIND REQUIRED AND NEWSPAPER WORKERS.

There are college men and college men. There is much discussion as to the value of collegians as newspaper men. Our own idea is that a newspaper man never has too much education, but there is much that passes as such that is of very little value to any one. The value of a collegiate course depends very much upon the objects kept in view in its pursuit, and the manner in which a course of studies is pursued. A great many young men come out of college more useless than when they entered. Many get wrong ideas of life and others do not pay attention to the keeping up of their physical strength and vitality, and cram their minds beyond their abilities to digest and assimilate. The modern plan of selected studies is a great improvement over old methods. There has been too much of the foreign languages, of studying the ignorance and exploded theories of the past. In some universities sports have been made too prominent and have been pursued as though these were the chief ends of life, and victories in these have been placed in the minds of the students above the attainments of scholarship and real all-around development. The contents have been made such as to be demoralizing and degrading, have lead to dishonesty and brutality, and even to gambling.

Educators should remember that a university course takes about one-tenth out of the years of active life, and if a young man has not been born rich and has his own way to make in the world, this is no small item, and they should be very solicitous to see that there is not one hour of waste. The young man should be kept in constant touch with the world, and, if possible, his studies should be directed with a view to the calling that he is to follow.

All real development and strengthening of the mind or body and very much of knowledge are useful in all callings. Especially is this true of all industrial training. Education should be especially with a view of strengthening the creative faculties, the ability to do things, and with the idea that usefulness or service is the highest aim and duty of man. The knowledge of the present with all the wonderful advances in arts, sciences, literature, government, the trades and everything else, that far surpass the ancients, should be put first. Scholars have dug out and given to the world all that the ancients had to impart, and there is no particular object in delving in these mines over and over again, for treasures already gathered, unless one is going to make study of such things his life work, and scholarship his profession, so that he may write new works or impart instruction.

The ancient languages should be studied principally with the view of better understanding and getting a better command of our own tongue and its vocabulary of numerous words and should no tbe pursued beyond the accomplishing of these ends. There are practical that things may be just as well studied for development and the strengthening the faculties of careful and patient research and the memory.

Language is largely a matter of memory and one may know a score of languages and yet be very nearly a fool as to the real affairs of life and the means of winning success, of being useful or even of make a living. The classics should ever be studied in connection with existing languages and literature, and literary works, and the words of wisdom derived therefrom. From one and a half hours to three hours of every day during high school and university courses should be devoted to useful, creative work, and more than half of the time of study be given up to acquiring knowledge of practical affairs, of the pursuits, the industries, the philosophy of the present. The students should be kept in touch with the world of thought and action, of events and attainments. This can be attained in part by using the best newspapers of the day in all classes. The newspaper workers deal with all kinds and groups of people, with almost all social, domestic, sociological, governmental questions, with all the industries, business and affairs of life. The collegian who comes out of college a recluse or mere book-worm is worse than useless in a newspaper office, and is very little good anywhere else. To know men and life and all pertaining to work and industrial accomplishment has been made more prominent each year in the most useful, up-to-date schools and universities, and it is well.

A WINNER OF FIRST PRIZE.

We present herewith the portrait of the winner of first place in the Third Ad-Setting Contect of the National Printer-Journalist. Mr. Wietelspach is a printer whose heart is in his work, and who makes the art his pleasure. Herein lies the secret of excellence and of the truest enjoyment of life. If we were asked to give the recipe for longevity, success, and happiness, we would say, "Make your work, and highest attainment therein, your pleasure." This relieves life of monotony and dullness. Toil becomes recreation instead of being corroding, wearing, care and drudgery.

L. WIETEISPACH
Streator, Ill.
Winner of First Prize.

We are glad to know both by a personal letter and by a copy of a splendid special number of his paper—the Bayonne, N. J., *Herald*—that our old friend, H. C. Page, though yet in ill health, is still at the helm, writing for and directing his publication. The issue of Dec. 17th is full of Christmas joy, cheer and good will. The holiday matter and illustrations are of great excellence. Among the rest is an original Christmas rhyme, "Without Regret," by W. E. Pabor, the poet laureate of the National Editorial Association, now residing at Pabor Lake, Avon Park, De Soto Co., Florida. The rhyme closes with the following supplication:

Oh! Thou of Whom we are a spark,
Guide us aright till we embark
Soul-cleansed in the Celestial ark
To lose ourselves in Thee.

The portrait and a brief sketch of the poet, who was formerly a resident of New York, are also given.

The issue contains twenty pages and gives historical sketches, illustrations and descriptions of Bayonne, its beauties and manufacturing establishments, together with portraits of prominent citizens.

EDITORIAL NOTES AND POINTS

BY BENJAMIN B. HERBERT, CHICAGO, ILL.

W. J. Kline & Son made bright their Christmas issue of the Amsterdam Evening *Recorder,* December 19th, with an illustration of a happy grandsire,—or perhaps it is Santa Claus himself,—with flowing white locks and beard, carving the turkey on a well-filled table, about which are seated six sons and daughters, whose beaming, interested faces speak volumes of the anticipated pleasures of the palate. They are surrounded with gifts and toys that have been for the time discarded.

The first four pages are printed in appropriate colors and the large amount of advertising that make the columns of the paper to stand out with fatness, show that the publishers have good cause for making merry.

The editor says:

On the days of the holiday season, as on all other days, any newspaper would not be complete without its full lay-out of Associated Press dispatches of foreign and domestic news, in all of which it has always been *The Evening Recorder's* aim to meet to the full requirements of its patrons. Besides these and the regular local and editorial departments, there is much entertainment to be found in this number of *The Evening Recorder,* suitable to the Christmas time, for old and for young; choice gems of literature, Christmas tales and poetry, bright miscellany, wherein many tastes are pleased for an evening, with much left over for the morrow.

This is right. While nothing must be neglected, the newspaper must keep up with all the festivities of the people, furnish all that is demanded by the prevailing spirit and be ever in close touch with all their joys and aspirations as well as with their sorrows and disappointments.

The Mansfield, Ohio, *News* rejoiced in a sixty-four page Christmas edition, on December 17th. Past President Cappellar and his associates never forget the youth nor the children, and they have educated their constituents in the wisdom of keeping up with the varying moods, interests and pleasures of the people. An original first cover page design, in colors, shows a room from the great window in which a view of the city is seen, under the glory of a full moon and twinkling stars. A little tot, in long white gown, is seen anxiously watching the great fireplace for the coming of Santa Claus.

The paper is illustrated with views of the city. Among the interesting articles we notice the following topics: "The work of the Kindergartens," showing how Mansfield is abreast of the times in this important educational movement for the instruction and training of young children, and how the teaching is done; "The New Home of Mansfield Elks;" "Christmas Day in Many Lands;" "The Simple Life;" "A Classification and Gravity Freight Yard under Construction and Other Betterments in Progress;" and so on, with articles devoted to Mansfield interests and others appropriate to Christmastide and the prevailing spirit of good will and the giving of gifts. The editor, in speaking of this holiday edition, says:

Once more the *News* comes to the public with its annual Christmas edition and in presenting this number the management believes a paper is furnished which is alike creditable to this office and to the city of Mansfield.

A city is oftentimes judged by the character of its newspapers, and, while in some instances the paper may be in advance of the city, it is more often the case that the city and its newspapers go hand in hand, the one reflecting the ability, the enterprise and the excellence of the other.

The latter, we believe, is the case in regard to the city of Mansfield and its first and favorite daily newspaper, the *News.* It has ever been the aim of this paper to hold the banner aloft for Mansfield, believing and insistently proclaiming that no city of anywhre near its size is any better or more enterprising in any regard than Mansfield, and that few are equal to it in all that goes to make up a desirable residence place or a point for business and manufacturing.

Starting with a business and industrial life awake to the benefits of advertising and liberal patronage in that regard, and with a general public appreciative of a good newspaper, the making of this holiday edition has been one of pleasure, notwithstanding the hard work connected with all the details of producing it, in which editorial, business and mechanical departments of the paper have co-operated.

Here is a spirit manifested and thoughts and truths enunciated that are good for newspapers everywhere and all the year around as well as at the time of the great yearly holiday.

Would that all editors were as fortunate in the enterprise, support and goodwill of their constituents. If they are not so blessed is it not because they are somewhat to blame?

A newspaper is, in a great measure, responsible for the sentiment and enterprise of its city.

The *Sentinel of California,* Washington Co., Pa., issued on December 16, is a very worthy historical number. This historical edition was printed in about the form and size of the *Ladies' Home Journal,* of Philadelphia, and was sent as a part of the regular issue. It was excellently illustrated, giving views of the city and its buildings and portraits of prominent citizens. A distinguishing feature, in the illustration, consisted of many excellent interior views of stores and manufacturing establishments. We have heretofore called attention to the advantage of placing in separate, permanent and attractive form all the matter especially prepared for a souvenir issue, that pertains to the description and history of a place. This method affords opportunity for the more effective use of fine illustration and makes a paper more easy of reference and better adapted for preservation as a record of the progress of all institutions, enterprises, industries and business. In the opening of his article on this California in old Pennsylvania, the paper gives a pleasing

summary of history that is so characteristic of the settlement of all portions of our country and so comprehensive that we reprint the following paragraphs:

When the vanguard of hardy pioneers reached the Monongahela river in its unstayed march across the continent, it paused awhile, to rest in contemplation of the wondrous beauty of the stream and the promise of fruitful opportunity its teeming banks displayed. The Red Man was here, but as ever before, was brushed aside or crowded back, to make room for the sterner life which was already flowing in resistless streams from the shores of Europe. Love of adventure and loyalty to the mother country first brought the white man here—the dauntless Frenchman who fought and bled, first in relentless wars with the Indians then the more serious ones with England. But they in turn withdrew, and made way for the farmers from many different lands—the hardy and tenacious Briton in greatest number, the plodding Dutchman coming with him, equal partner in the development of a virgin country.

Then the whole Monongahela Valley sprang into activity. From Fort Pitt to Fairmont rang the axes of the new race. Farms were cleared in less than a season and villages sprang into being as if by magic. There were trials and struggles against foes of many kinds. Frenchmen, Indians, and at last even stern old England, seized upon and attempted to throttle the settlements in their infancy. But drouth and famine never befell. Nature lent a ready hand to the willing husbandman and the hillsides bore living witness to the reward which industry always brings.

The history of one town in those early days is the history of another. Since then changes have come. One town has developed through its railroads, another through its milling interests, while yet another has become famed for its educational facilities.

Nestled in a graceful bend of the Monongahela, a magnificent bluff on the east and a gently rising plateau extending to the western horizon, California possesses a location unsurpassed by any in the United States.

The first white man to claim title to the land upon which the borough now stands was Samuel Young. His title to the land was a grant claimed to have been bestowed by King James. In the year 1787 Young relinquished all right and title to the land to Robert Jackman, who in addition became possessed of several hundred acres adjoining the original tract. At Mr. Jackman's death in 1813, all this land passed to six sons, who survived him. The portion of the land now comprising California borough was given to James and William, who soon allowed it to be sold at sheriff's sale, to Seth Buffington, who in turn transferred it to a John Ringland.

In 1849, during the gold excitement in the State of California, a company with William Jackman at its head, was organized and purchased of Ringland's heirs three hundred and four acres, upon which they laid out a town site, calling the newly created burg California.

Now, from away-off Tilamook, Oregon, comes a bright *Herald* heralding the glad Christmas time and greetings. Across the first page, under the deep blue sky, lit by the restful moon and the twinkling stars, Santa Claus, seated in his sleigh, loaded with toys, wreaths of holly and Christmas trees, drives his reindeers to the music of tinkling bells, over the snow-covered earth and houses. When this issue reaches the National Printer-Journalist readers, in every State of this Republic, in Canada, in the islands of the sea, and in far-away countries of Europe, Christmas and New Year will have passed, but the happy memories will remain and another Christmas, for which it is in the wisdom of the progressive newspaper man to prepare throughout the year, will be in promise. It is sometimes wonderful how much can be done in every month of the year for making a satisfactory anniversary issue, at the close, and how much of worry and rush can be saved at the last, by careful forethought and putting by, in orderly form, statistics and many incidents that are, later on, to make valuable and to grace a holiday edition.

The business men of Oregon evidently believe in Christmas issues, and they show their faith by their liberal advertisements. This *Herald* is to be commended for the liberal amount of neighborhood news given under the heading "News from About the County, as Written by Our Correspondents," and of local news and points, under the title, "Local and Editorial by Our Man About Town." Its "Home Circle Column," "The Dairyman," and other departments, are also to be commended. It is wise to have a department for everything in a newspaper and everything in its proper department. This Christmas issue, before us, as we write, contains seventy-two columns of instructive advertising, well displayed, and with appropriate borders for Christmas.

The *Herald* uses one page, each month, for publishing the school news of its county—Tilamook. This is a feature that ought to be imitated by all local papers. The newspaper is the people's college and should ever show a lively interest in and keep in close touch with the public schools and all of the teachers therein.

We commend to all editors, both to practice on, and to enforce upon their readers the following from the "Local Editorial" department of the paper:

If there is a chance to boom business, boom it. Don't be a knocker. Hope a bit. Get a smile on you. Hold up your head. Get a hold with both hands. Then pull. Bury your hatchet. Drop your tomahawk. Hide your little hammer. When a stranger drops in tell him this is the greatest town on earth. It is. Don't get mulish. Don't roast. Be jolly. Help yourself along. Push your friend with you. Soon you'll have a whole procession. No man ever helped himself by knocking other people down. No man ever got rich trying to make people believe that he was the only good man on earth. You can't climb the ladder of fame by stepping on other people's corns. All men are not alike. If you don't like their style let 'em alone. Don't knock. There is no end of fun minding your own business. And it makes other people like you better. Better have others get stuck on you than get stuck on yourself. Nobody gets stuck on a knocker. Don't be one. Cut it out.

The Angola, Indiana, *Magnet* celebrated, on Dec. 16th, with a holiday first-page, and historical articles.

One article was devoted to "The Beautiful Land of Steuben; Its Hills and Valleys and Crystal Lakes." The latter were displayed, in all their enchanting loveliness, by excellent halftones. Another article gave a "Brief History of Angola's Churches," showing all the buildings in halftones. These articles are both exceedingly well handled and the mechanical execution is excellent. Other institutions and improvements all come in for proper consideration and the paper is to be praised for the completeness of its local and county news.

Two pages of this number are devoted to letters from the little ones to Santa Claus, in answer to a letter this old friend of the children published two weeks before. This plan of letters to Santa from the children has always proved popular not only among the children but among all the older people. Here is a sample letter from a little boy that shows the true boy spirit of wanting the means of making things, as well as of blowing a horn, riding rapidly and knowing through books:

Angola, Ind., Dec. 5.

Dear Santa:

I am a little boy five years old. I want a box of tools, a horn, a book and a toy automobile. Your little friend

Burton R. Swanger.

That boy, and thousands like him, should be encouraged. Never curb the creative faculty nor curiosity and the desire for expression in children. With a toolbox and a book a boy is in a way to progress naturally.

Another department of the paper is to be recommended and is one that should not be wanting in any newspaper. It is a complete summary of the news under the title "Happenings of a Week in Brief." In talking with one of the Professors of History in Kansas State University, the other day, he spoke of the unreliability of history that depends on traditions or on the memories of men, as to events long passed. He looked to the newspapers as the great treasuries of history and suggested that publishers and editors owed it to the future as well as to the present, to give a brief, reliable summary of the living history as it is reported and recorded from day to day or from week to week.

Next comes, with holiday greetings, the *New Era,* of Wynnewood, Indian Territory. From every State and Territory come the members of our newspaper family. How bright their faces in the holiday time and how brotherly they seem, and how companionable, as they cozily fall in place at the editor's table. This splendid number of the Wynnewood *New Era,* in the far away Indian Territory, contains twenty-four pages, seven columns to the page, and is as bright as the best, with all the stories of Santa Claus and his happy children, with carols of joy and the ringing bells of the new year as well—the two great holidays finding place in the one issue.

The Maury *Democrat,* of Columbia, Tenn., makes bright the first page of its Dec. 22 issue with a design, in the form of a great heart of spruce branches, lit with burning candles, in the midst of which is seated the Christ, blessing little children. It is the season for the greatness of heart and the Maury *Democrat* always has a heart large enough to take in all the people and all their interests.

The *Daily Tribune,* of South Haven, Mich., of Dec. 17th, brightened its first page with the Christmas feast, in colors, a design used by several papers this year. Following this bright page a great amount of Christmas matter was published and the editor says:

> Today we present to our readers the largest and handsomest holiday edition ever issued by any paper in this city. In addition to the usual quantity of local news, we give a large amount of special Christmas matter, which will add much to the value of the paper. Especial attention is called to the fact that all of our advertisers are home merchants and we ask that you give their announcements careful attention before making your holiday purchases, for by so doing you will benefit yourself and our local merchants. All of the paper, except the colored cover, was printed at our office on our Whitlock cylinder job press.

Returning from the State University at Lawrence, Kansas, the Editor stopped over for a short visit in Kansas City and enjoyed a noon-day luncheon with the members of the Kansas City Typothetæ at their rooms. For many years this custom of dining together, at the noon hour, has been kept up by the employing printers of Kansas City, to their great pleasure and advantage. Around the common board friendships are kept alive and a better understanding reached, while wholesome good cheer and sociality wait on appetite and good digestion. Eating together and indulging in conversation with fellow craftsmen, is much more wholesome than rushing to a restaurant alone, bolting down a hastily-ordered and served repast and then rushing back to work. After the meal the members adjourned to an adjoining room and indulged, for a half hour, in light exercise, mirth and sport, playing, or watching, games of indoor tennis or ping pong. A complete outfit is provided and the play is entered into with enthusiasm, affording as much amusement to the lookers-on as for the players. The Kansas City Typothetæ is more active and efficient than any other such organization in the United States, and this is in no little measure owing to these every-day reunions.

This certainly has been a fat Christmas for the newspapers. We cannot mention one-half of those that reach our sanctum but have given enough to furnish any newspaper man of brains and thought with abundance of material as to how on any other holiday he may do a world of good, awaken a deeper interest in his paper among his patrons and reap a richer harvest for himself. There are many lessons, too, for any special issue, that local or other conditions may make it wise to publish, and for every regular issue of the whole year.

"Sketches—Mostly Boys," is a light, humorous and in every way delightful little book of verses with illustrations, from the Hudson-Kimberly Publishing Company press of Kansas City. The verses are by Bide Dudley, of the Kansas City *Star,* in which paper they have appeared from time to time, and the pictures are by Harry Wood, the head of the art department of that paper. The rhymes and illustrations have to do with incidents, emotions, humors and memories of everyday lives, mostly of boys, and they impress one with the old sayings: "One touch of nature makes the whole world kin;" "Laughter shakes down the cobwebs of the brain;" "The fountain of laughter lies close to the fountain of tears." The book is handsomely bound in velvet and is meeting with a large sale. The verses are for quaintness, humor and pathos, along the lines of Eugene Field's popular rhymes.

Mr. Franklin Hudson, of Kansas City, has succeeded Hudson & Kimberly and is conducting the business as The Hudson Press. He is a large publisher of military books and has recently issued a very important treatise in that line. He has some sixty different works relating to military tactics, laws, decisions and affairs. His patrons are the officers and members of the Regular Army of the United States and of the National Guard, numbering some 250,000 in all. He has recently designed a very neat trade-mark of a laurel wreath, encircling the name, crossed by a pen and sword, surmounted by a closed visor. The pen rests above the sword and they are tied by a streamer at the crossing point of the two.

The *Mirror,* of Clifton, Tenn., has a department "About Advertising," edited by one of its editors, H. M. Jackson. After discoursing, in the issue of Dec. 23d, on the great value of skillful and systematic advertising, and speaking of the importance of character in the advertising medium used, the editor says:

> The editors of the *Mirror* are putting forward their most conscientious endeavors to build up for the paper a character founded on the eternal principles of truth and justice. We want it to be a beacon light for morality and the higher and nobler attributes of mankind. We want it to stand as a true index to the business pulse of this section of Tennessee. We want to broaden its field and its sphere of influence.

National Printer-Journalist

A Journal for Printing and Allied Trades

Entered at the Chicago Post-office as Second-class Matter.

BENJAMIN B. HERBERT . . . . . Editor

Official Paper of the National Editorial Association.

PUBLISHED MONTHLY BY THE

NATIONAL PRINTER - JOURNALIST COMPANY

OFFICE OF PUBLICATION:

1319 WEST RAVENSWOOD PARK, CHICAGO, ILLINOIS

EASTERN OFFICE:

150 Nassau Street, New York City.

William E. Herbert . . . . . Resident Manager, Chicago Office

Benjamin S. Herbert . . . . . Secretary

SUBSCRIPTION RATES:—In the United States, Canada and Mexico, $2.00 per year, in advance; single copies, 20 cents.

Orders for subscriptions will be received by all dealers in printing material in the United States and Canada.

Remittances may be made by draft, money order, or registered letter. Make all remittances free of exchange and payable to the order of the National Printer-Journalist Company.

FOREIGN SUBSCRIPTIONS:—To Countries within the Postal Union, 10s. 6d.

Foreign Subscription Agents:—International News Company, Breams Buildings, Chancery Lane, London, E. C.; F. O. Strong, 111 Fleet Street, London, E. C., G. G. Turri & Co., Melbourne, Australia; The India Printers' Agency, 249 Mint St., Madras, India; Successful Advertising Co., Bangalore, India; John Dickinson & Co., Ltd., Cape Town, South Africa.

ADVERTISING RATES PROMPTLY FURNISHED UPON APPLICATION

The National Printer-Journalist is unequalled as an advertising medium in its field. No attention paid to postal card requests. Information cheerfully furnished to all patrons.

Subscribers and patrons will confer a favor on the National Printer-Journalist Company by sending in the names of responsible newsdealers who do not keep the monthly on sale regularly.

Manuscript sent in for publication must be accompanied by a letter of explanation and return postage.

CHICAGO, JANUARY, 1905

The year 1905 gives promise of increasing posperity. With the resources at hand, ready for development and use, the breadth of this prosperity depends in no small degree upon the press. There are thousands of ways in which the printing office and the newspaper may help business and manufacturing industries.

It is the wise printer or newspaper man who studies out these ways in his own community and plans to make himself, his office and his paper, profitably and practically useful. General local prosperity brings business and advertising and the right kind of advertising and printing broadens prosperity. If you have in a community a man who makes any article of especial value, if it be nothing more than a superior kind of shoes, teach him how, and help him to widen his field of sales for that article. With the right kind of publicity, many a rural village has been developed into an important manufacturing center, giving employment to many hundreds; affording an excellent local market for the farmers, thus benefiting both the residents of the village and of the adjacent country or the whole field of the local paper.

"How wonderfully the fields covered by the newspaper and the printing office have broadened," is one of the encouraging, stimulating thoughts that come with the opening of this new year of 1905.

The examining of the brief reviews of special issues of newspapers and of the output of job-printing offices in this one issue of the National Printer-Journalist, enforces the truth that the modern press touches men and their interests at every point. Education, morals, religion, philosophy, good government, art, science, music, manufactures, trades and industries, agriculture, commerce, business, the professions and all reforms and reformers, judges, legislators and administrators, all promoters of prosperity or measures taken for peace and the establishing of public and private confidence and good will as well as all societies and benevolences, sanitation, discovery and invention in all forms, find the ways for inspiration, promotion, betterment and enlightenment through the printing office and the newspaper. The parish of the newspaper is the whole world and nothing human or divine is foreign to its pages and in this great diversity of materials, ever at hand, enough is found to crowd every page of every newspaper, to the overflowing, each issue with entertaining, inspiring, instructive reading.

The practice of many newspapers, notably the daily *Tribune* of Chicago, of giving up a large and ably-conducted department, each week, to the world's workers by hand or brain, is one most encouraging and praiseworthy illustration of the widening sphere of entertainment and usefulness of the modern newspaper. And how educational and useful such a department has proved! Therein are related the real valuable battles of life, battles not of destruction, death and carnage, but none the less bravely and nobly fought, with moral courage, self-denial, and endurance; battles against physical difficulties, poverty, and all opposing forces; battles of attainment, of uplifting, of noble accomplishment, blessing not only the soldiers of industry, in the glorious strife, with crowns of enduring success but bringing substantial blessings to all and encouraging and inspiring to nobler efforts and attainments the ever-widening circles of mankind.

Where else can be found better or more appropriate material for the newspaper that reaches men and women at their homes in all the daily associations and walks of life than in the stories of the struggles, undertakings, hardships bravely borne, and the glorious victories won, by the workers—victories more blessed, and more enduring than all the victories of war. We have been reading today of some of the battles and victories of some of the real heroes and heroines of life, whose victories of peace are more worthy and should be more renowned than those of war. Our whole being was thrilled by the printed accounts and tears coursed down our cheeks, but these tears were not tears of sympathy for the injured nor of sorrow for the dead, but tears of overmastering joy at the noble spirit manifested, the hardships uncomplainingly endured, the unswerving, soul-inspiring purpose manifested, the economies, self-denials, unflagging industry, the bravery of spirit and the final blessed accomplishment. These battles are being nobly fought everywhere, in every community and their narration is the very best kind of news for every local paper. The most eloquent, appealing, helpful things are right in your own neighborhood. Do not be blind thereto.

It's the true newspaper man who recognizes worth in corners and brings out that worthiness not for the glorification of the worthy, but to encourage and inspire.

Escape, in your newspaper, the dead, dull routine and reiteration of meaningless personals or of regular, routine, daily events that have no more news or novelty than the daily washing of his face of a decent citizen. Put some information, some thought, something distinguishing from the ordinary, in your news items, in your personal mentions and locals. The mere mentioning of names is drivelling flattery. It might be news to state that some certain "hobo" had taken a bath, but it would not be news to state that a decently cleanly person had bathed—unless it could be added that he imported water from a distant ocean for the purpose, to improve his complexion or health.

This paper has frequently striven to enforce the wisdom and goodness of remembering the newsboys with consideration and kindness. The custom has grown of looking after and providing for them the means, through night schools, for their education, and through parties and music, excursions, entertainments and picnics for their social enjoyments, and for making their Christmas-time full of thankfulness, gladness and joy through a great Christmas feast. The Philadelphia *Bulletin,* one of the most prosperous papers of its city, with a circulation of nearly two hundred thousand copies daily, looks well to the newsboys. On Monday, Dec. 26th, the *Bulletin* gave a Christmas dinner in two great halls to over three thousand five hundred newsboys. The feasts—that were more than good meals, for they brought good fellowship and good cheer—were grand affairs with abundance of toothsome refreshments to keep the guests busy for an hour, and music by two bands and "The *Bulletin's* Newsboys' Drum and Fife Corps." The boys helped out the music by joining in a grand chorus, that drowned all other sounds, whenever the bands struck up pieces that they knew. There were many pleasing incidents, and some very pathetic ones, too, in their manifestations of thoughtful kindness and good will to cripples and to some old ladies who joined in the feast with their boy newspaper merchant associates of the streets.

The Kalamazoo, Mich., Saturday *Telegraph* devoted large space in its issue of December 10th to a write-up of its beautiful city and its growth and industries. An eight-page section of its thirty-two pages, was given up to "Publishing a Newspaper," a story of Processes and result in which the readers were taken through the entire *Telegraph* plant and told, by text and illustration, "how it is done." The handsome new home of the *Evening Telegraph,* a five-story, brick structure, the finest and best-equipped newspaper office in Michigan outside of Detroit, was shown in illustration and most entertainingly and instructively described. The readers were also made acquainted, through half-tone portraits, with the working force of the *Telegraph's* staff from general manager to pressman. It is wise to talk about your own paper occasionally, if not oftener, and very fortunate to have a paper of which you can talk with pride. The latter depends entirely on the editor and publisher for "the best paper" can be made in a small as well as large place.

In its issue of December 8th, the Washington, New Jersey *Star,* made a feature of presenting, in half-tones, local views furnished by the friends of the paper on request. The idea is an excellent one. The collection published is most pleasing and the pictures show many novel, picturesque, historic subjects, and enchanting nooks and scenery for illustration. What is true of Washington and Warren County, N. J., as to such views is largely true of every other city and county in the United States, where a newspaper is published. This plan actively interests many people and their friends, and every resident and many who are not now residents, are directly interested in such pictures. We recommend the plan to our newspaper readers. (Make a check here for future reference.) This number of the *Star* was well printed on excellent hard-finished paper and made a very attractive appearance. It contained twenty-four, full seven-column pages, filled with many hundreds of local items and vicinity news, besides articles of local interest and general news and a great array of high-class advertising. It is a superb local weekly paper with an issue of 4,250 copies. The editor says:

> This is the sixteenth consecutive Christmas number of the *Star.* The best efforts have been put forth in its execution, neither labor nor expense having been spared in an attempt to surpass all previous Christmas issues, both in interest and appearance.

Col. W. W. Folsom, First Vice-President of the National Editorial Association, was married to Miss Anna Voorhies at the First Methodist Episcopal Church, Columbia, Tenn., on Dec. 28th. He, all unknowingly, celebrated, thereby, the thirty-third wedding anniversary of the editor of this paper, so that we had cause for a double interest in the happy event. We would have liked very much to have been present in accordance with a highly-prized invitation, and to have extended congratulations, personally, but these are no less cordial though tendered at this distance. The whole NATIONAL PRINTER-JOURNALIST family join in hearty well wishes and hope to meet the happy bridegroom and bride at the twentieth convention of the National Editorial Association, in Guthrie, Okla.

Among the Associations, see page 63.

Edward R. Hamm has been elected Secretary of the Chicago Typothetæ, succeeding Daniel Shelley, who has resigned.

Thursday and Friday, Feb. 2d and 3d, have been selected as the date for the meeting of the Tennessee Press Association, to meet in Nashville. The first day's session will be called to order at 10 o'clock in the Assembly Hall of the Tulane Hotel, and after hearing the President's annual address and the report of the Secretary, the report of the Advertising Committee will be heard. At the afternoon session Thursday the report of the Legislative Committee will be submitted. At the morning session Friday the Committee on Ready Prints will submit a report, and this will be followed by a paper on "The Benefits and Needs of the Weekly Press," by J. D. Newton, of the Jackson *Dispatch.* There will then ensue a general discussion participated in by D. L. Smith, of the Sweetwater *Telephone;* Rob Roy, of the Alexander *Times,* and R. M. Reams, of the McMinnville *Standard.*

"The Best Way to Increase Circulation" will be the subject of an address by Lynch Perry, of the Maury *Democrat.* This address will be followed by a general discussion of the subject by R. A. Green, of the Covington *Record,* and L. H. Lassater, of the Athens *Athenian.* The election of officers will be taken up at the afternoon session Friday.

The Buckeye Press Association is to meet at Cleveland, Ohio, February 16 and 17, 1905. The Ohio press organizations have generally met during the same week at the State Capital, Columbus, and fraternized with the Governor and other officials and State solons.

A VISIT TO KANSAS STATE UNIVERSITY.

THE COURSE OF JOURNALISM OF THE STATE UNIVERSITY AT LAWRENCE.

A visit to the State University of Kansas, on Dec. 19th, served to remind us as to how useful and practical such universities have become. Kansas stands in the front ranks among all the best. Naturally we were especially interested in the "Course in Journalism," in which the School has taken the lead, but we were not deterred, on that account, from learning of other practical courses and practical work. The business course provided is superb and the other departments are proving very useful not only in the way of practical instruction but to the people outside the school.

Francis H. Snow, Ph. D., LL. D., who has been connected with the University almost from its beginning, and is now Professor of Organic Evolution, Systematic Entomology and Meteorology and Curator of the Entomological Collections, some six years ago discovered a highly contagious, parasitic fungoid disease that kills chinch bugs. By propagating this disease and sending out the diseased bugs throughout the wheat belt, havoc was worked among those very destructive pests and without doubt millions of bushels of grain were saved to the farmers that would otherwise have been destroyed. As a result Kansas, for the past three or four years, has been almost entirely free from the chinch bug. The disease is propagated best in a moist atmosphere on shaded damp ground with temperature about 70 degree above zero.

Mr. Snow has in his department one of the finest and completest entomological collections in the country. We passed a half hour or so, delightfully, in looking through his splendidly mounted and scientifically arranged collections of beetles, butterflies, moths and bugs. It is wonderful as well as gratifying to know how much service has been rendered to gardners, fruit growers and farmers through the practical study of insects and the ascertaining the methods or agencies for the destruction of those that are hurtful to plants.

Lucian Ira Blake, Professor of Physics and Electrical Engineering, has done a great service to the mining industry by the invention of a new apparatus for ore separation that is now being used in the mines of Colorado. We mention these two instances, at the beginning, only to enforce the fact of the practical and helpful drift of the school and of the instruction given by practical men who are in touch with the outside world.

The University buildings, illustrations of which are given herewith, are situated on a hill overlooking the river valleys and commanding most magnificent views for a distance of forty miles. While in the tower of Fraser Hall, the principal building, we could plainly see the smoke that hung over Kansas City.

The School is a beacon light, on a hill, to the people of the great, growing, wealthy State of Kansas and should be their special care and pride.

It is not our province here to go into an extended account of the School or its work, but we believe that editors, publishers and printers will enjoy a trip with the editor through the buildings. We first visited the Library, that contains forty-five thousand volumes, systematically arranged for protection and reference.

Birds Eye View of Kansas State University at Lawrence Kansas.

(1) Library, first building to the left. (2) Fraser Hall, second building on the right.

(1) The building consists of two stories and a basement, the greater part of which is above ground. On the first or main floor are located the general reading-room, a newspaper room, and the Librarian's and Cataloguer's offices. The reading-room is admirably arranged and lighted. In the newspaper room are kept the county and city weeklies and dailies published within the State. In addition, dailies published in all the larger cities of the United States are kept on file. The second floor of the building is also devoted to library purposes. In the basement are seminary rooms used for private study of students in the various departments. The building is lighted throughout by electricity. Its every appointment is modern and its facilities and usefulness unexcelled.

We were next shown through Fraser Hall, having had the pleasure of meeting the faculty and addressing the assembled students.

(2) This building is 246 feet in extreme length, 98 feet wide in center, wings 62 feet each. There are 54 rooms, of which one, the main audience room, containing an electric pipe-organ, is 94 feet long and 56 feet wide. This room has a seating capacity of 1,200. There are also in Fraser Hall eighteen lecture-rooms, each large enough to accommodate classes of

seventy-five to eighty students. In this building are located the executive offices of the University, including the Chancellor's offices, the office of the Secretary, and the office of the Registrar. The north half of the first floor is devoted to the use of the School of Law, including the law library.

(3) The Chemistry and Pharmacy Building. This building was completed in 1900. The material used is native limestone, laid in horizontal courses, with recessed pointing. The building is arranged specifically for laboratory purposes for the

Chemistry and Pharmacy Building, Kansas State University.

departments of chemistry and pharmacy. The entire length of the building is 187 feet, and the greatest width 70 feet. The ground plan shows a central portion (devoted to offices, private laboratories, supply rooms, balance rooms, and smaller recitation rooms) and two wings. The building is three stories in height, with a basement of the same height as each of the stories above; beneath the basement floor there is an

Museum Kansas State University.

air space of four feet, down to the solid rock on which the foundations are laid. The system of heating and ventilation, which has been arranged with special care, includes a fan blower, run by electric power, which forces tempered air over steam coils and thence into the laboratories and lecture-rooms. The air thus brought into the rooms is carried out by hoods on the sides of the rooms, which are connected with nine-inch tiles, terminating in the chimneys above the roof, each hood being ventilated by an independent flue.

(4) The Natural History Museum Building. The spacious building for the museum of natural history furnishes a safe and beautiful home for the natural history collections, estimated to be worth $300,000. The upper floor is devoted to the collection in entomology and paleontology. The remainder of the building is used for the exhibition of mammals and birds. The offices are ocupied by the Curator of Mammals, Birds, and Fishes, and the Curator of the Entomological Collections. The workrooms of the taxidermist are in the basement.

Snow Science Hall Kansas State University.

(5) Snow Science Hall is 110 feet in length by 100 feet wide, two stories in height, each 16 feet in the clear, and is provided with an attic of 12 feet, and with an ample basement, almost entirely above ground. The entire basement is now used for the gymnasium. The geological department occupies the two southeast rooms of the first floor. The departments of zoölogy and botany occupy the large west room of the first floor for laboratory purposes. The entire second floor is devoted to laboratories for advanced work in botany and zoölogy. The west room of the attic is used for the geological collections. The south room is the botanical museum. The department of drawing and painting occupies the remainder of the attic. On the first floor of the east half is the lecture-room, extending through the basement and first story,

The Shops of Kansas State University.

and arranged in the amphitheater style. This room has accommodations for 200 students.

(6) Fowler Shops Building is devoted to the mechanical and technical instruction of the School of Engineering, and to the electric light and power plants of the University. Its present educational equipment represents about $30,000, appropriated by the legislature. The building is of native stone, 224 feet

long by 50 feet average width, two stories high, with attic and a handsome tower. It encloses 32,000 square feet of floor space for instructional purposes. It contains boiler and engine-rooms equipped and adapted for boiler and engine testing, with generators aggregating 200 horse-power, for lighting and power for all the University buildings; forge room and brass foundry, metal and wood-working departments, dynamo and transformer laboratory, with photometer room, fitted with recent types of appropriate machines, so distributed as to give comprehensive and exact technical instruction. Two rooms, 50 by 30 feet, are devoted to the engineering laboratories of the civil and mechanical departments. The pumping machinery of the water and fire-protection system of the University is also placed in the engine-room.

(7) Blake Hall. This is of Chateau Renaissance style, three stories high, of Cleveland, Ohio, sandstone. Besides a general lecture-room seating 100, in which the editor had the pleasure of addressing the students taking the course in journalism, there are two class-rooms, seating 30 each, and a department reading-room and library, two general laboratory rooms, covering 3,200 square feet. Accessible to these are supply, battery, workshop, balance and chemical rooms. There are also eight smaller rooms specially adapted for physical research, each provided with water, gas and electricity, and each basement laboratory room has a stone pier, to bed-rock, giving instrument supports free from vibrations of the building.

Besides these there are buildings for the School of Fine Arts and for the Medical Department, which we did not find time to visit, and a Law Building in course of construction.

THE COURSE IN JOURNALISM.

This department is new and under the immediate supervision of Edwin Mortimer Hopkins, A. B., Ph. D., Professor of Rhetoric and English Language, at whose home during our stay we enjoyed the thoughtful hospitality of himself and wife on two occasions and were enabled to meet, in a social way, several members of the faculty and of the local press. In addition to studies required in the Freshman and Sophomore years, the regular University classes, the journalistic course includes the following:

American Colonial History; English Literature; Elementary Law and Contracts; Constitutional and International Law; Advanced English Composition; Philosophy (Ethics); Sociology or Economics; Newspaper Writing; American History (Administrations); Sociology or Economics; American History (Administrations).

I.—Rhetoric and English Composition. Outlines of rhetoric, with exercises and themes.

II.—Physics, one term; Financial and Monetary History of the United States, and Money and Banking, one term; Constitutional and International Law, one term.

III.—Narration and Description. Study of general principles, with exercises. A fundamental course, leading to V*a*.

IV.—Exposition and Argument. Study of general principles, with exercises and briefs. A fundamental course, leading to V*a*.

V*a*.—Newspaper Writing. A survey of all departments of newspaper work, with practice in reporting, in editorial and feature writing, and in proof-reading, in connection with local and other newspapers. One or more of the subjects named may be chosen for special attention. To be preceded by Course III. or Course IV., and by one or more courses in English literature, in addition to I. and II., 1st term, daily, at 11:15. Professor Hopkins.

V*b*.—Newspaper Writing. A continuation of Course V*a*, involving assignment to regular newspaper duty, and, in addition, the special duty of some department of newspaper making, with thesis based on the literature of the subject and on the study of representative periodicals. A conference course, open only to those who have satisfactorily completed Course V*a*. 2d term, daily, at 10:15. Professor Hopkins.

WE REMEMBER.

PORTLAND, ORE., Dec. 22, 1904.

*To the Editor of the National Printer-Journalist*s

MY DEAR COLONEL HERBERT:—It is a long time since you have heard from me. When you come to Portland next year you will see something that will surprise even your own dear self—Fair buildings, and a World's Fair that will surpass anything ever seen in this or any other country. Have you forgotten that you were the first to launch the project? You did it at a meeting we had in the Chamber of Commerce, April, 1899, and the National Editorial Association endorsed it at their National Convention held at the Marquam Theater.

Wishing you the compliments of the season and a happy and prosperous New Year, I remain,

Sincerely yours, DAN MCALLEN.

[We have not forgotten and hope to be on hand to rejoice with our friends of the Pacific Coast over the wonderful accomplishment. The Lewis and Clark Exposition will undoubtedly celebrate most creditably one of the greatest events in our National history. Without the fruits of the Lewis and Clark Expedition the United States would never have occupied the pround position this country now holds, and, as we look forward, we think this is but the beginning. The Pacific Coast has possibilities that as yet seem as only a dream of mighty promise.—The Editor.]

W. H. WOODWARD, DECEASED.

The death of Mr. William H. Woodward, President of the Woodward-Tiernan Printing Co., St. Louis, removes another of the prominent members of the United Typothetæ of America. He was a most genial gentleman and devoted a life-time to his calling and the building up of his business at St. Louis, in which his three sons, who honor such a father, survive him. He was one of the founders and the seventh President of the United Typothetæ and presided at the Convention held in Chicago in 1893. He was always present and usefully active at the conventions of that body and was highly esteemed by the employing printers throughout America as well as in his own home. The readers of the NATIONAL PRINTER-JOURNALIST have been made familiar with his great establishment and his life work. Some few months before his death he suffered from Bright's Disease, but had for several weeks been in usual health and thought that he had fully recovered. The night of his death he attended a banquet of prominent citizens interested in raising funds for founding a museum for the city and to secure the offered liberal donations, from different individuals and nations, of exhibits at the Louisiana Purchase Exposition. He had joined heartily in the festivities and was one of the speakers. He made a short address and tendered $1,000 towards the enterprise. As he settled back in his chair, he became pallid and, in a few minutes, was dead. It is supposed that the exertion and excitement of the evening had been too much for his weakened powers. There was no other apparent cause for his sudden demise. He died while giving his means and energies to the aiding of noble enterprise. His death was on the evening of November 30th, in the seventy-first year of his age. He had done his life's work well, nobly and successfully. He leaves an honored name and a prosperous, well-established business to his children.

Past President and Mrs. P. V. Collins gave a dinner to the editors and other employees of Mr. Collin's publications on December 24th. There were seventy guests in all. The editor of this paper returns thanks for an invitation to be present on this occasion. The practice of providing such occasions by publishers and editors for the pleasure and encouragement of their employees is wise and commendable.

MORE WORK THROUGH PUBLICITY

BY HARRY A. WOODWORTH

Address all Communications for this Department to
349 Jarvis Street, Toronto, Canada

One of the most unique things in printing-advertising is a two-column advertisement, nine inches long, which appears in the *Daily Herald* of Cheboygan, Mich., and consequently, takes not far from a quarter of a page. The ad is headed, "A Leading Trade Journal Commends McMullen Printing," and the introduction reads:

The *Herald* takes pleasure in reproducing from the September number of the NATIONAL PRINTER-JOURNALIST, Chicago and New York, the following very complimentary notice of the work of the McMullen Printing Co., of this city. The NATIONAL PRINTER-JOURNALIST is one of the leading trade journals of the world, and when it devotes so much space to the work of a country printing office, there certainly must be merit attached to it.

The quotation is a critique which I made especially long chiefly because it referred to the public recognition of a good compositor—the same being Albert K. Ness—by broad-minded employers. It was in accordance with suggestions to employers of good workmen frequently made in this department. Not only is the reading matter quoted from the NATIONAL PRINTER-JOURNALIST, but the reproductions are faithfully delineated as they appeared in this journal. Mr. Ness advised me at the time that my write-up was not only appreciated by him, but also very much by Mr. McMullen. And the latter gentleman is certainly keeping up his large, twentieth century policy of giving public credit to those who work with him. This is a kind of boss to be cordially commended—and faithfully served. I hope Mr. Ness will send me another copy of his four-leaf clover blotter—with its real four-leaf clover. It was taken from me—and I haven't had very much luck since.

The Hampshire Paper Company is putting out some of the handsomest advertising that has ever been done by manufacturers of paper. Several of their latest advertisements have been in the form of documents, with seals, from which hang flyers made of the different stocks the firm wishes to advertise. These hangers are but one inch in width and yet give as thorough and clear an idea of the stock advertised as would a whole page of the stock.

One of these documents is, as is explained on the outside, "Long, but interests you." It is devoted to an exposition of the recent increase in price of Old Hampshire Bond, and explanations of why this increase is necessary. It is a very attractive piece of printing. The printers received this with a letter from the treasurer, in which he states, "You will be pleased to find that we have made such arranagements on the envelopes as to make only 10 per cent increase necessary instead of 15 per cent," etc. A very important part of the letter as regards the question of publicity is the following statement:

We enclose also a copy of an announcement we have sent to consumers, telling them of the change in price. This announcement will make it easier for you to explain the slight increase in price you have to charge for Old Hampshire Bond stationery and printed matter. If you would like extra copies to send such of your customers as may not have received the announcement direct from us, please write us.

We are already, as doubtless you are, feeling the effects of our magazine campaign of advertising, in a constantly growing demand for Old Hampshire Bond. We believe that this advertising work can be supplemented to your profit and ours by coöperation between us, and we shall be glad to receive suggestions from you as to how we can make known to your immediate clientele the merits of Old Hampshire Bond.

The question of wholesalers working together with retailers is one that has been largely treated in these columns. The Old Hampshire Bond people have done more extensive and taking magazine and periodical advertising than any other paper firm ever did. Their letter shows the growing appreciation of the printer as a factor in the selling of paper. And their willingness to work with the printer, as exemplified in their letter, also shows their realization of the fact that it is a good thing to have the printer work with them.

The Beck Engraving Company of Philadelphia and New York, issue a three-color calendar monthly. The one for October shows a Hallowe'en design that would make the illustrator of "Tam O'Shanter" look like a bawbee.

The Philadelphia *Evening Bulletin* is still in that adjunct of its business which includes the turning out of first-class printed matter. The *Bulletin* is one of the greatest advertising mediums in America, partly because it gives advertisers good service, and partly because it believes in advertising a good thing even when the thing happens to be its own business. No false modesty prevents it from proclaiming the fact that "in Philadelphia nearly everbody reads the *Bulletin.*" It has just sent out a mailing-card in which the use of tint-blocks gives a copper-like appearance to a noble lion. An opening paragraph calls attention to another maxim they wish to emphasize, viz., "The Lion's Share of your advertising should be in the *Evening Bulletin.*" A folder just issued is on a peculiar stock which is greatly vivified by the attachment of an embossed slip, all of which is in gold. This contains the famous motto, which by this time must surely have induced *all* (barring the blind and the illiterate) to read this live Philadelphia paper.

The Randall Printing Company, St. Paul, Minn., issues a mailing-card with reproductions from the *Dispatch* and the *Pioneer Press* of that city. The reproductions of the pieces clipped from the paper are particularly good. The exact color of news stock is splendidly imitated. The same praise may be given the handwriting, as it would be hard for the lay mind to conceive the possibility of its being done by an engraving process. Part of the matter surrounding the newspaper extracts reads, "Newspapers Praise Randall Workmanship." The extracts refer to a booklet entitled, "Across America," issued by the Great Northern Railroad. The design on the outside of the mailing-card is evidently one of those in which the Randall Printing Company have called upon the work of the artist to produce a setting to the type, rather than upon the exclusive use of curved rules.

Here is a quotation from Ruskin, which I found on the wall of a Toronto artist, whose use should help those printers who are preaching the gospel of Better Work, and who know how impossible it is to make a fair living at it unless their customers realize that its natural accompaniment is Better Prices:

All works of taste must bear a price in proportion to the skill, taste, time, expense and risk, attending their invention and manufacture.

Those things called dear are, when justly estimated, the cheapest; they are attended with much less profit to the artist than those which everybody calls cheap.

Beautiful forms and compositions are not made by chance, nor can they ever, in any material, be made at small expense.

A composition for cheapness, and not for excellence of workmanship, is the most frequent and certain cause of the rapid decay and entire destruction of arts and manufactures.

"Sanders gets the Medal." This is the title—would I could show the fine color-scheme of the cover—of a booklet announcing the award made by the St. Louis Exposition to the Sanders Engraving Company. They are naturally pleased at this honor—and also by the very large order of 20,000 engravings and 42,000 electrotypes which were placed with them by the folks who directed the Fair.

The *Inter-Mountain* Publishing Company, of Butte, got out, at election time, a card containing the popular and electoral votes for president in 1904, that is a "beaut." This office is strong on tabular jobs, and knows how to enliven statistics with a handsome setting.

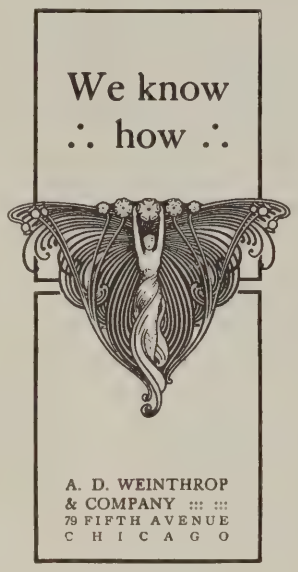
In a recent letter from Friend Biggers, he says, referring to a recent critique:

By the way, your criticism about blotter was good. I intended it to have reference to me in, "It is a laudable ambition that aims at doing better things than have been done before him." I see now for the first time it refers to no one and even kills the first meaning. I never publicly criticise my competitors when I can help it, and that is responsible for the bull. The original quote was, "It is a laudable ambition that aims at doing better things than one's neighbors," but as other shops are neighbors on both sides I took the liberty, of changing and you see the result.

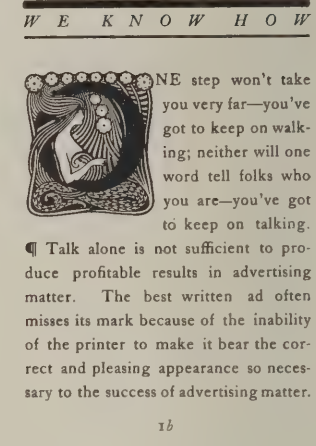
I remember Mr. Biggers writing me once on this "neighbor" question, but I never learned if he got the criticism I forwarded him. He must certainly have good neighbors if they can approach him as artist-typographers. I tell you, "The Sign of Quality" is grand! And the delicate blue ground of the stationery on which it is printed with the Golden Dragon (in gold) doing his little printing stunt, makes it especially pleasing. I like the blue space between the Old English head and the remainder of the job. A good inch in such a place is hypnotic.

I do not think that I have ever before reviewed the work of an engraving concern in New Orleans, but I must particularly congratulate the Romanski Photo Engraving Company of that city on the large oblong sheet they have just issued in order to show different grades of their work. But one illustration is used; and this is not only varied as to screen, but also as to size and shape and outline. The only thing missing is a specimen of the vignette.

A booklet entitled, "We Know How," is one of the latest productions in A. D. Weinthrop & Company's advertising. The first page of the inner portion of the booklet consists of the design shown as No. 1a, widely margined. The ornament and address are in a light orange. The envelope corner has this design with the exception of the address, and the color of the ornament is of a regular tangerine shade. Two of the inner pages of the booklet are shown in Nos.



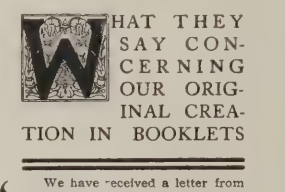
1a



WE KNOW HOW
ONE step won't take you very far—you've got to keep on walking; neither will one word tell folks who you are—you've got to keep on talking.
¶ Talk alone is not sufficient to produce profitable results in advertising matter. The best written ad often misses its mark because of the inability of the printer to make it bear the correct and pleasing appearance so necessary to the success of advertising matter.

1b

1b and 1c. The first sentence of the book sounds rather familiar, but it serves as a good introduction to thoroughly



WHAT THEY SAY CONCERNING OUR ORIGINAL CREATION IN BOOKLETS
"We have received a letter from the Bryan Mfg. Co., commending our booklet which you printed for us, and asking address of printers. We have written them giving your address and trust you may secure some business from the inquiry. Perhaps you may not know that the copy for this booklet was submitted to two or three advertising sharps and was universally condemned. Considering the success it has met with we feel proud of the booklet.
Yours truly,
THE A. H. ANDREWS CO."

1c

original matter. No. 1c is an example of a very taking use of quotation marks. These are in orange, as are the "W" of the initial, and the rules.

From an old friend—Will J. Cota, of Burlington Vt.—comes a cheery letter, part of which goes to show that he agrees with Mr. Wood and myself as to our objections to the card containing some of Bill Spooner's Philosophy, criticised in recent issues of the N. P.-J. The "little story" it re-

THE SHELDON PRESS, HIGH GRADE PRINTING

TELEPHONE, 11 21

2a

minded him of is much appreciated. Mr. Cota says he hopes to send me some "publicity" ere long. In the meantime I reproduce his new letterhead (No. 2a), which is in brown and green (ornaments green). It is a sample in keeping with the age of ornamentation we are getting into as a relief from so much paneling. In the hands of a less artistic artist than Mr. Cota the large ornament might have appeared somewhat unwieldy in such a job—but the handling, in connection with the color-scheme, is so daringly original and so striking that

it safely passes the border-line between mere grotesqueness and art. I wish the envelope in which Mr. Cota's letter came had not been torn as to the corner design. There's not the slightest hint of the bizarre about this—it is of the art which combines simplicity with modernness and originality. Send me another letter soon, won't you?

HE BUSINESS MAN'S STATIONERY is an advertisement, a standard by which the stability of his business is judged. The largest results are secured by the use of neat, attractive advertising. Let us do yours in this manner. No job too small, none too large. Books, Calendars, Folders, Cards, Souvenirs, one or more colors. Our prices are reasonable, yet it is quality not price that makes the ledger balance on the right side. Prompt service and right qualily at

THE SHELDON PRESS, BURLINGTON, VERMONT

2b

Ah! here's a card left in the envelope (No. 2b)! What's wrong with this as a high-class, up-to-date and beyond specimen of publicity? A yellow sky is back of the initial—and that fine Roman face, as open and honest as the face of boyhood, looks indeed well on such a job. Too bad that such types could get the word "quality" wrong. But the quality of the job as a whole is O. K.

The headlines on the Rowe Press job (No. 3a) are attractive, though there is nothing "smart" or "flip" about the simple phrase, "Getting Work Out on Time." But all we who have had dealings with printers have suffered from *not*

GETTING WORK OUT ON TIME

ONE of the good things that can be said about The Rowe Press is that the work is always got out on time. There is a reason for this: every part of our equipment is the very best, all the latest labor-saving machinery and devices are used, and our employees are experts in their line.

¶This is why we can give you your Printing promptly and at the same time maintain the high standard we have set for our work.

THE ROWE PRESS
BATH, MAINE

3a

Illustrations From New York

WE beg to direct your attention to the first issue of our stock cut catalog.

"Illustrations from New York" is issued by a firm whose fashion drawings and advertising designs are known among the best.

As far as possible these illustrations will approach the standard of magazine illustrations. In this way the value and interest of newspaper advertising will be increased. Apropos of this, it is well to state that our firm is composed entirely of artists and is the largest of its kind in the United States.

These artists have studied in the best schools of Europe and America.

The drawings are made under personal supervision of Mr. W. T. Van Dresser, formerly instructor in the Art Students' League of New York.

In regard to styles we have the most reliable sources of information.

No. 4

getting work on time. So the headline appeals in a way that the "smart" ad-writer could not better. The whole "talk" really refers to the one element of promptness. To the job itself it is left to tell the story of good work, though this virtue is tactfully and modestly alluded to in the talk. The result is a good advertisement. The larger spaces between the rules are in various tints to harmonize with various tints, so cannot be properly shown in a reproduction. But this blotter is a specimen of good color-work as well as of good composition. And though there is no attempt at typographical high-jinks or at glittering verbal generalities, it is a first-class advertisement.

The very latest folder of the Rowe Press is on stock of a very light shade of brown and has a deckled flap, on which is very simply printed, "The Value of Little Things." The inner portion shown as Reproduction No. 3b) has the

THE VALUE OF LITTLE THINGS

HERE is no line of work in which the value of little things is more plainly illustrated than in the printer's art. Just the right proportion of type, the correct size and grade of paper, the appropriate shade of ink. These things and countless other little details go to make the perfect piece of printing

No other print shop in the city has the reputation for fine printing enjoyed by THE ROWE PRESS. The attention to "little things," the careful work in all departments, the determination to make every piece of work a little better than the last has placed our work in the lead

If you are not a customer of ours we ask you to try us on your next order If you have already favored us with your business in the past we ask you for a continuance of the same, assuring you that not only will we continue to keep up the quality of our work, but that with our constantly increasing equipment we shall be in a better position to serve your interests than ever before.

THE ROWE PRESS
COR. WASHINGTON AND SCHOOL STS. BATH. MAINE

3b

inner rules, the initial and the paragraph marks in light green, and the balance in brown. The column arrangement in this job is a little different from the ordinary. The crease of the body of the folder comes between the two columns. It is a very tasteful example of the use of but one series.

An appropriate use of Cheltenham and Engravers' Old English is seen in this first page of a folder (No. 4) used by Stone, Van Dresser & Company, New York. The stock is a light yellow, antique laid. This is reproduced chiefly as an illustration of a particularly effective use of a large initial. The initial serves to capture the attention, especially as it is printed, like the other Old English, in green. The ornamentation of the initial is in black, as is the rest of the job. Sometimes the use of initials appears to me to detract from the advertising force of an advertisement. But not in a case like this.

From Janesville, Wis., and from Janesville, Minn., two envelope corners—both original. But the stock on which the Janesville (Wis.) specimen is printed forbids reproduction. The workmark on this job is particularly striking.

I'll print the Minnesota specimen (No. 5). It comes from E. B. Jones. Its paneling is odd. It is in three colors. "Neat and Attractive" is in a different color from that of "Job Printing." There being so much white space at the

left of the design, there should undoubtedly be a fuller line at the bottom. This is not so good as the jobs Mr. Jones

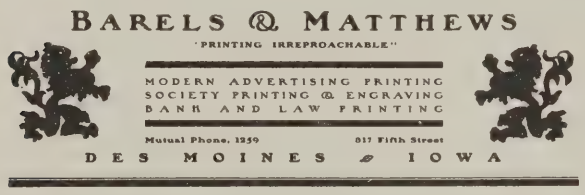
enclosed in the envelope. But it has points which hold the attention.

The chief charm of the letterhead of Barels & Matthews (No. 6) lies in the color scheme. The "B" and the "M"



No. 6.

and the two top rules are in a yellow which resembles a bronze size, and the ornaments are in an olive-green with a bright finish. It seems as if both of these colors were in harmony in the rind and interior of a citron. The balance is in a brilliant black. It is a remarkable job in respect to composition as well as to color.

On Tuscon Old Hampshire bond stock, in gold and brilliant red, this memo head of the *Courier-Democrat* (No. 7) is even more striking than in its reproduction. The top line of type, the initial "C" with the word "The" before it, and the

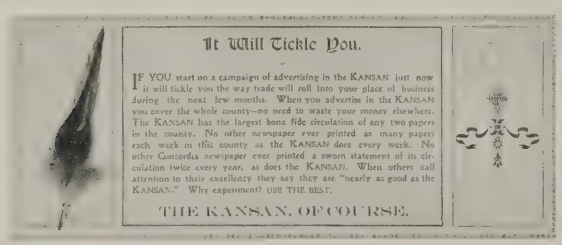
No. 7.

initial "D" with the hyphen before it, as well as the words "Job Printing," are in red. I believe that I gave another job of Mr. Livingston's a certain prominence in the November number. This was also remarkable as being composed in an original manner entirely in one new series of type. Mr. Livingston is enhancing the splendor of the record he made in Conway.

A genuine feather is pasted over the left panel of the *Kansan* blotter (No. 8). In this job the rules are in red;



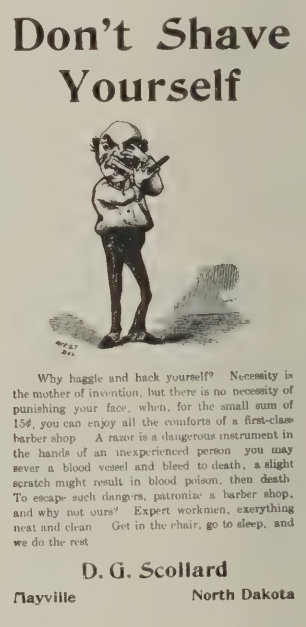
It Will Tickle You.
IF YOU start on a campaign of advertising in the KANSAN just now it will tickle you the way trade will roll into your place of business during the next few months. When you advertise in the KANSAN you cover the whole county—no need to waste your money elsewhere. The KANSAN has the largest bona fide circulation of any two papers in the county. No other newspaper ever printed as many papers each week in this county as the KANSAN does every week. No other Concordia newspaper ever printed a sworn statement of its circulation twice every year, as does the KANSAN. When others call attention to their excellency they say they are "nearly as good as the KANSAN." Why experiment? USE THE BEST.
THE KANSAN, OF COURSE.

No. 8.

the balance is black. This idea of using a feather with some suggestion as to "tickling," has been used by other printers on specimens forwarded to this department, but as this is an old blotter the idea may have been originated with the *Kansan*. I remember that Mr. Coyle, of Frankfort, Ky., used it on the outside flap of one of his news stock folders. I never mentioned this in regard to Mr. Coyle before—I fear that I have been neglecting Mr. Coyle of late, anyway—but this gentleman will realize from my remembering even his smaller specimens throughout the year, that his samples, and his lengthy and cheering letters, are not taken down from Memory's wall. To return to the *Kansan* job, it is possible that a more appropriate ornament or illustration should have been used in the right hand panel. However, the job has a decidedly neat appearance.

A card entitled "Cracker-Jack Printing" is received from the Nolan Bros.' Printing House, Brooklyn, N. Y. It is printed in fire-bronze and green. I had just been smoking a cigarette at the time of opening the envelope, and had dictated the first sentence of this critique before I reached for the supposed cigarette, and found it to be a burnt match pasted and wrapped in a slip of white paper. The matter

No. 9.



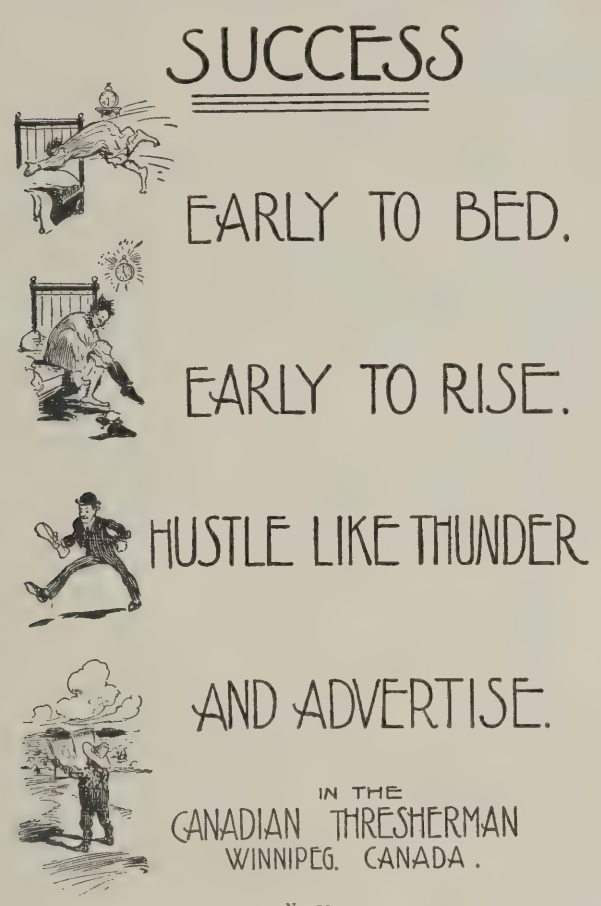
Don't Shave Yourself
Why haggle and hack yourself? Necessity is the mother of invention, but there is no necessity of punishing your face, when, for the small sum of 15¢, you can enjoy all the comforts of a first-class barber shop. A razor is a dangerous instrument in the hands of an inexperienced person; you may sever a blood vessel and bleed to death, a slight scratch might result in blood poison, then death. To escape such dangers, patronize a barber shop, and why not ours? Expert workmen, everything neat and clean. Get in the chair, go to sleep, and we do the rest.
D. G. Scollard
Mayville North Dakota

No. 13.

on this slip is reproduced as No. 9. "Cracker-Jack Printing" is thus explained: "To give particular people 'what they want when they want it,' we employ a cracker-jack at the head of every department of our business, who is directly responsible for his part in your work." The introduction of the word "your" in the last sentence in place of "our" is instinct with advertising genius. The cracker-jack who designed the picture of "the Napoleon of Printers," whose name certainly seems to be a corruption of that of one who was a cracker-jack in his day, deserves commendation for a very clever idea.

The mailing folder from the *Canadian Thresherman*, Winnipeg, Man., (No. 11) is opened by tearing a glued and perforated edge. The parody on the old saw is not altogether original, and is made more euphonious, or rather euphemious, in the third line than the original version, whose last word of the third line was alliterative with "Hustle," even though it does not scan so well. The job is in red and black and

with the very striking illustrations, makes an admirable advertisement for a paper that is admirable in every way.



No. 11.

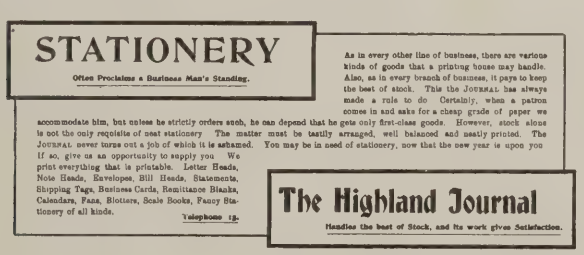
Harry A. Woodworth, 349 Jarvis St., Toronto, Canada.

DEAR SIR:—As I have started to send in samples of my job-work, I thought I would stick to it and send some in every now and then for criticism. Enclosed please find another lot of samples. As you may notice, some of the work is all done with an old set of rules, and so it is quite a job to make a close fit. I thank you sincerely for past comment and reproductions.

I was about to believe our Mr. Woodworth was gone forever. I am just in receipt of the September number of N. P.-J., and appreciate very much the reproduction of my blotter, and also the write-up. The number is a "beaut." from beginning to end, and is very interesting, and again I say, "It ought to be in the hands of every printer." Wishing you success, I remain, Yours truly,

Highland, Ill. JOHN HEBRANK.

Well, now, Mr. Hebrank, what's the matter with such rule work as this (No. 12)? I've seen worse mitred jobs. "Stationery" and "The Highland Journal" are red; the balance



STATIONERY
Often Proclaims a Business Man's Standing.
As in every other line of business, there are various kinds of goods that a printing house may handle. Also, as in every branch of business, it pays to keep the best of stock. This the JOURNAL has always made a rule to do Certainly, when a patron comes in and asks for a cheap grade of paper we accommodate him, but unless he strictly orders such, he can depend that he gets only first-class goods However, stock alone is not the only requisite of neat stationery The matter must be tastily arranged, well balanced and neatly printed. The JOURNAL never turns out a job of which it is ashamed. You may be in need of stationery, now that the new year is upon you If so, give us an opportunity to supply you We print everything that is printable. Letter Heads, Note Heads, Envelopes, Bill Heads, Statements, Shipping Tags, Business Cards, Remittance Blanks, Calendars, Fans, Blotters, Scale Books, Fancy Stationery of all kinds.
Telephone 18.
The Highland Journal
Handles the best of Stock, and its work gives Satisfaction.

No. 12.

is black. The use of white on the blotter, both within and without the panels, helps the contrast with the more solid portion. Mr. Hebrank is a "comer," all right. Come again.

In a very pleasant letter from Dell Shaw, of Mayville, N. D., he asks what I think of the card he has just gotten out for a barber, (No. 13). Some years ago suggestions appeared in this department concerning local trade which this recalls. The card is in blue with the exception of the blood on the face of the shaver, and this is not blue blood. I believe that I once objected to the brutality exemplified on a printing advertisement which was exceedingly bloody, but I cannot find any objection to this one on that score, as it strikes me as rather funny, and in good keeping with the advertisement. There is a great deal of trade that can be secured by the local printer with ideas, by getting up such ideas, in spare moments, for possible customers. Mr. Shaw's paneled design, which he places on the upper left-hand corner of the strongly-riveted pasteboard envelope that he sends, is a rather nice specimen of composition. He does not tell his business on this corner design, but he has a striking enough name to have his occupation well known in a town the size of Mayville.

Here's a job (No. 14) that is altogether in Gothic. Blotters with no other type than Gothic have been shown in these pages before, but this is the first specimen of one containing anything like so much matter. How neat it is! Note that each little "talk" about printing contains five full lines. This

No. 14.

is an instance of advertising writing as applied to certain desired effects in advertising printing. I don't think the art is much taught in the correspondence schools, but it is one in constant use by the advertising man who combines writing and designing. It is harder than writing poetry.

The words "We Do Printing" are in red on this job—the balance is in brown. Too much matter, and too little of it advertising matter, some persons might say. But I don't think much of such dictatorial opinions regarding publicity.

A most interesting letter this, from our old friend, Col. Coyle, of Kentucky:

Col. Harry A. Woodworth, Toronto, Canada.

MY DEAR FRIEND:—You asked what had become of the *Imp* in the September number of the N. P.-J. Well, I will endeavor to tell you a little story of my career in the capital city of Kentucky. I came here about four years ago to take charge of the Kentucky *Journal*—then an administration paper—and remained with it for eight months. I had a good (?) position and my duties consisted of doing all the buying, doing the estimating of every description, making all contracts, doing all the job work, doing the press work on the cylinder, setting all ads, arranging all headlines, and most of the time assisting in other departments. Now you see that is what some people call a "snap," but I came to the conclusion that it was too much of a "snap" for me, and began to look for brighter fields with more revenue. During my connection with the *Journal* I received many nice compliments from the State press as well as from other competent judges, and at last I concluded that I would go into business for myself—"sink or swim." Well, I had no "dough" at that time, so I bought my shop on time. I began to study the trade journals to get new ideas—to get out something different from the "other fellows." I did so. I then began an advertising campaign—telling the people that I had a brand new outfit, new faces, and believed I could get out a little more stylish, a little more up-to-date work than the other shops had heretofore turned out, and I would be glad to show samples, etc. Then I began to issue the *Imp*. Well, the result was better, far better than I had expected. The one thing I impressed on my customers was that good work and good material would cost a little more than the inferior grade of work that had heretofore been put off on them. The merchants realized this fact and now I have the very best lot of

customers in the city, customers who are willing to pay for good printing, and pay the bills when they are presented. In fact my business increased so rapidly that it was impossible for me to devote the time I desired to the *Imp,* so I discontinued it for a while, but this winter I expect to take it up again.

Every few months I add to my office and now I have a very nice little country print-shop. A great many of my patrons make me write their advertising matter up for them—they say that I can get it up in a more catchy style than they can—and the beauty of it is that they are willing to pay for it.

Another of my ideas that has proven to be a very successful one with me is to get out a proof of some catchy advertisement and take it to a customer and show it to him. If he wants it, all O. K., if not, I am out scarcely anything. But I have yet to find the first customer to turn me down on this kind of proposition.

I have advantage over my competitors, inasmuch as I am the only one in the city that takes a trade journal—the only one who tries to get out something new and different.

I wish to thank you most heartily for the help I have received from your department—as I believe I have been benefited more by it than anything else. My opponents are cutting prices to beat the band, but I still claim good work is worth good money, and have no trouble in keeping busy.

I send you a few samples under separate cover. The white blotter was gotten out simply because every other man you see on the street is a candidate for some office and I thought it would be timely. It filled its mission well.

With best regards, and hoping you will never give up your position with the N. P.-J., I beg to remain till further notice,

M. Delvaux Coyle.

The Coyle Press, Frankfort, Ky.

The white blotter to which our friend of the land of colonels and candidates alludes, is reproduced (No. 15). It's a nicely whited-out job, and "candidatus" means arranged in

ordinary, both as to style and wording. But one looks for something out of the ordinary from the Anti-Waste-Basket printers. This particular sentiment will go on my workshop wall—a good half-room away from the W. B.

At the left-hand side of the first page of a fine laid oxblood cover, is the representation of a star with golden rays. The title of the book is, "The Star of Canada." The inside title page contains simply the representation of a crown and the title "Canada," with these words beneath, "The Brightest Gem of the Crown in the British Empire." Alternate pages throughout the book are devoted to a discourse of which the first sentence furnishes the text, "These are growing times in Canada." The other pages show the deep meaning contained in the title on the cover, as they consist chiefly of "expressions from advertisers," as to the merits of that exceptional medium, the Montreal *Star.* It may be a surprise to many advertisers that Geo. L. Richards, publisher of the *Brown*

A leading advertising expert recently said of it:—"THE FAMILY HERALD AND WEEKLY STAR, published in Montreal, Canada—circulation 125,000—gives advertisers a much wider distribution among a better buying class of readers, at a very much lower rate than any combination of other weekly papers published in Canada."

No. 17.

Book, Boston, Mass., gives the following remarkable expression of opinion as to the merits of an advertising medium published in Canada:

I regard the Montreal *Star* at the very head of the list as a revenue producer for advertisers. I use 640 papers for my advertisements, and often spend one hundred thousand dollars in one blast, so I should know something about advertising. I suppose it is not to my interest to say it, and I suppose it will cost me money to say it, that I regard the Montreal *Star* advertising as the most remunerative of all my advertisements, and, as for price, if I had to pay the Montreal *Star* a great deal more than its tariff rate I would consider it cheap."

One of the pages (No. 17) is reproduced as being a decidedly unique display for the advertisement of a newspaper.

Remember, the door-mat of this department has, in 288-point Old English, the word "WELCOME," which I hope, may be read by all new contributors as they approach the threshold:

Harry A. Woodworth, 349 Jarvis St., Toronto, Canada.

DEAR SIR:—I am sending in separate package a few samples of my work in the "publicity" line. This is my first visit to your department, but I have been much interested in and benefited by it in more ways than one..

The "Do It Now" blotter and booklet are the creation of my brain; not so very much to its credit, to be sure, but my employer put it up to me to produce something, and as I believe it is better to make an attempt and fail than to back down, whipped without making an effort, this is the result. Any suggestions as to their improvement will be appreciated.

The other samples are my workmanship only, the copy being furnished.

I came to the conclusion some time since that my ability, such as it is, as a printer, is some points in excess of my ability as a writer.

Trusting that this epistle will not weary you much, and that you will have the kindness to point out the weak spots so my next effort will be better, I am,

Very sincerely yours,

Newport, R. I. MERTON L. VINCENT.

Well, Mr. Vincent, I have carefully studied the ad-writing you would fain disparage, and I must say I think it is as simple and strong as is the typographical work. There is no apparent striving after effect, but the writing has a story to tell, tells it, and stops, there being just enough embellishing frills of language to "ornament the construction." That's a pretty good test of ad-writing, it seems to me.

No. 18a.

Mr. Vincent, describes himself as a "Manipulator of Types and Designer of Things Typographic, in ye town of New Port, Rhode Island." The blotters are far ahead of the ordinary run of blotters. One of these (No. 18) is reproduced, particularly because One of these (No. 18) is reproduced, particularly because it shows one of the handsomest name-plates ever produced by a printer. It is especially pleasing in the original colors, which are a sort of salmon-pink and a brown. The composition is also worthy of note. The disposition of the white space, and the arrangement of the words, "Favor us with your next order," are especially pleasing. Mr. Vincent also sends a folder on a sage-green stock, on the title page of which appears the title, "More Work," which is suggestive of the motive of this department. There's a modest little note at the bottom giving Mr. Vincent's compliments. I

LET me but do my work from day to day,
In field or forest, at the desk or loom,
In roaring market place or tranquil room;
Let me but find it in my heart to say,
When vagrant wishes beckon me astray—
"This is my work; my blessing, not my doom.
Of all who live, I am the one by whom
This work can best be done, in the right way."

Then shall I see it not too great, nor small,
To suit my spirit and to prove my powers;
Then shall I cheerful greet the laboring hours,
And cheerful turn, when the long shadows fall,
At eventide to play and love and rest,
Because I know for me my work is best.

No. 18b.

should like very much to reproduce this cover design with its charming use of rules and ornaments. The folder is somewhat unique as it serves only as a wrapper for a slip of folded white deckle-edge stock on which this poem appears:

Mr. Vincent is one of those workers to whom work "in a tranquil room" is afforded. But nevertheless, there are times when a printer feels it a particular blessing that the strenuousness of his work is relieved by such tranquility as a well-fitted print-shop affords. William Morris, who has probably done as much towards modern artistic printing as anyone, did not like the leading of old-style types. But were he to see this job as it looks in its soft green in the midst of rough surface stock, he would doubtless admit that it savors of "sweetness and light."

No. 18c.

A folder-booklet with a flap for the address is a particularly fine job. The inner title-page is reproduced (No. 18c). Several pages of the booklet are devoted to "Opinions of the Critics," of which the most are, as usual, from the NATIONAL PRINTER-JOURNALIST. Mr. Vincent's name is, on these notices, modestly indicated solely by a 3-em dash. The booklet is printed in Cheltenham Old Style and is admirably displayed.

Harry A. Woodworth, 349 Jarvis St., Toronto, Canada.

FRIEND WOODWORTH:—It has been a long time since I have dropped in for a chat with any of the N. P.-J. department editors, and in fact quite awhile since I have worked at the case. But now that I am at it again I feel that I should renew allegiance to the instructors in the school of progressives. You, too, it appears, have been pressing upward during the interim, and have practically left this country, though your counsels and advice are still with those who read the JOURNALIST. I must admit that I haven't paid as much attention to my lessons in the past year or so as I should, and when I finally get broken in again I shall try to submit you samples that will be creditable enough to elicit your praise. The little bundle which comes with this contains only black and white stone proofs of some little things in printing—just ordinary work—without any distinction as models of good typography. Ever since I left the Inland Type Foundry I haven't been doing much

in the line of good printing. Occasionally I could not resist the smell of ink and would break in for a short time, eventually returning to the task of "toting" a note-book and pencil for the daily press. And of course my interest waned without the stimulus of actual work. So it is easy to figure out why I have been dropping behind the more studious ones, who have been pegging away industriously.

Printing seems to claim its own, I see, and even Will Bradley is back in the ranks after deserting to enter the world of illustrious designers. In his recent typographic specimens, notably the *Chap-Book*, he seems to have been in a happy mood indeed. Satisfied, no doubt, to be again a knight of the stick.

Fitzgerald, Crombie, Angre, Stutes, Walling, Gress, Dippy, et al, of the "school," also seem to be on the upward track.

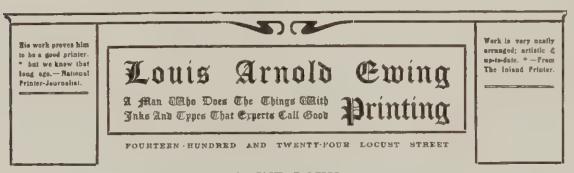
But, say, Woodworth, isn't there ever going to be "something doing" in the cover contest line? If I remember correctly, Brother Woods intimated that there was something "on" at the head office a long time ago, but no announcement of such has come to my notice.

Contests are good things to have, as practice is the only means of perfection. I have never yet been returned a winner, except in some little out-of-the-way contests. Of course, personal pride asserts that I am a prize-winner all right enough, so I am only wishing for the opportunity to "astonish the world."

Seriously, though, I do believe we ought to rub off the rust and get into the work with more vim. Let's talk up something out of the ordinary in the way of contests.

Sincerely yours, L. A. EWING.

The above interesting letter had already been sent to the NATIONAL PRINTER-JOURNALIST by the time I received a large



This work proves him to be a good printer. * but we knew that long ago.—National Printer-Journalist.
Louis Arnold Ewing
A Man Who Does The Things With Inks And Types That Experts Call Good Printing

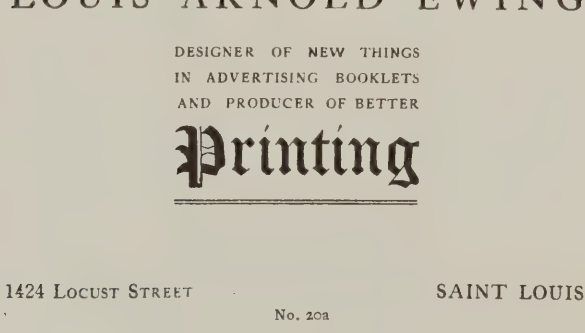
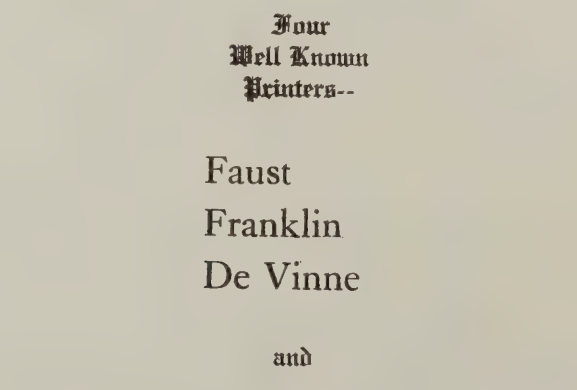
No. 19.

number of very excellent samples from Mr. Ewing. In this lot are many black and white proofs, with remarks on the



No. 20a

margin giving the color-scheme. On the specimen here shown (No. 19) the word "Printing" and parellel under-score rules, Mr. Ewing informs me, were in green lake and the balance



in bronze-brown. I have not seen this job in the original colors and should judge that the rules are rather better joined on the original job. Two pages of a folder are shown as Nos. 20a and 20b. Other admirable work of Mr. Ewing's will be reproduced in a specimen number. It will be seen that in the letterhead Mr. Ewing makes use of commendations of his work by the leading printing journals. The idea of using one star as a sign that something of the original discourse was omitted is a unique one.

In keeping with the ideas as to holiday advertising which have appeared in this journal is the Thanksgiving announcement of Kiesling Brothers, of New York. A very handsome card in olive-green and brown conveys the thanks of this live firm to their patrons for the generous support extended to them during the year. Rows of turkeys embellish both the card and the envelope.

In another portion of this instalment mention is made of the use of complimentary notices in newspapers concerning the work of the printers of the Great Northern Railway's handsome brochure, "Across America." The cover of this book is reproduced on a mailing-card as a specimen of the good work that the Northern Engraving Company, of St. Paul, Minn., can do. There is considerable clay-modelling in the design. The heading of the talk, is "Effective cuts make effective advertising."

A large folder in red and brown comes from the Keystone Type Foundry. The title of the folder is "Type for all Times," and the reading matter refers to and is composed in that grandly strong letter Standard Gothic. Examples are also given of the 20th Century Border, which harmonizes admirably with a Gothic.

Two or three years ago I printed a half-tone reproduction of a humorous pitcure used on printed matter by Robert J. Stillson, of New York, when he was moving to more commodious offices. On the top of the roller-top desk, near the coal-scuttle and the broom and the waste basket, was perched a cat; and the perspiration was pouring from Mr. Stillson's features. On a large postal card from the Beverly Evening *Times*, a somewhat similar design is used, only in this case the proprietor is shown on the ground with the paraphernalia of the office rolling from his shoulders, and the cat stretching itself after the journey. This is also a very funny picture, and I would reproduce it were it not that the most of it is a very heavy red background.

The Inland Type Foundry is still keeping up its custom of advertising by means of variously colored slips. One of the latest of these begins, "You sometimes wish to set a few words in heavier type than the text of your job. Go to your case and set a line." The "deadly parallel" is then brought into play. On one side it says, "If your type is the lack-o'-system kind, it will look like this." The alignment of the type to the left of the job is certainly bad. The other portion of the parallel reads: "If it is Standard Line as made at the Inland Type Foundry it will look like this." The weak point of this advertisement appears to be that the poor alignment was evidently composed with Standard Line, though there seems to have been considerable trouble taken to have it line so illy. The cleverest part of the job is this, at the end, "Hoping these few lines find you well, we are, yours, —INLAND TYPE FOUNDRY."

When Schoffer was printer, away back there in the fifteen hundreds, he didn't have Cheltenham; he couldn't get it. But you can, and can get lots of trade with it, too, for business men like Cheltenham.

The American Type Founders Company have done some remarkably clever booklet and circular advertising of late. Their *Chap-Books* which have already been treated in the other review departments, now form a very much appreciated portion of a number of *Chap-Books* which adorn my library. The very Bradleyish printings which have been called "The Mission Toys" are of the old-style new-style variety. By far the best of these advertisements is the book entitled, "From Grumbleville to Joyville." Such a book should make the designers of "The New England Primer" turn green with envy. It is a booklet that will be treasured by all who are interested in refined quaintness. It gives, in addition to admirably clever writings concerning the Mission Toys (which are shown in black and antique-red), a number of samples of how they may be used where it is not expeditious to have a design made especially for a particular job. The stock is in keeping with the old-style appearance of the booklet.

DEAR MR. COPPER: DO YOU REALLY BELIEVE THIS STATEMENT OF YOURS—"THERE HAS ALWAYS BEEN A QUARREL ON BETWEEN THE TWO—THE ADVERTISER AND THE NEWSPAPER"? AND IF IT IS SO, WHY SHOULD IT BE SO? AND I, WHO HAVE BEEN—AND AM YET—BOTH AN ADVERTISING MAN AND A NEWSPAPER MAN, HAVE NOT FOUND IT SO.

COULD WE HAVE SUCH GOOD NEWSPAPERS, BROTHER COPPER, IF WE HAD NOT GOOD ADVERTISEMENTS AND GOOD ADVERTISERS? COULD WE HAVE SUCH GOOD ADVERTISEMENTS, IF WE HAD NOT SUCH GOOD NEWSPAPERS? IF THERE HAS ALWAYS BEEN A QUARREL ON BETWEEN THE ADVERTISER AND THE NEWSPAPER, LET'S CALL IT OFF;—IT'S FOOLISH;—IT'S NOT IN KEEPING WITH THIS PROGRESSIVE NEWSPAPER AND ADVERTISING AGE.

IF WE ALWAYS LEARN A USEFUL LESSON FROM OUR MISTAKES, WE ARE IN A FAIR WAY TO BECOME WISE.

YOU MAY LOSE A CUSTOMER'S CUSTOM BY TRYING TO GET THE BETTER OF HIM IN AN ARGUMENT.

IT OFTEN HAPPENS THAT MORE DEPENDS UPON THE WAY A SCHEME IS WORKED OUT THAN UPON THE SCHEME ITSELF.

THE MAN WHO IS UNWILLING TO PAY A GOOD PRICE FOR A FAIR ARTICLE IS A POOR CUSTOMER.

THE ADVERTISING A PRINTER RECEIVES FROM A CUSTOMER WHO LEAVES HIM BECAUSE HE HONESTLY BELIEVES HE HAS NOT BEEN FAIRLY TREATED IS EMPHATICALLY THE KIND THAT DOES NOT PAY.

IT IS MUCH LESS DIFFICULT TO ADAPT AN ADVERTISEMENT TO A CLASS THAN IT IS TO CONSTRUCT ONE THAT WILL APPEAL TO EVERYBODY.

AN EXTENSIVE KNOWLEDGE OF HUMAN NATURE AND A FAIR AMOUNT OF COMMON SENSE ARE ESSENTIAL IN THE ACCOUTREMENTS OF AN ADVERTISING CAMPAIGN.

"ADAPT YOURSELF TO YOUR CUSTOMERS," I ADVISED A LITTLE WHILE AGO. ANOTHER HINT: ADAPT YOUR CUSTOMERS TO YOURSELF.

A LITTLE GENUINE COURTESY ON THE PART OF A PRINTER OR HIS ASSISTANTS WILL SOMETIMES DO MORE TO SECURE THE GOOD-WILL OF A CUSTOMER THAN ALL THE ADVERTISING MATTER THAT CAN BE WRITTEN.

THE MOST MISTAKES MADE IN ADVERTISING ARE NOT SO BAD AS THE MISTAKE OF NOT ADVERTISING.

THE ADVERTISER WHO IS THE MOST ECONOMICAL IN BUYING SPACE IS SOMETIMES THE MOST LAVISH IN FURNISHING COPY. WHEN THIS OCCURS IT MAKES A BAD COMBINATION, AND THE RESULT IS NOT LIKELY TO BE AN UNALLOYED SUCCESS.

IN ADVERTISING THE PRINTING BUSINESS—OR ANY BUSINESS—AN OUNCE OF INDIVIDUALITY IS WORTH A POUND OF IMITATION.

ONE MAY BE TOO ECONOMICAL TO MAKE MUCH MONEY TO SAVE.

A FOOL WILL NOT LEARN FROM ANYBODY, BUT A WISE MAN MAY LEARN SOMETHING FROM A FOOL.

ANYHOW, HERE'S FOR A HAPPY NEW YEAR! WE ARE FAIRLY SUCCESSFUL IF WE ARE BUT HAPPY.

I DON'T SEE WHY YOU SHOULDN'T GET SOME PRINTING TO DO IN THIS ADVERTISING YEAR OF 1905.

A NOTABLE NEWSPAPER.

The following letter, with all the claims of which we agree, was received after our article on the paper was printed:

MONTGOMERY, ALA., Dec. 16, 1904.

To the Editor National Printer-Journalist, Chicago, Ill.

DEAR SIR:—In am sending you, under separate cover, a specimen copy of the Christmas Edition of the *Advertiser*. I trust it will reach you promptly and in good condition, and that you will take the time to examine it carefully.

To my mind, this is one of the most notable newspapers, all things considered, ever issued from a perfecting press in the South.

It contains 92 pages, in eight parts; 26,560 copies of this issue were sold and delivered. Each paper weighed 24 ounces, and 39,840 pounds of extra quality of news paper were used.

From an advertising point of view, this issue established a new high-water mark for Alabama's only metropolitan newspaper. It contained 4,784 inches of local advertising and 2,741 inches of foreign advertising, making a total of 7,525 inches, equal to 358 columns of 21 inches each.

I am especially proud of this issue, not only on account of the volume of advertising handled, but of the unusually high character of the business handled. Notice, please, the splendid typography, the handsome illustrations, most of which were made by our engraving department, and the well-written copy. Surely, you will agree with me that the Montgomery merchants are a progressive lot, and understand, to a surprising degree, the art of advertising.

The fact that all of the matter in this big issue was planned and executed here by our various departments without having to call on outside help, and that none of our daily features were neglected, certainly indicates the ability of the *Advertiser* to measure up to any emergency, and I think places the paper in the first rank of Southern newspapers.

In considering this paper, I would ask that you bear in mind that the population of the City of Montgomery is 40,000. I do not believe there is a newspaper in this country, published in a town of like size that is accorded such patronage and confidence by local business men and its foreign patrons.

I will esteem it a favor if you will give me, by letter, a full and frank criticism of this paper, from every point of view.

Thanking you in advance, I am, Yours truly,

V. H. HANSON.

We found no room for criticism hence gave, in our article, only commendation.

COMFORTS OF TRAVEL.

The porter on the California Limited this winter will be prepared to press a gentleman's trousers while he waits. This is a new wrinkle, introduced for the benefit of fastidious dressers. It isn't absolutely necessary to carry along an extra pair of trousers, either; the porter works while you sleep.

On this luxurious train daily market reports are received by wire; there are the latest morning and evening newspapers issued en route, fine stationery, a library of western books and current magazines. A Whitley exerciser for those who wish to keep up their athletics, and electric curling irons for the ladies are other travel comforts.

The Santa Fe intends to keep its fast flyer at the front.

THE STABILITY OF A WELL-CONDUCTED PAPER.

On December 20th the Lexington, Ky., *Democrat* ceased publication, having been asborbed by the Lexington *Herald,* which was edited by the late W. C. P. Breckinridge, and is continued by his son Desha Breckinridge as manager. The incident contains a lesson as to how difficult it is to supplant a paper once thoroughly established. We reprint, for its lessons, the following from the Lexington *Herald,* upon the occasion of taking over the opposition paper:

With the issue of today, Tuesday, Dec. 20, 1904, The Lexington *Democrat* ceases publication. This simple announcement marks the end of the effort to establish a morning newspaper in opposition to the *Herald.* In this effort over $30,000 has been spent; the united efforts of the local and State Democratic organization were expended; to it four laborious, self-sacrificing years were given by a trained, accomplished and experienced newspaper man of large means and with wide business, social and political connections. And now the name, plant, good will and subscription list of the Lexington *Democrat* has been purchased by the manager of the *Herald,* and will be consolidated with and absorbed by the *Herald.* Over four years ago, Sept. 23, 1900, after the bitter and divisive days of 1896, when the *Herald* felt it was its duty to oppose Bryan and Sewell and support Palmer and Buckner; after the intense local fight of 1897, when the *Herald* supported the fusion ticket and opposed the local Democratic ticket; after the terrific fight of 1899, when it supported John Young Brown and opposed Goebel and Beckham, and the almost equally savage fight of 1900, when it again opposed Colonel Bryan and supported Yerkes, there was aroused against it a feeling of opposition that made the Democratic organization both in Fayette county and in the State think it necessary to oppose it. The local organization organized a stock company with a capital of $7,500, which was fully paid, for the purpose of establishing a newspaper. There was received from the State organization several thousands of dollars, and from local political contributions several thousands more. After negotiations for the purchase of the *Herald* had failed, the *Democrat* was started, and Mr. W. P. Walton, who had won more than a State reputation as an editor and publisher, was induced to come to Lexington and take charge of it. With varying fortunes it continued until today. The great majority of those who formed the stock company and subscribed the $7,500, gave their stock to Mr. Walton; he himself, a man of wealth and with influential political connections, put into the paper between $15,000 and $20,000, and published the best paper that could be published without the service of the Associated Press. Every legitimate means that could possibly be thought of was used to build the paper up, to secure subscribers for it and widen its influence, and if it had been within the range of possibility for a paper to make a success in the morning field in opposition to an old established paper, which was published upon the idea that the first requisite of a newspaper was to give all the news, and its first duty to be frank and courteous in the discussion of every public question, the *Democrat* would have made a success.

Cheltenham is busy everywhere, conveying trade messages that catch the eye and impress the bargain fact, the merit fact, the good thing fact. Business men like Cheltenham. See the point, Mr. Printer? Of course you do. And now that you will order Cheltenham be sure to include the new Cheltenham Italic.

DECEASED A T99 YEARS OF AGE.

THE OLDEST EDITOR AT REST.

The Buckeye *Informer,* of Waverly, Ohio, had in its December issue the following as to the life and demise of one who was, probably beyond all question, the oldest active editor in the whole world:

In the ninety-ninth year of his age, William Millikan, Sr., the oldest newspaper man in active service in the world, perhaps, died Dec. 7, 1904, at his home in Washington, C. H., after an illness of only a few days. Two years ago he suffered a stroke of paralysis, affecting the right side, but he rallied sufficiently to resume his journalistic work.

The veteran editor was born Sept. 22, 1806. He was the oldest son of John Millikan, who was a lieutenant in the war of 1812, and died in the service of his country, in 1814. The subject of this sketch was elected as a member of the Legislature of Indiana, two terms from Laporte county, and also served one term as mayor of Laporte. He was a member of the

ber of the Ohio legislature from Fayette county in the Sixty-second and Sixty-fourth General Assemblies. As such he secured the passage of a law regulating the rates of legal publications in newspapers.

Mr. Millikan, shortly afterwards, bought an interest in the Kalamazoo, Mich., *Telegram.* Two years afterwards he sold his interest in that paper and bought a half interest with his brother, John Millikan, in the County *Whig,* at Laporte, Indiana. In five years thereafter he sold his interest in the *Whig,* and for four years engaged in the mercantile business. This was the only period in his long business life in which he was not engaged in the newspaper business.

In November, 1858, he moved to Washington C. H., O., and established the Fayette County *Herald,* a weekly newspaper. Several years later he took his son William into partnership with him and started a daily. This relation continued up to the day of the death of the father.

Before the formation of the Republican party Mr. Millikan was a Whig, and such was the politics of all his papers up to that time. He assisted in the organization of the Republican party in 1854, and for nearly fifty years edited and controlled a Republican paper.

Mr. Millikan had a high and just appreciation of his duty, as well as his responsibility as a newspaper editor. He never permitted the use of his paper to herald slander or personal abuse, nor to gratify personal malice or revenge.

He was personally on the right side of all moral questions, and these were reflected in the columns of his newspapers. He was a wonderfully self-possessed man; cautious, calm and considerate, and his habits were simple and temperate. He was not moved or carried away by popular clamor or sensationalism, consequently these never found place in his paper. He honestly and faithfully endeavored to publish in his paper only such articles as would promote good morals, and tend to make people better and happier.

Business men want Cheltenham Italic because it tells their trade messages in small space and very distinctly. They will go where Cheltenham is—to your printery or to that other one. It's a mighty type success. So is Cheltenham Italic, the latest member of the family.

GREETINGS FROM CANADA.

"THE MONTREAL STAR," STAR BUILDING, MONTREAL, CAN.
Christmastide, Nineteen Hundred and Four.

Editor National Printer-Journalist, Chicago, Ill.

MY DEAR SIR:—At this glad season of the year it is meet we should lay aside briefly the cares and anxieties inseparable from the strenuous life, and join together in hearty good wishes, each for the happiness and welfare of the other.

May your Christmas be bright and merry, and your future blessed with happiness and prosperity.

Very sincerely yours,

THE MONTREAL STAR.

Once it was De Vinne type we all talked about and printed from. Its equal never would be produced. The makers thought so. Many printers said so. But Cheltenham has come along—a type that fits well and looks well, having merit that wins the printer and buyer of printing. There is also Cheltenham Italic. Look that up, also.

OTHER SIZES IN COURSE OF PREPARATION

The Kenilworth Series, up to and including the 18-Point size, is sold in fonts of 25 pounds and multiples thereof when spaces and quads are included, in fonts of 20 pounds and multiples thereof when spaces and quads are omitted, at body letter prices, as follows: 6-Point, 64 cents per pound; 8-Point, 52 cents per pound; 10-Point, 46 cents per pound; 12-Point, 42 cents per pound; 14-Point, 40 cents per pound; 18-Point, 40 cents per pound. The 7-, 9- and 11-Point sizes are in preparation, as are also the larger sizes, from 24- to 84-Point, inclusive, and an italic especially designed therefor.

Patent pending. Registration applied for.

BRIEF HISTORY OF KENILWORTH

KENILWORTH, A SMALL TOWN of Warwickshire, is pleasantly situated on a tributary of the Avon, on the railway between Coventry and Leamington, 5 miles distant from both towns and 99 miles north of London. The town is only of importance from its antiquarian interest and the magnificent ruins of its castle. It most probably derives its name, which in Domesday is written Chinewrde, from a king of the Mercians named Cenwulf, and werthe, a dwelling place. The old royal residence of the Saxon kings was destroyed during the wars between Edward I. and Canute. The manor of Kenilworth was bestowed by Henry I. on Geoffrey de Clinton, afterwards the lord chief justice, who erected the earlier portion of the present castle. It was given by his grandson Henry de Clinton to King John, and it remained a royal residence until the time of Henry III., who granted it to Simon

BRIEF HISTORY OF KENILWORTH

KENILWORTH, A SMALL TOWN OF WARWICKSHIRE, is pleasantly situated on a tributary of the Avon, on the railway between Coventry and Leamington, 5 miles distant from both towns, and 99 miles north of London. The town is only of importance from its antiquarian interest and the magnificent ruins of its ancient castle. It most probably derives its name, which in Domesday is written Chinewrde, from a king of the Mercians named Cenwulf, and werthe, a dwelling place. The old royal residence of the Saxon kings was destroyed during the wars between Edward and Canute. The manor of Kenilworth was bestowed by King Henry I. on Geoffrey de Clinton, afterwards the lord chief justice, who erected the earlier portion of the present castle. It was given by his grandson Henry de Clinton to King John, and it remained a royal residence until the time of Henry III., who granted it to Simon de Montfort, earl of Leicester. After the battle of Evesham, 14th August 1265, at which Simon de Montfort was slain, the rebel forces rallied at the castle, when it sustained a siege lasting six months, but finally capitulated to Henry III., who bestowed it on his son Edmund. After being used as the prison of Edward II. previous to his removal to Berkeley, it came into the possession of John of Gaunt, by whom it was greatly enlarged. On his son becoming king as Henry IV. it was made a royal residence, and it remained in possession of the crown until Queen Elizabeth in 1562 granted it to Robert Dudley, earl of Leicester, who spent a large sum in restoring it, and whose splendid entertainments there to Queen Elizabeth are described in Scott's novel, "Kenilworth." It was dismantled by the soldiers of Cromwell during the civil war, and was thenceforth abandoned to decay. Since the Restoration it has belonged to the house of Clarendon. The walls of the castle originally enclosed an area of 7 acres. The principal portions of the building still remaining are the gate house, now used as a dwelling house; Cæsar's tower, the only portion built by Geoffrey de Clinton now extant, with massive walls 16 feet thick; the Merwyn's tower of the novel of "Kenilworth;" the great hall built by John of Gaunt with windows of very beautiful design; and the Leicester buildings, which are in a very ruinous condition. Not far from the castle are the remains of an Augustinian monastery founded in 1122, and afterwards made an abbey. Adjoining the abbey is the parish church of Saint Nicholas, restored in 1865, an old structure of mixed architecture, and containing a fine Norman doorway, which is supposed to have

REVIEW OF JOB WORK

BY A. V. FITZGERALD, MILWAUKEE, WIS.

Address all Communications for this Department to
1319 W. Ravenswood Park, Chicago, Ill.

When I consented to again take charge of this department I thought I should have ample time to prepare copy for this issue, but on account of pressure of business (the office running night and day) I was unable to attend to this matter until late in the month—to late, I am afraid, to permit making reproductions—therefore I shall omit specific criticism of samples this month and devote the space to a general talk, the main points of which will be elaborated in future issues. I shall endeavor to so handle the department that those whose opportunities for experience and practice have been limited may have the benefit of a long and larger experience in handling high-grade work.

I desire the coöperation of interested readers to render this department as valuable as possible. There will be no "hot air" dispensing, but every adverse criticism will be dictated by and made with the view of being helpful. The opinions expressed will, of course, be "individual" opinions, and have no more or less weight than the experience and successful demonstration of the writer entitles them to receive.

The value and *necessity* of such educational means as these departments place at the disposal of the typographical student are highly appreciated, if I may judge by the expressions contained in the numerous letters received during the past month. The job compositor is gradually awakening to his opportunities for advancement. It is seldom the steady, studious printer is heard finding fault with his "chances." There is an increasing demand for competent printers—the demand increasing much faster than the supply. The compositor who studies, who makes a *business* of his business, who is a severe critic of his own work, who realizes that attention to trifles makes perfection, who overlooks no opportunity for improvement, but concentrates his attention upon the *quality* and quantity of his work, need never worry about the question of salary. Employing printers are mostly "from Missouri"—the workman must be prepared to "show" them.

It has taken a vast amount of preaching by expert craftsmen to convince the employer that it is advisable, almost necessary—to simplify his type outfit—that he should have type in series, large font of every size, and fewer type faces. But this accomplished is but the first step only toward securing simple, stylish, economical and at the same time artistic results from the composing room. The workman must be taught to observe the same rules in the construction of his work that the employer has observed in selecting the equipment. He must learn that there are styles of composition that are particularly appropriate to certain classes of work; that it is as great a fault to put too many styles of composition into a job as to use too many styles of type, and that "correct spacing" has reference to the space between letters, between lines, between the different sections of the display pattern, as well as between words. I have found that many otherwise good workmen fail to give consideration to these points. It is very often possible to take a very inferior piece of work and by simplifying the spacing and whiting out (without resetting a line) to produce a first-class job.

"Simplicity" means that all of the foregoing details have been properly taken care of and more. It means that in choosing the general pattern of display a form has been selected to which the wording of the copy most readily adapts itself, so that the completed job bears no evidence of a "struggle." Whenever the work shows that the type had to be unevenly spaced or poorly displayed in order to give it the chosen pattern, or form, it gives evidence of poor workmanship.

How often have we seen the first part of a sentence displayed, and the remainder commenced with a large initial—the compositor, in his anxiety to use the initial letter, forcing it into the *middle* of a statement. An initial should not only be the beginning of a *sentence*, but at the beginning of a *statement* also, and this fact should dominate any desire to use an ornamental initial.

The trouble with a great many compositors is that they are not content to let well enough alone. Learn to know when a piece of work is *finished* and then cease working on it, or the chance is that your extra touches will be detractive. This refers to ornamentation, and not to such details as spacing, whiting out, punctuation, capitalization, and correct display. The latter is most important. I recall an incident which illustrates this point:

A compositor was given a title-page to set, containing the following matter: "By-Laws of the Cook County Building and Loan Association, Chicago, Ill." The proof he turned in showed that he had the correct idea as to choice of type, spacing, whiting out, etc., but failure to give proper consideration to the story his *display* must tell, rendered his work ridiculous. This is the way it appeared:

BY-LAWS
OF THE
COOK COUNTY BUILDING
AND
LOAN ASSOCIATION
CHICAGO, ILL.

The compositor failed to see that *his* story was about the "Cook County Building," and he strongly denounced the "bull-headed" foreman who made him reset the page.

One of the chief distinctions between a first-class workman and one who is "pretty fair" lies in the attention to each detail which is characteristic of the former, and causes his work to appear more "finished."

In future issues this department will select samples illustrating these points—the sins of omission as well as of commission. Those who can perfect each detail of their work are the competent workmen, and the doors of every printing office are open to them.

Bulfinch Oldstyle Series

A Revival

Of Simplicity in Type

There are a number of type faces that have long been in the public favor, because each was made on plain, sensible lines. Recognizing the soundness of this principle the Curtis Publishing Company owner The Ladies' Home Journal delegated William Martin Johnson to design a type devoid of oddity or freakishness, yet graceful and legible. We are enabled to place at the disposal of printers the result of his work, the Bulfinch Oldstyle Series

Made and sold by

American Type Founders Company

6 Point Size BULFINCH OLDSTYLE 24A $0.95 48a $1.05—$2.00

DISTINCTIVE BULFINCH CHARACTERS PRODUCE CLEAN MODERN PRINTING STRIKING QUALITY WHEN CONSIDERING MERCANTILE PRINTORIAL WORK
The new spirit in printing has not yet made of that calling the art it is destined to become. However, the leaven is just beginning to work; there is a very distinct and rapidly growing element in printerdom that is making for things considerably better than formerly obtained

8 Point Size BULFINCH OLDSTYLE 20A $1.15 40a $1.10—$2.25

STRENGTH AND HARMONY PROMOTING HIGHER CONCEPTIONS OF THE PRINTING ART AMONG BENJAMIN FRANKLIN'S ADMIRERS
The power of type is being somewhat better understood now, and it is most fortunate that the greatest type foundry organization in the world is yielding so cogently to this new perception of the real status of printing as a fine art

10 Point Size BULFINCH OLDSTYLE 18A $1.30 36a $1.20—$2.50

EXTENDED NOTICE RECEIVED CONFIRMS STRONG PURPOSE AMONG PRINTERS FOR IMPROVEMENT
Careful study of the products of the best modern printers will give some idea of the revolution that is in progress in printing, measured by the standards of early typographers

12 Point Size BULFINCH OLDSTYLE 16A $1.30 32a $1.45—$2.75

INGENIOUS GRACEFUL PRINTING IMPLEMENT
Extremely Appropriate for the Modern Publications and Wherever Legibility and Gracefulness are Prime Requisites, Besides also Being Mechanically Perfect

BUSINESS NOTES

This Department is conducted for the benefit of advertisers, and expresses their claims and views

The Star Engravers' Supply Co., of New York, sent by mail to the trade a very handsome calendar for 1905. A copy of this calendar will also be forwarded throughout the year 1905 in every shipment that leaves the factory, whether of "Glossoid" zinc or "Glossoid" copper. At the sides of the calendar are given a list of some of the various articles manufactured by the Star Engravers' Supply Company.

A little "Pocket Reminder," by the Matthews-Northrup Co., Buffalo, N. Y., in the form of a vest-pocket booklet with a memoranda page for each day of the month, preceded by an enumeration of the multitudinous varieties of work done by the office in a year, is an excellent reminder in a double sense and must prove first-class advertising.

The Evening Wisconsin Company of Milwaukee favored this office with a copy of "The Story of the Printing Department" of the Company. The "Story" is neatly told in text and illustration and is in rich paper covers printed in colors. The right kind of a man can always tell something of interest about a good, modern, up-to-date printing office. Some of the facts made prominent in this model booklet are in regard to the leading firms for which the Company does printing. This is doubtless pleasing to the customers. It gives them a little pleasant publicity and it is at the same time the very best kind of advertising for the printing office, as it shows the high character of the work turned out, also serves to illustrate the capacity of the establishment for handling large orders.

There is no other department of the printing business so important as that of estimating cost, ascertaining and knowing what ought to be the total earnings of the business, in order to meet all expenses and to leave a fair margin of profit. In his book, "Fundamental Principles of Ascertaining Cost of Manufacturing," J. Cliff Dando, 31 S. Third St., Philadelphia, has given the underlying principles of these problems of cost and profit. His work is founded on many years of careful study, observation, experimentation, thought, writing and experience. The general approval with which his conclusions have been met can be seen by reading page five of this issue of the NATIONAL PRINTER-JOURNALIST. Here are found testimonials from leading printers in every part of the United States, England and Australia. These opinions give a very good idea of the many truths, views, features and points of practical usefulness presented in the work as they appear, from many different view points, to thinking men, active in the calling, who have met with difficulties that the book solves or helps to solve. To explain why the majority of printing offices do not pay enough to cover depreciation in the plant and bad debts and adequate return in the shape of the proprietor's salary, let alone a profit on the investment, is a great step toward bettering existing conditions. Mr. Dando does this, through estimating mythical or hypothetical profit and loss accounts and then goes further and shows means of increasing future earnings, no matter how good or bad these may be under existing methods. It would be a very poor business man who could not gain ten times ten dollars by the study of this book in a very few months. However, the book is so well fortified, by the flattering opinions to which reference has been made, that it is needless to add more at this time. Read page five and then send in your order for the book. This is the opportune time of the year to make needed changes.

"Mrs. Maybrick's Own Story: My Fifteen Lost Years," has been published by Funk & Wagnalls Company, 44-60 East 23d St., New York, in an attractive souvenir subscription edition. It contains 394 text pages and 15 full page half-tone illustrations, also new photogravure portrait of Mrs. Maybrick. Every copy is signed by Mrs. Maybrick, in ink, by her own hand. The book is bound in dark blue grained linen, stamped in gold, rough edges, gilt top. Price $2.00. Agents wanted.

The Bulfinch type now used for headings by the *Ladies' Home Journal* was designed especially for that publication and made by the American Type Founders' Company. There are thirteen sizes, 6-point to 72-point, in stock at all of the American's houses. The Bulfinch face is delicate, but not weak, and approaches the extended effect just enough to be exceedingly attractive. There are many classes of job printing that call for Bulfinch and it has a pronounced value for weekly and monthly publications in headings and advertisements.

A visit to the Maury Manufacturing Company while in Kansas City showed that concern to be enjoying the prevailing prosperity. They have recently put in a number of their excellent machines in the engraving establishment of the Teachenor-Bartberger Engraving Co., in looking over whose splendidly arranged new establishment we passed a half hour. We found our old engraving friends in a new building on the corner of Central and Seventh streets. The new quarters have been especially designed and constructed for the Teachenor-Bartberger Co., and for excellence of lighting, convenience, system and compactness of arrangement, as well as for the comforts provided for the employees, this establishment stands among the first of the best engraving plants of the country.

The McGinty Gripper that Grips for any job press, advertised in our pages this month, is recommended as a positively simple device—no screws or springs used and no tools needed to put them on or to take them off. It grips the sheet with "fingers" between the lines on one or all four sides. The McGinty File and Feed Gauge Company also manufacture an automatic ink feed and distributor and steel newspaper file and binder. See their advertisement.

"Finger Posts of Color," by the American Type Founders Company, makes a most complete and satisfactory showing of "Wayside Ornaments," and their arrangement and use, as well as of their strong, distinctive "Cheltenham Bold" series of type. Strength and distinctiveness in types and the use of pleasing, attention-commanding ornaments and proper uses of colors combine to make good printing effective.

That Cheltenham must be a remarkable type, printers say, when it crowds the selling record of De Vinne. Well, it's Cheltenham. A type that fits well and looks well for a nice little booklet, for general job printing, or for newspaper ads. And now there is Cheltenham Italic.

We again call attention to the announcement by the Star Engravers' Supply Co., of New York, as to the quality of the polished zinc and copper plate sold under their trade mark, registered brand "Glossoid." We are assured that etchers can obtain superior illustrations by using this metal, not only because it is ground and polished with a great deal of care, but also on account of the absence of imperfections on the surface.

The Keystone Type Foundry, of Philadelphia and New York, shows on a two-page insert of this issue, their latest Universal Line, Point Set Type Face. It is the Standard Gothic Series made in sixteen sizes from five to seventy-two point inclusive, and is one of those types that adapts itself to the wants of either the general job office or the newspaper office. It is handsomely designed and accurately cut in all sizes, and should be in the cases of every printing office.

The Hamilton Manufacturing Company, manufacturers of wood type and printers' wood goods, have moved their Eastern warehouse and office from Middletown, N. Y., to Rahway, N. J., for the more convenient handling of goods and the better accommodation of the Eastern trade. They have erected a commodious building and fitted the same up especially for the handling of their goods. The new establishment fitted up in first-class shape to meet all demands, will be under the direction of Mr. Walter Clark, who was in charge of the office at Middletown, and had, for many years previous to that, been in charge of the Chicago office. He is thoroughly conversant with every branch of the business and with the wants of customers.

Cheltenham is another entry into the class of world-winning types. Sounds big, we know, but there are carefully-kept casting and selling records to prove Cheltenham a world-winner. Now there is Cheltenham Italic—two mighty type successes.

Now that Linotypes have been in the Government Printing Office some three months and every member of Congress has had, since the beginning of the present Session, a copy of the Congressional Record printed from Linotype slugs on his desk each morning, the novelty of composing machines in the world's greatest print shop has somewhat worn away, and we are sufficiently far from the change to get the full perspective.

This brings into view a point we are all prone to forget—the building of forty-six Double Magazine Machines within a specified time, and the endless mass of details connected with it.

New faces to be cut, thousands of accents and special characters, sorts running into hundreds of thousands, and mold liners for special measures in nearly every body the machine will handle; and yet, in addition to filling regular orders amounting to seventy-five or eighty a month, the entire forty-six machines were erected in Washington in perfect running order, and turning out actual Government work, within about sixty days after receiving details.

The Linotype Company has a shop to be proud of. In fact, one that the whole country is proud of.

Cheltenham isn't hard to get. But it's hard to beat. There are 24 of the American's houses, also several agencies, that sell Cheltenham. And there are many times 24 classes of work that printers can employ Cheltenham for and profit by it.

The Sanders Engraving Company, who maintained a most complete and attractive exhibit throughout the Fair, was awarded, by the International Jury of Awards of the Louisiana Purchase Exposition, a medal for excellence in making of halftones, and the highest and only award given to any American engraving firm. This company also secured and executed the contract for making all the engravings and electrotypes for the Exposition. It was one of the largest orders ever placed, there being 20,000 engravings and 42,000 electrotypes.

OVER A MILLION OF MONBY IN MONOTYPES.

The insert of the Wood & Nathan Company that appears among our advertising pages strikingly exemplifies what intelligently prepared and mechanically perfect trade-paper advertisements can do when backed up by a machine so meritorious as the Monotype. It is a wonderful showing, considering the short time the selling agency for the Monotype has been in their hands, and no firm less aggressive and less able to advance arguments carrying conviction with them as to why the Monotype will do all they claim for it, could have made such a record.

We congratulate the Wood & Nathan Company on the showing made and in the sound judgment shown by their method of advertising. We know of nothing in the history of the printing trade showing so great a success in so short a time. Nevertheless, it is our conviction that the Wood & Nathan Company will make a record that will far eclipse the present one in future periods of similar length.

A NEW SELF-FEEDING PRESS.

While in New York recently the editor was shown a platen press in operation in one of the larger plants that was not only entirely new, but that bids fair to revolutionize the method of printing small work whether the run is long or short. Doubtless a full description will soon be published by the selling agents, the Wood & Nathan Co., of New York, though a number of the machines have been placed with leading printers very quietly. We are violating no confidence in mentioning a few details of the new press, and presume a few words on the subject will be of interest. The press automatically feeds and delivers single sheets of any stock from French folio to 120 cardboard, and handles any size up to 12x18 inches at a speed of about 3,500 impressions per hour. We were assured that on some work the press could run at the rate of 4,000 per hour without difficulty, and this we can readily believe, as it was handling a sheet of enameled cardboard about 9x11 inches in size, on which was being printed a four-color half-tone job at the rate of over 3,000 impressions an hour when we saw it. The work was perfection itself, as the register was exact.

From our examination we could find nothing to criticise in this extraordinary machine. It is much heavier and stronger than the ordinary platen of the same size, and is remarkable for its simplicity. While running, the platen press does not move. A feature of great importance is that there can be no wear that will affect the impression. Several of the largest New York offices have already placed orders for the new press, and we are confident that its use by printers generally is only a matter of bringing it to their attention.

Cheltenham has printing merit and pleasing merit—something that first helps the printer, then helps the buyer of printing. Those points of merit have made Cheltenham the type leader of today. Another help for good printing is the new Cheltenham Italic.

WORDS THAT GIVE PLEASURE TO THE EDITOR.

CHESTER, NEB., Dec. 19, 1904.

The National Printer-Journalist:

GENTLEMEN:—I certainly appreciate the effort you have put forth to advance the education of the editor. Let me first say that I have been a reader of your valuable magazine for a number of years and appreciate it highly as a printer's journal. It seems to me that almost every person could receive some good therefrom, whether they are newspaper men or not, and the office that is without it is missing a mighty good thing. It is an educator on the more refined lines of modern typography or printer's art, and I feel to congratulate you and yours on the success the JOURNALIST has thus far attained. I appreciate the advice you have expressed in the article selected from the thought of mine, and permit me to say that, while I have to work almost night and day to keep even, yet I count it not drudgery, but a labor of love to which I am bound by more than ordinary ties. If I live until next year it will be my fortieth year since I learned the first lesson in the art preservative. I will then be in my forty-eighth year, and in my eighth year I learned the case on the *Youth's Companion.* I love the work more and more each year, and while each year seems harder in the way, yet I have no desire but to die in the harness.

A country editor is as free as the air. He has many privileges and advantages which the city man has not, and which are too many to enumerate. He is called to mingle with all classes and branches of the business, while the city man only sees to one of them. We are a pleasant class of people and have our own way in almost everything. And then I rejoice that I am what I am, and that I am only a country printer.

I have a family of five children and they are all well and hearty.

I thank you for your kind words and thoughts and wish you a vast amount of this world's goods in every way.

With very best regards, I beg to remain

Your very obedient servant, HENRY ALLEN BRAINERD.

SCHOOL OF JOURNALISM TO BE WELCOMED.

(From the Springfield, Mass., *Republican*, Dec. 20, 1904.)

The University of Kansas, at Lawrence, has its school of journalism, and in a lecture before it yesterday B. B. Herbert, editor of the Chicago PRINTER-JOURNALIST, included the *Republican* among the ten journals which appeal to him as offering the best newspaper models. While it must continue to be true that Nature will have a large hand in making successful newspaper men, it is also to be conceded that schools of journalism can do much toward adding to the equipment and giving intelligent direction to the efforts of students looking toward this line of work. In the cultivation of self-respect, a proper professional pride, and breadth of preparation, these schools are to be welcomed.

CIRCUS POSTERS DOOMED.

The decision of the great traveling shows to discontinue the lavish use of flaming posters, robs the gullable youth and his elders, too, of the rapture and fascination of gazing upon the great aerial acrobatic feats; of enjoying the amazement which accompanies the representations of the gilded maidens fondly caressing the wild beasts of the jungle; of the sculptured clowns in their new and original pranks.

The circuses have come to realize more fully the greater advantage of judicious newspaper advertising and in the future will devote their publicity to the most profitable channel. The great traveling shows probably spend more money proportionately in advertising than any other line of business enterprise. They employ publicity experts and they follow certain systems to test the efficiency of the various methods of advertising. The result of years of experience and investigation has convinced the circus magnates that posters are not essential to the success of the shows while newspaper advertisements are sure to draw crowds to the tented cities.

Newspaper advertising is indispensable to success in all lines of business.—The Daily Union, Schenectady, N. Y.

The Merry Christmas issue of the Elgin, Ill., *News,* gave for its first page a bird's-eye view of that lovely city and illustrations of "New Factories of the Elgin National Watch Company, of the "Fail Borden Public Library" and "Elgin's Classic Postoffice Building," all in photo brown, surrounded by a border of holly branches and berries in green. The effect was very pleasing. The *News* is in its thirty-second year and fully up to its age. This number contained forty-four pages and described, briefly but entertainingly, Elgin's numerous industries that have a world-wide fame and are very interesting in themselves—especially so, to printers and publishers, is the great plant of the Cook Publishing Company that shows what can be accomplished, even in a medium-sized city, by choosing one line of publications and then concentrating with steady persistence all possible energy in their development. The opportunities have not been by any means exhausted. It is wise for every printing office to have some line in which it is a manufacturer, or publisher of a specialty. In this way an independence is secured that cannot be had when depending entirely on work for others or on commercial work so-called. Elgin is famed for a multitude of manufacturing establishments: The National Watch Company, "Borden's Condensed Milk Company," Elgin Butter Tub Company," "Star Watch Case Company," "D.C. Cook Publishing Company," "Seybod-Reed Pipe Organ Company," "Brethren Publishing House," "Illinoian Watch Case Company," Metal Works, Shirt Factory, "American Tower and Tank Company," "Silver Plate Company," "Wind, Power and Pump Company," and so on. Every printing office and especially every newspaper should be a promoter of local industries. It is wise for a newspaper publisher to be constantly on the lookout for industries that may be profitably developed in his own community. Such promotion is not only a public service but helps the growth of the newspaper and printing office. Many cities grow just because of a wideawake press. Public improvements are not second in importance to local industries and the Elgin *News* rightly devotes one section of its issue, largely, to a most handsomely-illustrated article on Elgin's beautiful parks.

One page is given to "Prize Christmas Stories" by Elgin boys and girls, written for this issue. Four prizes were given and the products of these youthful writers show that they deserved the liberal prizes awarded. Of course "Buildings Erected During the Year" and all other matters of progress come in for proper space. Nothing is neglected in the lines of Christmas matter, stories and carols, local and general news and miscellany. The liberal advertising, covering page after page, speaks volumes for the enterprise, wisdom and public spirit of Elgin's business men and manufacturers and for the deserved popularity and the established value of the *News* as an advertising medium.

Cheltenham was found in 17 of the big magazines for November, also in the *Ladies' Home Journal* and the *Saturday Evening Post.*

Among the Associations

"In Unity is Strength"

PROGRAM N. E. A. EXECUTIVE COMMITTEE MEETING.

JOHNSTOWN, OHIO, Dec. 30, 1904.

B. B. Herbert, Editor National Printer-Journalist, Chicago, Ill.

DEAR SIR AND BROTHER:—The meeting of the Executive Committee of the National Editorial Association has been arranged for Tuesday and Wednesday, Feb. 7-8, 1905, at Indianapolis, Ind. President Screws is particularly anxious that this meeting may be largely attended and our good "Hoosier" friends have certainly done their part to make the meeting exceptionally inviting. Fully ninety per cent of the replies to my circular of November 17th were favorable to Indianapolis and a two-days' session. Therefore, my Brother, we hope that you will make arrangements to spend the full two days and not attempt to get the next train home. It is only justice and courtesy to the Indianapolis Committee that you do the Casabianaca act.

The program and itinerary is, to-wit:

FEBRUARY 7.

9 a. m.—Social Meeting with Address of Welcome from the Mayor.

10 a. m.—Trolly ride over the City of Indianapolis, arriving at the State House at 11:30, where the Governor will receive the Committee.

12 m.—Lunch.

1 p. m.—Business Meeting of the N. E. A.

5:30 p. m.—Dinner.

8 p. m.—Theater Party.

FEBRUARY 8.

7:30 a. m.—Leave Terminal Depot, arrive at the Soldiers' Home, 10:45 a. m. Address of Welcome by Maj. G. W. Steele, Governor of Home. Reception and Band Concert; leave Soldiers' Home, 11:45 a. m., arrive at Marion at 12 m., where will be held a reception, smoker and lunch by the Marion Commercial Club; leave Marion 1:30 p. m., arrive at Anderson 3:30 p. m., reception by Mayor, Commercial Club and other citizens of Anderson. Smoker and refreshments; leave Anderson at 5 p. m., arrive at Muncie, 6 p. m. Reception and banquet by the Commercial Club of Muncie; leave Muncie 7:30 p. m., arrive in Indianapolis at 10 p. m., where all those wanting to make trains east and west will have from one to two hours to make their connections.

Committeemen from the South and Southwest who desire to use the Vandalia Ry. from St. Louis to Indianapolis will apply direct to J. M. Chesbrough, Asst. G. P. A., St. Louis, Mo., who under date of December 3d, wrote: "I will say in connection with your direct application for transportation to Indianapolis and return for members of your Committee, we will be glad to have them write us direct, giving information relative to their paper, also stating the fact that they are of the Executive Committee, and have been referred to this office by yourself. I hope to be able to give them replies which will be satisfactory."

You are expected to procure your own transportation to and from St. Louis. Your Delegate's Certificate is herewith enclosed. Should you need another, apply to me and it will come by next mail. I have made arrangements with the Pullman Co. for a return pass, but in order to secure this you must not fail to take a receipt for your money. Surely no Committeeman will dig up a Berth Check or report that he forgot to take a receipt. Remember the RECEIPT and nothing else will get a pass home.

The Headquarters will be at the Grand Hotel, where a $2 rate has been made.

Since this meeting combines business with pleasure, I would suggest that the Delegates bring with them their wives and daughters. This program is not intended to be a "Stag" affair, so bring along the ladies. They always look good.

I hope that this meeting will be largely attended and feel secure in saying it will be both profitable and pleasurable.

Wishing you a Prosperous and Happy New Year, I am,

Very respectfully,

WILLIAM A. ASHBROOK, Cor. Secy. N. E. A.

The Kansas State Editorial Association will hold its annual meeting on January 16th and 17th at Topeka. E. W. Howe, of the Atchison *Globe;* Capt. Henry King, of the St. Louis *Globe-Democrat;* Walter Williams and T. B. Murdock, have been invited to address the meeting.

The Press League of Bucks and Montgomery counties, in Pennsylvania will hold its annual meeting on January 21st at Bristol. Assemblyman-elect Joseph Thomas, of the Bristol *Gazette,* was present at a meeting of the executive committee last week at Pottstown and tendered the freedom of the town of Bristol to the editors.

Introductory steps were taken at a meeting of newspaper men in East St. Louis, Dec. 17th, for the formation of a County Press Association for St. Clair County, Illinois.

Addresses were made by Mayor F. J. Kern, of the Belleville *News-Democrat;* editor Jones, of the Lebanon *Journal;* editor Hickman, of the Freeburg *Tribune;* Ben. Galbraith, of the St. Louis *Star;* C. B. Carroll, of the St. Louis *Globe-Democrat;* M. L. Munie, of the Belleville *Morning Record;* C. B. Franke, of the St. Louis *Republic,* and Curt H. G. Heinfelden, of the Harvard *Crimson.*

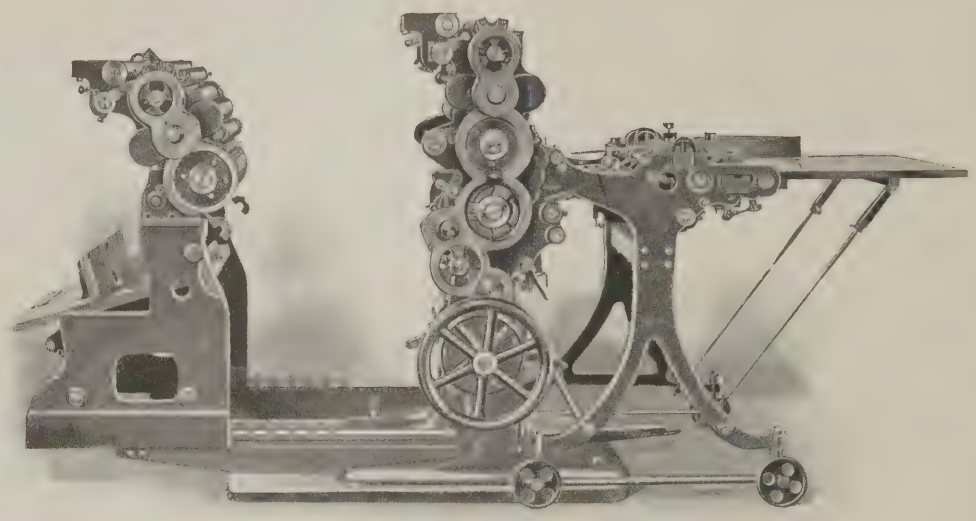
On motion Chairman Jordan named a committee of three to act with the chairman and secretary to draft a constitution and by-laws and to take all steps necessary to making the organization permanent.

Saturday, January 7, 1905, was selected as the next meeting date and the writers will gather in East St. Louis on that date, enjoy a second banquet and form the permanent organization, adopt a constitution and by-laws and elect officers, etc.

The editor wishes to acknowledge the many highly appreciated holiday greetings sent by kind friends to himself and wife. Time does not afford opportunity for direct reply so this method is taken to return thanks to all members of the NATIONAL PRINTER-JOURNALIST family and to wish many happy returns and all possible happiness to each.

(*See Editorial Page 43.*)

THE HARRIS PULL BACK



¶ This is one of the most popular of our twenty-seven varieties. It is the Two-color fifteen by eighteen press, opened up for makeready. It is easy to get at. ¶ Like all the other varieties, the Pull Back is good for five thousand or more well printed sheets per hour, and this press will do them in one or two colors. ¶ We make the Little Wonder Card and Envelope Press in two-color form now, *and with Automatic Sheet Feed if desired.* ¶ There are two classes of Printers—Harris Press Printers and the Others. Watch the others change classes.

Address Cooper Printing and Engraving Co., 61 Plymouth Court, Chicago, Ill. for information regarding School of Instruction for Harris Pressmen.

The Harris Automatic Press Company, *Niles, Ohio*

New York: 26 Cortlandt St., Havemeyer Building *Chicago:* 295 Dearborn St., Old Colony Building

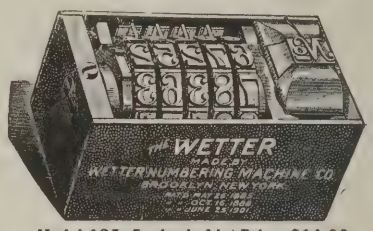
Makes possible numbering and printing at one impression; the Modern way – used by all printers. Makes possible a good profit, otherwise given away to the numberer. Others do it—you should. All typefounders and dealers carry in stock and endorse the "*Wetter*." Get our circular.



Model 125, 5 wheel; List Price, $14.00

WETTER NUMBERING MACHINE CO., 337 Classon Ave., Brooklyn, New York, U. S. A.

The Age *of* Specialists

The Credit Specialist whose field is confined exclusively to the Paper, Book, Stationery, Printing and Publishing Trade, and the only Specialist in this field, is THE TYPO MERCANTILE AGENCY. Its Credit Books, Special Reports, Bulletins, Collection Department, and every feature, are designed to meet the special requirements of those whose customers are in this Trade.

The Typo Credit Book stands in a class by itself; it is more than a Credit Book and much more than a mere Trade Directory. It gives every firm, large and small, in this entire Trade, with ratings for capital and credit, and street addresses in all cities. It reflects the result of constant investigations in the Trade itself, and thus indicates the undesirable customer, no matter what his capital, and points out the safe risk. The business classification is such as to give practically distinct lists of each branch of the Trade, which makes it as indispensable to the salesman as to the credit man. It is issued every January and July.

The Typo Bulletin gives all the changes and happenings in this Trade affecting credits, and in such condensed form that it saves the credit man much valuable time in gaining these facts, essential to his protection. It is issued weekly.

The Typo Special Reports are prepared by specialists who have made the conditions in this Trade their special study. They contain the Typo records, and the facts given and deductions drawn are based upon information gleaned with the greatest care through local, general and trade channels. The special feature which makes them superior to every other report is their exhaustive Trade investigations, which show the past experience of others. They are issued in answer to inquiries.

The Typo Collection Department offers the most effective as well as the most economical method of dealing with delinquent debtors and collecting doubtful accounts. Knowledge of these debtors gives the Department every advantage, and its special position in the Trade forces many a worthless debtor to pay a just account otherwise uncollectable. Many slow accounts may be collected promptly and at nominal cost through the Typo Drafts.

The Typo Service meets every requirement, and the testimony of Subscribers of years' standing is indisputable evidence that the Service is unequaled.

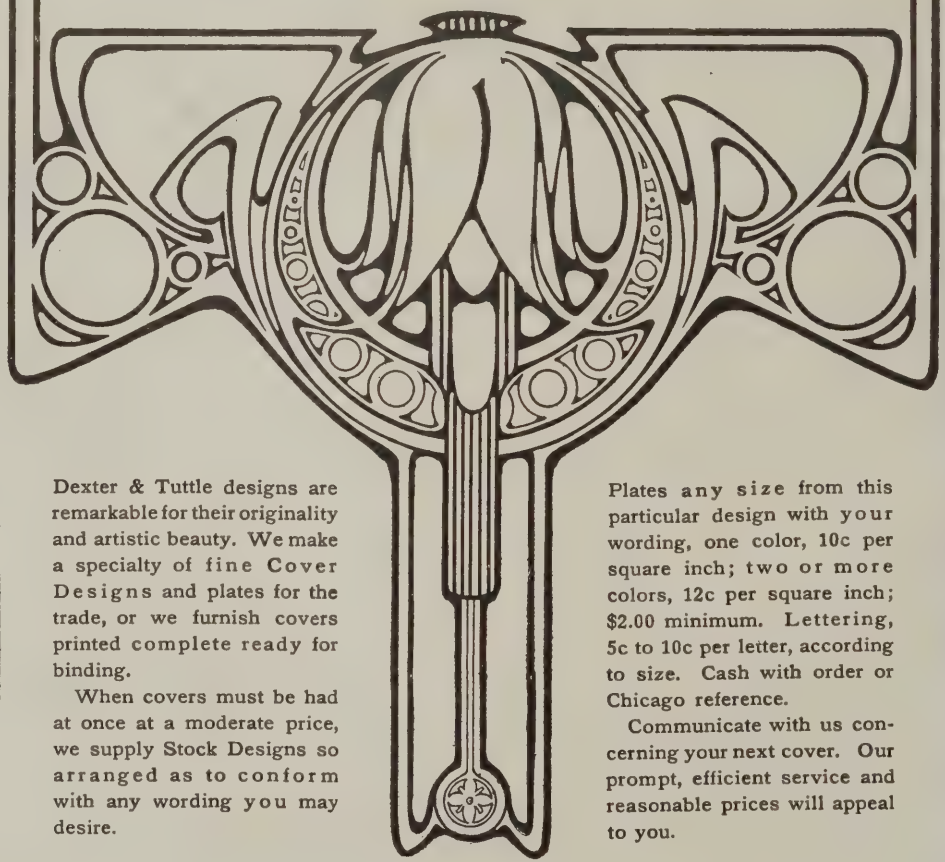
COVER DESIGNS



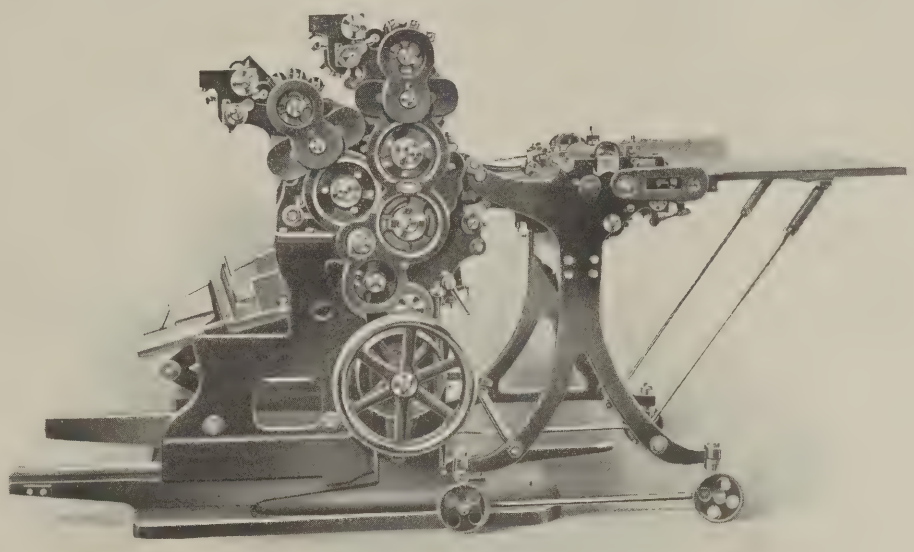
Dexter & Tuttle designs are remarkable for their originality and artistic beauty. We make a specialty of fine Cover Designs and plates for the trade, or we furnish covers printed complete ready for binding.

When covers must be had at once at a moderate price, we supply Stock Designs so arranged as to conform with any wording you may desire.

Plates any size from this particular design with your wording, one color, 10c per square inch; two or more colors, 12c per square inch; $2.00 minimum. Lettering, 5c to 10c per letter, according to size. Cash with order or Chicago reference.

Communicate with us concerning your next cover. Our prompt, efficient service and reasonable prices will appeal to you.

DEXTER AND TUTTLE
INCORPORATED
356 DEARBORN ST. CHICAGO, U.S.A.



Guaranteed net output 5,000 or more sheets per hour in one or two colors.

The Differences *in* Human Nature enable some *fellows* to get rich

¶ There is the printer who doesn't need to have a brick wall fall on him, for instance. He puts in a Harris press when its money-making capacity is first demonstrated to him. He knows from experience that some of his competitors will wait for the brick wall to fall. While they are waiting he is doing business in a volume never known to him before, and with a margin of profit larger than anyone else suspects. It's lucky for him that human nature has different phases.

The Slowness of one mind makes the opportunity of another.

Address Cooper Printing and Engraving Co., 61 Plymouth Court, Chicago, Ill. for information regarding School of Instruction for Harris Pressmen.

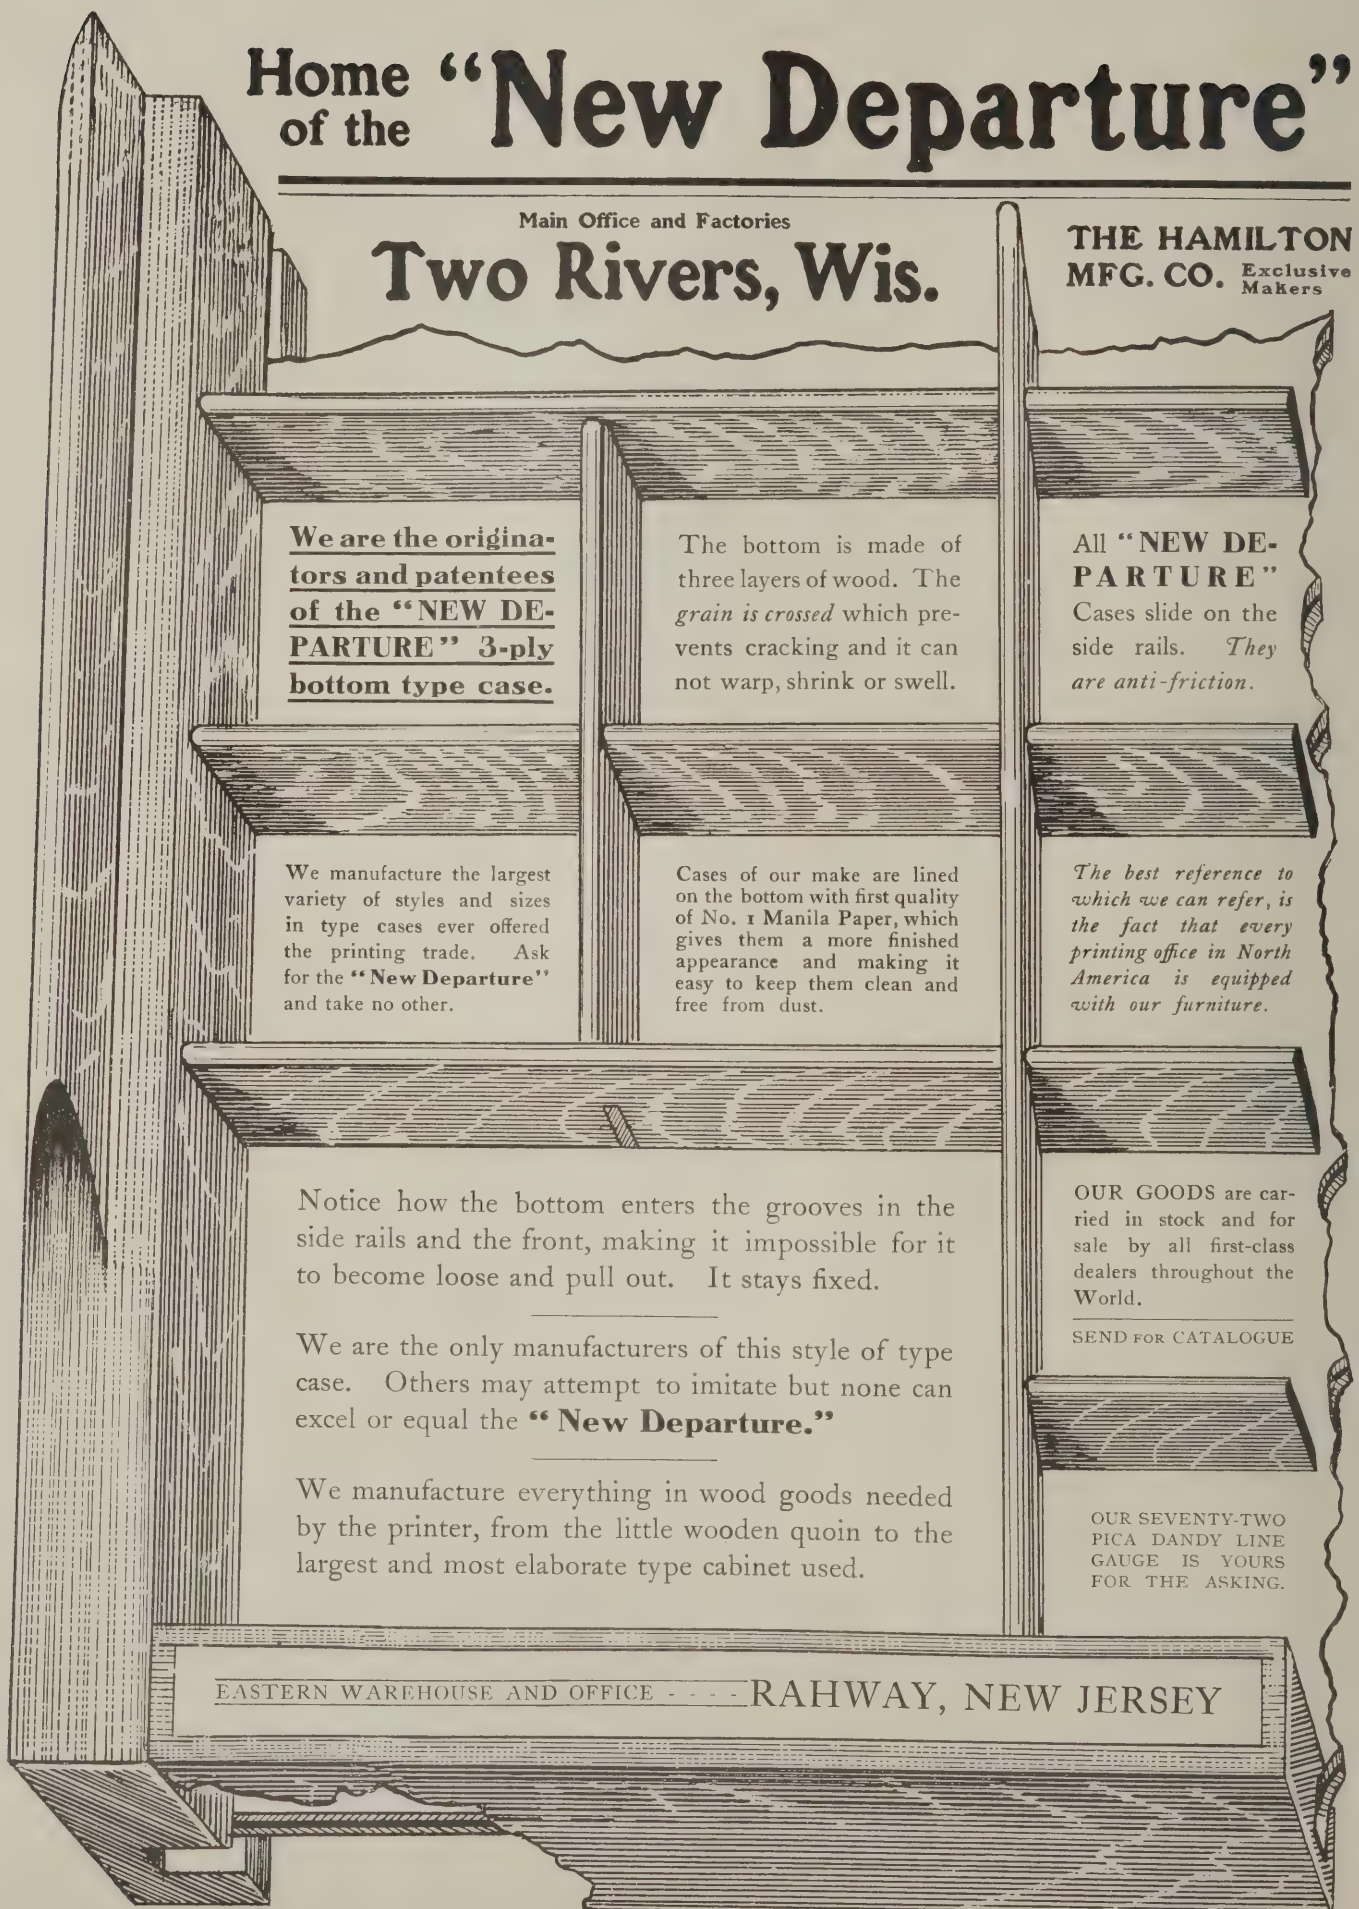
Home of the "New Departure"

Main Office and Factories

Two Rivers, Wis.

THE HAMILTON MFG. CO. Exclusive Makers



We are the originators and patentees of the "NEW DEPARTURE" 3-ply bottom type case.

The bottom is made of three layers of wood. The *grain is crossed* which prevents cracking and it can not warp, shrink or swell.

All **"NEW DEPARTURE"** Cases slide on the side rails. *They are anti-friction.*

We manufacture the largest variety of styles and sizes in type cases ever offered the printing trade. Ask for the **"New Departure"** and take no other.

Cases of our make are lined on the bottom with first quality of No. 1 Manila Paper, which gives them a more finished appearance and making it easy to keep them clean and free from dust.

The best reference to which we can refer, is the fact that every printing office in North America is equipped with our furniture.

Notice how the bottom enters the grooves in the side rails and the front, making it impossible for it to become loose and pull out. It stays fixed.

We are the only manufacturers of this style of type case. Others may attempt to imitate but none can excel or equal the **"New Departure."**

We manufacture everything in wood goods needed by the printer, from the little wooden quoin to the largest and most elaborate type cabinet used.

OUR GOODS are carried in stock and for sale by all first-class dealers throughout the World.

THE GLOBE ENGRAVING & ELECTROTYPE COMPANY'S

Scale of Prices for Half-Tones, Zinc Etchings, and Electrotypes.

Place the block or plate on the lower left-hand corner of the Scale, follow the curved line above the upper right-hand corner of the block to the columns of figures. On long narrow plates, not indicated on the Scale, the price is determined by the curved line directly above the extreme length of the cut. In estimating the cost of half-tones, add ¼ inch to the length and width for bevel.

HALF-TONE—From Photographs or Wash Drawings furnished. (without alteration or extra work on copy or plate)

square finish, mounted on wood, charged as per first and largest figures on Scale; larger than 8x10, 15c. per sq. in.

Half-Tones, finer than 150 line screen, 25% extra.
Duplicate Half-Tones from original negatives, 25% less.
Retouching, altering or improving copies, or grouping photographs, 75c. per hour.
Vignetting, hand tooling or wood-cut finish, 75c. per hour.
Extra negatives for half-tone groups, ½ Scale price.
Anchoring Half-Tones on blocks, 10c. per anchor extra.
Extra proofs and proofs in colors, 60c. per hour.

ZINC ETCHING—From Black and White Line Drawings or Prints furnished.

(without alteration to copy or plate) mounted on wood, charged as per second figures on Scale; larger than Scale, 5c. per sq. in.

When a number of plates, under minimum size, are reproduced at one operation, the Scale price rules for the plate as etched, with an extra charge of 10c. each for blocking; minimum charge, 25c.

Reproductions from lithograph copy, script and penmanship, and etchings of color plates to register, 50% extra.

Reproductions of book, catalogue or music pages, over 50 plates, 10% less; over 100 plates, 15% less; over 200 plates, 20% less than Scale price.

Metal Base Cored, for either zinc or half-tone, 4c. per square in. extra; minimum, 25c.

Unmounted Plates, ½c. per sq. in. less than Scale.

ELECTROTYPING—From Cuts or Forms furnished.

mounted on wood, charged as per third and smallest figures on Scale; larger than Scale, 2c. per sq. in.

Electrotypes from Half-Tones, 25% extra. Nickel-types, 50% extra.

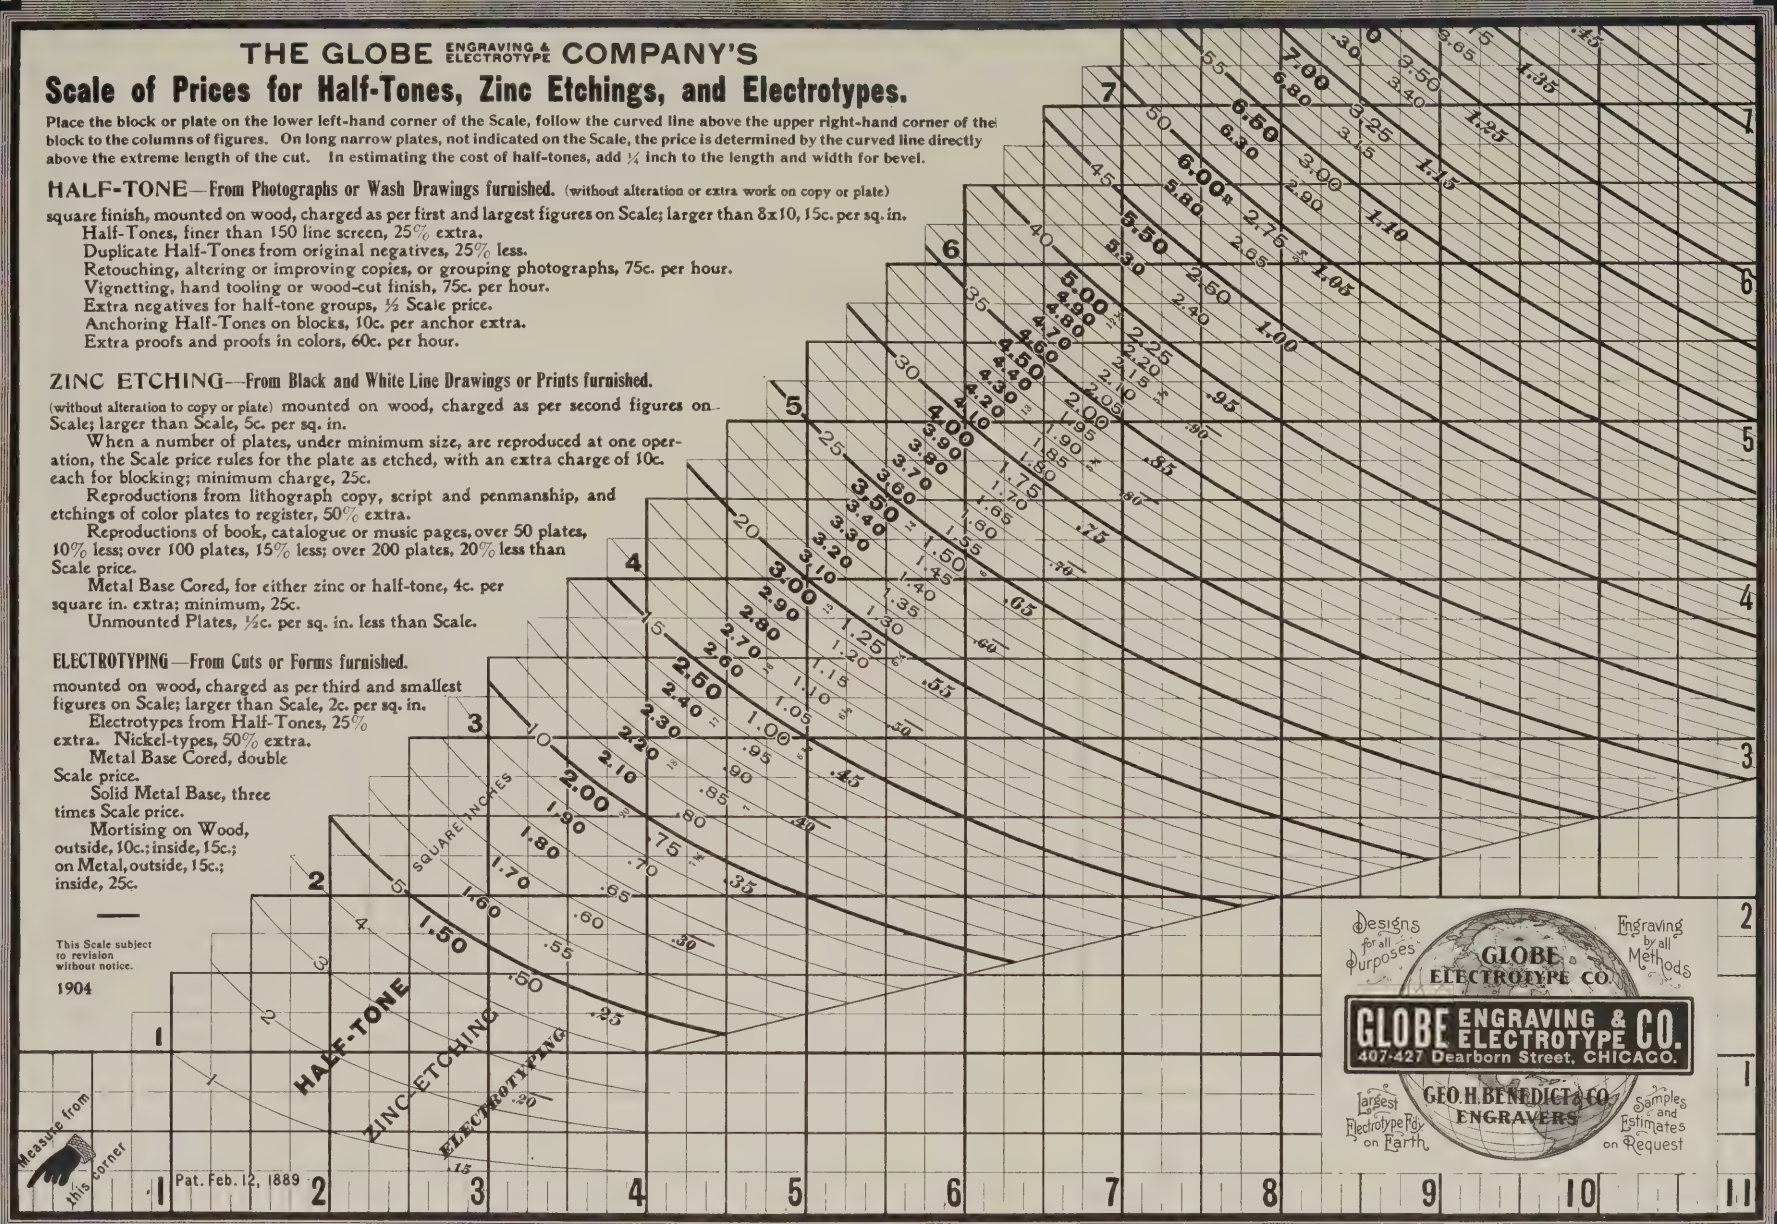
Metal Base Cored, double Scale price.

Solid Metal Base, three times Scale price.

Mortising on Wood, outside, 10c.; inside, 15c.; on Metal, outside, 15c.; inside, 25c.

This Scale subject to revision without notice.

1904



ABOUT CUTS.

Our experience has proven that the more intimate knowledge the person ordering has of the use of engravings, the kind of copy necessary, and how to order, the less trouble is likely to arise in satisfying him; for that reason, and to avoid misunderstandings, we submit the following information as worthy of careful consideration.

When sending photographs by mail, care should be taken to pack them so that they will not be crushed. Creases are difficult to repair and are liable to cause defects in the plate.

It is important to remember that when a picture is reduced or enlarged the relative proportions cannot be changed, therefore be sure to indicate the exact size the cut is to be in inches, height or width, and not "one-half" or "one-fourth" of copy.

Always send your firm name and full address. Mark every piece of copy so as to identify it with the letter of instructions, and say if you want copy returned.

HALFTONE.

Since the Half-tone Process is a method of producing printing plates direct from photographs without the aid of the artist or engraver, it is important to remember that it is impossible to make a good halftone from a bad copy. For this reason care must be taken in selecting photographs. The "Aristo" and "Brilliant" albumen prints are best; they should be toned to a neutral tint, mounted and burnished, sharp in detail and larger than the proposed engraving, or the same size. Negatives and tintypes should never be offered as copy.

The cost of halftones varies with the conditions and depends upon the copy furnished, as well as what is expected of us. It is seldom that a photograph cannot be improved—there is usually a necessity to strengthen outlines or shadows and retouch highlights, to create a greater contrast between the different parts of the picture. Where extra work is necessary it is impossible to determine the cost of same without having the copy for inspection.

The cost of groups depends on the copy furnished; if the photographs can be put together and the negative made at one operation, the Scale price prevails, but if the copy is in separate photographs, varying in size and color, extra negatives will be necessary, for which there will be an extra charge, and if an ornamental background is required there will be a charge for the drawing.

ZINC-ETCHING.

Direct reproductions by Zinc-Etching can only be made from prints or other copy that is in clear black lines or dots on clean white paper. Halftone prints, flat tints or pictures with blurred shadows cannot be reproduced. Coarse prints can be reduced, while fine engravings can be enlarged to advantage, as the enlargement tends to make the lines more open and suitable for letter-press printing.

ORIGINAL WORK.

For designs, pen-drawings and wood, metal or wax engravings, the cost varies in proportion to the fineness of the work and the amount of detail in the drawing or plate. No general prices can be given; each subject requiring a special estimate, the copy should always be sent with the inquiry for prices.

PHOTO ENGRAVING.

Our Photo Engravings are made from pen drawings by our own artists. It must be understood that Photo Engravings cannot be made from photographs without first making pen drawings, and as it is impossible to make a good cut from a bad copy, the photographs should be as perfect as possible, and contain everything to be shown in the engraving. In making the drawing objects that disfigure the picture may be omitted, but it is difficult to add anything not shown. Photographs should be larger than the proposed engraving, or of the same size. Large engravings from small photographs do not show details to advantage.

TIME.

While it is possible to turn out a finished plate in a few hours, the great variety of work constantly on hand, and obligations to other customers, prevent our guaranteeing to fill an order for a single plate from suitable copy in less than two days, and from three to six days if the subject is to be redrawn.

OUR SCALE.

Our Scale of prices is the most complete, comprehensive and consistent ever issued for our line of work. With it on your desk the necessity for correspondence on reproduction work is entirely eliminated.

The prices on the Scale are strictly NET and as low as can be offered consistent with high-grade workmanship. We will, however, offer special inducements on large orders.

TERMS.

The nature of our business is such that the greater portion of the expense of production is for labor, which must be paid for every week. In accepting accounts of companies, firms or individuals satisfactorily rated by the mercantile agencies we expect payment during the month following delivery. We do not care for business on any other terms and persons unknown to us will save time and charges for return of money by remitting the full amount. We do not accept C. O. D. orders unless a remittance by draft or money order for one-half accompanies the order as a guarantee of good faith.

THERE has not been an Optimus out of register between bed and cylinder in ten years, or since the adoption of our Optimus bed motion; nor has this movement, the most vital of a press, cost anyone one cent. It is mechanically perfect and extremely simple.

Others in ten years have repeatedly changed their movements. Some motions, greatly boasted a year or so ago, are now entirely abandoned; while today the most vaunted are not as they were some months since, and the new are experimental.

OPTIMUS
OPTIMUS

It has not been necessary to change the Optimus driving motion. No user has found fault with it. No other is as simple; everything else is more complex. It gives easily the press of highest speed, greatest steadiness and smoothness in operation, absolute register and greatest rigidity. No other press is as strong; no other as well constructed and finished.

OPTIMUS
OPTIMUS

It is these points, with others, that make the Optimus the most profitable in use; that enabled us to sell at Baltimore five times as many as our next highest competitor, and several times all others combined; that has given us the past year the greatest business in our history, and has forced us to build the largest factory exclusively devoted to flat-bed printing presses in America.

The No. 43 Optimus, a three-roller press, for a 25x38 sheet, and less, is very heavy and strong, with all the advantages of the big machines. It is as handy as a pony.

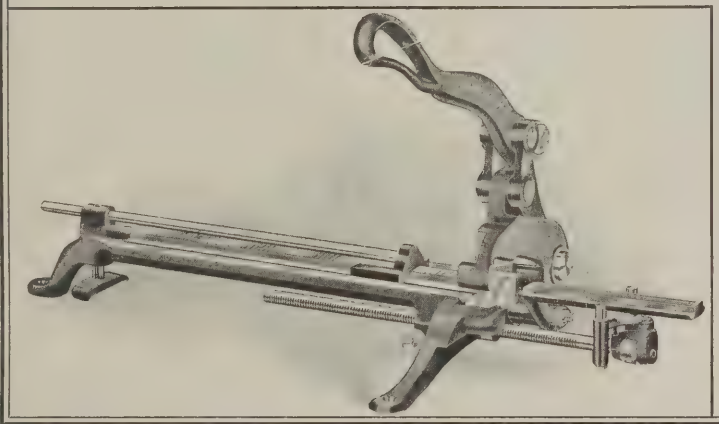
OSWEGO, NEW YORK

American Lead and Rule Cutters

HAVE been on the market five years, and their sale now exceeds the combined sales of all other lead and rule cutters made in America. There are many reasons for this, but the chief reason is, that they *produce results* quicker and better than any similar machine. If you would know ALL the reasons, buy one and let it do its own talking. Better order one to-day from your dealer. If he is 'on to his job,' he has them in stock and can ship at once; if not, and he is a *bona fide* dealer, he will get it for you, Made in three styles:



No. 3 . . . 12.00
Gauges to 105 picas by nonpareils, also to 45 picas by points.

No. 2 . . . 10.00
Gauges to 105 picas by nonpareils.

No. 1 . . . $ 7.00
Gauges to 14 inches, not graduated.

HE MONOTYPED pages following, and the letter received from the Klopp & Bartlett Co., of Omaha, Neb., which accompanies them, supplement each other in a very notable fashion.

The samples of Monotype work exhibit the range and adaptability of the Monotype, the only machine upon which work of this nature and of this *quality* can be efficiently done.

The letter sums up in a phrase the leading characteristic of the Monotype, the characteristic which places it in a class by itself. "The Monotype," says the Klopp & Bartlett Co., "enables us to do printing at a profit." No higher recommendation could be paid though volumes were devoted to the task.

"*Printing at a Profit*" might well stand for the Monotype's motto.

ONE MADISON AVENUE, NEW YORK.

A LAND OF WONDERS.

THE SIGHTSEER FINDS MANY THINGS OF INTEREST IN CALIFORNIA.

California has numerous natural bridges, caves, etc., of no little interest. The Mammoth Cave of Calaveras, discovered by miners in 1850; the Alabaster Cave; the Crystal Palace Cave, containing a number of attractive subterranean appartments, such as the Bridal Chamber, the Crystal Palace Room. A curious apartment called the Music Hall, where the deposits of aqueous origin not only take the form of organ pipes, sounding-boards, etc., but emit, when struck, musical sounds and vibrations. Near this cave are two natural bridges which the tourist can visit and return to the railroad within half an hour. The only natural way to reach these scenes of interest is via "The Overland Limited, Route," comprising the Union Pacific and Southern Pacific, now really one line. The only line running through trains to San Francisco from Omaha, its fast trains arriving sixteen hours ahead of all competitors. Pamphlets and maps describing the wonders of California, and full information about the most comfortable and direct route to the Pacific Coast, can be obtained of—

Gentlemen:

In these days of good, bad and indifferent competition, there is but one thing better than the Monotype, and that one thing is the profit we are enabled to make out of the Monotype.

Like all printers, we think more of profit than of any other one thing in the business, and, as the Monotype enables us to do printing at a profit, we think that next to profit, it is the best thing in the world.

We are especially pleased with the Monotype for the reason that we have not bought a dollar's worth of Foundry type since we started the machines, and as we are now our own type founders, we think we have solved one of the greatest difficulties in connection with the printing business.

With many thanks for your courteous treatment, we beg to remain

Yours very truly,

KLOPP & BARTLETT CO.

ONE-TYPE-AT-A-TIME

Volume I — New York, November 15, 1904 — Number 4

Mr. Type Salesman.—Your bills are not as large nor as frequent as they used to be. Aren't you doing the business?

Mr. Up-to-date Printer.—Twice the business old man. You see, it's this way: I put in Monotypes awhile back and now I'm saving the money I used to spend for type.

HEREWITH is a reduced fac-simile of the first page of ONE-TYPE-AT-A-TIME for November: After the etching was made, and before the paper was mailed, the letter which appears above was received from the Klopp & Bartlett Company. Our artist did not exaggerate in the least, and our claims as to the saving the Monotype makes are shown by this letter to be well within the facts.

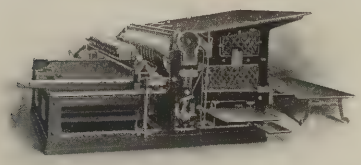
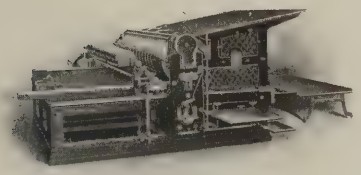
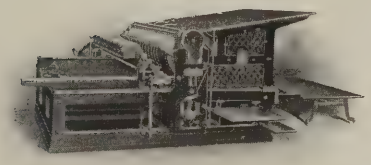
The WHITLOCK

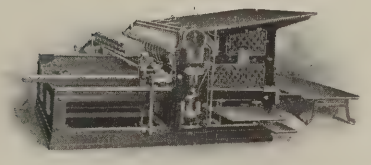
Is This What YOU Want?





How Does this Strike ?You?





"Berkeley, Cal., Jan. 25, 1904.

Dear Sir:

We have your favor of the 18th inst. in regard to our new Whitlock Press. We investigated the press business pretty thoroughly before replacing our old Cylinder with a Whitlock. After looking at all the presses in the market, we decided on the Whitlock as best suited for our circulation of 2,500. The only trouble we have had since we installed the press has been with the power. We were running with a four horse-power gas engine, and could only get a speed of about 1,800 an hour. We then installed a five horse-power motor and speeded the press up to 2,300, our Pony up to 2,600, and put on the folder and three platen presses, and it runs them all in fine shape. We have the big Whitlock set on the floor without foundation, and there is absolutely no jar. The boys put a five cent piece edgeways on the frame while the press was running at 2,300 an hour, and there was not enough jar to knock it down. We go to press at 3:45, and the edition is out about five o'clock. We only run the first side about 1,860 an hour, but speed up for the last side. We are more than pleased with the press. Of course we had had a year's experience with the Whitlock Pony, which gives excellent satisfaction on fine half-tone work as well as general work.

Very truly yours,

(Signed) C. E. DUNSCOMB,

Business Mngr. Berkeley Daily Gazette."

The foregoing letter was written by a user of a

Whitlock Fast Revolution Newspaper Press

in reply to the inquiry of a prospective purchaser.

The prospective purchaser has since bought a WHITLOCK

THE CENTURY

No other Press prints at once so fast and so well

The impression precludes possibility of battering the forms and saves time of the pressman. The register is absolute and lasting, ensured by your method of gearing the bed and cylinder together. The continuous distribution of the ink with your system of rotary interchangeable rollers is excellent and also an ink saver.

ROBERT BARTSCH,
New York.

We have recently completed a run of 200,000 half-tone illustrated circulars on our Century, (*which has been in constant daily use for five years*) at a speed of 1800 an hour, and the condition of the plates and appearance of the printed sheets at the end of the run were extremely gratifying.

Volume Twenty-two Chicago, February, 1905 Number Two

A Transformed Press—Belittling of the Calling—Scored by George Harvey Editor of Harper's Weekly.

THE HIGHER IDEALS, THE TRUE IDEALS.

ONE of the most healthful and sensible talks of late years on the American press was given by Mr. George Harvey, editor of *Harper's Weekly,* at the Silver Anniversary Banquet of the Chicago Press Club on the evening of January 11th.

Mr. Harvey rightly deprecated the practice, that has been too prevalent among newspaper people, of sneering at all that tended to the proper recognition of the great obligations, power, value, dignity and merit of the calling. He said, as reported in the Chicago *Tribune,* that gave a most excellent report of the occasion:

Of all of the many public misconceptions of the forces dominant in our national progress none is so marked as that which applies to the press. The transformation evolved in the last score of years in the professions, more particularly the legal and the educational, both secular and religious, has evoked both comment and criticism, but, despite tendencies which are often pronounced deplorable, the saving clause to the effect that, after all, wicked exceptions serve only to establish a highly satisfactory average, invariably finds its most complacent utterance in the most effective place.

Professional self-respect and self-appreciation win this unconscious tribute. And this is but natural. If one indicates little regard for himself or for the fellows of his craft, what can he in reason expect from others? Precisely there is the line drawn by journalists themselves against the profession of journalism. It is not that they do not really respect themselves and their co-laborers; they do. But by every possible method they convey the impression that they do not. They seem to prefer to be regarded as cynical rather than as sincere; as smart, alert, successful rather than thoughtful, capable and worthy.

GROWTH OF IDEALS CHECKED.

The sneering, silly, and inexcusable remark, savoring of the vulgarity of the ostentatiously "self-made" man, "I am not a journalist, I am a newspaper man," has done more to check the growth of ideals in the eager minds of thousands of young men than any like utterance ever made by one willing to burn truth upon the altar of epigram. Of all of us in this room who have given mind, heart, and conscientious endeavor to public service, there is probably not one whose perspective, at some point of his career, has not been blurred by this stupid differentiation.

The contrast of terms is, of course, only phrasing and inconsequential. But the idea conveyed, the deliberate insistence upon being regarded not merely as cynicists, but as mechanics, if not indeed as day laborers, has been fruitful of infinite harm both within and without a profession requiring the greatest skill of intellect, the finest discrimination between right and wrong, the most forceful form of expression, and the highest order of moral courage. That the most potent agency in the evolution of this American nation should be thus debased, even in appearance, is surely anything but creditable to those responsible for it and those who themselves should guard no more jealously their own good name than the honor of their craft.

AMERICAN PRESS MOST FREE.

There is no press in the world comparable to that of America in freedom from influence, political or social, from venality, from contamination of any kind whatsoever. In France, a newspaper's opinions are a matter of francs, in England too often of titles, in Germany, Austria, and Spain of imperial favor, in Russia of absolute censorship.

In America, thanks to the maintenance of the sturdy traditions established by the Greeleys, Raymonds, Bennetts, Medills, Danas and Bowleses of the past, the fundamental integrity of the press cannot be impugned. It is faultful, but it is free. We have our sadly exaggerated headlines on week days and our monstrosities on Sundays; we have our truly delightful Buster Brown, but also his hundreds of puerile imitators; we have amazing productions of no less amazing "art;" we have columns and columns of crime and pages and pages of waste. Finally, not least—at any rate, in numbers—we have our red and white papers, sometimes referred to as "yellow" journals.

RUSSIA EXAMPLE OF EVILS.

As contrasted with our own country, Russia today stands forth a vivid example of the effect of suppressed opinion. Discontent would better burn than smolder. The continuous hissing of offensive gases escaping is not pleasant, but it is infinitely preferable to the otherwise inevitable explosion.

Freedom of speech, freedom of publicity, yes; all admit the wisdom and necessity of preserving both. But how frequently is added, especially by men in public office, a vigorous declamation against "unfair criticism" and how almost daily is uttered sometimes a violent and unwarranted, sometimes a dignified and justifiable, protest against "invasion of privacy," "encroachment upon personal rights," and like offenses.

Only those behind the curtain of the editorial sanctum can fully appreciate the proportion of insincerity contained in the virtuous avowals of shy and retiring, though weak and human, beings of both sexes. In nine cases out of ten the most vociferous protest may be attributed safely to self-sufficiency, snobbishness, or a guilty conscience. There is so little of malice in American newspapers as to be unworthy of notice, but it is unquestionably true that too little heed is paid to the fact that unwillful misrepresentation is often quite as serious in effect.

Worst of all is the refusal to rectify a known error. Cursed be the man who initiated the policy of never making a retraction in the columns of his journal. The mere fact that an individual, whether right or wrong, is virtually voiceless and helpless in controversy with a newspaper, should and does morally vest him with the right to exceptional consideration. A lie once started can never be stopped, but the one responsible for its circulation, directly or indirectly, who fails to exert every possible endeavor to that end, is unworthy of association with decent men. An American newspaper should be an American gentleman.

To see the right is genius; to do it is courage. Unite the two under the banner of sane idealism and the most potent force in the cause of progress, enlightenment, and good will lies in the free press of America.

It may be that many newspaper people are cynical or become cynical by being brought in constant touch with the vanities, weaknesses, jealousies, the littleness and hypocrisy, the vices and selfish, personal ambitions of all classes of men, especially of those who wish to be rated before the public as great, noble and wise. However this may be, the profession presents within itself no reason for cynicism. Noble men and women are found in every walk of life and if shams have been raised to prominence, to high offices and power, the easy, indulgent, compliant good nature of the members of the press is largely responsible therefor. The fostering of this spirit of cynicism and negation has had a demoralizing effect on the members of press clubs in some of our large cities, but a better, a healthier condition is beginning to prevail, yet there is still room for improvement. Sneers at religion, because of the faults of those claiming to be orthodox; the aping of those in high positions in their bibulous, lustful and gambling habits, in their vulgarities, oaths and "smutty stories" that have passed for humor or wit, are no longer recognized among thinking people as indications of liberal mindedness, broadness and greatness. It is an unfortunate thing that because doubts are raised with regard to long-received theological theories, and creeds, many young men come to think that it shows superior wisdom to sneer at that true religion which involves duty and sane, healthy, noble living, and that has been recognized as the proper guide of life and all true, noble and wise men in all nations, in all races and in all times as shown in all records and writings since the human family has had a history. Press clubs, like many other clubs have, too frequently, been cursed by the membership of vile-minded loafers, who were brilliant in imagination and expression of thoughts, but as vile in thought as brilliant in conversation, and whose reputations for wit and wisdom have been established by sneers and vulgarity. Any fool or knave can sneer and question, but it takes an honest, wise man to give a reason and to establish the truth. Vulgar, dishonorable men who have won high positions through the easy compliance of the press are being driven out of office and are sinking to obscurity, and true men of noble purpose are taking their places through the aid of better newspapers and more thoughtful writers. The men of negation, of sneers, of lust for place and spoils, are giving way to men of positive principles, sterling honesty and virtue, of strenuous lives, of ripened scholarship and more benevolent and patriotic impulses. Even the glamour and power of mere position and vulgar wealth are coming to be disregarded. There is a reform working itself out everywhere in the life of this republic and among the leaders in that reform are the workers on the American newspapers.

THE EDITORIAL PAGE.

BY GOVERNOR A. B. CUMMINGS OF IOWA, BEFORE THE CHICAGO PRESS CLUB, JAN. 11, 1905.

IT must be understood that the editorial page, properly defined, means a great deal more than the part of a newspaper or magazine put in large type, and which presumably is the product of the editor.

Every newspaper or periodical is composed of at least two parts. First, the mere statement of facts, or alleged facts, which the paper has gathered in one way or another, and publishes to the people as the news of the world; second, reasoning, analysis, criticism, censure, praise or comment upon the facts so published, or which are otherwise known. The latter part I call the editorial page, and it matters not where it may be found or from whose pen it may come, it constitutes the most vital and potential force in the life of the people.

Discarding for the moment the purely educational processes which are carried on through public contributions and private philanthropy for the training of the young, there is no other one factor so responsible for existing ideals and existing practices, for the high or low civilization in which we live, for civic honesty or civic dishonesty, for civic courage or civic cowardice, for civic purity or civic impurity, as the editorial page of the vast circulating library commonly called the press.

INFLUENCE ON ELECTIONS.

The fidelity with which the voters will in the future direct the destinies of their country is largely in the hands of those who assume the responsibility of expressing their views in the newspapers. The standards of peaceful patriotism will be largely determined by those who take up the task of commenting upon men and events. The integrity of those who make up the public service will, in great measure, be determined by the men and women whose duty it is to lay before the people an unprejudiced, unbiased and high-minded conclusion upon the things committed to the care of public servants.

I said a few moments ago that every age had its own demands upon the men of the time, and I now add that in every age character has its own peculiar weaknesses; not weaknesses absolutely, but weaknesses in comparison with the assaults which are made upon it. Dividing the country again into electors and officeholders, the vulnerable places in the armor of the former are, first, a kind of belief that inasmuch as this country was started right, it will run right without much attention; second, a disposition to give little thought to the tendencies and associations, the habits of thought and the probable conduct of men who are proposed for their suffrages.

FOR THE HIGHEST IDEALS.

The press has always, in the main, stood for the highest ideals in these respects, and I only venture to ask its representatives to redouble their efforts to fasten upon the minds of the people the truth that this country will not realize the fond dreams of its patriots unless the people themselves are alert, not only some of the time, but all the time.

Of the second class into which I have divided the people, I have more to say. I believe it to be true that the only menace to an uninterrupted career of honor, glory and success that will carry this land of ours to the highest point that mortals will ever attain, is first, cowardice; and second, corruption among men who hold public position.

The people of this country do not like a coward. The trouble is that the coward in public life is oftentimes able to conceal his shortcomings in the garb of conservatism. When I speak of a coward I mean a man who, with an

honest instinct and a desire to do right, is afraid to do it lest he may not again be nominated and elected to office. I mean the man who hides himself behind the shelter of want of opportunity; who remains silent under the plea that his voice would not be heard; who throws up his hands and shivers before an emergency, and who protects himself by the cry that the interests to be affected are so vast and the subject so complicated that he must take eternity to make up his mind. I mean the man who waits until the people are marching under quickstep to accomplish an end, and who then rushes from the rear to the front and declares, with panting breath, that it is a privilege and an honor to lead his beloved constituents in their struggle to right a grievous wrong.

I mean, too, the man who bends to the unjust passion of the populace, and who permits his desire to stand well with the people to drive him into a course which his better judgment condemns.

WEAKNESSES ARE GROWING.

I shall not attempt to specify further or describe more elaborately these weaknesses in the character of public servants. They seem to me to be growing. I have but to refer to them to summon before you, whose observation has been varied, whose studies have been deep, to accomplish my purpose.

I say again that the press of this country has been in the main true and steady, but I desire, if possible, to implant in your hearts a firmer resolution to make the truth known at any and every cost. I think I can speak fairly, because I bear a good many scars from the lance of the journalist.

PROOF IN LIBEL CASES.

IF the publisher relies upon the truth as a defense to a libelous statement, he should be careful that he is able to make the proof as broad as the charge, or charges, if there are more than one. It will not do to prove some distinct or similar matter. The editor should be ready to prove the truth of any insinuation, as well as any direct statements. Some cases of interest may be of value to illustrate the principle.

In October, 1884, Patrick Rellivan published in his newspaper, *Ireland's Liberator,* an article of which the following were the scare heads: "Judas Iscariot Ford,—The Evil Genius of the Irish Movement Reviewed and Exposed—Facts About His Private Life Which Cannot Be Disproved—His Attacks on Catholics and His Attempts to Lead An Independent Bolt from the Church—Deserter, Betrayer, Infidel, Freemason, Sham-Reformer, Swindler of the Emergency Fund, Would-Be Dictator and Political Prostitute—His Conduct in the O'Donnell Case and Shameful Treatment of Susan Gallagher—Starvation Wages in the *Irish-World* Office.—Ford Betrays General Butler and the Green-Back Party, and Insults Every Irish Democrat by the Sale to Blaine."

The headlines may indicate somewhat the character of the charges in the article. The principal one, however, was to the effect that Ford had used the balance of $32,000 of the O'Donnell defense fund in paying his private debts. On the trial Mr. Rellivan admitted that his only reasons for believing that Ford had paid his debts from the O'Donnell fund, was that Ford had no means of his own with which to pay them. Further proof being more or less lacking and the other evidence failing, Mr. Rellivan was convicted and sentenced to two months' imprisonment.

In 1880 the following was published in the Chenango (N. Y.) *Union,* the report having been sent in by correspondent: "Joseph F. Bennett, a somewhat notorious character, whose presence in this village, Sherburne, was a blessing too much disguised to be at all apparent, is holding revival meetings and preaching Rev. Mr. Earle's sermons in various rural districts of the State. * * * We know for a certainty that his object is a mercenary one. * * * As Bennett is apt to assume an alias, we give a short description of him." In an action by Mr. Bennett against Walter G. Smith, of the Union, evidence was given of some of the charges, but there was no evidence that "Bennett is apt to assume an alias." The question for the jury was the amount of the damages which, naturally, could not be so large as would have been the case had there been a total failure of proof.—30 N. Y. Sup. Ct. Repts. 50.

In 1873 a series of charges were published in the Denver *Tribune* against Jacob Downing, a probate judge. The following is a sample: "J. Downing has been guilty of forgeries enough to confine him in the penitentiary for not less than 200 years. * * * Boss Tweed said he was a statesman previous to being locked up as a felon. Wonder what Jake Downing would give as his occupation in the event of a similar contingency which is far from unlikely. * * *." This forgery consisted of alterations in a memorandum book for his own convenience and not required by law to be kept, and the entries could not affect any legal rights. The Supreme Court held that this did not constitute a forgery, and the plaintiff was permitted to recover for lack of complete defense.—Downing v. Brown, 3 Colo. 571.

In the month of November, 1873, a writer in the San Francisco *Bulletin,* speaking of the dealings of certain parties with reference to a mine, said: "The chief owners believe that they have been outrageously swindled." As a matter of fact the chief owners did so believe, but evidence as a defense was only proper where it could be shown that the owners *were* outrageously swindled. It is no defense to prove a rumor or belief on the part of the editor or other parties. Possibly in states where punitive damages are allowed, evidence of this kind might be shown as against a claim for punitive damages.—Wilson v. Fitch, 41 Cal. 363.

On the 6th day of October, 1897, there appeared in the New York *World* an article of which the following were the headlines: "Collis & Platt Worked a Huge Grab—*World* Exposes Amazing Conditions in City's Contracts—Boss Gets His Share Through His Surety Company, Run and Officered by His Son—On Almost Every Contract—Other Sureties Rejected and His Fidelity and Deposit Company Substituted—Long Record of Favoritism—In Nearly All of 146 Contracts This Change is Made." In an action by General Charles H. T. Collis, Commissioner of the Board of Public Works, against publishers of the *World,* the court held that where a newspaper article alleged that plaintiff and another had worked a "Huge Grab" in the substitution of a surety company in which they were interested, for other companies on municipal contracts, proof of the substitution was no justification for the statement when it appeared that the substitution was by order of the proper municipal authorities, and that the plaintiff was not concerned therein; that the statement "worked a huge grab" was libelous, as charging a malfeasance.

Good manners are as valuable in advertising as in personal behavior and good manners are the index of character in business as in social life. Every customer sought for through an advertisement should be treated with all the courtesy of the most highly prized friend and with like candor, honesty and consideration.

THE APPROACHING LABOR WAR.

IN an address before the Citizens' Industrial Association of America in New York City, Mr. F. C. Nunemacher, a leading employing printer of Louisville, Ky., reviewed the existing conditions as to the approaching difficulties between the United Typothetæ of America and International Typographical Union. The Union demands on the one hand an eight-hour day and the closed shop. The Typothetæ has declared by resolution for an open shop and the prevailing nine-hour day or fifty-four hours a week. January 1, 1906, has been set as the day for commencing hostilities or declaring a strike by the Union, if their demands are not conceded. Both sides are preparing for war. The Typothetæ has pledged its organization to provide and to keep intact a defense fund of $100,000, while the Union has commenced the collection of one-half of one per cent of the earnings of members for the establishing of the eight-hour day in the job and book offices of the United States and Canada. The Typographical Union claims a membership of about 46,000, and it is estimated that the assessment will amount to $200 a month or $240,000 a year. Of course these amounts, although they seem large, are a mere bagatelle compared with the real amounts that will be lost in case of a strike. The loss will run into millions each month of the strike. It has been pretty carefully estimated that, since 1888, or in sixteen years, strikes and lockouts have cost this country a round billion of dollars and that one-half of this great loss, besides the effects of the violence employed, the assaults and murders, the demoralization and lawlessness that have ensued, the suffering of the women and children, has fallen upon the public, upon those not responsible for the strikes and only unfortunate lookers-on. "War is hell," yet even war is not so destructive of public and private morals, of regard for the rights and lives of others, of respect for law and justice, as are modern strikes with all their attendant hate and violence. War generally has some noble principle or patriotic motive for its justification; strikes and lockouts have selfishness as the only motive—selfishness made blacker by greed, envy or low hates, covetousness and jealousy. War is conducted under well-established usages and rules and with rigidly-enforced discipline. Strikes are conducted contrary to all existing laws, in defiance to constituted authorities, with the methods of the cowardly assassins and the midnight slugger, without regard to any principles of manliness, fair play or the rights of either combatants or non-combatants. In war even combatants are recognized as having some rights, in strikes not even women or children or the maimed or helpless receive consideration and, during them, crimes are committed in the honored, sacred name of labor, that would shame the lowest savages or the vilest cutthroats and bandits or Mafia of Southern Europe. Worse than private wrong, too, are the subserviency of subservient demagogues, cowardly politicians, officers of the law and a too compliant press. This will change some day and the public will arise in indignation and assert the right to compel the settlement of disputes in a way not to inflict loss, injustice and injury on citizens no way concerned in the selfish disagreements between employes and employers. Mr. Nunemacher, speaking, in part as to the "Liberty of the Press," said:

The loss of liberty and honor is more terrible to the free and brave than the most horrible death. Have we liberty? Can we employ whom we please? Where is our honor when we turn from our doors the non-union American workman for no reason but that he is not a member of the union that is in control in our plant? How many newspapers in America enjoy the true "liberty of the press" that is so loudly proclaimed? The law gives it to them within reasonable bounds. The union takes it from them. The average editorial writer on the labor question pens his paragraphs with the comfort of a keeper of a powder magazine; a single utterance may precipitate serious trouble, not in the nature of an immediate strike—for the agreement with the Publishers' Association would, perhaps, prevent that, but with the exception of a few notable instances the pen that indites the editorial or reportorial review of any labor incident, where the union is involved, feels the restraint of the business office, which is influenced to a greater or less degree by the restrictions of the union.

Few, indeed, are the large newspaper offices that would deliberately dare to put a non-union man to work. Is this true Americanism? Is this any restriction of the liberty of the press or its owners, when they cannot employ whom they please? Do you know that the publication of the majority of the magazines in this country would be stopped if the establishments printing them should attempt to employ non-union help? Do you know that such an attempt on the part of the large daily papers of any city would result in the cessation of their publication? Why is it that we cannot treat our fellow-countrymen as one free American should another? Whence comes this law that is above the constitution, which gave us the rights of life, liberty and the pursuit of happiness? In the instances of the printer and publisher it comes from the International Typographical Union. In your several lines of business it comes to you from the union with which your employes affiliate. Can we rightfully claim our heritage as loyal American citizens if we virtually sanction this condition of affairs by our silence and inaction concerning it?

We, the people at large, are to blame for the deferential attitude of the newspapers to the unions, for if we would show by our words and actions that we uphold the newspaper which makes the stand for the open shop and freedom from the domination of the union, the day would not be far off when the press would have the liberty which is its right. Let the citizens of any community take this stand, and the press will quickly throw off the yoke which galls it. It would cost them work; it would cost them money; it might cost them life, but to such men what are work, money and life if they have not liberty?

I believe in men. As a workingman among workingmen I learned to know their labor, struggles and necessities, and for them I would ask "fair play," with full consideration of their rights. Many here have been caused loss of business and injury to their plants, and, naturally, feel strongest inclination to adopt the most aggressive and stringent measures in dealing with those whom it appears our plain duty to oppose, and the question is, should such a spirit be allowed to control in our deliberations?

As a man brave and strong can be generous to his foe, so this gathering, representing as it does the most powerful industrial organizations in our land, can afford to meet with most liberal spirit those with whom it will have to deal. In the beginning our nation was dedicated to give equal rights to all. This proposition has been maintained throughout our history, and if we depart from it now we will build a structure upon the sand.

Instead of widening the breach between employer and employe, our best thought should be directed to bringing them together on more friendly relations. Let us steadfastly protect our own interests, but let us not forget the rights of others. Speak out in no uncertain tones, and let the action of this great union of business interests stand in no false position before the world in relation to our employes as man to man. Stand out and give with courage, tempered with moderation, the views that bring you to this place as a man and an American.

On you our country this day turns its eyes. On you our industrial safety lies. As those who have gone before us faltered not in the declaration and defense of their rights as American citizens, fighting for them, dying for them, so let us hesitate not to declare for ourselves that we will make the stand for our equal rights to conduct our business and manage our affairs as we deem proper; not in conflict with the laws of our nation, but with careful consideration of our individual employes, submitting to domination by no labor organization.

No fears attend me in my thought of the action that will be taken here. My confidence in the sincerity and good judgment of my countrymen is such that I know you will do your duty as true men.

QUESTION BOX

All Questions from Printers will be Answered in this Department
Address CHARLES A. KING, Beverly, Mass.

A PLEASED PATRON.

FULTON, Mo., December 13, 1904.
National Printer-Journalist, Chicago, Ill.

MR. CHARLES A. KING. DEAR SIR:—I am glad to note the creation of your department in the N. P.-J. I believe it can be made the best department in the paper; sort of "first aid to injured" directory.

I have had the same trouble encountered by G. A. E., of Wisconsin. Slip sheeting is the only infallible remedy, but I have sometimes avoided their use by smearing glycerine on the hard platen paper, renewing the "smear" every three or four hundred impressions. It should be rubbed in well with the finger tips and then a few sheets of ordinary paper fed through to take off the surplus.

I stumbled on to a good way to clean up brass rule from seeing a brass kettle cleaned to make preserves in. Take a shallow pan and put your dirty rules in it; pour over them a solution of plain vinegar and salt. After a few minutes' soaking take the rules out, one at a time, and wipe them off with a rag soaked in warm water. Rules that are full of dirt can be made to fit snugly like they did when new.

A little glycerine on the finger tips is also a good help to press feeders. It seems to "ketch" hold of the sheet better than rosin.

Yours truly,
BRENT WILLIAMS,
Publisher Missouri *Record*.

Mr. Williams' letter is one of several which commend this department, and no doubt it will be of assistance to many printers. While the editor in charge does not expect to be able to suggest relief in all cases, no doubt if you will tell your troubles someone else may.

Glycerine is about as important an article in a printing office as lubricating oil. Many printers use it to dispel electricity with fair success. The platen or cylinder sheet should be well soaked with it. It is also useful in preventing offset when "working and turn" on a hurry job. It is good for thinning copying ink and making it work freely, and indispensable in reducing a blocking compound and making it flexible. There are other uses and it should be kept on hand. Glycerine does not evaporate and this should be borne in mind and when applied to a printing surface it must be well rubbed in and then the surplus absorbed by running old sheets. It should not be wiped off unless it has been too freely applied.

S. F., Kansas. "I have just subscribed for the NATIONAL PRINTER-JOURNALIST and wish your editor of the Question Box would tell me how to increase my business. I have tried getting out posters every week and some other advertising, but it does not seem to 'pull.' I am in a town of about 1,000 population with another office."

We judge that S. F. is a young printer, although the samples of his advertisements are well printed; the only comment we could make would be that the stock was too much like a poster. A printer's advertisements should be on the best of stock. One printer in a manufacturing town where there was much competition refused all cheap work and endeavored to print for customers who wanted the better class of work and induced many concerns, who could afford it, to use distinctive stationery and advertising. A printer should set this example. We have no doubt S. F. will find many valuable hints by reading the trade journals and he must bear in mind that he cannot get immediate results from advertising. Most of the people in his town do not need printing every day and his announcements may reach them at a time when they are supplied, but if he can keep his name before them he may get their next job. In my own case, when I first started, I sent out a lot of sealed letters in hopes of securing customers but received but one reply and that not very promising; but I had very little to do and encouraged my visitor who said he had dropped in out of curiosity to see who would think of sending him an invitation. As a result he began to have printing done and in the course of several years we did thousands of dollars' worth of work for him, as he started a monthly paper which is today running successfully. Plain, clear printing is much better than anything fancy and as a rule pleases the customer and certainly pays better. Do not cut prices; this is one of the poorest things to do in building up a business, for it is difficult to convince a customer next year why you cannot do his work for the same price as this year. Better try and give superior work, although there are a few jobs which can only be obtained on the score of cheapness. Strict attention to busines is also most important, and remember that in some instances your customers can only look after work evenings or at odd times and you should try and accommodate them; in fact, the same rules for success that apply to other kinds of business are true of printing.

A. B., Indiana. "Will you give me some information about souvenir post cards? I understand that in many places printers are working this scheme."

In every large town there is a good field for publishing post cards with local views, and good money in it, too. The collectors of post cards are as numerous as stamp collectors, and in all the large cities you will find hundreds of men selling them on the street. Probably no visitor to Chicago, New York, Washington, the World's Fair, or similar place, came away

without a handful of post cards. The stationers in the country places say that there is call for local views and many are trying to supply it. A printer who has made a success of it gives this information: "We started in the post card business because a new manufactory wanted some for an advertisement and we finally found that others liked this sort of advertising. Then we got into making them for the trade as souvenirs. We get the best possible photographs of local views; something of a historical nature sells best, or of special interest. Any half-tone engraver who does good work will make the plates. Have the screen of the finest, and frequently a little tool work is desirable. The ordinary plate will cost about 15 cents per square inch and tool work as much more. A good plate should last for all the cards you will ever want to print and a dollar or two spent on the plate is a good investment. The cards should be thin bristol, enameled on one side, and any paper warehouse will sell them to you for about $1 per thousand; some of them make a specialty of cards printed on one side. There is a postal regulation as to size: 3 9-16x5 9-16—2 15-16-x4⅝, or between the two. If your press is large enough you can print two or four at a time, but it is desirable to print them single if done on a smaller press than a half medium. The distribution should be as good as possible and the rollers new. Use a double-tone sepia ink, or something similar, and either slip-sheet or add something to the ink to make it dry instantly. As this is nice work, slip-sheeting is preferable. Of course, if you are in a large place you can print the postals on a cylinder and if there are plenty of rollers the effect is better. As a rule the single-color cards are retailed for 2c each and the three-color cards for 3c to 5c each. There is a good profit, as almost any store will take them on consignment and a wire rack will show them to advantage. On special holidays or when there are visitors, clean boys can sell many on the street. In such cases the sets should be put in envelopes and a sample set used to show. Nobody wishes to buy soiled post cards and in the summer care should be taken not to expose them to flies in too large quantities. Judicious advertising is also of great help and if you have a newspaper you can easily build up a trade for them. Already there are dealers in the large cities who are gathering sets of postals from different localities for present or prospective customers.

HOW TO MAKE ADVERTISING PAY THE ADVERTISER BEST.

PAPER READ BEFORE KENTUCKY PRESS ASSOCIATION BY W. Q. ADAMS, PUBLISHER OF THE OWENSBORO, KY., DAILY INQUIRER.

THE solution of the problem assigned me as a subject for discussion does not lie wholly within the power of the publisher. It is equally in the hands of the advertiser. Each has his important part to perform before the desired result can be attained. "How to Make Advertising Pay the Advertiser Best." The first element needed in a solution of this question is good copy. Some convincing argument must be used, some attractive bargain offered, some definite idea conveyed. Without this all that a publisher can do would not be sufficient. He might print a model paper that everybody in his territory reads, and give the copy the most attractive display possible; he might put it in the most conspicuous part of his paper, and yet it would bring no returns were the text meaningless. The first thing to do, then, is to educate your merchants in the art of advertising. Help them in the preparation of their copy, get them to study the advertisements of successful merchants in large cities that appear in your exchanges. Persuade them to take mail courses in advertising from some of the good correspondence schools. You might secure tuition certificates from some of them in exchange for advertising and give these to your largest merchants. It would pay you well. Then there must be an advertising writer on your paper, one who has taken a course in advertising and knows about the different sizes of type, the various faces and the entire technical end of the business. He should help advertisers in the preparation of their copy, and in doing this he would help the printer to as great an extent, as well-written and properly-arranged copy greatly facilitates his work. These remarks, of course, do not apply to foreign advertisers, as their matter is almost without exception prepared by professional and skilled writers.

The next requisite for securing the best returns from advertising is good position. I do not contend that advertisements should be sandwiched among news matter and the desires and feelings of readers ignored. This is neither necessary nor desired. But the make-up can be so arranged that nearly every advertisement in the paper will be given a good position and yet the reader not inconvenienced. This can be done by placing advertisements on both sides of the page, say one or two columns on the left and the remainder on the right side of the page with an occasional one at head or foot of intervening columns. Even though contract does not call for any specified position it is better to give all advertisements the best position possible not to the inconvenience of the reader and injury to the appearance of the paper. When the advertiser uses fixed amount of space regularly in every issue and copy is changed frequently it is better to give him a fixed position on a specified page. The reader will then know where to find the advertisement when he wants to look for it, and there will be many who will want to see it if they know it always contains some bargain offer. It is also important that in the make-up of a paper the different departments or classes of news matter be on the same page week after week. This is not only desired by the advertiser but it is of great advantage to the subscriber. The reader soon learns just where to look for everything, knows on what page he will find country correspondence, on what page local news, personal news, telegraph news and all the classes of news the paper is accustomed to containing. Many small papers carry out this idea of uniformity of make-up only as regards the editorial page, that being the only class of matter that appears on the same page at all times. In this connection it might be well to state that the live, important news should not be collected on a few pages and nothing left for the other pages but matter of a miscellaneous nature. Some of it should be put on every page and if it is necessary to use miscellany to fill up with let that be scattered on the different pages also.

One other thing is needed to bring the best results, and that is frequent change of copy. The same advertisement should not appear in two consecutive issues of a publication, except in certain restricted lines of business. Certainly department stores, dry goods and grocery stores and most retail businesses where a variety of goods is handled should change their advertisement every issue. The cost of composition should, of course, be added to the rate for space, and paid by the advertiser. Most papers outside of the large cities estimate the cost of composition at about 4c an inch.

In giving these principal elements that enter into the making of "Advertising Pay the Advertiser the Best,"I do not presume to cover the entire field embraced in the subject. If I had mastered the details of this problem I would not now be publishing a country newspaper, but would be occupying the soft berth of a millionaire, free even from the crashes of Wall street and the clashes of Lawson and Standard Oil.

EDITORIAL NOTES AND POINTS

BY BENJAMIN B. HERBERT, CHICAGO, ILL.

NEVER air personal grievances in a newspaper and never advertise your competitor by finding fault with his methods. If these are wrong, they will become known without your help. Talk about all the good things that you are prepared to do and impress all—in wise humility, truthfulness and clearness—with the services that you render, but devote no space to your competitor. Give a little time, however, to quietly observing, studying and adopting, in your own way, any of his methods that are better than yours, and secretly note and avoid his errors, mistakes or failures.

We hope that our newspaper friends are receiving the full honor and appreciation which is their due for the splendid services rendered their respective communities. We have just been reading a copy of the Milton, Wis., *Journal*, of December 1st, and admiring the splendid showing that is made, in text and half-tones of all the advantages, beauties and institutions of that progressive town that has lately become incorporated and has its village president, clerk, treasurer and supervisor. In fact, the portraits of, and what was said about, these officers, particularly attracted our attention and led us to think of the honest services by the paper that in all probability, preceded their election. Milton evidently made no mistake in choosing those who should administer her affairs. They are the most able, reliable and worthy of her citizens. The right kind of a newspaper has great influence, when judgment and discretion are used, in securing the right kind of officials, and therein can be constantly useful. The urging of the best men to accept positions of public trust and then the leading the people to see that good government depends upon the men by whom it is to be administered, are duties of the press and therein too is highest business wisdom. Unworthy place-seekers and demagogues do not have it in their power, either with money, favors or offices, to repay a newspaper for the loss of character, prestige and business that results from helping to place such unworthy and dishonorable men in positions of trust or power. A newspaper prospers with a community. Its weal is the newspaper's weal. Besides this, the reputation of a newspaper for strict integrity, broad, intelligent public spirit, and usefulness, with fearlessness in standing up against wrong and wrongdoers and for the best men and measures, is worth more than an endowment—vastly more than money, promised favors or graft or purchased friendship.

The Milton *Journal* is filled with matter that is helpful. This issue gave an account of work to secure money for a Memorial Hall fund; talks of the "Village of Happy Homes;" of the "Denominations" and their church buildings; of the "Lighting Plant;" "Business Center;" "Fire Department;" "Milton College," "High School" and "Public Schools;" "Milton's Opportunity" in certain manufacturing lines; the "Founding" and the "Founders" of the village; the "Sugar Beet Industry;" "Milton's Village Officers," and of beautiful "Koskonong," a historic lake, and popular resort for hunters, fishermen and pleasure-seekers.

We enumerate these by way of reminder, to all other local newspaper publishers, of how much there is in any community for treatment in entertaining text and for illustration in half-tones.

It is queer how quickly men will bite at a proposition in which they are made to believe that they are getting something for nothing. The advertising schemes that are successfully worked on that basis are beyond enumeration. We recently ran across one of these schemes that is somewhat new in details. The plan is to get a piano for as low a figure as possible, in consideration of the advertising that is to result to the dealer or manufacturer. Then figure it into a coöperative advertising arrangement, claiming it to be the piano company seeking to advertise the piano and that the piano is contributed without charge. Then charge twelve firms in different lines, thirty dollars cash as their respective shares of the advertising expense. Beat down the local newspaper and job printer and expend fifty dollars for the advertising and printing which the merchants are led to believe costs three hundred dollars. Put up the piano to be voted to the most popular local society and furnish each of the contributing merchants with ballots to be given away, one vote for every quarter's worth of goods purchased. Pocket two hundred dollars or so for the week's work required in getting up the scheme and move on to another town. Will the merchants bite? Of course they will, for they think that a piano company has made the present of a piano worth three hundred dollars—merely to help advertise their business and to confer a favor on a local society. They never imagine, for a moment, that they have paid for the piano and for all the printing and advertising and two hundred dollars to the promoter of the scheme. Men will go into a scheme like this who think it foolish to maintain regular advertising in a local paper that goes regularly to all the best people in their community. It is a new and ingenious adaptation of the trading stamp scheme, that requires no capital, as no money, except to the advertising writer, need be put up in advance. The merchants put up the money.

A life of negations is a failure.

The *Evening Leader* of Corning, N. Y., congratulates itself and readers on "New Linotypes, almost human in their operation," and a new "12-page Duplex press—that can do two-color work, print, paste, cut, fold, count and deliver the papers at a speed of five thousand copies per hour." The *Leader* is a bright, progressive paper and is wise in bringing the good news of its prosperity and of its preparedness to meet all increasing demands and expectations, to the attention of its patrons.

Always take your readers into friendly confidence and ask them to rejoice with you over all advances and new improvements, if not over the pieces of silver found to be accumulating in the till. Progress of a newspaper is an index to the progress of a city and all citizens are interested therein. The *Leader's* page illustrated talk about itself was of personal interest to its readers, and Messrs. E. S. Underhill & Co., editors and publishers, wisely said editorially:

> The strength of this paper has been the loyal support accorded it by the people whom it strives to serve, and it feels that its patrons will take pride in knowing that every effort has been and is constantly made to improve it.
>
> The additions to its plant just installed represent a heavy monetary outlay but it is felt that it is warranted. For 1905 the *Leader* has renewed its resolutions that it made five years ago: To print the best newspaper possible with the resources at command, to be fearless, impartial and reflect abroad in the highest sense the attractivenesss and advantages of Corning.

"Loyal support" is the strength of every newspaper and that strength comes from loyal service, well and cheerfully rendered. Publishers and printers, sometimes, are so unwise as to imagine that their callings demand support regardless of fitness or service. A greater error, than this of support owed, was never harbored in church or business. This world owes nothing to any man merely because of his position or calling. He who would be chief must render the greater service, must be the servant of all. The non-serving priest, preacher, teacher, professor or editor, has lost his savor and is to be cast out to be trodden under the feet of all men.

Assumed worthiness because of a calling, of dignity and sanctimoniousness, as claims for honor or support, have gone the way of the hellish doctrines of the divine rights of kings, nobles, aristocrats and prelates and are deemed as the badges of hypocrisy, dullness, cant, sloth and devilish selfishness; but service and worth are, or should be, everywhere recognized, honored and rewarded.

The York, Pa., *Dispatch,* of which Hiram Young is editor-in-chief, and he and his four sons, as a board of directors of the Dispatch Publishing Co., are publishers, devotes a full page of its issue of January 2nd, to descriptions and illustrations of its splendid new four-story building, 23½x230 feet in size, and its new three-deck Goss printing press. The descriptions are followed by a brief and interesting history of the paper which was established by Mr. York in 1864, under the name of *The True Democrat* "in response to a public demand for a newspaper in York that would support the cause of the Union."

Both morning and evening dailies are now published under one management.

The evening paper is known as the *York Dispatch* and the morning paper, which is the oldest daily paper in the city, as the *York Daily.* A large, well-equipped job office is also conducted as a part of the business.

The following, as to the growth and the meeting the demands thereof, will be appreciated by many who are now going through a similar experience, as well as by all who are interested in printing, but who have not had the opportunity of witnessing one of these great modern printing machines at work:

> The big new press of the *Dispatch* is a marvel of mechanical ingenuity. Nothing like it is to be seen in this or neighboring counties. Up to the time the *Dispatch* occupied its old quarters on East Market street this paper was printed on a single roll, eight-page machine. When four pages were printed on that press it could produce them at the rate of 20,000 copies per hour. When an eight-page paper was printed the speed was cut down to 10,000 or 12,000 per hour. When more than eight pages were desired an extra run was necessary and the additional sheets had to be inserted by hand. The pressure of advertising had become so great that the problem of making extra runs for supplements had become an expensive item in producing the paper, not to speak of the delay and inconvenience incidental thereto. Then a ten-page paper could not be produced. Often the *Dispatch* was compelled to produce twelve pages when ten pages would have held all its matter. Thus two pages more than was needed ate up all the revenue from the additional page. The growing circulation also had become too large for the old press to produce in time to make the mails. To overcome these problems it was deemed advisable to make a big investment in a modern machine of greatly increased capacity. After a thorough investigation it was decided to buy a Goss three-deck perfecting press. The old press had but one deck and printed from one roll of paper. This wonderful new machine is practically three machines in one. It has three separate sets of printing cylinders and three rolls of paper are used at one time. Each set of printing cylinders is capable of printing eight pages. Thus 24 pages can be printed at one time. If circumstances should make it necessary the *Dispatch* can come out with 24 pages all printed and delivered folded in one operation. In addition, 20 pages can be printed at one time, or 16, 12, 10, 8, 6, 4 or 2 pages, just as might be desired. Up to 12 page papers this press will deliver its finished product, folded ready for delivery at a speed of 24,000 copies per hour. When printing 16 pages or over, papers are delivered from the press at a speed of 12,000 per hour. An interesting feature of this wonderful piece of machinery is the operation of printing 6 or 10-page papers. To produce the two extra pages a half width roll or web of paper is run between two cylinders carrying plates of the two extra pages. When the impression of these plates is made on the paper the sheet is automatically conducted into its place between the other pages and pasted into position. When the pages are thus assembled into their proper order they are mechanically conducted into the folder, where they pass through knives and are cut off and folded into proper shape and delivered ready for distribution. A feature of this three-deck, or triple printing mechanism is that should one of the decks become unserviceable because of accident or disarrangement, it can be cut out and the rest of the press operated. Two decks can be cut out if needed. Thus one press is practically three machines, any one section of which can be operated independent of the other.

This issue gives a complete roster of the editorial, reportorial, business and mechanical force, of the two papers, numbering in all one hundred and twenty-five. We believe the giving of these names is good newspaper policy. People are certainly interested in those who make and furnish the newspaper that they read. When the *Daily Dispatch* was started in 1876, one editor and a half dozen other employes, including printers and pressmen, did all the work. The workers have been increased eighteenfold and the capacity of the presses at least a hundredfold.

Two hours lost in the morning makes sixty-nine days or over two months and a half of working time in a year, and yet many managers of printing offices fritter away the first two hours of each day while all the members of the whole force are dallying over work because the proper direction and push have not been given to start every department and every man toward the accomplishment of work in hand. The whole establishment, to a greater or less extent, wastes

two hours working time each day waiting for orders or directions and the habit of dallying continues through the day. This kind of management means failure. Time is capital in a printing office.

Practical ideas and system are the two things that win and are especially necessary and essential in a newspaper or printing office. A man without ideas has no place in business or in a trade in this day. Such an one should the rather be a sweeper in a livery stable and even there, ideas would make work more effective. No one can set type or run a press, much less figure on work, plan for its economic or profitable production, look after customers or write readable, pleasing, winning editorials, news items or locals without ideas. An idea is the motive power, the electric force, the dynamo of the brain, and system is the directing, controlling power, the balance wheel to the engine, or the rudder to the ship of business, that directs the course to avoid the rocks and whirlpools, and that insures anchorage in the harbor of safety and success. Ideas and system, however, are of little use if they do not increase and better production or save time and waste. Time is the great desideratum to the printing and newspaper office as well as to all mortals. With nine hours as a working day and the limit of active life in business placed at forty years, allowing two weeks or twelve days annually for a vacation, even if always in good health, a man has only a little over eleven years as measured by the sun and seasons in which to work. But in a printing or newspaper office it is not the loss of the time of the one man alone that works the great loss, but the retarding the work of a score or a hundred, and the delay in the work or the paper that incommodes or disappoints others, causes dissatisfaction and drives away business.

One of the great troubles of many business men in the matter of advertising is that they make no distinction between notoriety and true fame or reputation. A man may become noted by painting his name on every fence board or post, on every barn, projecting rock or hillside, but no real public estimation is gained thereby unless it be an ill estimate of the man as an intruding nuisance. All valuable advertising must give information that is convincing, and pleasing instead of being offensive, and hence must be so truthful as to be made good to the satisfaction of the one influenced thereby. The natural place for advertising is in the newspaper that exists to give information, to tell the truth about events and business.

Humility is a cardinal virtue but is not inconsistent with a daring spirit. Humility leads to a right estimate of your own powers, but does not necessitate the overestimating of the abilities of others, but only the taking them at their real value. If you have weaknesses, others are not free from them and it is determination that overcomes them. Not the strongest nor the most brilliant men have won the prizes of life, but those who have understood and used their powers to the best advantage. It is the will to do and the boldness to use one's powers to the utmost limit that conquer difficulties.

Cultivate all your powers, but above all cultivate the will and self-reliance. Dare to speak out, to attack, to stand alone, if need be. Difficulties often vanish at the first blow. Remember that you alone must determine your own destiny and that it is better to try and fail than not to try at all. In nine cases out of ten, there is no need of failure. Follow your own counsel after kindly receiving all the wise advice that may be tendered, but remember that you are, or ought to be, the best informed as to your own business, your own plans, your own abilities. Yours is the inside view. The outsiders only see some one salient point. They have no time or disposition to examine the details and generally their advice is as unreliable as their information is limited. Better, a hundred failures than the making no attempt at all. While guarding in every possible way, against failures, do not exaggerate their consequences. It will make no great difference a hundred years hence, so be unafraid. It has been said that a failure is the letter "A" in the alphabet of success. It often so proves, if we only learn instead of being discouraged by a failure. "Attempt" is assuredly the first letter in the alphabet of success.

Daniel Boone used to say that one of his secrets of success in fighting Indians was that of considering carefully what he would do if in their place, with their characteristics and modes of warfare. Human beings are not so different, whether savage or civilized. It is wise frequently to put yourself in the position of your reader or customers and to consider what would be most useful, pleasing and acceptable to yourself in like situation, conditions and surroundings, with like education and tastes and with like designs, aspirations, and ambitions and the like business to promote.

Clearness is the first essential in writing whether of news, editorials or of advertising. Ambiguity is the worst enemy of the reading and advertising columns of a newspaper.

Sneers and growls seem to attract certain classes of mentally and morally dyspeptic newspaper readers, but hopefulness, good nature and good cheer are vastly more nourishing as daily food. Pepper may be all right to stimulate action in morbid digestive organs but even newspaper readers cannot live on pepper alone. There are times for criticisms but these avail nothing, or very little, where they are made the rule instead of the exception. They are effectual when they are only used in cases of necessity, with regrets for the necessity. An eternal snarl becomes disgusting and extremely wearing and unpleasant.

We do not believe entirely in the idea of sinking personality in newspaper work. There is a power in personality that should be used and not be abused. The people like to know of the persons whose writing they read, either in news, stories or editorials. We believe that a newspaper would gain and not lose by publishing the names of its entire force, business, editorial, reportorial and mechanical, in its columns. We believe, too, that every member of the force would be spurred to better work by such publication. Personality has no small nor unimportant place in advertising and effective advertising is just as important to a newspaper as to any other business.

The *Democrat,* of Memphis, Scotland County, Mo., is in its thirty-fourth year, and adopted, with its January 5th issue, the eight-page form, six columns to the page, increasing the size of its sheets by 192 inches. A new Babcock printing press has been installed and there are other evidences of prosperity. The advantage to the advertiser of the change of the form of the paper is pointed out as follows:

Another advantage in an eight-page paper is to the advertiser. The advertisements will not be crowded on a few pages, but will be arranged over the eight pages so as to give all or most of them a position next to reading matter.

The modern eight-page form is certainly more convenient for the readers and also permits the better arrangement of the matter under proper departments. The *Democrat* properly eliminates advertising from its first page and presents a bright, clear, finished appearance.

Four free lectures have been delivered during the past two months in the lecture hall of the Boston Public Library under the auspices of *The Printing Art* on the history and art of printing. The first lecture, December 1st, was by Will Bradley on "Type Display in Modern Printing;" the second by Wm. Dana Orcutt, December 15th, "Typographical Evolution;" the third, January 19th, by J. Horace McFarland, "The Making of Books;" the fourth, January 26th, "Symbolism of Form and Color," by Henry Turner Bailey. The popular interest in printing as well as in newspaper making has greatly increased in the last few years. The one is coming to be recognized as an art and the other as an educative profession. The two callings are in a very important sense to be classed among the important industries, but they are more than this because they have very much to do with imparting knowledge, with advancing not alone business but the arts, sciences, religion, ethics, and good government. George Frangoudis of Athens, Greece, said in an address before the World's Press Congress at St. Louis, what is coming to be recognized of the newspaper press around the world:

Some people think that journalism is simply an industry, and that we make much money out of it. I think that journalism is not an industry like shoe making and brewing and other kinds of business. I think that journalism is a power even greater than the courts of justice. Hence I wish that this congress would make some declaration of principles which shall guide the world, principles that shall govern social and political institutions of the state; and then we must work for the advancement of our ideas, not for making money but for the advancement of modern civilization.

The great works of printing and newspaper making have come to be the advancing the civilization of the world.

In the early settlement of the West the large cities were built on the west banks of our rivers. The early pioneer never came to a stream without crossing over and building on the farther side. Later increasing populations have spread over to the eastern shores. These thoughts come from having just received a copy of the *Daily National Live Stock Reporter* of St. Louis, Ill., or East St. Louis. It is a great sixteen-page paper and tells of the wonderful growth of its city that has increased over a hundred per cent in ten years and seventy per cent in the last four years and now has a population of over fifty thousand, with a real estate valuation of $50,000,000, and the largest horse and mule market, one of the largest stock yards and four of the largest packing houses in the whole world. It is not our province to write up the wonders of the place but only to commend, by way of example and suggestion, the excellent manner in which the *Reporter* handles the interesting facts and statistics. The first page is given up to the stock market and a complete showing is made of the year's receipts amounting to the magnificent totals of 1,074,126 cattle; 4,954,902 hogs; 687,896 sheep, and 181,341 horses and mules. These statistics are handled most interestingly, giving record making days, the receipts by states, for months and for the last thirty-one years. Then the fine breeds are given and then special statistics as to different breeds. A most interesting history is given of the horse and mule market and many items set forth as to history and present condition. On the last page, the growth of the city is set forth, its advantages and public improvements enumerated, in one and two-line items. These brief facts about the city are given in a most forcible manner. These items fill a column and set one to thinking as to how many good things can be said about a city that are really important, with the power to interest and to influence. We give the following three paragraphs or brevities as suggestive examples:

It is the most profitable manufacturing place in the world.
It has inexhaustible coal fields only two miles distant.
It has the cheapest coal for manufacturing and private purposes in the world.

Remember, that a word in cold type sinks deeper and lasts longer than a word merely spoken, and may rise up again after many days or years to confront you.

Printed words have a real immortality and should be treated with the consideration due immortals. Words spoken may be forgotten or, if remembered, may be explained away as having been used in a different sense or in a different connection and no one can positively assert that the remembrance thereof is absolutely accurate or correct. It is not so with the printed word. It may be submerged for a long time; may be buried and forgotten, but is likely to come to the surface again, to be resurrected at any time, and it always comes up in its original form, not changed or transfigured, with all its original meaning and association fully preserved. "A bad penny always returns" with all its badness and worthlessness, so does a bad word once printed. Be careful as to what you print. No wonder the wise man said, "O, that mine enemy would write a book." To have a bad enemy on record in a book or in print is the most effective means of having him at your mercy. See to it that you print nothing by which you are not willing to stand or that puts you at the mercy of your enemies or your rivals or competitors. Print nothing that will dishonor yourself or cause sorrow to your friends or injury to your patrons, or unnecessary pain to anyone. Better to forgive and forget a wrong than to inflict a wound. Words fittingly printed are like apples of gold in pictures of silver, but unkind words, a spiteful, angry, inconsiderate, vile word once printed is like a diseased, rotten, filthy apple cast in a bin of healthy fruit, it may cause all to become diseased. The impure word may destroy all the good fruits of a whole lifetime. But how blessed are pure words of encouragement and of kindness, of knowledge, wisdom, love and truth. Never were we more gratified, as an edi-

tor, than by being told by a gentleman how pleased he and his wife were with an editorial that we had written in all kindliness, but that had nothing personal in it, and that his wife had cut it out and preserved it in her scrap-book; then again, when a father told us that he was cutting out and preserving in a scrap-book, for his boy to read, a series of articles that we were writing under the caption of "Our East Window." Doubtless many other editors have had similar commendations. It is good to get near to the hearts of one's readers and such testimonials of genuine appreciation for words fittingly written are no small rewards to the true editor. The thoughtful, approving voice from the home is worth a thousand times more than the reckless, thoughtless acclaim of the loafers on the street corner. Be an independent thinker, but watch your pencil when writing to print in the columns of your paper.

The Philadelphia *Bulletin* is now classed with the six most widely circulated newspapers in the United States, having made an average net gain of 38,728 during 1904. The *Bulletin* issues a table showing the net circulation for each day of the year, eliminating all damaged, unsold and returned copies. Speaking of its statement the *Bulletin* says editorially: "It forms an interesting study of the constant progress of a popular newspaper in the favor of its constituents." The publishing regularly of such a statement is a constant spur to greater endeavor, to the making of a better showing each day, each week, each month and each year. It is the kind of statement that shows honesty and candor and wins advertisers as well as subscribers.

The unwound clock runs down and stops; the unadvertised business runs down and fails.

The Oklahoma *Hornet* of Waukomis, has a department of brevities under the caption of "Pepper and Salt." Salt is said not only to be the elixir of life but good for the stings of a *Hornet*. However, this particular *Hornet* has more pepper than stings. Here are a couple of its "Pepper and Salt" items: "Do not be a home destroyer. If you can't do something to make other people happy don't do anything." "Let your light shine so that it will be beneficial to others, and hide your faults under a bushel. Some people may need several measures to cover their own faults." Making other people happy is the mission of the press and this is to be accomplished by gathering all the light of events and sending that light forth through the columns of the paper.

The Amsterdam, N. Y., *Evening Recorder* celebrated the close of the year 1904 by placing an order for a two-roll newspaper perfecting press with a running speed of 20,000 eight-page papers or ten thousand ten, twelve or sixteen-page papers, per hour. The order was made necessary by the increase of advertising patronage, necessitating running more than eight pages. The prosperity of the readers of the NATIONAL PRINTER-JOURNALIST is always a source of great pleasure to the editor of this paper. This prosperity, we are fully assured, comes in no small measure from having benefited by the methods, views, knowledge and experience, culled from the most successful newspaper makers all over the Nation, and published in this paper, as well as from individual experience and enterprise. Mr. Wm. J. Kline, the editor of the *Recorder,* is one of the honored members and Vice-Presidents of the National Editorial Association. Not only has he been a faithful reader of the NATIONAL PRINTER-JOURNALIST for sixteen or seventeen years, but he also has been a faithful attendant on both the New York and the National Editorial Associations, and has been not only ever attentive as a learner but ever active in devising and promoting better methods in newspaper making. His addresses have been interesting, instructive, practical, useful and inspiring. As President of his own Association he exerted a highly beneficial influence and won honor and friends. His successful and honorable career shows that it pays to study the calling both through the journal devoted thereto and through the interchange of views and experiences among members in organizations for mutual benefit and for the promotion of the interests of the calling.

OF INESTIMABLE VALUE.

GLENWOOD SPRINGS, Colo., Dec. 30, 1904.

B. B. Herbert, National Printer-Journalist, Chicago, Ill.

DEAR SIR:—Enclosed find my personal check for $2 for my subscription to your journal, which I appreciate very much because of the assistance it has been to me the past six or eight years. Every year I get an economical streak on and conclude to cut off some of my papers like the farmer, but when I come to yours I have to stop. I cannot do it because of the gain your work is to me. There are months when it contains matter of inestimable value. This is true of your last—December—issue, and what I consider of most value is the report of the doings of the State associations. Along the line of association work I note that the boys over the Nation are waking up to their duty, or rather beginning to realize the necessity of legislation. The Colorado Editorial Association took up the matter of legislation in 1901 and succeeded in clearing the decks so they now have but one rate on the statute books for legal publications, whereas in former years three or four existed. The rates then existing seemed to be confounding to the county officials and also to the judges on the bench, as the boys found when they took one or two cases up to the Supreme Court, and that body of distinguished judges advised the printers to go back and make a contract for the work on some one of the rates existing on the statute books, which varied from 30 cents to 75 cents per folio. We now have on the statute books but one charge for legal publications of all kinds, and that is 7 cents per line for the first insertion and 4 cents per line for each additional insertion, nonpareil, 12 lines to the inch, 13 ems. This law has superceded all others, and if we should have a case now the question of rates would be eliminated.

We have a strong organization and the boys over the State are alive to the work on hand and to a man the 365 workers in newspaperdom are standing by the association. We have nothing to fear except the lack of interest in legislative matters. As president of this organization I was approached by a legislator who has prepared a bill calling for the publication of the tax schedule of each county in the State, wanting to know if the association would accept a lower rate than 7 and 4 cents to be attached to the bill. I assured him the association would consider no rate except the one now on the statute books, for the reason that every

legislator introducing a bill calling for a publication would attach his rate and the printer would be in the same position as formerly. I assured him it was better not to have the bill introduced than to destroy the present law, which he was attempting to do by tying a rate to his proposed bill. I hope I have made this plain, for I believe the editors should endeavor to keep out of the courts, but if they have to go in they should endeavor to get there right. Your article on the meeting of the Oregon Press Association is of value and their work will be watched with a great deal of interest. We have some laws we would like to get on the statute books, in regard to affairs of each school district in the State. We have a law now calling for the publication of the county commissioners' proceedings and we would like to have one requiring the publication of the proceedings of the town and city councils.

Our association compiled and printed 300 to 500 pamphlets containing the laws of the State governing publications on all subjects ordered by the statutes, and I think it has been of some service to the business office of every newspaper in the State. I hope your reports of the doings of the different State organizations will always contain the laws and legislative matters considered before each body.

As president of the Colorado Editorial Association I have traveled around over the State in the interest of individual members without being authorized to do so by the by-laws and constitution. I have found a few cases where I felt a visit to certain county officers would assist in allowing bills to local printers. Some visits were made unsolicited while others were made by solicitation. The executive committee of this association have been attempting to show to every newspaper man in Colorado that the association was formed and conducted especially for him or her.

Yours respectfully,

H. J. Holmes.

TYPICAL AND INSTRUCTIVE NEWSPAPER BANQUETS.

OVER a quarter of a century ago, we visited Duluth in charge, as President of the Minnesota Editors' and Publishers' Association, of an editorial excursion to the "Zenith City of the Unsalted Seas." We there met Mr. R. C. Mitchell, the then editor and publisher of the Duluth *Tribune*. He, with the Mayor and citizens of Duluth, gave the editors a warm-hearted welcome and we have always had a warm corner in our heart for him ever since. We were pleased in glancing over a copy of the Duluth *News Tribune* of January 3, 1905, today, to see that he was one of the honored speakers at a banquet given under the direction of the present manager, Mr. Millie Bunnell, to all the employes of the paper. This recognition was naturally very gratifying to him and he said, among other things:

This occasion carries me back to a third of a century ago when I established a newspaper that was destined to become the Duluth *News Tribune*. I have assisted to the extent of my ability in the upbuilding of Duluth, and the establishing of the *News Tribune* is to me one of the most gratifying things that I have ever accomplished. The paper now takes its stand among the metropolitan journals of the country. I regard the *News Tribune* as my child and rejoice in its prosperity. I am glad that it is in the hands of men of news instinct and business enterprise. I take this occasion to wish the management and the employes of that paper much happiness and prosperity.

It is doubtful if anything else in this world takes a stronger or more enduring hold on a man's affections than a newspaper that one has worked long and arduously in establishing and conducting. It becomes as precious as an only child to the heart of a fond mother. We are glad that the present paper has become so worthy as to be a subject of real pride to its early founder.

Manager Bunnell struck the true chord. He said:

The *News Tribune* family is larger than I had supposed it was. Certainly there is no evidence here of newspaper race suicide. I have arranged this *News Tribune* dinner to impress on you my position of the "old man" of the family. You all know how necessary it is for the success of a newspaper that all departments shall work in harmony, and with friendly loyalty. This condition of affairs is more necessary in the making of newspapers than perhaps in any other industry. Harmony and loyalty, I am glad to say, have always existed on the *News Tribune* to a remarkable degree, and such success as the paper has achieved is due to this fact. Without this friendly coöperation the paper could not have been a success, and to the men and women employed on it is due the remarkable growth that it has enjoyed and does enjoy.

I wish to thank you all on behalf of the *News Tribune* company. If by this gathering, even more friendly relations may be established the time will have been well spent. Personally I wish to express my thorough appreciation of the good will you have all shown toward me. I wish you all a happy New Year.

There were seventy-nine present at the banquet. The tables were arranged in the shape of a letter U with the Manager at the head of the table.

On December 29th the *News Tribune* management also gave a banquet to the sixty carrier boys of the paper. Half-tone illustrations and interesting accounts of both banquets were given by the paper and so worthy as to be a subject of real pride to its early founder.

The occasion that called forth the remarks quoted is itself worthy of note and highest commendation.

There is no one thing more important in a newspaper or printing office than perfect harmony or good feeling between all the members of the force, all the departments and the manager. Loyalty to the paper and a genuine *esprit de corps* result therefrom, and such social occasions, reunions, eating and talking together, are excellent promoters thereof.

In the opening of the speaking at the banquet, which was a royal feast given on January 2nd, the legal New Year holiday this year, the banquet to the boys was so model an affair, so full of suggestions as to the manner in which such an occasion can be made pleasing and instructive and hence very valuable to a newspaper that we know the readers of the National Printer-Journalist will be benefited by reading the following account of the same:

Three long tables were filled when Rev. Roderick J. Mooney, who invoked the divine blessing, was introduced by Edward Armstrong, superintendent of circulation. Typical young business men, the boys presented the appearance of much older persons and maintained the most orderly behavior throughout.

SOME CLEVER ENTERTAINERS.

At the conclusion of the repast Miss Mae Wylie rendered several elocutionary numbers. "Old Abe" and "The Serenade" were accorded the most careful attention and brought forth merited applause from the guests. Miss Wylie also read James Whitcomb Riley's "Raggedy Man," in a pleasing manner, and in response to enthusiastic demands for an encore recited "The Family Drum Corps."

William A. Coughlan, a local ventriloquist, entertained the boys with his clever efforts and it was with difficulty that he succeeded in leaving, so insistent was the applause. His imitations of barnyard fowls and the efforts of little folks making their initial appearance in public as singers and reciters were especially pleasing. Mr. Coughlan is a ventriloquist of more than ordinary ability and his rendition of "a man on the roof and one in the basement," with interesting dialogue, was warmly approved.

Rev. Mr. Mooney addressed the boys, outlining the elements of successful business life. "I was just trying to figure

out this morning," said he, "what kind of boys I was going to speak to this afternoon. I want to congratulate all of you on your manly appearance. I want to thank you for your splendid devotion to duty. It speaks remarkably well of this town to see such a well-behaved and intelligent lot of boys here today.

ELEMENTS OF SUCCESS.

"I was asked to speak of the elements of success. First of all, boys, be straight. You all know what I mean when I say 'straight.' It contains the essence of the ten commandments. You must be loyal to your fathers and mothers, for in being so you lay the foundation of a loyal manhood. Be loyal to your employer now and all time. Let not the temptation to skip a customer, who perhaps, lives a little out of the way, or whom you may not like, influence you. Go on doing your duty as you find it and success will come eventually. Be true as steel and genuine at all times. Have no use for the hypo-

Clear Creek Canon, Colo.

critical boy, but be straight and help your comrades to be so.

"The possibility for the boy doing wrong in this day is great, but the lad who has the desire to be straight and the sand to stand for what he believes is right, is in no danger."

Mr. Mooney touched upon the little temptations of boys' lives that lay foundations, if yielded to, for an undesirable manhood. He spoke of the boy who, by drinking a little, or gambling a little, or indulging in other petty vices, thinks he "is making a man of himself." "This is a mistake," declared Mr. Mooney. "The boy with the sand and desire to be straight knows better and will succeed where the other one fails.

"It is easy to see the 'straight' things we ought to do, but it is difficult sometimes to have the sand to do them. These two are the elements of a magnificent manhood." In closing Mr. Mooney cited the examples of men well known to the boys, who, from a small beginning have accomplished great things through laying proper foundations of honesty, perseverance and proficiency. He said that within a very few years every one of the youths before him would achieve success in life if the proper foundation is properly laid now."

CIRCULATION MANAGER TALKS.

Edward Armstrong, in a "little shop talk," admonished the boys to be industrious and to guard well their reputations.

"You are merchants, each of you," he said. "Among your items of stock in trade the most important is reputation. Let your customers know that you can be thoroughly relied upon to deliver the *News Tribune* promptly, for upon you rests a great responsibility."

At the conclusion of the remarks by Mr. Armstrong, Roy Blake, who had presided at the piano during the dinner, played "America," and the lads joining in the National anthem, filed from the dining room.

THE KANSAS STATE PRESS ASSOCIATION.

The Kansas State Press Association held its annual meeting at the Commercial Club Rooms, in Topeka, on January 16th and 17th, with an evening session and reception in Representative Hall, Monday evening, and a reception Tuesday evening by Governor and Mrs. Hoch, at the Executive residence. The following was the instructive and enjoyable program:

At 10 a. m., Monday, the Executive Committee met to receive and pass upon applications for membership.

At 11 a. m. a short business session of the Association for miscellaneous work, and the appointment of committees on resolutions, credentials, memorials, laws of the association and auditing, was held.

In the afternoon at 2 o'clock President Herbert delivered the annual address.

The Needs of Newspaper Legislation was presented by Senator George Tucker, of the Eureka *Herald.*

Mrs. Jennie McMillan spoke on the topic, "My View of a Local Paper," and then other members gave their views.

Dr. J. E. Roberts, of Kansas City, delivered an address on "What a Newspaper Should Be."

Two Minute addresses were made by Kansas newspaper men and statesmen.

On Tuesday morning at 10 o'clock D. O. McCray discussed "Should the Newspapers Be Read in the Schools?"

"Does Job Printing Pay at Present Prices?" by J. P. Campbell of the Clay Center *Dispatch.*

Miss Anna Carlson, of Lindsborg, gave her opinion upon "The Woman and the Newspaper."

The Tuesday afternoon session began at 2 o'clock with a paper by A. C. Miller on "The Advertising End."

"The Linotype in a Country Office" was discussed by Chas. A. Southwick, of Clay Center.

The Question Box.

All newspaper workers were requested to come prepared to propose and discuss matters of interest to the trade. All such were at liberty to take part in discussion and consideration of the following topic questions:

"Would Country Correspondence Be Better if Paid For?"

"Do the People Appreciate Partisan Politics in the Local Paper?"

"Isn't Coöperation Better Than Competition?"

"What is the Best Way to Dispose of State, County and City Printing?"

Report of Committees.

Election of Officers and Delegates to the National Editorial Association.

President Ewing Herbert designated the meeting as "a family gathering of the newspaper men of the State, to discuss family affairs," and added that the balance of the year will be time enough to talk about other people's troubles. The officers of the Association in charge of this convention were: President, Ewing Herbert, *World,* Hiawatha; Vice-President, Miss Estelle Riddle, *Messenger,* Minneapolis.; Corresponding Secretary, J. E. Junkin, *Bulletin,* Sterling; Recording Secretary, Mack P. Cretcher, *Pantagraph,* Sedgwick; Treasurer, J. M. Lewis, Jr., *Graphic,* Kinsley.

349 Jarvis Street, Toronto, Canada

THE "Mission Toys," whose history and adventures we read of in the modern chap-books issued by the American Type Founders Company, appear to have leaped at once into popularity. Some of the best examples of their use have just arrived from our old friend, M. Delvaux Coyle. The series of new stationery used by the Coyle Press is so original, yet so good as to composition, wording and ornamentation, that it is reproduced (Nos. 1 a, b, c and d). The Mission series of ornaments serve, likewise, the purpose of illustration, and are so used by Mr. Coyle, although it is doubtless hard to conveive just what the gentleman in the one-piece garment is represented as doing, or being about to do, with the stiletto, which he so fearlessly holds by the blade. The American Type Founders Company thus employ him to illustrate an advertisement of fairy tales, but he is probably used, unlike the waiter, more for ornamentation than illustration on Mr. Coyle's letterheads (No. 1a). These ornaments are made, of course, for use with two colors as well as with one, and the tint-block used by Mr. Coyle is in all cases used with a bronze red. Plain black and white will by no means do justice to the force of these pages in their original types and inks, especially as I have no time to retouch the drawings so as to show where the black is superimposed on the red. The stock is corn Old Hampshire Bond and the upper rules being in red, as is one of the blocks. No. 1c has the pen and the inkwell in brown, as are the words "Printing and Advertising," and the balance is in black. This is, of course, an envelope corner, and the ornamentation is appropriate, both to the ad-writing part of Mr. Coyle's business, and to the fact that it is an envelope corner. No. 1d has the rules in green and the balance in red and black. Why Mr. Coyle should add another d to the word "ad" is a puzzle, unless

he means to show that such writing as he does (of which we have had many samples in his *Imp*), increases the business of his patrons. The design takes rather more than half the space at the top of the letterhead, and the rules run off the sheet in the printing. This is a style that Mr. Coyle has used before, and I criticized it then as being odd, without much beauty, but this design has the beauty as well as

and the line "Printing and Shorthand Advertising" are in green. The cuts, as has been already stated, are in bronze red. The type is in a bronze blue-black, which, of course, lends the effect of purple. The initials "T," "C," and "P" are in red as are the underscoring rules. Mr. Coyle has lately become a rival of The Sanderses in the harmonious use of brilliant inks. A new card of Mr. Coyle's is given as No. 1b. This will serve as a study of the use of a similar design in a different measure. This type is in red and black, the three initials and the words "Printing and Advertising"

the bizarreness. I consider the whiting-out of some of these pages is particularly good.

In a characteristically kind letter written since the last installment of this department appeared, Mr. Coyle, in thanking me for complimenting his work, says: "But had you given me a good 'roast' I would have taken it in the same manner, as I know your aim is to help the 'boys,' and I profit by your review of my samples, be the criticism favorable or not." Well, this invoice blank (No. 1e) certainly gives a chance for the unfavorable kind of criticism, although the type is modern. One would hardly suppose it was from the same office as the specimens just shown, unless one considered that originality was there—but in this case,

originality run wild. The initials and the line, "Printers of 'Most Anything" are in red, in pretty poor register on this particular sample. It is a mightily poor piece of composition. It has but a half-inch margin at the top, and there is no proper balance in it. It is a particularly difficult undertaking to make a job look like 'most anything, in a series like Engravers' Old English, when one line is so widely spaced as is this heading. The omission of commas in the "long unlovely" address line does not add to its beauty, and certainly not to its sense. The Italic line looks like a stranger in a strange land. It is in a particularly inharmonious position. The job would be improved greatly were it omitted, and then, perhaps, it would not have been such a very bad piece of composition of the freak order of composition. It is so different from the Coyle Press' usual work that it is notable. But Homer nodded.

PLAIN FACTS PLAINLY TOLD ARE MORE CONVINCING THAN WHOLE STRINGS OF SUPERLATIVES.

That Mr. Eugene Biggers is an artist and has, in the words which his former boss, Hal Marchbanks, is so fond of quoting, "found his work," is becoming more and more evident. I can give some idea of the typography of some of his recent work by reproduction in these pages, but, of course, am unable to do more than talk about the symphonic color-

Corsicana, Texas

2

schemes and the admirable presswork. Specimen No. 2 is a widely-margined letterhead. Surrounding the upper part of the page and at the lower margins are die-stamped rules, which greatly add to the beauty of the job, but which cannot be well reproduced. The faint outlines are particularly pleasing on the Kenshaw stock. The ornaments are in green, and the initials "G" and "P" in a reddish brown. It does not even do justice to this job to omit the familiar sign of the Golden Dragon, whose inner part is about one and three-

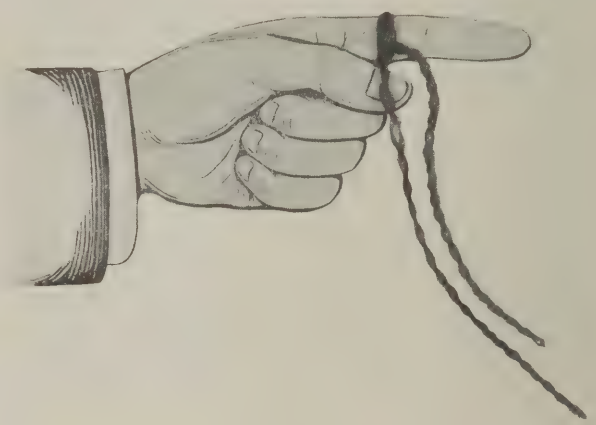
quarter inches due south, and certainly embellishes the job. Mr. Biggers' use of the "Mission Toys" is as striking as that of Mr. Coyle, already mentioned. Take, for example, this envelope corner (No. 3a), with the ornaments in red and black and the word "Type" in red, and the balance in black, on a fawn shade of Damascus Bond. This ornament should hardly be classed as a "toy." It is, however, a very Bradley-ish design, and the toys have certainly the earmarks of Bradley. As I reproduced both the envelope corner and the letterhead design of Mr. Coyle's, in order to show what I might call the difference in their similarity, I shall do the same for Mr. Biggers' work. That initial "T" (in No. 3b) is a familiar one in Mr. Biggers' work, and it is an admirable one, though some might think it did not harmonize with the Clarendon Text, but I am afraid such a criticism would be hypercritical. This is a combination of the new style of composition with a tasteful instance of the paneling which has been so prevalent of late years. The new style is rather easier to compose than the old, but it must be carefully handled in order to make a really artistic job. It seems to me that a good many of the designs in the "chap-books" are rather too freakish and induce too much difficulty in reading to be satisfactory in advertising matter for any great



Simply a Reminder that BIGGERS' printing is *better than ever*

4

length of time. Some of them are regular games of logomachy. Such printers as Mr. Biggers, however, may be trusted to join modern ideas to that originality and lack of freakishness which are so necessary to advertising. Mr. Biggers uses the secretary of the "Mission Toys" on stationery, which will probably be reproduced later. One would think one were being invited to a wedding, upon receiving a square white envelope enclosed in a square white envelope, which is one of Mr. Biggers' latest plans of drawing attention to his print shop. The sheet of paper which the inner envelope contains possesses, however, a different short of interest. The first page will, I trust, be reproduced as No. 4. The picture of the fist is cut from flesh-colored stock and pasted on the note paper. The string is a genuine bit of scarlet yarn. This is, of course, in keeping with the ancient and approved way of keeping a fact in remembrance, and the little bit of composition beneath the first is so tasteful that it should "help some." The ornaments are red and green, and the initials are red. It is not often that caps, lower-case and italic can be contained in two 13-em lines, but surely this arrangement has both advertising and æsthetic force. In this job it is also a study in really artistic irregular spacing.

THE BETTER THE ARTICLE THE LESS ADVERTISING IT WILL NEED, BUT THE MORE IT WILL BEAR.

The envelope design reproduced as No. 5a was handed to me by the office boy with the remark that he considered it the handsomest piece of printing he had ever seen. The

*Neither 5a or 5b could be reproduced by the half tone or zinc etching processes—*Ed.*

paper is in a gray tone with the exception of the fluers-de-lis and the initial, which are in red. The underscoring is likewise in red, and the words are in black. I hardly agree with the office boy's critcism; as these fluer-de-lis, to my mind, are out of keeping with the design. However, these things are a matter of taste. I greatly prefer the letterhead shown as No. 5b. This has the same color scheme as the envelope, the red being the paragraph mark and the underscoring. The statement as to the names of the type and of the inks is somewhat novel on a letterhead, but should certainly add to the advertising effectiveness of such a page. A man likes to know what he is getting, even when it is eighty-pound Strathmore deckle-edge, and now-a-days the real worth of up-to-date advertisements is becoming more and more understood in respect to just what such a combination of technical points means. The leading type founders have frequently specified on their letterheads the names of the type-forms which they use on the job, and of late they have been acting in harmony with the local printers in order to get them to advertise their types. This is, of course, to the type founders' benefit; and it is also likely to be to the benefit of the printer. It is an example of mutual publicity which is in keeping with modern advertising. The Old Hampshire Bond people are doing a large campaign in advertising to the consumer. And although they have raised their prices lately no doubt the local printer finds it good publicity to take up this national advertising and help the paper people in exploiting the merits which are "nominated in the bond."

By the way it is wonderful what strides Mr. Ewing has been making of late in the typographical characteristics of modern publicity.

A WISE MAN IS ALWAYS LEARNING SOMETHING, BUT A FOOL THINKS HE KNOWS IT ALL AT THE START.

An example is given in Nos. 6a and 6b of two mailing cards recently prepared in the city of Bridgeport, Conn. They were both sent by Charles L. Powers, the clever foreman of the Dunham Press. It will be noticed that the talk on both blotters is practically the same, but this cannot be classed as an instance of plagiarism, because of the intimate connection between the Dunham Press and Gorham, Stevens and Dunham. The designs are representative examples of the style of mailing cards produced by both the Dunham Press and the advertising firm for their customers and themselves. It is a very effectual style for such work. The card with the narrow composition is in blue and orange, the picture being in both these colors, and the composition in blue, with the exception of the rules. The other card is in bronze blue, with the exception of the rules, which are in a brick red. I hope the camera will take the blue satisfactorily.

I have to thank Mr. Powers for sending me the June issue of *Light,* that very clever publication issued by Gorham, Stevens and Dunham. The article I particularly desired in this number will be more appropriate to an article I am preparing for a future issue. The one I will use this time is a quotation from another business journal. The art of proper selection is often as good a test of the editor's ability as his work in original writing or dictation. The shears are sometimes mightier than the pen. The following quotation is credited by *Light* to *Modern Methods,* and is illustrated with specimens of the mailing cards which are issued by the Bridgeport firm:

DO MAILING CARDS PAY?

A firm which has made Babbitt metal, hitherto always sold by traveling men, was induced to try a mail series. To make the test thorough, a State in which they had no trade whatever was selected. To a list of prospective customers they sent a series of printed matter, one piece a week for thirteen weeks. Then they sent a bright young man to travel this territory. Order after order was sent in and finally a request for a year's contract at an advanced salary. He got it. When he arrived at the home office he was the hero of the

STOP!
¶Doesn't it seem reasonable that you'll interest a prospective customer if you lay your proposition before him often enough and attractively enough?
¶That's what our MAIL SERIES does. It reaches him persistently in a common sense, businesslike manner—It secures new business from entirely new sources and helps salesmen to turn in more and larger orders from regular customers.
¶Don't do spasmodic advertising—keep everlastingly at it. People remember your goods because you force them to by your advertising.
¶We believe that our conception of the mail series as a business getter will interest you and we'd like to write you fully about it.
¶Catch the next mail.

hour. He sat beside the old man's desk and explained how he did it. When the man who put up the money for the mail service ventured to suggest that that might have had something to do with the results, the drummer airily turned the suggestion down. He had sold the goods. The mail series had not been heard from.

The company, realizing that they had a treasure, gave him a virgin territory in another State. Never a drummer and never a

single piece of printed matter had gone to that State. The young drummer started out with flying colors—and fell down at the first stop. After trying six or seven towns, without getting even an audience with his prospective customers, to say nothing of an order, he was called home.

IF A FOOL AND HIS MONEY WERE NOT SOON PARTED THE DISTRIBUTION OF WEALTH WOULD BE MORE EVEN THAN IT IS AT PRESENT.

Harry A. Woodworth, 349 Jarvis St., Toronto, Can.

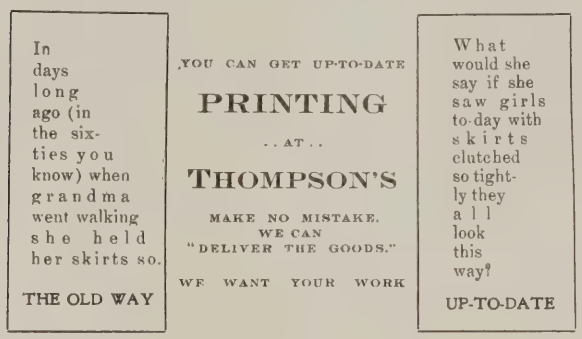
DEAR SIR:—Enclosed please find just a couple of practical, every-day business cards with the "devil's favorite" thrown in.

Wishing you a Merry Christmas, Respectfully,

J. B. L'HEUREUX.

Foreman, M. D. L. Thompson, Burlington, Vt.

The design on one of the cards, although it uses the long-line-short-line system, is a piece of composition which is handsome because of the use of some of the larger sizes of Engravers' Roman. As to the specimen of typography shown, as No. 7a, this method of making pictures from type-matter has long been a favorite one in the funny columns of the newspapers. This is a particularly good example of the compositor's workmanship. One side of another card is shown as No. 7b. The underscoring and the ornamentation are in red. As a general rule I do not like such ornamentation as this, but surely there is something rather artistic about this particular job. And certainly the American Type Founders Company, with their chap-books and things, are doing their best, and in some instances their worst, in order to make this an age of profuse ornamentation as a relief from the plainness of the last decade. Mr. L'Heureux has certainly the ear-marks of a coming man in



In days long ago (in the six-ties you know) when grandma went walking she held her skirts so.

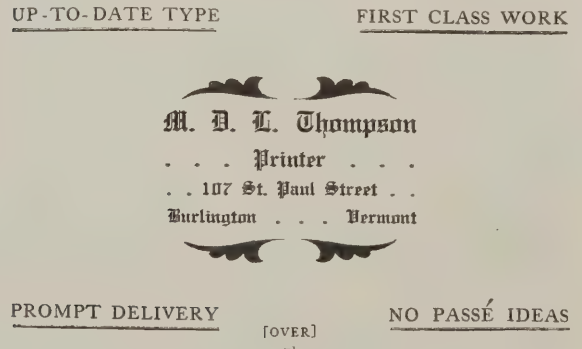
the realm of typography, and I hope his samples will be a feature of this department for some years. The reverse side of the latter card has nothing to do with the subject of printing, having a German dialect sketch of "The Dutchman and His Dog." On the reverse side of the other cards is a dialect poem in the patois of the Canadian French, the profanity of which is somewhat excusable, owing to its humor. The oaths are somewhat classical, being reminiscent of those used with such freedom by Shakespeare's "Ancient Pistol." Another card has a poem which bears this title, "A Song of the Sea." It is our old friend, "The Wreck of the Jule la



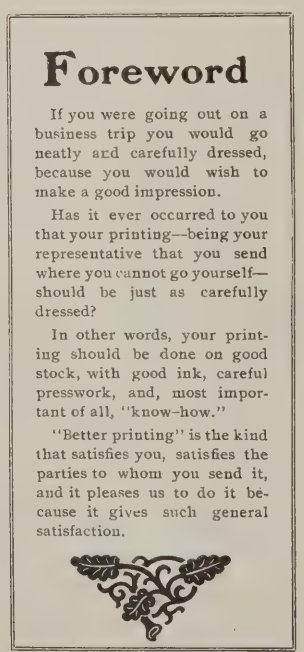
7b

Plante," which is generally attributed to Dr. Drummond, of Montreal, but which, like "Beautiful Snow" and "Laugh and the World Laughs With You," has been claimed by many authors. It is, in my opinion, the finest dialect poem in existence. I remember that years ago I used to do stories and political articles in the dialect of the Acadian-French for a local newspaper. On one occasion a French journal praised my handling of the dialect, but made a vigorous protest against the practice of writing in this vernacular, evidently thinking it an insult. Such a thought, however, never entered my head, as I had been brought up on dialect literature, which was largely that of the writer's own language. Here we have fine specimens of the dialect of the habitants and of the voyageurs of Quebec, exploited by a man whose name and locality show him to be a French-Canadian or the descendant of one. What Scotland and the world in general would have lost were it not for the dialect of Burns and his forerunners, and even that of the kailyard school!

Is such advertising good advertising? is what I have been asked many times when I was editor of the *Retailer and Advertiser*. It seems to me that there is worse. That poem, for instance, is one that I have been asked for at least a thousand times, particularly in New York and Boston. It is sure to be preserved, and consequently insures the advertising the quality of permanency. I do not believe in such advertising when it contains the elements of obscenity or vulgarity, for reasons which I have frequently given in these columns, and should I think be patent to all. Such poems as the most of the selections which Mr. L'Heureux uses are sure to be preserved, and if they are prettily type-composed they are likely to be of value as an indirect advertisement, supplementary to the direct one which forms their setting.

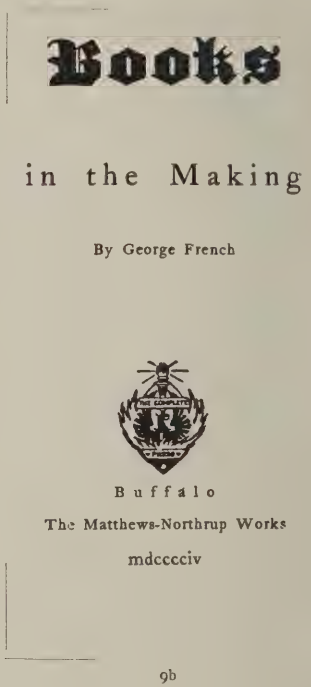
SHOWINESS IN AN ADVERTISEMENT WILL NOT MAKE UP FOR LACK OF NECESSARY INFORMATION.

"DEAR MR. WOODWORTH:—This is our latest. Your criticism, please. A. L. CHIPMAN." With this note comes a booklet distinct with the individuality of the proprietor of



Foreword
If you were going out on a business trip you would go neatly and carefully dressed, because you would wish to make a good impression.
Has it ever occurred to you that your printing—being your representative that you send where you cannot go yourself—should be just as carefully dressed?
In other words, your printing should be done on good stock, with good ink, careful presswork, and, most important of all, "know-how."
"Better printing" is the kind that satisfies you, satisfies the parties to whom you send it, and it pleases us to do it because it gives such general satisfaction.

8



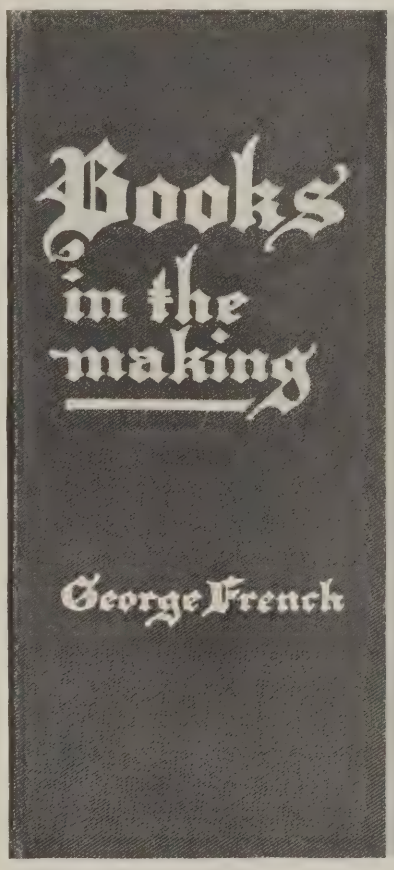
9b

"Ye Chipman Printery." Its cover is such a splendid example of color work that I should very much like to reproduce it, did the camera permit. The pages are in white and golden rod Old Hampshire Bond, with appropriate color schemes, the four center pages in the golden rod. Nearly every page of the booklet is different as to the color of the inks, but all are in harmony with whatever colored stock is used.

The "Foreword" is reproduced both as a specimen of advertising and of printing (No. 8). The color scheme of this page is: headlines in red, balance in (so far as I can tell in this light) olive green. There is a peculiar balance to the page, induced by the heaviness of the ornament as contrasted with the headline. But I like this originality, and consider it an artistic defiance of the old laws of balance, such as so much good modern advertising is. (By the way, the last sentence shows a violation of the rule laid down in the composition text-books that a sentence should never end with a word like "is." I am not sure that it is an artistic sentence, but it is somewhat in keeping with the modern idea of violating those hard and fast rules in all kinds of composition which were fashioned, in spite of usage, by the critics of eld.) Each page has those neat rule borders, and, as has been already stated, they are in various colors. Another very tasty job which Mr. Chipman sends me is a prospectus of a book entitled "Chipmans of America." The first words of the text are "Begining with John Chipman"—the spelling of this word being, I might suggest, a bad beginning. I have known a good many Chipmans of America—in fact my father's best man at his wedding bore the name of John Chipman, that gentleman now being a judge in Kentville, N. S. I had read the handsome prospectus through, and examined the typography carefully, before I recognized in the name of the author, "Alberto Lee Chipman," the full name of the gentleman whose Christian names have hitherto been indicated to my readers simply by their initials. I congratulate Mr. Chipman on his excursion into the realms of authorship, cognate as it is with the typographical field.

THE PART OF AN ADVERTISEMENT THAT IS REMEMBERED IS THE PART MOST LIABLE TO PRODUCE RESULTS.

I neglected last month to felicitate the Matthews-Northrup Works, of Buffalo, and Mr. George French, of Boston, on their new connection with each other. This is shown in a cloth-bound book, two and three-quarter by four and a half inches, lately issued by "The Complete Shop." I trust that the NATIONAL PRINTER-JOURNALIST will take the utmost care of this brochure, as I'm sending it to Chicago for reproduction as to cover and title page. The cover (No. 9a) is in red, with the outer margin white from top to bottom of the book, Each alternate two pages are blank. As a specimen of particular taste in the matter of a title page No. 9b is especially pleasing to me. I could never understand why one of the foremost critics of printing at the beginning of the nineteenth century (I forget his name, although I never thought him in any way comparable to that eminent critic of the beginning of the twentieth century, Mr. George French) so strongly deprecated the use of that black-letter through which the American Type Founders Company evolved their Cathedral Text series. Carl Heintzmann, of Boston, made quite a hit by its use a good many years ago, and I have no doubt he still continues to use it in his shop on Summer street, in which the stained glass windows help to produce a cathedral-like charm. The Matthews-Northrup Works use it on every printed page of this book. It is in rhodogene, and certainly looks admirably quaint in connection with the Caslon and wide-margined, antique-laid, deckle-edged pages. I hope the NATIONAL PRINTER-JOURNALIST will reproduce, in addition to the cover and title-page, the two pages with the side-quotes (No. 9c, the pages are not folioed), in order to show the style of the running head on every one. These pages are not reproduced because I consider the repeated quotations add to the charm of the typography, but because it is the exact language of Mr. Matthews to Mr. French, and therefore is certainly a mighty good piece of printing-advertising. I remember that Mr. French once quoted approvingly in the *American Printer,* as being the words of one of of the great printers of the land, a publicity song-and-dance which I wrote myself, and of which the great printer approved. I spoke of the wide margins of the book; the only exception is at the top, where there is scarcely one-quarter of an inch above the running head. I do wish the PRINTER-JOURNALIST would get the habit of indicating, by means of a 1-point rule, the disposition of the margins on pages like these. There is really scarcely anything that so helps the beauty of a printed page as an artistic arrangement of the white spaces. No. 9b, for instance, has a peculiarly striking arrangement. The top margin is one-half inch, and the left-



9a

Books in the Making

"MR. FRENCH, we will

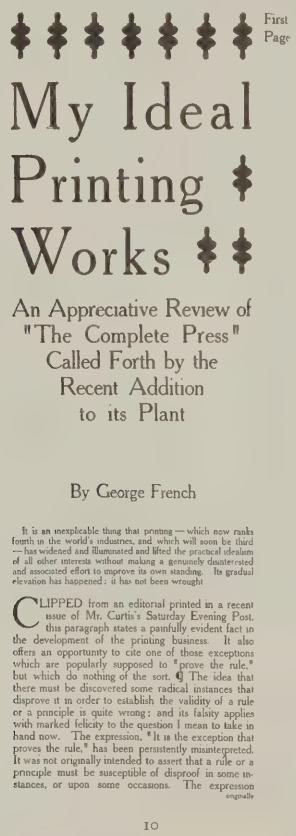
"command, and anything
"which you can suggest, or
"we can originate, to im-
"prove the product shall be
"provided."

9c

hand one, which merges into the opposing blank page, is three-eighths of an inch. The right-hand margin is three-quarters of an inch, and the lower margin is about one and one-eighth inches. The first page of the reading matter is of a similar method of arrangement, and has a much shorter page. The word "Books" is in red in 18-point Cathedral Text, and the words "in the Making" are spaced between the lines and are in 6-point of this letter.

The art of the letterer is a worthy adjunct to that of the type founder and the typographer. The Old English text of the cover of the book is worthy of mention as a specimen of tasteful Old English, as it comes from the hands of the modern follower of the missal-making monks.

Another recent production of the Matthews-Northrup Works resembles, in some points, a railroad folder, but is



First Page

My Ideal Printing Works

An Appreciative Review of "The Complete Press" Called Forth by the Recent Addition to its Plant

By George French

It is an inexplicable thing that printing — which now ranks fourth in the world's industries, and which will soon be third — has widened and illuminated and lifted the practical idealism of all other interests without making a genuinely disinterested and associated effort to improve its own standing. Its gradual elevation has happened: it has not been wrought

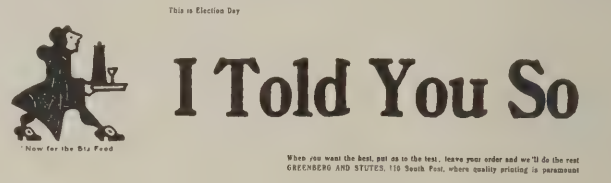
CLIPPED from an editorial printed in a recent issue of Mr. Curtis's Saturday Evening Post, this paragraph states a painfully evident fact in the development of the printing business. It also offers an opportunity to cite one of those exceptions which are popularly supposed to "prove the rule," but which do nothing of the sort. ¶ The idea that there must be discovered some radical instances that disprove it in order to establish the validity of a rule or a principle is quite wrong; and its falsity applies with marked felicity to the question I mean to take in hand now. The expression, "It is the exception that proves the rule," has been persistently misinterpreted. It was not originally intended to assert that a rule or a principle must be susceptible of disproof in some instances, or upon some occasions. The expression originally

10

over a foot long by five inches wide. It is on heavy, deckle-edged antique wove. It is printed entirely in Cheltenham, with rubrical lines at the top. The folios are also in red. The first page of the reading matter is here shown (No. 10). The sub-head and the initial "C" are in antique red. This is a reprint of the testimonial Mr. French gave "The Complete Press" before he got his present job. Mr. French, with his charming diction, has written much concerning the larger print-shops of the country, and all his matter shows him to be not only a large-minded critic, but also a master of an easy, graceful style and a rattling good advertising man. Even his blame, of which he has not always been sparing, even in these presumably paid-for write-ups, has been mentioned, by firms of which he wrote in subsequent printing-advertising, as really adding, by means of a vivid contrast, to the advertising force of what he has praised. "The Complete Press" has surely justified its name as regards the selection of employes, and it seems to be a fact that this concerns manages to keep its best men for life.

TRADE IS BECOMING MORE AND MORE A STICKLER AS REGARDS ETIQUETTE. IT DECLINES TO GO WHERE IT IS NOT INVITED.

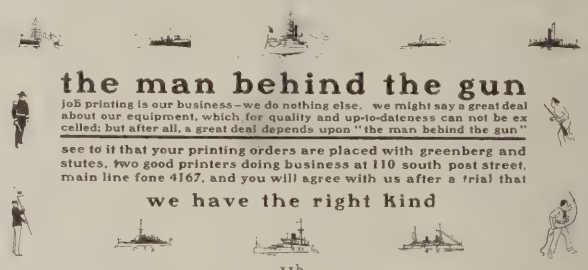
That celebrated printer, E. W. Stutes, seems, since he became a member of the firm of Greenberg and Stutes, to be doing as good work for himself as he did for others. And that is saying much. I should greatly like to reproduce some of his latest specimens of blotters, dodgers, etc., but am unable to do so owing to Mr. Stutes' large use of purple, which harmonizes beautifully with the green he employs in connection therewith. I showed Mr. Coyle's use of Election Day as a holiday advertising period in November. Here is



This is Election Day
"Now for the Big Feed"
I Told You So
When you want the best, put us to the test, leave your order and we'll do the rest
GREENBERG AND STUTES, 110 South Post, where quality printing is paramount

11a

Mr. Stutes' election card (No. 11a). I have seen "I Told You So" cards worn in enthusiasts' hats before, the strange point about the matter being that they were usually worn before the returns were all in. Mr. Stutes' card is in black and wine color, the latter shade being used in connection with Mission Toys. The mission of this waiter would doubtless be satisfactory, no matter which way the election went. One of the recent blotters of Mr. Stutes can be reproduced (No. 11b). It is certainly an original bit of blotter composition, and is in two colors, red and black, on a pink



the man behind the gun
job printing is our business—we do nothing else. we might say a great deal about our equipment, which for quality and up-to-daleness can not be excelled; but after all, a great deal depends upon "the man behind the gun"
see to it that your printing orders are placed with greenberg and stutes, two good printers doing business at 110 south post street, main line fone 4167, and you will agree with us after a trial that

11b

stock. The use of lower-case letters when capitals are not only called for by custom, but likewise by accuracy, always appeared to me to be of the freakish order of advertising, and to be as out of place, if not as irreverent, as John Morley's use, when a young man, of a lower-case "g" when speaking of the Diety—a specimen of bad taste which he afterwards lamented as being foolish, although he did not change his views on the subject of religion. I should certainly not belittle my firm name by the exclusive use of l. c. Mr. Stutes, your menu card in purple on onyx stock is grand.

THE MAN WHO AIMS AT THE BULL'S-EYE MAY NOT HIT IT EVERY TIME, BUT HE WILL COME NEARER THE MARK THAN IF HE SHOOTS AT RANDOM.

Probably the breeziest advertisement of a country newspaper that ever happened to hike over the pike is that that has just been turned loose from the shop of the Hespeler (Ont.) *Herald*. It is in the form of a booklet of sixteen pages and cover—the brochure being bound (with a silken cord) so as to have two alternating pages untyped, uncut. Deckle-edged, feather-edged, as to body and cover—and the cover is of a stock that nearly resembles Japanese vellum. A reproduction of the cover is herewith given (No. 12). And the other pages (especially No. 1 of the text) are likewise well worthy of reproduction from an artistic viewpoint alone. But I prefer to take a space larger than I usually devote to reproduction, criticism and quotation to reproducing the

cover-page and quoting the text *in toto*. It is largely in that undeveloped but spontaneous diction classified as "slang"—but the slang of one period of the Anglo-Saxon tongue is the water that comes from the "well of English undefiled" of the next. And what a story of earnest endeavor and ultimate achievement does this "nervous English" reveal!

THE "HERALD'S" HISTORY.

Here's where we take you to our chest and put you wise to the inside history of the making of Hespeler's g. f. j. Here's where we unload our troubles onto the public, whose worries we have made our own for many a year. Here's where we ask you to lend us your ear (either one) while we whisper the confidence that you and I can do business on a mutual benefit plan. Doesn't matter whether it's

12

advertising, fine printing, or just general information; we're on the job and can pretty nearly make good any time you hit us up.

It's not a long story—but it's a true story.

It's also a fairly interesting story, and butts into the game along about ten years ago—comin' June—when we were took bad with editoritis, and decided that the busy factory town would go down and out unless it got a real, live family journal and up-to-the-second printing plant of its very own.

We believed it was up to us to fill the long-felt want.

We had a hunch that we could negotiate the bill right down to the eceteras—but we hadn't the price.

Our assets at this time—ten years ago—weren't bothersome, financially speaking.

But we were long on ambition; didn't mind roughing it a bit; had a few mighty good friends; some high-priced experience, and a graduating diploma in higher mathematics.

We started to work with these, and it wasn't long till we had a printing outfit safely cached in a 3 x 6 rear extension back of what was then August Henry Wittmaak's store.

We sent out the glad tidings that we were in the printing business (not so far in, however, that we couldn't have been extracted with a corkscrew) and pretty soon began to gather in subs. and adv. contracts.

The original plant was a dandy.

It was sure a great and only.

A decrepit No. 1 Gordon and half-a-dozen fonts of news was it.

The whole outfit wasn't worth a quarter century.

The first issue of the *Herald* was a 4-page 8-column affair, and a pretty good looker at that.

It was dated Friday, June 13th, 1895. Wouldn't that have made you back up?

It didn't phase us. We never did believe in signs—unless they were $ signs.

This first issue of the paper—our paper—Hespeler's paper—was printed in Preston. So were the next 53.

There was no nerve-racking rush during our first half-year. We were the whole tip; editor, solicitor, financial man, bookkeeper, compositor, pressman, office boy and p. d. all in one, and we didn't have to work overtime, either.

About the 7th month we spied out a bankrupt job-office in Sarnia, and when we got the outfit set up in the Ochs' Block we had a second-hand Eclipse press and about 30 fonts of type—pretty tough stuff—most of it ready for the hell-box, but we had to make it do—we were still short.

Then we hired a man to do the light work.

We pegged along very nicely for a while, until our ambition began to do stunts.

It hit the pace hard. It only touched the high spots.

It wanted a press so the paper could be printed at home.

It put us up against the toughest proposition yet.

But it couldn't lose us. We were game.

We landed in Toronto; made Miller & Richards believe we were honest, if we were poor and homely, and when the clouds had cleared away we were doing the grand in the Zryd Block, and were the main guy in a plant which included a Prouty power press, a paper cutter, about half-a-thou' in new type—and our first lien.

We started printing an 8-page 6-col. paper at home.

The job department came to the front; kept coming, and it finally worked the old Eclipse off its feet. Then the Toronto Type Foundry contributed a No. 1 and a No. 3 Gordon to the equipment. They got the old Eclipse, some cash, the rest time.

Just about here we had to increase the staff.

We wanted power next. This deal nearly queered us.

But we finally accumulated a motor and all was lovely.

The power addition made work easy.

It was so easy we had to hustle like the mischief for new business to keep the staff going.

We got the business. Kept getting it.

Ads., jobs and subs. were doing the double every minute.

We were playing leap-frog with our liabilities. Had indeed made mincemeat of our second lien.

We bought and paid for a new Prouty job press.

Everything was coming our way.

Couldn't keep the sun from shining in our windows.

The world looked "bright and fair" to us on the very stormiest days.

Then we had a set-back.

We were partially burned out. It was a bad mess.

We could hear the little dicky birds singing "back to the woods for yours." But we fooled the birds.

We settled with the Insurance Co. and cleaned up the ruins.

Then we moved.

Hiked away up—up to the top storey of the Henry Block to start life again.

Our first move here was to trade the old Prouty paper press for a magnificent new Hoe cylinder; a regular artist's dream—in iron.

We also installed a new 3 h. p. C. G. motor

We enlarged the paper; made it 8-page 7-col.

For a year the fates were kind.

We had just about got our toes on the ground again, and were ready to believe that this wasn't such a bad old world after all.

Then we bumped against set-back No. 2.

There was a fire in the lower storeys of the Henry Block, and of course the bloomin' thing had to come through our way to get to the roof.

This was a worse mess than the other one.

It was a regular heartbreaker.

It sure looked as if there was nothing left but the tall timbers this time.

But we weren't quite ready to hit the pike.

No quitting in ours.

We buckled in; cleaned up; fixed up; painted up, and got going again in a week.

We've been going pretty steady ever since, and up to date haven't had to negotiate set-back No. 3.

We're not hankering for any more trouble. We've had enough. We have had about all the throw-downs we have coming, and just want to be allowed to go ahead and make good.

We aimed high when we started in the printing business.

We wanted the best—nothing else would do.

We wanted the best machinery money could buy.

We wanted to be better in every way—if only a little better than the general run of country weekly, and we believe we have succeeded.

We have a bang-up office.

We have an up-to-now equipment—presses, type, styles. Everything is right up to the mark.

We stay right with the procession.

We have the best country weekly in Canada and we want you to know about it. That's really why we are telling you our troubles.

We're proud of our paper; proud of our plant; proud of our office; proud of the work we turn out, and why shouldn't we be? The Lord only knows we've had a serious enough time getting to our present condition.

We've spared no expense in the making of this office. We were never afraid to raise the ante, and while we have sometimes gone in blind, we have generally made good in the draw.

We've had some mighty precarious moments since we became the main-stay of this g. f. j., and we've turned some all-fired sharp corners, and the sun has many times hid behind the clouds.

We've paid enough discounts to start a bank.

But we are still with you.

We've had some bright spots, too, and on the whole have enjoyed our experiences immensely.

We have added to our assets the best little helpmate in America, a million-dollar daughter, (you'll see her on the cover), a comfortable home, and about 50 pounds avoirdupois.

We've annexed some staunch and true friends, who have stood by us like heroes; whose words were as the summer's sunshine in our hours of trouble.

We've been turned down and tramped on by a few ornery cusses, who soured because we didn't see everything their way, and we've had to strike a few names off our visiting list—for various reasons.

But on the whole the *Herald* and the great general public have pulled together pretty well. So what's the odds, so long as we're happy.

We print anything from a label to a three-sheet poster; from a dodger to a catalog,—nothing is too small nothing too big for us to handle. We turn out the neatest, niftiest work, and do it at reasonable prices, and we wouldn't mind figuring on a trial order from you.

We are the local paper for one of the busiest towns in Canada and the finest fanning community this side of Jordan.

We have 998 subscribers—some of 'em paid in advance.

We have about ten times that many readers, and when you put an adv. in the *Herald* you get a chance to talk directly with over 10,000 of the finest people in this country. Let this truth sink in.

We are out for business every minute of our time. Don't care where it comes from, so long as it's paid for, and are ready to open communication with you any minute.

If you're where we can get at you handily we'll come in and talk it over. If you're too far away, telephone us. If this is too expensive and you can't come, write. The telegraph, the telephone, and His Majesty's Mails are at our service, and if the inclination is with you we can easily get together.

It's up to you. Yours,

OSCAR EBY, Editor and Proprietor.

If you telephone No. 47 or write Drawer B, Hespeler, Ontario, you will reach us.

WHENEVER THERE IS DANGER OF ONE'S BUSINESS BECOMING TOO WIDELY KNOWN, IT IS.

The Perkins Printery of Muncie, Ind., send a large blotter, one-half of the enameled surface of which is devoted to an excellent half-tone of the interior of that print shop. A calendar for January also takes considerable space, but there is enough left for a bright talk, showing that the year 1904 was a particularly busy one in that office, and hoping that business will be still better in 1905. The spirit of thankfulness is not absent from this very striking blotter.

THE PRINTER WHO HAS THE FACULTY OF MAKING PEOPLE FEEL THAT HE IS ANXIOUS TO PLEASE WILL NOT LACK POPULARITY.

I am sorry that the slip, on a light gray stock, of Kiesling Bros., New York, is in a purple, which paralyzes the photographic art. The picture of a milk can and a pump is what first catches the eye in connection with the heading "Watered Stock." This is the other application of the catchline: "Poor printing, like watered stock, is reduced fifty per cent in value. If you want full-value printing let us do your work." On the other side of the slip is this couplet:

Who sees only the first outlay
Will live to have more bills to pay.

SPEAKING OF PUBLICITY—THERE'S A WIDE DIFFERENCE BETWEEN POPULARITY AND NOTORIETY.

A blotter from James J. Wray, of New York, is a neat job of composition, if not of presswork, but is chiefly remarkable for the pithy catch-phrases with which it abounds. It serves as an announcement that Mr. Wray's shop has "not moved, only enlarged." It is now, therefore, "a printing office from the ground up." It is likewise "a printing office with department store facilities." "All departments," it is announced, "are complete. Writing, Designing, Engraving, Printing and Binding all done under one roof."

YOU MUST TELL YOUR STORY AGAIN AND AGAIN IF YOU WANT TO MAKE A LASTING IMPRESSION, AND WHEN YOU GET PEOPLE TO BELIEVE IT, YOU MUST BACK ITS STATEMENTS WITH PROOFS, IF YOU WOULD RETAIN THEIR CONFIDENCE.

The Mittineague Paper Company, of Mittineague, Mass., use an elaborate mailing folder to advertise simply one sample of their stock. It is Old Cloister deckle-edge cover paper. It is, however, a remarkable advertisement, giving, as it does, the effects produced by various inks harmonious with the stock. It has two pages which might be termed cover pages, although it is all cover stock. The back page is secured by a notch which fits into a slit. There is one leaf within, of the same stock, attached by means of paste to the fold in the paper. The only suggestion of deckle-edge is at the side of two of the pages, which are narrow as to length. The sentence, "Note the folding qualities of Old Cloister," is particularly good advertising, it seems to me, especially as the quality is there.

ANY FACTS ABOUT YOUR PLANT, AND WHAT MAY BE DONE WITH IT, THAT SHOULD INTEREST THE PUBLIC, SHOULD MAKE GOOD ADVERTISING, IF TOLD IN AN INTERESTING WAY.

From a letterhead of the Biggers Press, Corsicana, Texas: Texas:

The Biggers Press—a shop wherein printing is done as well as good printers can do.

From a slip of Hal Marchbanks, formerly of Ennis, Texas:

Hal Marchbanks' Print Shop, on the Tow Path at Lockport, New York, is doing some good printing and would like to do for you.

Is this peculiar use of the verb "do" a Texan idiom?

In a previous issue of the NATIONAL PRINTER-JOURNALIST —I think it was the March number of last year—I reviewed a booklet concerning that good-luck-bringer, the Gopher's Tail, which was sent me by the *Manitoba Free Press,* of Winnipeg, Man., together with a charm for a watch chain, which contained one of the comparatively few tails that the paper had been able to secure, it being an off year in gopher hunting. The charm would, doubtless, have brought me a great deal of luck, but the trouble was that it came apart from its mounting—a consummation which the booklet warned against. I believe that the *Manitoba Free Press* used the strongest cement which they could procure, and have no idea whatsoever that they intended to put me against anything but the best of luck. Anyhow, whatever influence the separation of the tail from its mount had on my destinies for the year of 1904, I considered myself lucky to receive such a striking souvenir through such a source. This year I was remembered, in common with my old friend Capt. Chas. B. Bazan, with a quill from a Canadian wild goose, with which I would write this critique were it not for the fact that I am in a hurry to catch the mail, and dictation to a stenographer, although not so instinct with the old-time spirit, is considerably quicker than any writing I can do with anything but a pencil. A feather-edged booklet comes with the quill, and the title is the name of the souvenir, "A Quill from a Canadian Wild Goose," and the sub-title is, "With the Cree Legends of Nih-ka, The Wild Goose, set forth for the First Time in Print." The first page of the cover contains a seal, which I would fain reproduce, but it cannot be caught by the camera. I might as well say right here that the back cover page, which contains a flying wedge of wild geese taken at the time of the setting of the sun in the Great West, combines red and black to such an extent that it, too, would be hopelessly unreproducible. The title of the front cover page is in writing which was evidently originally done by a quill pen, as is the title of the first article in the booklet, herewith reproduced (No. 13a). This article is of great interest as giving a description, not only of the birds which furnish the *pennae,* but also of the manufacture of quill pens, such as

THE quill pen accompanying this little book, which The Manitoba Free Press, of Winnipeg, sends you with its best wishes for a merry Christmas and a happy New Year, was made in England from a wing-feather of a Canada wild goose taken last spring with many others in the vicinity of York Factory, the historic trading post of the Hudson's Bay Company, some six hundred miles—as the wild goose flies—due north from Winnipeg on the shore of Hudson Bay.

The particular wild goose that furnished the pen herewith probably had its birthplace somewhere on the banks of one of the many rivers emptying into Hudson's Bay, along the west coast line of that great inland sea. On the spring and fall journeyings of the drilled battalion of which it was a member, in its migrations from Arctic meadows to the lagoons of the South, it traversed yearly a great extent of this continent, its

13a

the ends are protected by a cardboard case; and in this condition they pass into the trade."

It is interesting to note that the English word pen (Latin, penna), as well as its equivalent in French (plume) and in German (feder) originally means a wing-feather; but in ancient times the implements used for producing written characters were not quills. Among the earliest reference to pens are those found in Judges v. 14, Psalms xlv. 1, and Isaiah viii. 1, chiefly referring beyond doubt to the iron stylus which cut out characters in the tablets of limestone or soapstone. These may have been made of other metals, and were in some instances pointed with diamonds, as referred to in Jeremiah viii, 8; and if taken in connection with the mention of a penknife (Jeremiah, xxxvi. 23) this passage seems to imply that a reed was in use at that period.

In the Third Epistle of John, written about A.D. 85, mention is made of "ink and pen," referring to the practice of writing upon skins or other flexible material. Although the first reference in the Bible to writing belongs to B.C. 1296, writing upon goatskins has been found in the course of excavations in Upper Egypt, and is assigned to the reign of King Khufu, B.C. 3766. In the far East, and perhaps in Egypt the camel's hair pencil was substituted for metal implements, and characters were painted on the bark of trees and skins of animals, very much as the Chinese draw them on paper.

The quills of geese and crows were in time discovered to be more useful than either the reed or

13b

brush. They were introduced, it is thought, about A.D. 56. For centuries the quill was the favorite instrument of the rapid writer, and continued to be so until the steel pen superseded it. Until the early years of the nineteenth century, the quills were simply hardened by dipping in boiling alum water or diluted nitric acid, and were not cut. Writers cut their own pens from these prepared quills, an art acquired only after much instruction and practice. Every teacher was expected to be proficient in this part of his profession. Early in the nineteenth century quill pens were made for sale, and boxes of them, with nibs for fastening them upon holders, were sold by all stationers.

Notwithstanding the impression that the quill pen produces only coarse writing, as beautiful specimens of penmanship have been produced by it as by any other instrument in use, not excepting the engraver's tool. It has always been from the goose that quills have been chiefly obtained; although the swan, crow, owl, hawk and turkey have all been more or less laid under contribution. Swan quills, indeed, are better (and more costly) than those from the goose. For fine lines, crow quills have been much employed.

You will hardly tell by what you see that I write with a steel pen. It is a device come out of France, of which the original was very good and wrote very well, but this is but a copy ill made.

—Roger North to his sister, Mrs. Foley, March 8, 1700

In 1779, however, we have mention of a certain Charles Stewart, a penmaker, a man of no fixed habitation. It would seem, therefore, that penmakers wandered about the country selling their wares, turning goose quills into pens, and making anew those that had been worn out.

—Notes and Queries, vii, 8, 220

The Cree Legend of Nih-ka, the Wild Goose

IT is many years since I heard the story of the Gray Goose. It was told me by Kitche Keesickow, a Swampy Cree Indian, who had been brought up at the Roman Cathlic Mission at Fort Alexander, on Lake Winnipeg. We were camped at Rabbit Point, beyond the narrows, in the late fall, being storm-stayed by a strong north wind, which, with its hundred miles of hoarded strength, raised the lake to such a pitch that it was more than the frail birch bark could withstand. After the slender poles and brush had been raised for the shelter, and the fragrant bed of cedar spread before the fire of driftwood, we sat listening to the "Honk ker-Honk!" of the geese, as they mounted high in the air at sight of our fire, on their journey south. As I heard the story so I have tried to set it down, and if I have wandered from the thread of the tale, or erred in any of the details of it, you will be lenient to remember that in those days none ever dreamt such stories could be sought after or thought worthy to be in print, and that the Company's affairs, and the gathering of skins and exaction of hunters' debt, was of more consequence to us in the service of the Honorable Company than a thousand of their fables.

"I t'ink you not hear," said Kitche Keesikcow, "of how dat Nih-ka, de gray goose, becom' dat color, an' not w'ite lak' de wavey, w'at you call arcteek goose. It is not long story, mon frere, but it is tol' many year, more as I can co'nt, over de fire of de Cree, all a way from de Big Watter of de Companee to de contry of de Ar'abasca.

"It is long, long year back w'en dere is yet only wan man in de worl', de fader of all de Cree, Wi-sa-ka-chack, who mak' de tree', de bird', an' de animal' for his chil'ren. Dere is also a ver' bad speerit, nam' Ke-che-mosh-ka-hun, a beeg medicine, mak' great magic, who not lak' dat Wi-sa-ka-chack com' on his hunting ground, wat you call trespass. He t'ought dat by'meby quick Wi-sa-ka-chack cover de w'ole c'ontree wit' his chil'ren an' his animal', an' his oder t'ing dat he mek', an' leave no place quiet for heem. So he fill hees heart wit' gre't hatred for Wi-sa-ka-chack, an' do everyt'ing he could to mek' bad t'ing for him, an' treat him de wors' he can.

"It happen wan fall dat We-Kwas, de birch, she w'isper to her leaves a message for Wi-sa-ka-chack, an' send dem on de back of de nort' wind to heem; for We-Kwas she know dat Ke-che-mosh-ka-hun was Wi-sa-ka-chack' enemy, an' had evil t'ought.

MANITOBA
No. 1
HARD
REINDEER
PEMMICAN
THE MANITOBA FREE PRESS has marked the Xmas season in previous years by the presentation:
IN 1901—Of a miniature sack of "No 1 Hard" Manitoba Wheat.
IN 1902—Of a miniature sack of Reindeer Pemmican made at Fort McPherson, a Hudson's Bay Co. post, sixty-five miles within the Arctic Circle, and 2,978 miles northwest of Winnipeg, accompanied by an illustrated booklet, bound with a deerskin thong.
IN 1903—Of a Gopher's Tail, mounted, as a "good luck bringer;" accompanied by an illustrated booklet containing the Cree legend of the gopher, given in print for the first time

13f

13d

are more or less habitually used, even at the present day, by King Edward and other crowned heads, including myself and Charlie Bazan. Pages 6 and 7, 8 and 9, of this booklet, are likewise reproduced, as No. 13b, c, d and e. The latter part of the booklet leaves the realm of legend to lead us through the regions of hard but interesting fact. The headlines of the subsequent articles are, "The Immigration into Western Canada," "Facts About Western Canada," "Facts About Banks in Western Canada," "Facts About Financial Corporations in Western Canada," "Facts About Winnipeg," "The Growth of the *Manitoba Free Press,* Winnipeg." "Some Facts in Regard to the *Manitoba Free Press,* Winnipeg." I

The Famous Mary McKinney Mine, Cripple Creek, Colo.

trust that the circulation statement given under the headline next to the last quoted is not to be relegated to the realms of fiction which pertain to the Cree legends, as the last two headings, taken together, might seem to infer. It seems that I did not get in on the ground floor as regards the yearly distribution of gifts, as the second cover page of the booklet (No. 13f) says that this custom originated with the sending of sacks of "No. 1 hard" Manitoba wheat in 1901, which was followed by sacks of reindeer pemmican in 1902.

I had a call from J. A. Echlin a short time ago, that gentleman being at the time the advertising manager of the *Manitoba Free Press.* Believing that the charm I had received the previous year had been the outcome of the expenditure of considerable time, trouble and money, I asked Mr. Echlin:

"Do you find this kind of advertising pays?"

"Do we find it pays?" Mr. Echlin remarked. "Do *you* find *publicity pays?* Why, besides the notices received in the National Printer-Journalist and other technical papers, we had a full column-and-a-half writeup in the New York *Sun.*"

Mr. Echlin is so good an advertising man that Toronto found it needed him—so during the past week he has begun to hold down the advertising manager's throne in the office of the Toronto *News.* The *News'* advertising patronage is going to soar even as Nih-ka, the wild goose—and that's a prophecy that doesn't require the powers of divination of a Cree medicine-man.

The most of the matter I have received for consideration in this department during and since the holiday season has been of the holiday kind mentioned in my Christmas homily. It's an especially pleasing thing in respect to this matter that it is mostly from new contributors—most of whom wrote mightily kind letters in connection with their first votive offerings to this department. These Merry-Christmas-and-we-hope-and-trust-you'll-have-a-happy-if-not-a-prosperous-New-Year greetings were so especially gratifying to this recipient —as no doubt to all who got them—that they laid on the top of my desk for days; and some of those thieves-o'-the-world who occasionally drop into this office swiped several of the more alluring. Good taste, forsooth, but a bad method of showing it. And as to those which I have on hand, and those which, eftsoons, I haven't on hand—it seems to me better that they should be reproduced and commented upon shortly ere the Christmas and New Year holiday season of 1905-06 than now. They will then be more immediately suggestive to would-be holiday-season advertisers than they would if talked about in the present dull advertising season. And I so want to keep the kind wishes on file in my own workshop, as well as sending them to Chicago, I ask this of the senders:

Like good fellows, won't all who have sent me holiday remembrances in the shape and form of "printed matter," kindly send me one or two copies more?

A large folder issued by the Inland Type Foundry is devoted entirely to the Dorsey series. It is indeed, as is claimed by the makers, a "versatile letter." Such type faces as the Dorsey are adaptable to many classes of work; they pertain to both genders, and give proper expression to every thought, whether it be "the blacksmith's appeal to attention or the announcement of a millinery opening." The Dorsey series certainly has that mellow effect—that softness, ripeness and bloom that appeal to the eyes. The day of the hair-line letter is practically over. This is an age that demands durability, particularly as the modern durable letters impart,

Long's Peak from Estes Park, Colorado

by the very absence of hair-lines, a graceful flow of uniformity. The specimen books used to advertise the particular series of type will be found most useful to its users, and should be preserved by them. These show the result of the careful study of experts as to the possibilities of adaptability of a single series of type, whether solid or leaded; whether in one color, or two, or more; whether in one size of a series or in several; whether with ornaments or "fancy free."

National Printer-Journalist

A Journal for Printing and Allied Trades

Entered at the Chicago Post-office as Second-class Matter.

BENJAMIN B. HERBERT . . . . . EDITOR

Official Paper of the National Editorial Association.

PUBLISHED MONTHLY BY THE

NATIONAL PRINTER - JOURNALIST COMPANY

OFFICE OF PUBLICATION:

1319 WEST RAVENSWOOD PARK, CHICAGO, ILLINOIS

EASTERN OFFICE:

150 NASSAU STREET, NEW YORK CITY.

WILLIAM E. HERBERT . . . . . Resident Manager, Chicago Office

BENJAMIN S. HERBERT . . . . . Secretary

SUBSCRIPTION RATES:—In the United States, Canada and Mexico, $2.00 per year, in advance; single copies, 20 cents.

Orders for subscriptions will be received by all dealers in printing material in the United States and Canada.

Remittances may be made by draft, money order, or registered letter. Make all remittances free of exchange and payable to the order of the NATIONAL PRINTER-JOURNALIST COMPANY.

FOREIGN SUBSCRIPTIONS:—To Countries within the Postal Union, 10s. 6d.

FOREIGN SUBSCRIPTION AGENTS:—International News Company, Breams Buildings, Chancery Lane, London, E. C.; F. O. Strong, 111 Fleet Street, London, E. C., G. G. Turri & Co., Melbourne, Australia; The India Printers' Agency, 249 Mint St., Madras, India; Successful Advertising Co., Bangalore, India; John Dickinson & Co., Ltd., Cape Town, South Africa.

ADVERTISING RATES PROMPTLY FURNISHED UPON APPLICATION

The NATIONAL PRINTER-JOURNALIST is unequalled as an advertising medium in its field. No attention paid to postal card requests. Information cheerfully furnished to all patrons.

Subscribers and patrons will confer a favor on the National Printer-Journalist Company by sending in the names of responsible newsdealers who do not keep the monthly on sale regularly.

Manuscript sent in for publication must be accompanied by a letter of explanation and return postage.

CHICAGO, FEBRUARY, 1905

The newspaper is not infrequently spoken of as a complete mirror of the times and this is often claimed to be the true newspaper ideal. It is said that in this view the ideal newspaper is the newspaper as it now exists. It enables the readers to see the world as it is and each to judge and form an opinion for himself. However, how many perfect mirrors are there? How many are so placed as to get the best light and to give true reflections? Every flaw, imperfection, irregularity, concavity or convexity in the mirror distorts and every particle of dust or dirt dims the image. A mirror may make one appear a giant or a dwarf, a grinning idiot or a sedate sage. All depends upon the mirror and nothing is more difficult than to secure one that is absolutely perfect.

How different is it with the perfect newspaper mirror, that has so perfectly reflected its city, county and State as to reveal all that is worthy, helpful, inspiring and beautiful; that has portrayed all resources and advantages as well as all the defects or wrongs that need righting—a newspaper, the daily or weekly reflections from which have resulted in a community of feeling, in laudable ambitions, in individual and public improvements, in happier, better, more beautiful homes, in improved lawns, streets and parks, schools, churches and benevolent institutions; in sanitation, healthfulness, cleanliness, righteousness and good government. Such a paper encourages and helps in the introducing of new industries and the establishing of new factories and the improving of those already existing, in the advancing of trade and general prosperity—serving all the people with singleness of heart and purpose all the time, and is at all times pointed to by its numerous admiring patrons and readers, with just pride and gratitude.

The newspaper mirrors are made up of the minds and hearts of the editors and reporters. These must be backed by the quicksilver of knowledge, discernment, human sympathy and understanding; must have the surface of candor, common sense and correct judgment; must be free from the flaws of ignorance, prejudice and conceit, from the grime and dust of self-interest, low ambition and fawning servility, and must have perfect luster and polish, in order to reflect clearly and correctly.

It makes all the difference in the world as to the character of the reflections of the newspaper mirror as to where it is placed. If it is so placed as to reflect only the backyards, the slums, the filthy places, the reflections therefrom cannot be very pleasing or edifying. If so placed as to reflect the best there is in the homes, in society, in the schools, in the industries and public life and in government, the reflections therefrom will be enrapturing, ennobling and inspiring.

With the view, that the newspaper is the complete, perfect mirror, we sometimes think that the English-speaking people have had but one nearly perfect newspaper man, and he lived before the day of newspapers, William Shakespeare, who so reflected the characters that he mirrored forth, that their truthfulness to nature have come to be recognized by every reader and in all lands.

There is much more in this world than the mere surface outline. No newspaper reflection or picture is perfect that does not mirror forth all that takes hold upon human interest. The outer surroundings and inner, moving passions; the clinging vines of affection, the modest flowers of sacrifice, service, duty, love, hope and aspirations; the thorn bushes of wrongs and entangling difficulties, must all be reflected in order to give a perfect view, or image of men and measures, acts and accidents.

In "Dotheboys Hall" the uninitiated public saw only a place for training refractory youth and giving to them strength of character by a somewhat rigid course of discipline and rule. In "Squeers" the head of the school, the people recognized only a "mild, scholarly man" and took him on his own pretensions. Charles Dickens, a prince among newspaper reporters, turned the perfect mirror of publicity upon the place and revealed the sufferings of the boys, the struggles and trials of the poor tutor Nicholas Nickleby, and by correctly mirroring forth this den of tyranny and cruelty to youth, broke up that class of schools in all England. By true reflection from the Chelsea debtors' prison, he revealed all the infamies practised there as well as the ennobling self-sacrificing character of "Little Dorritt" and, in the end, made imprisonment for debt, impossible in Great Britain.

But what has all this to do with successful newspaper publishing? Much every way. It is the province of the newspaper, to give truthful reflections of all that pertains to human interests and life, not only in a way to please and entertain but to instruct, to build up, to help and to lead the way to better things. The people are ready to subscribe and pay for the newspaper that honestly and courageously does these things. Such a paper is read and believed in and is sought after by all legitimate advertisers who wish the services of a reliable newspaper, convincingly to inform prospective buyers as to the articles or merchandise which they as merchants have for sale.

It is very foolish to think the character of a paper has little or nothing to do with its success. Some papers have no character, either good or bad. They are terious, tasteless and dry as dust, without heart or the blood of a healthy circulation. Poor newspapers, inane, objectless, without any real interest in the affairs of the people and the community that they pretend to serve, content with giving blurred, dull, distorted unilluminated reflections of the surface of trifling events that come before their beclouded, imperfect mirrors, have been endured and in a way supported by communities for the lack of anything better. Yet they have been looked upon with disgust, and apologized for to visiting strangers with shame and remorse. Do you publish such a paper?

Even as a correct mirror, the newspaper need not be without power and influence. With a large enough, perfect enough convex mirror or lens, we could distinguish the color of the cheeks of the maidens on the planet Mars. With a perfectly-reflecting mirror of the press, crime, wrong and all wickedness could be banished by their complete revelation, and all goodness, virtue and righteousness be glorified and made pervading and all controlling by their exaltation.

To be of any value a mirror must be true, clear, clean, highly polished, free from flaws, well-backed and substantially framed.

Truthfulness, clearness, cleanliness, even perfect polish, freedom from the faults or flaws of prejudice, ignorance, egotism, selfishness, envy, hate, covetousness and low, self-seeking ambitions; with a good backing of brains, common-sense, human sympathies, experience, knowledge, and vast capital in energy and industry, with a solid, enduring, sustaining frame of worthy purposes, principles and sentiments, are the essentials of a useful, popular and successful newspaper.

Notwithstanding all this, and all the preparation, expenditure and work implied therein, in a free government, a newspaper is generally considered to be more than a mere mirror of the world and its doings. The editor is expected to reason and enforce his reasons and convictions and to illumine and warn as well as to reflect. Dr. G. B. Winston, editor of the *Christian Advocate,* rightly said, in an address before the Nashville, Tenn., Press Club, the other day:

"To advocate purity of politics and to promote right public sentiment, is in a democracy not merely a duty under immutable moral law—it is more; it is a measure—the only absolutely sure measure—of self-preservation. No agency that can influence public sentiment at all in such a community as ours can dare to neglect the moral aspect of its influence. To do so is to dig beneath the foundations of our most cherished institutions.

"Given thus the paramount power of public sentiment in a popularly-governed nation, and given the absolute necessity that such a sentiment be unified on the basis of true morality, we arrive in the immediate neighborhood of the editorial department of the newspapers."

INDUSTRIAL PEACE—SPEECH AT CONNECTICUT TYPOTHETAE MEETING

By PROF. HENRY ROGERS, Dean of Yale Law School.

But the wars which states wage by force of arms against each other are not the only wars which afflict mankind. Industrial wars are threatening incidents of our modern life and as subversive of the law of brotherhood as the wars which nations wage with nations. The question of industrial peace is even more distinctively the problem of our day than is the question of international peace which has been the problem of many generations.

In the United States are twenty-two million workers. Seven million of these are engaged in manufacturing and mechanical pursuits.

The U. S. commissioner of labor has officially stated that the strikes and lockouts which occurred in this country between 1880 and 1900 threw out of employment 6,610,000 persons and that this resulted in a direct loss of $449,000,000. In the coal strike of 1902 the number of miners who stopped work was 147,000 and the direct loss more than $100,000,000. But the importance of this question does not depend alone upon the financial loss which industrial wars inflict upon the country. These conflicts provoke class hatreds and are often accompanied by deeds of violence.

After mentioning methods of securing or promoting industrial peace, Dr. Rogers said, in conclusion:

The United Typothetae of America, of which your organization in Connecticut is so distinguished a part, has set a splendid example to all the trades throughout the world. This honor you share with the International Pressmen & Assistants' union. The trade agreement made in 1903 between these two great organizations by which a peaceful method of settling trade differences was established, is so admirable in its character and so well adapted to its purpose that it deserves to be adopted by trade organizations everywhere. If that were done, it would solve the problem of industrial peace and solve it with honor to all concerned. No higher compliment can be paid you than to say that you are worthy to have all the trades follow in your steps.

COL. OSBORN'S SERMON.

Col. Norris G. Osborn, of New Haven, said in his address: "I think the relationship between employer and employe is a humane relationship. I think it is not a question of legislation but relation. The real question between employer and employe is not a complicated one. It isn't hard to settle the question if the game is played fair. We agree that the weak man should not receive the reward of the strong man. What is there about a dollar that is so much greater than an honest man? I propose to fight the battle for the good of others and reap the reward of the association. This may sound like a sermon, but such a sermon should be preached oftener, I think.

"I have lived to see the trade of typesetting disappear and implements used in place. I don't know what will come next.

"We can't make men good by law or sermon, but we can make men good by personal conduct."

MACK P. CRETCHER.

PRESIDENT KANSAS PRESS ASSOCIATION.

The newly-elected President of the Kansas State Press Association, Mr. M. P. Cretcher of Sedgwick is one of the most progressive, successful, up-to-date newspaper makers in that State, celebrated, both in the past and in the present, for able, aggressive, wide-awake editors and publishers. He is an Ohio man, though he has not as yet taken to office-holding outside of his calling. He was born in Champaign County, December 9, 1868, but migrated with his parents to Arkansas Valley, Kansas, in 1871, and passed his boyhood days on a Kansas farm. He was educated in the common schools of his home town, Sedgwick, and at twenty-two years of age, commenced to learn the printer's trade in the office of the Sedgwick *Pantagraph*, the paper he now owns. He worked one year for nothing and boarded himself. When, out of funds, he worked for several months in a drygoods store, then borrowed money and bought one-half interest in the *Pantagraph*, assuming editorial charge in May, 1892. In 1894

MACK P. CRETCHER.

he purchased his partner's interest, and has edited the paper continuously since that time. He was married January 20, 1897, to Miss Alice May Johnson, of Sedgwick.

His paper is widely copied, gaining this honor and fame from the short editorial paragraph work, a department the editor never had considered of much importance.

In 1904 Mr. Cretcher purchased a one-half interest in the Newton *Journal*, now issued by Cretcher and Napier, publishers, J. L. Napier, editor. Mr. Cretcher is ever a regular attendant at the meetings of the State editorial association, and always an active worker. He was a member of the executive committee of the Kansas Editorial Association in 1903, recording secretary in 1904, and chosen president in 1905, at the meeting held at Topeka, Jan. 16 and 17.

SHOWING PROOFS.

BY BERT R. BOWMAN, DENVER.

WITH the printer the primary object of submitting a proof is to minimize the possibility of disapproval or complaint when the product is completed. An unsatisfactory product is embarrassing to a profitable charge, and the proof is the means of securing some indication that will make complaint unavailing when the product is completed. It is the precautionary to protect profit besides the means of seeking to please. But since we concede the primary motive to be purely one of profit it enlarges the necessity to secure that indication at a minimum cost.

The usual offensiveness of proofs which are shown the customer is one very evident reason why they so often ignominiously fail to secure the approval of the customer, and this usually means an added expense to the printer. The customer has been quoted a price for a satisfactory job. By the existence of sharp competition the printer is required to submit to the inevitable because such conditions eventually discourage all provisions for alterations. With the single exception of failing to show a tasty and attractive proof the printer produces the job as cheaply as possible, giving only a corresponding value to the price charged. If the proof is offensive and not representative of the finished product, alterations are necessarily invited; and if the proof properly characterizes the finished product it is clearly manifest that all the purposes have been fully treated, rendering alike an advantage to both printer and patron.

All progressive shops have a handpress ostensibly for this purpose. Where there is a considerable volume of color-work these presses have become an essential and indispensable factor in the economical production of it. The printer is enabled to present a proof identical to the finished job, enhancing the possibility of the customer's "OK." Where color and marginal effect are involved a proof of this character eradicates the necessity of the printer depending upon the unappreciable imagination of the customer.

A small shop can show a creditable proof without the aid of a proof press, by using a good quality of paper, cut to a convenient size, and indicating the marginal effect by scoring it. Scoring is preferable to pencil lines. If the printer allows a proof to make an improper impression he loses a good opportunity and perhaps a profit in that he is obliged to alter the form to conform to the extent of the customer's revision. The lost opportunity is the credit the customer takes for whatever merit the product may have, so that the aim and purpose of the proof should be to create the right impression. What would look decidedly harsh and ugly, and manifestly objectionable, can be transformed to invite admiration if a moment's time is taken to present it with proper dignity and good taste. In lessening or abolishing author's changes, under the conditions described, the production of work is necessarily economized to a considerable degree. To resolve all the above into a "word" it is only necessary to say that offensive proofs are expensive to the printer.

And expensive proofs are offensive to the printer, too.

The Connecticut Typothetæ held its sixteenth Annual banquet at the Fontine Hotel, New Haven, Thursday evening, January 12th. It was, as usual, in every way a pleasing success. The spread was elaborate and plates were laid for one hundred and twenty-five. Wilson H. Lee, of New Haven, acted as toastmaster.

NEWSPAPER CRITICISMS

BY O. BYRON COPPER, DE SOTO, WIS.

Address all Communications for this Department to De Soto, Wis.

WE HAVE so many letters and newspapers submitted for consideration this month that we cannot afford to indulge in any preliminary remarks, but must get to work at once. The first thing our hand strikes on the huge pile at our elbow is a letter from J. Albert Hood, our good friend at Ocean Grove, N. J. In fact, Mr. Hood has sent us several letters since our last regular budget of reviews. The first we shall mention is a tasty Christmas greeting note on pale green stock (we're writing this by lamplight and therefore won't stand for criticism on our judgment of colors) enclosed within a dainty envelope of the same fine material. This is the inscription thereon:

That
You will enjoy
a cheerful Christmas
and have a full measure of happiness and
prosperity throughout the
coming new year of
1905 is the
sincere
wish
of

J. A. Hood, the Printer-man, of Ocean Grove, N. J."

Next is an unique "New Year Greeting" on a soft gray stock folded twice and holes punched therein for the dainty silken cord that ties it. Outside within a laurel wreath are the figures "1905" in gold. Upon the within central portion are these words:

NEW YEAR GREETING

It is my sincere desire that the New Year of nineteen hundred and five will have in store for you much happiness and the fulfillment of all your material and spiritual aims for the betterment of yourself and your fellowmen.

J. Albert Hood
The Printer-Writer-man of
Ocean Grove,
N. J.

all done into a pretty text with every branch of the printing art highly and handsomely demonstrated. Both of these pretty little tokens of remembrance are enough to convince one of the great generosity of the soul of the man who sends them, and then this manly letter, which shows plainly the beauty and liberality of its author's spirit:

January 15, 1905.

Mr. O. Byron Copper, De Soto, Wis.

Dear Mr. Copper: The January number of the National Printer-Journalist has reached me. I note that you have placed our friend Mr. Wietlispach and myself at the head and tail, respectively, of the class in ad contest No. 3. The laurels, in this instance, rest gracefully on the worthy head of an exceptionally good compositor, and I am gratified that the gentleman from Streator has been accorded the honors. The fellow at the bottom doffs his chapeau to the fellow at the top, and wishes him a long life in which to do many more good and better stunts in the printing line.

I also note your adverse criticism of my specimens, which of course were ordinarily constructed. If I was so unfortunate as to be afflicted with enlargement of the cranium your strictures would certainly have made it look like a deflated foot-ball. But for years I have been free from a "swelled head," so my No. 7 Dunlap still fits very nicely. I assimilate the unpleasant as well as the pleasant things with equal equanimity, endeavoring to profit by well-meant criticism.

I am sorry you were disapointed with my entries in this contest, for I feel sure it would have afforded you far greater mental satisfaction to have spoken favorably rather than otherwise of my typographical efforts. But my specimens will have fulfilled a mission, inasmuch as you have pointed out how badly the Balm ad could be constructed, and it was doubtless "of some interest," as I hoped, to the compositor-readers of the N. P.-J.

I extend you my thanks for your able criticisms, and also for the impartial manner in which you have conducted contest No. 3. Hoping that I will be able to do better next time, and sincerely wishing you good health and good times, I remain, Cordially yours,

J. A. Hood.

Friend Hood has guessed aright when he surmised that "it would have afforded us far greater mental satisfaction" to have been able to speak favorably of his typographical efforts in our last ad-setting contest; but in these matters an earnest critic quite frequently has no choice. Many times, as in this case, the critic is compelled to pass adverse comment upon the work of contributors who have endeared themselves to him by generous letters and gentlemanly conduct in more ways than one, while on the other hand he must not infrequently praise the work of those who have provoked him past description by their impudence and arrogance. The next from Mr. Hood is under date of January 16th, and runs as follows:

Dear Mr. Copper:

In going through the effects of an old friend of mine, recently deceased, I found a lot of old literature, some of it rare; and among it several old newspapers published in the sixties. Thinking that they might be of some interest to you I am sending you three copies by this mail. Yours very truly,

J. A. Hood.

These three ancient newspapers, published something, over a decade and a half before the writer's birth, indeed, furnish an interesting treat. The first is a copy of the New York *Herald,* dated July 11, 1861. Such headings as "Important News from Missouri," "Engagement Between the Union Troops at Brier Forks and Carthage," "Severe Loss to the Enemy," "Smart Engagement Between the Union and Rebel Troops," etc., confronts the eye, making the Rebellion more realistic than ever did the pages of Barnes' Brief History of the United States away back there in the little old log school house, where we first learned to trace the movements of Grant, Lee and Sherman on the map. The second of this seared trio is a copy of "The Philadelphia Inquirer," dated "Monday, October 13, 1862," and containing all the "interesting particulars" of "The Daring Rebel Raid into Pennsylvania." A copy of "The Press," dated "Philadelphia, Wednesday, May 6, 1863," is the last of this unique contribution. Its entire front page is given over to an article headed: "Army of the Potomac —The Operations of General Hooker—The Rebel Commander Lee Out-generaled—The Battle of Chancellorville—Stonewall Jackson Attacks the Right and is Repulsed—The Rebel General Hill Killed—Our Army Confident and Victorious." At the end there is a long, long list of the "killed and wounded." As we perused these musty columns we seemed to partake of some of the stirring sensations which they must have conveyed to their high-wrought readers of forty-two years ago. We should like to comment further upon the contents of these

old papers, and draw a comparison between them and the modern newspaper, but space forbids.

Since our last regular department, too, we have been receiving a whole lot of pretty printed stuff from one source and another, and which we must formally acknowledge before our conscience will feel easy. Especially has the American Type Founders Company, "of Everywhere," been kind to us with regular copies of their unique "American Chap-Book," and all sorts of beautiful "Bradleyfied" typographical advertising matter. Then there is a long, narrow mailing card from the McMullen Printing Co., of Cheboygan, Mich., wishing us a "Merry Christmas and a Happy New Year." Within a holly border wreath at the top there is a ribbon tied in a manner indicating that something had been thrust through here, but, if the supposition be correct, that "something" had been lost in the mails before it reached us. We are sorry, too, for it must have been something nice to be in keeping with the rest of the job. Then there is a fine, serviceable blotter from the Perkins Printery, Muncie, Indiana, containing on its face, besides the calendar for January and the talk to prospective patrons, a nicely-printed half-tone interior view, presumably of the Perkins Printery press rooms. Thanks; blotters are something an inveterate scribbler like us can always find use for. Last and least in size, "at least," in this case, is a "Merry Christmas and Happy New Year" card with the cut and compliments thereon of B. F. Harb, with the *Bulletin*, Anderson, Indiana.

Editor F. L. Baldwin, of the Munising (Mich.) *Republican*, Secretary-Treasurer of the Lake Superior Press Association, contributes the following interesting communication:

MUNISING, MICH., Dec. 21, 1904.

Mr. O. Byron Copper, Desoto, Wis.

DEAR SIR:—I enjoy what you say in the PRINTER-JOURNALIST about the other fellows' newspapers, so I am sending you a copy of our Paper-Mill-Christmas Number to see what you will say about us. Please note on page 4 what I say as to the time and number of hands used in the production of the edition. When we began work on the edition we did not know what we had undertaken, but experience leads me to suggest that you advise your readers never to undertake to print a newspaper on manila wrapping paper. We printed four pages at a time and, because of the curling of the paper it took two persons to feed the sheet, part of the time.

Would like to have your criticism of the paper as a whole, and of the advertisement "get-up" in particular. The eight-line wood type used in full-page adv. on page 16 was in obedience to the orders of the advertiser. He also wanted us to use a 30-point border, but we balked on that. Yours truly,

F. L. BALDWIN.

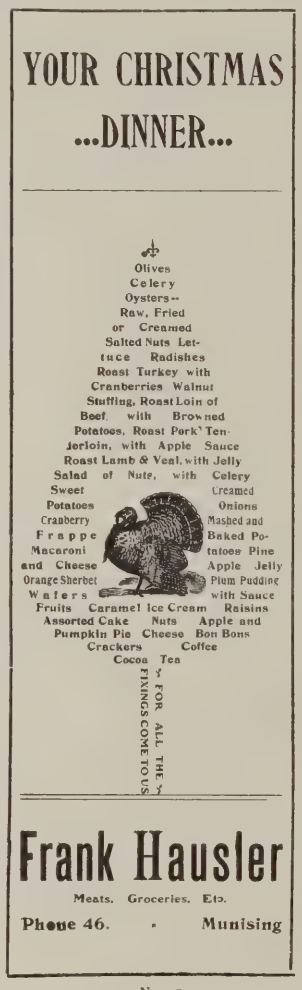
The getting out of a special Christmas edition on "Butcher's Fibre" paper represents something new to us and something distinctly unique. This edition of the Munising *Republican* consists of two six-column quarto parts and one folio, all replete with entertaining articles descriptive of the city and county and the work of the development of both. Elaborate half-tone cuts adorn almost every page. An exceptionally liberal advertising patronage has been extended this special edition, over sixty columns of space having been utilized in display. In speaking editorially of his "20-page-all-printed-at-home-on-home-made-paper-number," Editor Baldwin remarks:

> The work has practically all been done by four persons; and by the work we mean the editing, writing, reporting, typesetting, advertisement composition, presswork, folding, etc., etc. And the entire work has been done in a little less than twelve days. We believe this is a record that has never been equaled in any newspaper office of equal size and an equal number of workers.

Then after having spoken more at length anent the edition, its object, etc., the editorial closes with these patriotic words:

> In closing this, we wish to boldly assert that we are proud of our edition; proud of the paper used in its production; proud of the Paper Company that made the paper; proud of the town in which the paper was made, and proud of the loyal lot of people in the town. We don't all think alike all the time, but all of us do believe in putting in our everlasting best licks for the town. The "full dinner pail" made possible by the advent of the paper mill is one of the realisms that seems unanimous.

Makeup and presswork on this special edition of the Republican are in the main most creditable, and while there is nothing remarkably artistic about the advertisement composition, the ads, nevertheless, are all simply, hence economically, constructed, and are therefore neat and legible in appearance. Withal this edition calls forth our unreserved con-



No. 1.

gratulation. We clip one ad for reproduction (No. 1), not that it is in any way a model for other compositors, but merely on account of the appropriateness of the design. Editor Baldwin, in his letter above, alludes to the hurry attending the publication of this edition, which no doubt accounts more or less for the many conspicuous defects in evidence in this specimen; for instance, the missing ornament at the top of the "tree," the unjoined rule, the wrong font "H" in "Hausler," and the turned "c" in "etc."

WAKEFIELD, NEB., Dec. 29, 1904.

Mr. O. Byron Copper, De Soto, Wis.

DEAR SIR: Herewith find a few every-day ad specimens clipped from the last issue of the *Republican*. Would be pleased to have your criticism on them, either good or bad, as I am always ready to learn. Yours respectfully,

G. B. SPEARS, Foreman.

For "everyday ads" these will perhaps compare favorably with the ordinary country newspaper advertisement. The compositor possesses one admirable virtue and that is getting in an abundance of clean, pure white space; he knows how to

distribute it to the best advantage, too. The "L. C. Nuernberger" ad is an excellent and well-nigh faultless product, but for reasons of our own we are tossing it into the waste-basket and showing these two more faulty, but more original, designs (Nos. 2 and 3.) Almost any compositor will admit that the compositor in exhibit No. 2 got beyond hackneyed lines and produced something with an intrinsic relieving in-

fluence. The three lines, "The Furniture Store," would have pleased up better had each received the same indention, say about a pica from the border, and we have been wondering whether the ad could not have been somewhat improved where the line, "Everything New" intersects the central panel. The over and underscore might have extended out to the border, or at least from points of equidistance. Example No.

UP-TO-DATE JEWELRY STORE
In my jewelry store I have on display a fine new line of Jewelry, Watches, Clocks, Scarf Pins, Watch Chains, Fobs, Cuff Buttons, Rings, etc., etc. Engraving done free on all goods sold. Call on me and I will convince you that my goods and prices are right. I am a graduate optician and carry a full line of spectacles.
Remember that I am now located in the room opposite the Star Clothing House, and you should call and see my new stock whether or not you are ready to make your purchase.

Wakefield, - Nebraska

No. 3.

3 is exceptionally fortunate in its design, which is excellent. It is to be regretted, however, that the rules in the upper panel became displaced. We, of course, have not studied this specimen thoroughly, but at a glance would conclude that its entire construction would be possible with only labor-saving material, and we admonish our readers that these alone are the only kind of ad designs which they should aim to create. The type matter in the lower panel is scarcely pleasing, but with this material could hardly be bettered. We hope to hear again from Foreman Spears.

PUYALLUP, WASH., Dec. 18, 1904.

Mr. O. Bryon Copper, De Soto, Wis.

MY DEAR SIR: Am a constant reader of the NATIONAL PRINTER-JOURNALIST, and specially of your department.

I am taking the liberty to send you, under separate cover, a few copies of our paper, and a copy of the Souvenir Edition, which we issued in September; also a letterhead and a blotter.

The presswork on the paper has not of late been good—owing to the dampness of our new brick building and to the fact that we have not been able to get the press properly adjusted.

The marked article is our issue of November 12th will give you an idea of our plant. It is—without the slightest doubt—the most model, handsome and best equipped country newspaper office in the Northwest.

Any notice you may accord us will be deeply appreciated.

Congratulating you on the very clever and valuable work you are doing for the P.-J., I am, very respectfully,

ROBERT MONTGOMERY.

The Puyallup Valley *Tribune,* Editor Montgomery's paper, is, indeed, a progressive-looking sheet, with eight six-column pages all printed at home and containing besides the abundance of well-selected and well-edited reading matter, something over twenty columns of displayed advertising and perhaps more than a quarter as much legal advertising and paid readers. Our friend need offer no apologies for the presswork, as that compares favorably with the average. The ad compositor evidently in an attempt to master the present trend of the art toward ornamentation "spreads it on a little too thick," as it were, and by the introduction of a trifle too many faces in a single ad fails to achieve the fine effects which would be possible with his mechanical ability, by the adherence to one distinct series for the display and less ornamental punctuation. The elimination of the three columns of displayed advertisements from the introductory page would be about our only suggestion for improvement in this respect. The editorial work is good, there being throughout, even between the lines, a staunch loyalty to the town in evidence. In the editorial alluded to in the foregoing letter, Editor Montgomery describes his office and equipment, thus:

> A large part of our equipment is brand new. We have a new Campbell cylinder press, a new 12x18 Chandler & Price jobber, several new imposing stones, new Polhemus type cabinets and a large and fine assortment of new type faces. The building is 27x56 feet in size and is constructed of pressed brick and concrete. It is finished in Washington fir, cut at the mills of this city, home products being used in every instance where they were procurable. The structure is well lighted throughout, has water and electric light connections and complete plumbing and sanitary arrangements. Built solely for use as a newspaper office—with editorial and stock rooms, an immense sklylight and concrete foundation for cylinder press—its design contemplates every modern improvement and convenience such a purpose demands.

Then comes the "Souvenir Edition," one of the grandest creations of the kind with which this department has ever been honored. Its editorial excellence combined with its varied contents, general elaborateness and typographical beauty, rivals our powers of description. The whole, printed on fine supercalendered stock, is found within an elegant yellow cover which is surmounted with a beautiful special design. It is, of course, in a stapled magazine form, with pages approximately 10x14 inches. Including the three cover pages, there are in all twelve pages of displayed advertisements, but the complete edition represents one of the best advertisements the Puyallup Valley could afford. The magazine proper, excluding the cover, consists of thirty-two pages, set two twenty-six-em columns to the page. Contents consist chiefly of glowing descriptive articles of the Puyallup Valley country, touching upon its scenic beauty, marvelous fertility, resources, geography, history, soil, climate, residences, horticulture, citizens, live stock, woodworking industries, cities, firms and manufactures. These descriptive articles alone are illustrated with over eighty well brought out half-tones. In a mechanical way, as previously intimated, this souvenir edition of the Puyallup Valley *Tribune* is most commendable. Details, make-up and presswork are all first class and the ad compositor here

has greatly surpassed the work, as noted in the review of the regular edition of the *Tribune*. We are showing a couple of fine designs from this special issue. (Nos. 4 and 5.) While the letterhead, envelope and blotter hardly belong to this department, we cannot, before turning them over to Brother

ical work upon the blotter, the wording, for such a purpose, strikes us as a most novel and quite exemplary idea. Herewith we quote the contents of the blotter, without regard to arrangement or display:

THE PUYALLUP VALLEY TRIBUNE

Prints all the news of the Valley and "whoops up" all its interests and industries. Are you encouraging the good work? We each of us belong to one of two classes—we are either Local Patriots or Local Parasites; we are Helpers or simply Hangers-on. Let us all cultivate the "Puyallup Valley Spirit" by patronizing and encouraging everything that makes for our own Progress, Happiness and Prosperity. Let this be our motto: "One Valley, One Purpose, One Destiny."

With best wishes, The Puyallup Valley *Tribune*.

FORT PIERRE, S. D., Nov. 16, 1904.

O. Byron Copper, De Soto, Wis.

DEAR SIR: Am sending you a sample of our paper with a sample or two of my own design in job printing, for your criticism, if you think it is worth mentioning. Our paper is not the best-appearing paper as it would be if we were not handicapped with the large amount of advertising.

After our new rule, borders and ornaments arrive I will send you something out of the ordinary. I am going to ask you to send me the December number of the N. P.-J. Very truly yours,

L. G. PATTERSON.

The Fairplay is the name of "our paper," and a very fair name for a newspaper it is. It is the regulation six-column quarto on ready-prints, containing an abundance of local and county news and a staunch Republican editorial department. The amount of displayed advertising in this issue of November 11, 1904, while liberal, is not sufficiently great to excuse the appearance of two columns of it on the initial page. The promiscuous way in which the ads are mixed up with the straight matter on the other home-printed pages merits condemnation. The setting of the ads, however, is quite neatly executed, along plain, everyday lines. In some instances, however, the compositor gets beyond the ordinary and produces

effects savoring of originality, as in the specimen shown (No. 6). This ad, however, is somewhat discordant, due to the choice of material. Suppose a six-point rule border had encompassed this specimen, with one- or two-point bold-face rules instead of the hairlines employed vertically between the three departments; and suppose further that next to the two ornaments in the center a two-point bold rule had been turned, with the light rules and a portion of the space removed from between these lines in the centre, and all the lines in the two outer columns centered, this would then have proved, in our estimation, at least, almost a masterpiece. Mr. Patterson's specimens of job work are being turned over to Mr. Fitzgerald, to whose department they rightly belong, and who is doubtless better able to pass judgment thereon than we. We shall be pleased to have further favors from this contributor, as he says, when the "new material" (oh, joy to a printer's heart!) arrives.

POCAHONTAS, ARK., Nov. 14, 1904.

O. Byron Copper, Esq., De Soto, Wis.

DEAR SIR: Some weeks since I sent you a couple or more copies of the *Star*. Am forwarding later issues under separate cover. Any comment or critcism that you may make will be received with thanks and in the same spirit that it is given.

Thanking you in advance for the favor, I remain, Very truly yours,

EARLE W. HODGES, Editor.

P. S.—I enclose a couple of "Extras" issued by us last week.

HODGES.

As a second "postscript" it might not be out of place to add that we do not like display advertising on first page, but two or three of our customers will not run "ads" in any other position. They are good, substantial customers and we do not care to turn their work away.

This is the publication which was given notice and exhaustive review in our last December's installment, the papers having evidently preceded the above letter a few weeks. We also have at hand a copy of the *Star's* "Christmas Edition," a seven-column quarto printed on good pink stock and most creditable as to contents and mechanical departments. This special Christmas number is more liberally supplied with ads than the regular edition and all our readers have perhaps not forgotten our description of that in our December department. The same high degree of artistic composition is maintained, as may be seen by referring to exhibit No. 7. This ad, with a change of copy, is duplicated in the Christmas edition, but as there were a few little errors manifest in the latter, due, no doubt, to a hurried change, we have preferred to show this one as a handsome, clean piece of work. We believe, however, that bolder rules for the panels would have improved matters. Now regarding Editor Hodges' (Mr. Blankenship is merely publisher of this sheet, and evidently not editor also, as we stated in our review of last December) second postscript, it would be far easier for us to pass this by unheeded; but as an honest critic we must meet such difficulties face to face. To be sure, "circumstances alter cases," and when customers refuse to advertise unless they are accorded certain positions, why the natural impulse is to give them the desired position. But, may not this threat to withdraw business be but a mere "bluff," meant to scare the particular publisher into conceding the point? For the past two and a half years the writer has been engaged in the publication of a country weekly in which no displayed advertising space on the front page is sold. Certainly many customers have requested a first-page position, but not in a single instance, to our knowledge, has any advertiser withdrawn his business or refused to advertise on this account. Where the practice of inserting ads on the initial page is once established, we fully realize the difficult task one would have in attempting to reform, or in a town where a competing and less scrupulous sheet was published, an editor might for some time find it hard to convince the merchants that an introductory page free from displayed advertisements was mutually all for the best; but where a publisher is starting a new paper and has full control of the field we can imagine no serious difficulties arising from the resolution to make up the face of the paper of exclusive straight matter. There is such a sound, logical line of reasoning and argument suggested in defense of the plan, that no sane advertiser can long remain blind to the mutual advantages derivable through its inauguration. The election news extras were good and deserve commendation.

The Advance Guard of Autumn
Has fired its first salute and it is now high time you were thinking about your fall purchases. Pay our store a visit and as your eye runs over our large stock you will certainly be tempted to part with your cash. The flood gates of low prices have been thrown open and we are resolved to do just this one thing—give you greater value in merchandise of all kinds than any other Merchandise Store in Pocahontas.

Every day from this date until after Holidays will be a special bargain day with us.
Each Bargain Bears our Guarantee for Reliability.
Spinnenweber & Peters.
Pocahontas, Arkansas.

No. 7.

National Printer-Journalist, Chicago.

DEAR SIRS: We send you a specimen copy of our holiday edition, issued yesterday, the principal features of which are illustrations of our inland lake resorts, and children's letters to Santa Claus—upwards of 100 of the latter.

What may be lacking in mechanical execution is chiefly due to the limited facilities of a small country office.

You may possibly remember our Mr. Rose as a delegate in the Denver, Portland and Buffalo meetings of the N. E. A.

Fraternally yours,

ROSE & WILLIS.

Messrs. Rose & Willis' letter, as above quoted, and their most excellent Christmas number have been, as is the natural custom, turned over to this department. The edition consists of twelve seven-column pages bound in an elegant lithographed cover. On the first inner cover page is an exceptionally well-written article entitled "In the Beautiful Land of Old Steuben," containing a patriotic description of "its hills and 'vallies,' and crystal lakes." [The proofreader evidently overlooked this line.] Several beautiful and well impressed half-tones occupy conspicuous positions on this page. On the first page of the paper proper is a brief illustrated history of Angola's churches, and following this are other equally interesting special articles besides the regular amount of local news, county correspondence and personal mention, besides an able and extensive editorial department. Along toward the closing pages appear the *Magnet's* "Letters to Santa Claus, Written by His Little Friends from All Parts of this Vicinity." Now, while personally we do not believe in teaching children such falsehoods as the belief in the existence of such a fallacious individual as Santa Claus, since such teaching must finally, in a greater or less degree, result in the child's conscious or unconscious distrust or contempt for its parents' word, we fully realize that there are comparatively few people who agree with us—but there! We sometimes forget that we are not employed to write sermons, but, rather, newspaper critcisms. The publishers of the *Magnet* have perhaps done no more harm than merely aid in prolonging the deception practiced so universally upon the "confidin'" little ones, as James Whitcomb Riley says. Laying aside all scruples this idea of having all the little children in the vicinity write Santa a letter for publication is indeed an original one, and no doubt pleased hundreds of the paper's patrons who do not agree with us on the Santa Claus question, and to please your patrons is a newspaper man's first duty—but don't forget what Editor Herbert said about this, in his comparison of the newspaper man with the druggist. You've no more right to furnish your patrons with poison than has the pharmacist, provided you have reason to believe it will culminate in his suicide. These letters to Santa are almost numberless, some of them are absurd; some comical, others pitiful, but all interesting, even to us. Mechanically this special edition of the Angola *Magnet* is creditable. Ad composition is plain, neat and serviceable, the makeup neat, correct and even artistic, and the presswork is clear and legible. These special editions are something we never tire of praising, and the publishers, who have the time, material and money to issue them are gaining popularity with their readers. This edition of the *Magnet*, we came near forgetting to remark, is most generously patronized by local advertisers.

He who devotes all his time to discovering and pointing out the errors in the creeds or beliefs of others has no time left in which to discover and live the truth for himself.

A MODEL ANNUAL ADDRESS—MANY FEATURES OF NEWSPAPER MAKING TREATED.

THE Kansas State Press Association closed on January 17th, a very profitable convention at Topeka. The program, published elsewhere, proved exceedingly valuable in the papers presented and exceedingly practical in the discussions elicited. It is impossible, at this time, as our reading page forms close on the twentieth of each month, to give, now, the space deserved, but these discussions and papers will be taken up at a later date. President Ewing Herbert made many valuable suggestions in his annual address that will be read with interest and profit by editors everywhere. Outside of his address, he made many remarks, from time to time, that were eminently opportune and highly appreciated. Right here, the editor wishes to return sincere thanks for the kind words that President Herbert volunteered, in the interest of the members of his association, in regard to the great practical value of the NATIONAL PRINTER-JOURNALIST to newspaper makers and printers, even going so far—after his fifteen years' experience in reading this paper—as to say that if any member of his association was not now a reader of this paper and would subscribe for the same and study it and say at the end of the year that he had not received more than his money's worth, he would himself repay the subscription price. He referred, in like manner, to the course of reading and special study laid out by the editor of this paper in the address before the students of the Kansas State University, printed in the January issue of the NATIONAL PRINTER-JOURNALIST, and recommended editors to adopt the course of study suggested thereby. There was no matter of self interest nor of relationship in these remarks, for President Herbert pays the full price for his paper, like any other subscriber and, though he has the same name, is no way related to the editor of the NATIONAL PRINTER-JOURNALIST. He is, however, an enthusiastic and successful newspaper publisher and to a marked degree, a man of independent thought. This much by way of acknowledgment.

President Herbert's address was published in full in the Topeka *State Journal* and in the Topeka *Daily Capitol,* two most excellent papers, and was as follows:

Kansas is a newspaper-made State. From territorial days—from birth—no newspaper—east or west, north or south—has failed to pay tribute to Kansas. Some of the advertising has been good—much of it has been bad, but all of it has been of some account—all of it better than no advertising at all. The newspapers of the State are notable—some notorious—and many of the publishers seem to be better known and more discussed than the newspaper men of other States. There is a freedom of thought and expression in Kansas newspapers which is uncommon. No one seems to direct their policy—many of them haven't any. They have a way of saying and feeling what they think—if they think at all. This may be lack of culture—it may be lack of tact, but it is natural and wholesome—better than to think one thing and say something else. The keen interest taken in Kansas affairs, from school district to State matters, is evidenced by every newspaper. And the loyalty to Kansas is something fine. It is the mark of intelligence, of sterling patriotism. Each newspaper is read by at least five persons, and this means that 90 per cent of our people read newspapers and little else. The editors' words invade every home. The preacher and lawyer and teacher and politician say much that no one can recall, but the editors' phrase is on record in type which all may read.

The Kansas papers seem to share in the general advancement and prosperity. Although your president has the newspaper lapses and shortcomings so often complained of, he humbly pleads for better things. For instance, why not stop forever petty quarreling with one another? The "roast" is no credit to any editor and of no interest to peace-loving readers. The way to respect our great calling and power is to respect one another. Men of average intelligence are partly right in their difference and partly wrong. Impartial discussion of differences of opinion on public matters may have some interest, but no personal reference made to the enemy down street strengthens any cause. A war of words lacks both sense and dignity. No newspaper man of experience has any pride in his personal quarrels. They are usually a source of shame and will always cause regret to any but the conceited and immature.

The newspaper that attempts to give all a square deal, including competitors, is the newspaper every editor should desire to produce at any cost and he shouldn't be connected with any other kind, even by a mortgage. His ideal better self should always be free—although for all business dealings he should adopt the practical cash policy. Pay cash and exact cash. Don't give away printing. Don't trade printing. Make prompt collections. Pay your own way like a gentleman. Never notice a paid entertainment unless paid to do so. Never owe any one anything but good-will. Pay that and keep on paying it.

And why not quit working for nothing, just to beat the other fellow? Wouldn't it be wiser to cooperate with him than to compete with him? Labor, equipment, stock, capital, brains, are necessary to successful printing and publishing. Work should be done at a fair price, for work is for the worker and good work depends on the amount of human energy and human life put into it, and there should be some thought of the worker and not so little thought which benefits none but the consumer. The newspaper man works all the while. His mind and body are chained to his work. He is poorly paid in money and if he deals unjustly with himself and his fellow workmen, he is a pitiful and culpable failure. The cheap labor in the country printing offices is made cheap by foolish and unreasonable competition. The deadbeat editor is another product and so is the newspaper hold-up and newspaper bust-up.

A master printer should say, "Good work is seldom cheap work and I will do good work and pay my helpers good wages, and by my example induce my competitor to do as much." Better, far better, have it said that yours is the best printing shop than have it said that it is the cheapest one.

And why not insist on legislation fixing the price of public printing by the line, which all can count, instead of by the square, the measure of which printers differ? Wouldn't it be a better arrangement to have a fixed price and give the spoils to the victor than to do the public printing for next to nothing, as is so frequently done?

And why not deal with your party central committee as you do with any other patron? Charge for party advertising. Charge for advertising candidates. Contribute cash to the party campaign fund. Defend your party principles and support your party candidates without price. Don't let your central committee pay you for this service. Be respectful in your criticism of other parties and candidates, for that is the best support you can give your own.

And why not charge for "cards of thanks?" Why not charge for everything that will stand a charge? Charge as often as the Japs did at Port Arthur. Make one price to all. For country papers a cent a line for each hundred circulation is nearly right and none of them get it. Why not help your merchants sell good goods and help your party elect good men to office? Help secure good roads, a primary election law and pure food. Why not expose advertising fakes and fakers? Why not urge all your subscribers to consult a physician before taking the patent medicines you advertise? And why not, above everything else, keep your town clean and lawful—commending every good deed and boosting every enterprise—helping schools and churches with timely notices—printing nothing, neither advertising or reading matter, that can't be read aloud before the children in every home. Spiteful, ugly things have no place in any paper, but there should always be room for hopefulness and good humor. Why not be for everything that's good against everything that's bad? If right, the newspaper is powerful, if wrong, it is weak.

Type and presses do not make a successful paper. It takes more than that. Most political ventures and personal organs die young. It is the duty of the good citizen to subscribe for and read the good newspaper. It will inform him, enlarge his acquaintance and sympathies, and unconsciously aid him in his purposes. The editor has an interest in every citizen. No one is a patriot who fails to give up something for his fellow-man. Goodness comes from sacrifice of natural meanness and goodness never comes quick. A dishonest paper cannot exist in an honest community. If the dishonest paper lives corruption rules. The newspaper should be the best thing in every town. The editor must never falter, must never weary of his work. As he ages he learns that "it is better to travel hopefully than to arrive— that true success is to labor." And when tired hands are at rest, let it be said of the master workman and his work: "Here ends a series of books written through a number of years with no little toil for the strengthening of hearts."

REVIEW OF JOB WORK

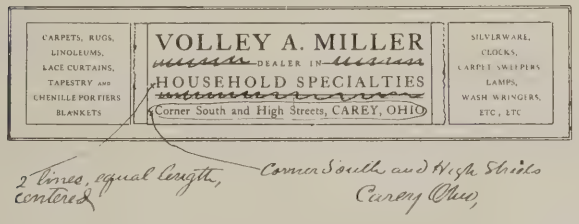
BY A. V. FITZGERALD, MILWAUKEE, WIS.

Address all Communications for this Department to
1319 W. Ravenswood Park, Chicago, Ill.

A COMPOSITOR possessing a characteristic style, and whose work is well known to the readers of this department, is Mr. D. Gustafson, of Red Wing, Minn. The opinion expressed in the following extract from a letter of his shows how a certain kind of "criticism" is regarded by the more competent and ambitious craftsmen: "* * * While the review departments in the trade journals are productive of a great deal of good, yet one cannot get everything through them that he needs or wants; and for that matter some of these departments have been resolved to something akin to a medium of exchange of admiration between critic and contributor, and it was with no small degree of satisfaction that I read your announcement in the last JOURNALIST that there would be "no hot air dispensing" in your department. This uniform praise of everything—good, bad and otherwise—is nauseating. I, for one, am pleased with the stand you take."

Specimens which "point a moral" are just as valuable to the students of this department as are those of artistic excellence demanding praise, and reproduced to "adorn our tale." It is well to have the virtues of others held up to us, but we are likely to derive greater benefit from having our own vices pointed out.

L. H. MCNEIL, Carey, Ohio.—The samples submitted range from fair to very poor. The Miller letterhead comes in the first classification, its praiseworthy points being the choice of type face and general arrangement of display. In the composition of medium-grade advertising matter it may be excusable to have the rules forming the panels come "pretty close,"



CARPETS, RUGS, LINOLEUMS, LACE CURTAINS, TAPESTRY AND CHENILLE PORTIERS BLANKETS
VOLLEY A. MILLER

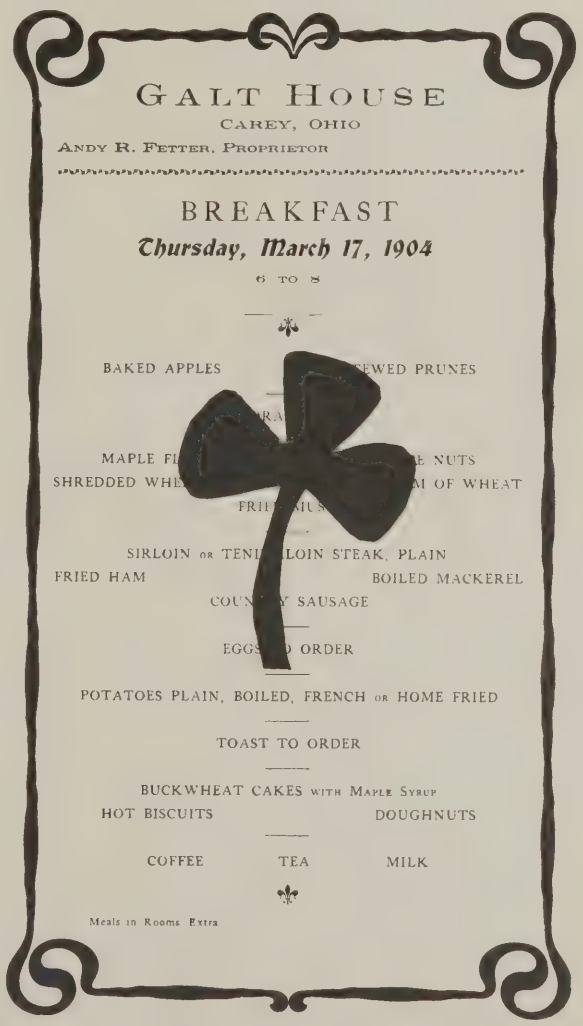
2 lines, equal length, centered
Corner South and High Streets Carey Ohio

No. 1.

but in stationery composition they must be joined *perfectly* —they are not so joined in this letterhead. When panels are used in this class of work the address should be placed outside the panel so as to form part of the date line. Figure 1 shows this job proof-read to conform to the foregoing. Note the center panel is made wider to unify the design, instead of having it in three parts. Of course it will be necessary to white-out properly, putting about four points more space above the dealer's name. The Galt House Menu (Fig. 2) contains nothing to praise typographically, and the presswork is worse, if possible. The border should have been omitted, the three first lines placed in the lower left-hand corner (the name of the house in about the size of "Carey, Ohio," the size of the other lines to be reduced proportionately), the date small and in the lower right-hand corner, say, and the word "Plain" following the word "Steak," and "Plain, Boiled, French or German Fried," following the word "Potatoes," should be caps and small caps, the word "potatoes" being centered and the descriptive line being centered beneath same. The clover-leaf might be placed in the upper right-hand corner so as to overhang the heading "Breakfast." Omit other ornaments. The green ink used on border and clover-leaf is of too poor



No. 2.

a grade for this class of work, or shows bad presswork. The two four-page folders are very well composed, but the margins are faulty. The printed page should have been placed slightly higher—giving a wider margin at the foot than at the head—the sample shows them exactly centered, and they *appear* to be below the center. The stock chosen is too dark (a cloud gray), part of the composition being in six-point O. S., is scarcely legible, and this fault is aggravated by the use of a colored ink. I hope to hear from you from time to time. Your composition gives promise of improvement.

RUSSELL THOMPSON, Boulder, Colo.—The two window cards which you desire compared are a "hang choice." The card printed in orange had been the better if you had used a plain, legible letter, instead of the text. Your notehead (Fig.

THE PAPER THAT BRINGS RESULTS TO THE ADVERTISER
The Herald
THE BEST EQUIPPED JOB PLANT IN NORTHERN COLORADO
O. H. WANGELIN, EDITOR AND PROP'R

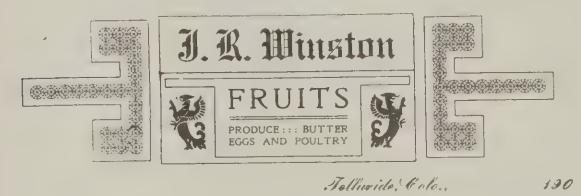
Boulder, Colorado,

No. 3.

3) can be vastly improved by omitting all the rule work, changing the position of the editor's name, etc. (this line is poorly spaced, and the word "proprietor" should be spelled out), and emboss "The Herald."

CLARK SMITH, Clearfield, Iowa.—The pamphlets you mention have been "lost in the shuffle" incident to the change in this department. Send duplicate lot. We shall be glad if any suggestions herein be found of service to you.

HENRY A. ANGER, Denver, Colo., sends several specimens possessing the well-known characteristics of "the panel man from the Rockies," characteristics which many have attempted to imitate—very few successfully. I am sorry the color scheme renders reproduction impossible, for Anger's work is



No. 4.

suggestive. My introductory remarks in last month's issue contained some advice against over-elaboration—i. e., to quit work on a job when it is finished. A job before me (Fig. 4) illustrates this point. Had the compositor, Mr. Will San-

No. 5.

born, of Telluride, Colo., left undone all the labor expended upon this letterhead, except the salvage shown in Fig. 5, his work would have possessed a high degree of merit, economically and artistically. As it is the job is very amateurish. Mr. Sanborn's work in general is much above the average, the job reproduced being the only really faulty one submitted. I can scarcely believe that he is guilty of "building" it. The presswork throughout is good.

PRESS PUBLISHING CO., Cœur d'Alene, Idaho.—Composition of blotters is very good—presswork rather poor.

H. M. HICKMAN, Coalgate, I. T.—Your samples give evidence of a lack of facilities for rule work, and panel-work should be well executed or not attempted. You can achieve far more satisfactory results by artistic arrangement of the type matter.

BRENT WILLIAMS, Fulton, Mo.—Submits specimens of the work of a deaf one-year apprentice which are very creditable. The ornaments should be omitted. Ornaments other than special designs are seldom appropriate on stationery.

GEO. A. THORNDIKE, Medford, Mass.—Your blotter can be very much improved by omitting the border rules (except the rule around the calendar) and the ornaments. So much rule work tends to smother the type. Do not be afraid to leave some white space—it gives relief to the type display.

H. C. HULL, Ashville, N. C.—Your package of samples failed to reach the writer, but your notehead is before me. There should be a tint in the center panel and the parallel rule and the two "tails" should be omitted.

WISE EXPLOITATION OF PUBLICITY.

BOLIVAR, NEW YORK, Jan. 14, 1905.

Hon. B. B. Herbert, Chicago.

MY DEAR HERBERT:—Once a month the *Breeze* has an editorial on the subject of advertising, in which the value of newspaper advertising is strongly shown in general and the value of advertising in the *Breeze* in particular.

We have been able to trace good results to these editorials. The arguments made have induced a number of business men to have more faith in newspaper advertising—and we have gained new contracts.

This may have something to do with the large amount of display advertising appearing in every issue of the *Breeze*. During the past year we have never run below 650 inches an issue, and many weeks we have handled 800. During the holiday season we averaged about 1,050 inches an issue.

The attached clipping headed "Profitable Publicity," appeared in the *Breeze* as an editorial on Dec. 29. It will give you a good idea of the style and character of our advertising editorials. What do you think of the proposition? Could not the plan be followed with profit by many other publishers of weekly or daily newspapers? Very truly,

JOHN P. HERRICK.

PROFITABLE PUBLICITY.

If you desire the trade of the people of the Allegheny county oil field, why not invite them to come and see you? Tell them each week, through the *Breeze*, what you have to offer. Use the same argument that you do to the customer outside of the counter. Clear, convincing and interesting advertisements will command their attention and respect. You can spend your money for signs on fences beside those of firms dead and gone, for calendars of which every man is supplied with a dozen, for flaming banners outside of a circus tent which are up just one afternoon, for space on directories which are out of date before the painter finishes the work, owing to the death of a member of a firm or a dissolution of partnership, or any one of a dozen other schemes that are of doubtful or little value, yet expensive.

A newspaper carries your message every week to the men and women you wish to reach, the people from whom you naturally expect to influence trade. A good advertisement well displayed has a pulling power of undoubted value.

The *Breeze* covers its field very thoroughly, it stands high with its readers and advertisers, and no country newspaper displays advertising to better advantage. Our compositors have all needed type and borders to work with and they know their business. All advertising copy is edited as carefully as the news matter and great care is taken in proof reading.

If you have never advertised regularly in the *Breeze* and desire to become more thoroughly in touch with the buyers of the Allegheny oil field, why not make a contract for space for the coming year?

There is no advertising so good or so reasonable in price as space in a live newspaper, providing common sense copy is used. Why not begin to spend your advertising appropriation for profitable publicity?

MISSION SERIES

PATENT AND REGISTRATION APPLIED FOR

Cast Point-Line, Point-Set, Point-Body in Deep-Cut Matrices from Superior Copper-Mixed Metal

The Mission Series up to and including the 18-Point size, is sold in fonts of 25 pounds and multiples thereof when spaces and quads are included, or in fonts of 20 pounds and multiples thereof when spaces and quads are omitted, at body letter prices, as follows: 6 Point, 64 cents per pound; 8 Point, 52 cents per pound; 10 Point, 46 cents per pound; 12 Point, 42 cents per pound; 14 Point, 40 cents per pound; 18 Point, 40 cents per pound.

Larger sizes in preparation — Figures cast en set

MODERN IDEAS

never before has such beautiful printing been done as is being turned out at the present time. The every-day work of the modern printer excels the choicest products of a few years ago, and when an attempt is made now-a-days to produce something extra fine the result is often nothing short of marvelous. A truer conception of the artistic, and facilities greatly improved over those at the printer's disposal in former years, are responsible for this satisfying condition of things. Type faces are no longer noted chiefly for their freakishness; on the contrary, designs of today are notable for genuine artistic excellence, and they are of a nature, as a rule, that will always be used. One thing of decided value to the printer desirous of doing the best work in the shortest possible time is Barnhart Bros. & Spindler's Point-lining system. Nothing but ordinary leads or slugs are needed for the lining of Point-line faces on different bodies; if the bodies agree in size the faces line naturally. This lining system is a far-reaching improvement, both in the matter of saving composition time and the improved appearance of the finished work. In the matter of time on work in which rules are to be lined with type the saving is especially noteworthy, as rules may be lined with any Point-line system face as quickly as the same space could be filled with quads. In a word, the improvement brought about by the adoption of our Point-lining system enables the office having type so cast to make a fair profit at prices which with less modern facilities would mean a loss. It should be the aim of every printer to replace his present outfit of type with Point-line faces as rapidly as possible. The saving in composition sure to result will go far toward paying the cost of the change. We have considerably more than 1,000 separate faces cast on the Point-lining system, to which

SET IN 10-POINT SIZE

6 Point Mission u — Job Font, $1 75

THE MATTER OF LINING TYPE IS SO IMPORTANT THAT EVERY PRINTER SHOULD BE FAMILIAR WITH THE DEtails of our Point-line, Point-set, Point-body Lining System. This system saves the printer many a dollar in composition time, to say nothing of the increased beauty of his work. Every printer has experienced trouble in bringing type on different bodies to line, and in lining rule with type, and therefore knows the great loss of time unavoidable when lining type is not available. Take a legal blank, for instance, in which words in larger type that begin paragraphs, as well as some others, must be lined as near as may be with the letter selected for the body of the work, and in which two-point brass rule must be lined with the type: hours of valuable time must be spent by the compositor having only old-system material at his disposal, because of the necessity for using paper and cardboard to bring about even a semblance of alignment between the various faces and between type and rule. No printer worthy of the name will 1234567

8 Point Mission u — Job Font, $2 00

ELECTRIC-WELDED CHASES THAT WE MAKE FROM SILVER-GLOSS STEEL ARE NECESSARY in these days of close competition. These chases cost the customer no more than hand-welded wrought-iron chases, and so there is no reason for buying the latter. We make them for both cylinder and platen presses, and they save time and money wherever used. Platen presswork costs from twenty-five to seventy-five cents per hour; cylinder presswork from seventy-five cents to one dollar and more per hour, according to the size of press and rate of wages. This being true, it does not pay to have chases that cause presses to lose time. A chase should be perfectly square, and all its sides should be true in every way, as 8901234

10 Point Mission u — Job Font, $2 25

EVER SINCE GUTENBERG CAST HIS FIRST TYPE EFFORTS HAVE BEEN put forth by type-makers to improve their product in respect to its durability. For centuries little progress was made in this direction however, owing mainly to the fact that hard, durable metals refused to yield perfect faces; and so, much against his will, the type-founder was compelled to sacrifice the quality of his metal, from the standpoint of durability, in order that sharp, clear-cut faces with perfect printing 567

12 Point Mission u — Job Font, $2 50

THERE ARE SEVERAL THINGS TO CONSIDER IN TYPE QUALITY. Durability, of course, is very important; but durability is not all. Finish, accuracy, artistic in design, correct lining principles, depth of cutting—all must be taken into account. To be durable type must be cast from a perfectly proportioned and perfectly blended alloy of 890

18 Point Mission u — Job Font, $3 00

AS TO THE EXTREME DEPTH TO which all our faces are cut we are receiving many letters of commendation, especially so from printers who do electrotyping, and for all purposes deep-cut type is preferable. Our first care is the welfare of our 45678

14 Point Mission u — Job Font, $2 75

THERE IS NO RECORD OF THE BIRTH OF JOHN GUtenberg, but it is the belief of his German biographers that he was born at Mentz about the year 1399. His parents were Frielo Gensfleisch and Elsie Gutenberg Their two children were 12345

THE AMERICAN CHAP-BOOK

By Will Bradley.

PUBLISHED MONTHLY
IN TWO EDITIONS

Paper Bound Ten Cents the copy, One Dollar the year

Board Bound in covers of quaint design with label, Twenty-five Cents the copy, Three Dollars the year

by the

American Type Founders Company
U. S. A.

THE American Chap-Book treats of printing as a business. It shows its splendid opportunities as a business, and how art may be shaped to the laying out of printed matter to meet the requirements of business.

Each number contains a large variety of designs by Mr. Bradley, illustrative of the text, and showing the latest types and decorative material being made by the American Type Founders Company.

The first six numbers contain:

September—"Eighteenth-Century Chap-Books and Broadsides."
October—"Directness and Simplicity."
November—"The Use of Borders and Ornaments."
December—"Appropriateness."
January—"The Abuse of Custom."
February—"The Value of Little Things."

These are illustrated with nearly 200 examples, showing latest type designs and arrangement.

Numbers 1 and 2, of which large editions were printed, may still be had at 10 cents the copy, or bound in boards with label at 25 cents.

Numbers 3 and 4, for November and December, are out of print with the exception of a limited number of copies which will be held to fill new subscriptions, and a few copies bound in boards which may still be had at 25 cents each.

Mr. Bradley will begin in March another series of six papers completely illustrated; a full announcement will appear in the February Chap-Book.

Will the Chap-Book be continued after its first year? Well, as the little boy said, "That's telling." The Chap-Book is only a baby, you know, but it is a stout well-fed baby, and stout well-fed babies are apt to grow. Thirty-two not over big pages are close quarters in which to hold Mr. Bradley.

Besides the Chap-Book we also have under way some new and very elaborate specimen showings:

"The White Book," containing sixteen large pages printed in color upon beautiful Old Stratford deckle edge paper, with cover in three colors.

"The Printer Man's Joy," containing thirty-two large pages, printed in two colors, upon Strathmore Japan, with an old-fashioned cover in four colors.

"The Golden Book of Business," with pages 11 x 17, containing over fifty letter-heads, receipts, checks, etc., all of special design and printed in numerous colors upon Old Hampshire Bond.

"The Green Book of Spring," containing thirty-two pages printed in color upon the beautiful tinted Roxburghe papers, with strikingly effective cover.

"A Book of Fables," printed in an oldstyle manner, very quaint and brimful of horse sense.

And there are still others.

Special Offer: To subscribers of the Chap-Book whose subscriptions are received before March first we will, if so requested, send copies of the above books as issued. These very elaborate books, together with the Chap-Book for the year, will contain hundreds of specially prepared designs by Will Bradley, all of which will prove helpful in building a profitable printing business. The designs will also show the latest products of the foundry.

These books being very expensive to produce, the issue is limited. Those desiring copies should send in subscriptions early, before the editions are exhausted. No copies will be supplied on subscriptions received after March first.

Note: Look over our recent specimen work and watch for the new specimens being rapidly produced in our Typographic Department and then ask yourself if the American Type Founders Company is not so far in the advance as to make unwise allying your future with any other?

As a plain statement you have but two questions to answer: do you want to buy type metal—or, type designs? If the latter, these can only be had from the American Type Founders Company, whose product represents the best that brains and money can produce. This best leads the world.

Among the Associations

"In Unity is Strength"

THE twentieth annual meeting of the Associated Ohio Dailies convened at Hotel Hartman in Columbus, on January 24th and 25th. Committees reported on "Legislation;" "Codification of All Laws Governing Legal Publications;" "Uniform Forms for Legal Reports for Publications in Newspapers." The following topics were discussed:

Methods of Keeping Accounts—For subscriptions, carriers and advertising.

Collecting Agencies—Do you use them? What results?

Scales of Wages—What changes past year; open and union offices; strikes and causes. Results.

Rural Routes—How affect circulations. Subscription price. Weeklies, etc. Postage on dailies on such routes. General discussion.

City Circulation of Dailies—How best handled.

The Carriers—Daily circulation in nearby towns. How handled, etc.

Illustrations—Do they pay? To what extent used? What is the ideal makeup for the daily?

The Advertising Department—Local solicitor. Does he pay? Salary he gets. Commission plan. Insurance advertising.

Subscriptions—Systems of collecting. Advance payment for weekly. Individual experiences with same.

Circulation Promoters—What are the best? Do premium schemes pay? Opened by J. S. Boeschans, *Ohio State Journal.* General discussion.

Address—By Hon. W. D. Guilbert, Auditor of State, on scope and province of State inspection of public accounts and uniform forms for officials' reports for publication. How the new laws affect legal advertising. Question Box.

Address—By A. W. Glessner, Galena, Ill., *Daily Gazette;* president Inland Daily Press Association. Our Experience With News Print and Ink Contract for Members. Question Box.

One very profitable feature of the program was the presentation by members of samples of forms found most satisfactory for use in their respective offices.

* * *

The midwinter meeting of the Northeastern Iowa Press Association, comprising the third, fourth and fifth Congressional Districts is held at Waterloo, Iowa, Feb. 2 and 3, 1905, with the following program:

THURSDAY AFTERNOON.

1:30—Enrollment and Procuring Membership Cards.

Newspaper Circulation, Helpful Suggestions—W. E. Dodge, Dubuque *Times.*
"Awheel and Afoot," followed by poem, "Farmer Jones and the Country Editor"—Homer P. Branch, Westgate *Herald.*
Last but not Least—Oc. C. Cole, Fayette *Postal Card.*
Business Meeting.

This Association includes the twenty-seven counties in the Northeastern portion of the State. The officers are, President, F. G. Ellsworth, Osage *News;* Vice-President, Frank Hobson, West Union *Argo;* Secretary-Treasurer, H. J. Green, Decorah *Public Opinion.* Executive Committee, officers and L. B. Raymond, Hampton *Recorder,* C. K. Meyers, Mason City *Republican.*

The Military Tract Press Association held its thirty-second semi-annual meeting at Galesburg, Ill., Jan. 27, 1905, with the following program:

Morning Session.—County Printing—How Best to Secure and Handle It, Prices, etc.—E. E. Fitch, *News,* Galva. Discussion. The "Hell" Box—W. R. Newland, *Chronicle,* Bowen; The Editor in the One Paper Town—Frank Krans, *Record,* Altona; The Mission of the Editor's Wife—Mrs. M. Baumert, *Independent,* Nauvoo; Outside Schemes to Advertise the Paper—Charles H. May, *Herald-Transcript,* Peoria. Discussion. Business—Election of Officers, and Delegates to the National Editorial Association.

Afternoon Session.—Address—The Arteries of a Nation—Hon. Chas. S. DeHart, Carthage.

Symposium by Galesburg talent.

The Value of the Local Paper in My Business—Ten Minutes each—The Minister—Rev. Edson F. Reissnider: The Educator—Supt. W. L. Steele; The Merchant—Geo. B. Churchill; The Lawyer—Att'y A. J. Boutelle; The Politician—Mayor Geo. Shumay; The Railroad Man—A. S. Crawford; The Government—Postmaster F. A. Freer.

The Wisconsin Press Association meets February 15th and 16th. Executive Committeeman, A. M. Youmans, writes:

President Noyes has just written me asking as to the National meeting, and he very opportunely notified me that the winter meeting of the Wisconsin Association will be held at Madison, Feb. 15th and 16th. The program has not been arranged, though Gov. La Follette, ex-Gov. Peck and President Van Hise, of the State University, have been invited to give addresses, as also has Col. J. A. Watrous, recently returned from the Philippines, and perhaps others. The officers of the Association are: Frank E. Noyes, president, Marinette, Wis.; Fred T. Yates, secretary, Washburn, Wis.; Mrs. M. P. Ruidlaub, treasurer, Platteville, Wis.; vice-presidents Ed. Malone, Waterford; J. G. Patterson, Cambridge; Geo. Crawford, Mineral Point; A. F. Warden, Waukesha; J. F. Hughes, Keeseville; Geo. A. Markham, Independence; Mrs. S. H. Sturtevant, Oshkosh; Edw. Decker, Jr., Algoma; C. O. Marsh, Antigo; C. R. Morse, River Falls. Executive Committee: R. W. Cheever, Clinton; R. E. Powers, Wausau; Emil Baensch, Manitowoc; F. E. Andrews, Bloomer; Ed. L. Peet, Grantsburg.

At the meeting last year a plan was put on foot to arrange for an elaborate history, to be published, of the newspapers of the State, and ex-Lieut.-Gov. Emil Boeusch, of Manitowoc, has the preliminary work in hand. I believe he has a plan of organizing a company to look after the project.

The annual meeting of the Inland Daily Press Association will be held at the Press Club in Chicago on the third Tuesday in February President Glessner writes:

I have formulated the following program: "The Press and the Postoffice," by E. P. Adler, *Times,* Davenport, Iowa; "Starting an Inland Daily," F. H. Hall, *Evening Herald,* Joliet, Ill.; "My Experience with a $2.00 per year Daily," H. H. Fitzgerald, *Journal,* Flint, Mich.; "Railroad Advertising," A. H. Lowrie, *News-Advocate,* Elgin, Ill. There will be the annual election of officers and the selection of three delegates to the Guthrie meeting of the N. E. A. The Press Club will entertain our members in the evening with a reception and social, including a literary program and a dance. The ladies are especially invited and all members of our Association are requested to bring their wives and make arrangements to stay until the conclusion of the evening program.

The writer will see you at Indianapolis.

Yours very truly,

A. M. Glessner.

The Upper Des Moines, Iowa, Press Association meets at Hampton, February 16th and 17th. Mr. Al. M. Adams, Secretary, writes: "We expect a good turnout and a great big time. This is the Twenty-ninth Semi-Annual Meeting of our Association and we never have any tiresome meetings." The Mason City *Times-Herald* says:

An effort will be made by the committee to get Governor La Follette, of Wisconsin, to deliver the principal address of the meeting.

The Association embraces almost all the newspaper men in the State and there are usually a hundred editors, with their wives, who attend the semi-annual meeting of this body. The last meeting was held at Council Bluffs in August. The officers of the Association at the present time are: President, J. A. Menton, of Boone; Vice-President, J. E. Downing, of Ft. Dodge; Secretary and Treasurer, Al M. Adams, of Humboldt.

The program prepared, which is subject to change, is as follows:

1—Effect of the Biennial Election Amendment on the Newspapers—A. B. Funk, Spirit Lake. Discussion—A. H. Barnes, of Eagle Grove; J. L. Powers, Carroll.

2—Women in Journalism—Mrs. W. O. Payne, Nevada. Discussion—Mrs. L. G. Hardin, of Ames; Miss Bessie Crary, of Boone.

3—Fiction in the Country Paper—E. N. Bailey, of Britt. Discussion—George Fitch, of Council Bluffs; Joe Trigg, of Des Moines.

4—Report of Legislative Committee—T. W. Purcell, of Hampton; E. H. English, of Mason City; B. Murphy, of Vinton.

5—Subscription schemes as paying propositions—Elmer E. Johnston, of Rockwell City. Discussion—W. J. Branagan, of Emmetsburg; W. L. Chandler, of Fonda.

6—Making of An Advertiser—Burt Harwood, of Clarion. Discussion, George I. Long, of Manson; Will Muse, of Mason City.

7—The Professional Code of Ethics and Advertising—Miss Anna Donivan, Emmetsburg *Tribune.* Discussion—C. D. Hellen, of Webster City; H. A. Cook, of Fort Dodge.

8—How I Have Been Imposed Upon—Sam Stauffer, of Sac City. Discussion—Col. L. B. Raymond, of Hampton; W. P. Goldie, of Cherokee.

9—Newspaper Courtesies—Frank Clarkson, of Ida Grove. Discussion—T. B. Hotchkiss, of Lake City; W. S. Clark, of Pocahontas.

10—The Effect of Patent Insides on Foreign Advertising—W. R. Orchard, of Glidden. Discussion—H. E. Scott, of Sibley; Edgar Williams, of Ogden.

BUSINESS NOTES

This Department is conducted for the benefit of advertisers, and expresses their claims and views

The Lanston Monotype Machine Company has arranged a correspondence course of keyboard instructions. The new plan will be appreciated by Monotype buyers, as the loss of time and expense incident to taking instruction under the old plan is done away with, and the instruction is just as thorough as before.

We have received from the National Lead Co., 100 Williams St., New York, a very valuable, complete and convenient pocket Memorandum Book for Linotype Machine operators. It treats of use and care of metals, "Machine Sections," "Linotype Adjustments," etc., besides containing identification and memorandum blanks, "Tables, 1905—1906," and "Brief Business Laws." In a word, it contains all information necessary for the running of Linotype Machines and the care of Metals used in printing offices. It is sent free to operators and machinists.

The directors of the Lanston Monotype Machine Company have authorized the expenditure of $500,000 in cash for the enlargement of the factory and the purchase of new equipment. The plant is now being modernized in every department. When the changes now being made are completed the Monotype factory will be one of the largest and best equipped plants in the country.

The Inland Type Foundry, of St. Louis, announce the opening of a New York Branch on February 1st. This branch will be under the management of J. H. Ramaley, for many years in charge of their Buffalo House. Mr. Ramaley's long acquaintance with the printing art and among those engaged in the business, and his intimate knowledge of the requirements of the trade, especially fit him for this important position. The new office is located at 160 Williams St., New York City.

The Monotype business in foreign countries is as satisfactory as it is in the United States. Monotypes are in use in practically every civilized country on the globe.

"The Stoneman" is the name of a valuable and very convenient little work on "The Science and art of Imposition," by Charles W. Lee of Chicago, Ill. It is the most complete work extant on this important department or branch of the printing art. Aside from the plans for the mere laying out and locking up of forms of all forms and sizes and differing numbers of pages, there are very many helpful directions and hints as to different folding machines, as to "Initials," "Pairing Pages," "Foundry Forms," "Foreknowledge," "Sections," "Verifications," "The Pressman," "Measurements," etc., etc.

The December issue of *Country Life in America* is a model, typographically. Aside from the general excellence of the printing, one is attracted by the excellence of the engravings, and especially by the three-color half-tone reproductions of several varieties of prints, around which the type is set, the lines following the contour of the cuts in a most pleasing fashion. The type from which *Country Life in America* is printed is cast and set by the Monotype.

We desire to announce the completion of our new Eastern warehouse and office at Rahway, N. J. Being now located between New York and Philadelphia, on the main line of that greatest of American railways—the Pennsylvania Line—we now have superior facilities for the distribution of our products to the larger as well as the small cities of the East, and we can therefore give our customers the very best service possible and far superior to what we were able to do from our Middletown warehouse, which is now discontinued.

The beginning of the New Year finds us settled in our now and commodious quarters. With an abundance of space we are able to carry a large and varied stock of goods for the printer's use, and all orders for regular stock can usually be shipped from Rahway on the same day they are received. It has long been our aim to place ourselves in a position

where we could fill orders promptly and with practically no delay, and with our removal from Middletown to our present quarters at Rahway, we feel that we have solved the problem and accomplished the purpose which we have so long had in view.

Appreciating the many favors extended to us by our Eastern customers, we hope to merit a continuance of their patronage.

THE HAMILTON MFG. CO.,
Main Office and Factories at Two Rivers, Wis.
Eastern Office and Warehouse, Rahway, N. J.

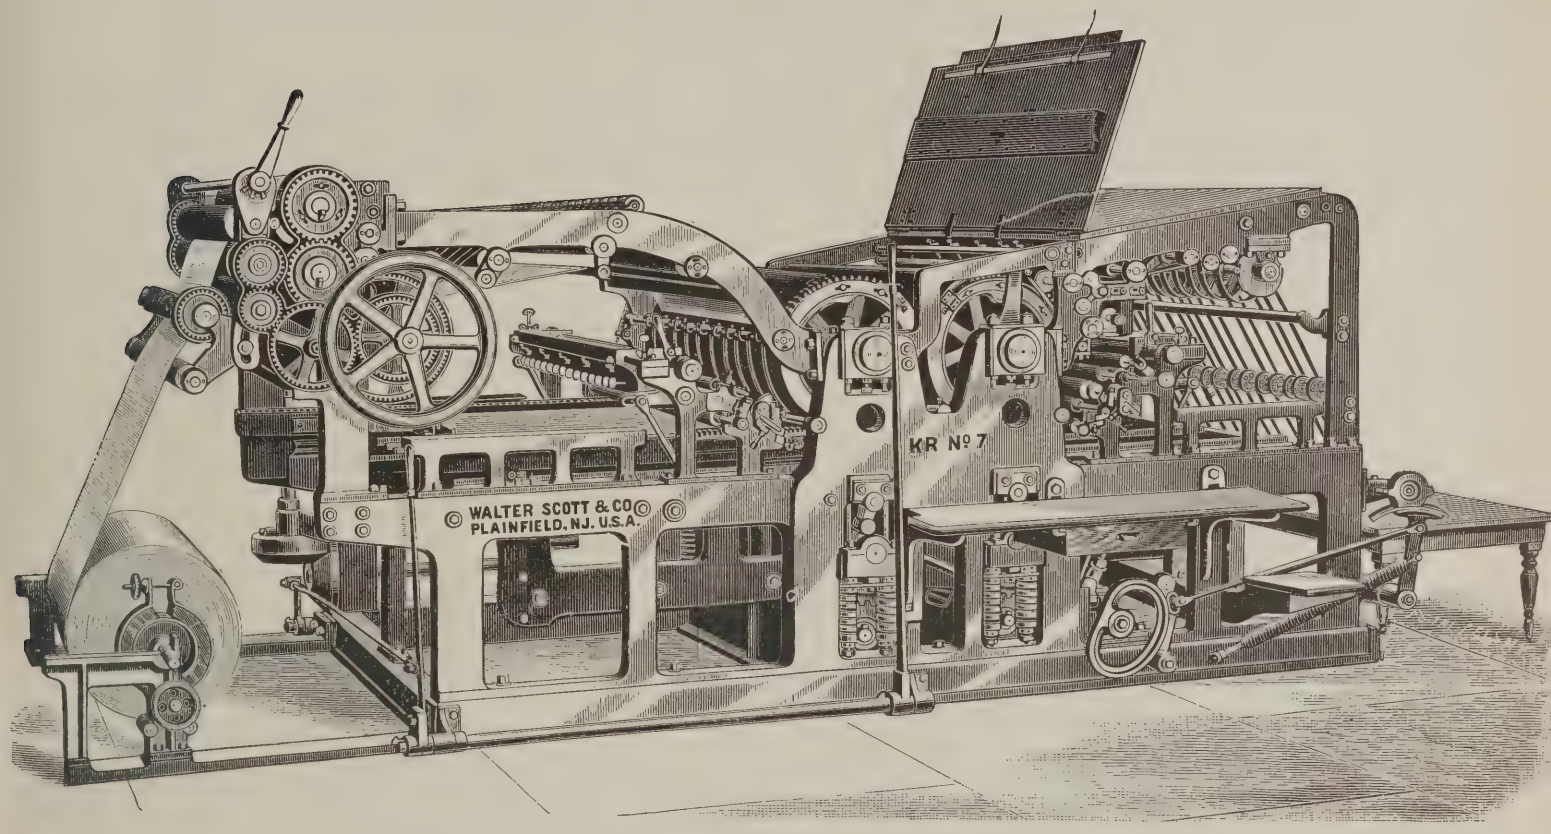
HONORS TO EDITOR WILLIAMS.

Walter Williams of Columbia, Mo., is being mentioned by newspapers in Missouri as the one model candidate—free from all entanglements and above all unholy alliances—for Governor of Missouri, on the Democratic ticket at the expiration of Governor Folk's term of office. Mr. Williams has proved himself worthy of all the kind things that are said about him but, just at present, is busy attending to his duties as editor, and as a Regent of that splendid, most useful and practical institution of learning, the University of Missouri—a position to which he has been recently appointed by Governor Folk. He is bearing, with humility, the honors conferred upon him by his friends at home and by the land of Homer, Aeschuylus, Plato, Demosthenes and others of the old Greek poets, philosophers and orators.

The queen of Greece has conferred upon Editor Williams the cross of honor and medal, in appreciation of services in behalf of the international exposition at Athens, Greece. The decoration was given upon recommendation of the directors of the exposition. It is accompanied by a diploma of merit, engrossed in Greek and signed by the president and secretary of the exposition. Mr. Williams was the American representative in 1903 of the exposition at Athens, which was held under the patronage of the government of Greece.

The Scott Flat-Bed Perfecting Press

WITH ROLL FEED



The Machine shown here is adapted to print magazines, newspapers, and periodicals; also telegraph blanks, circulars, etc., printed on one or both sides, or any work of that character, running at speeds, according to quality of work, up to 1,500 sheets per hour.

The Cutting Cylinders are constructed to cut off sheets of different lengths.

Change in Length of sheet can be made in a few minutes.

Offset Device. An automatic oiling means is used to prevent "offset;" it is simple and effective.

The Sheet is Fed from the roll to one side of the first impression cylinder.

When the Leaf of the feed board is raised, the upper sides of both impression cylinders are accessible for "overlaying" or other purposes.

The Change from Roll to table feed and vice versa can be made in a few minutes.

When Entering a Roll of Paper, the cutting apparatus can be disconnected from the press and waste sheets removed without turning the press, inking the rollers, or tympan sheet.

These machines are made with Two and Four Form Rollers, also with Roll Feed, as desired. They have many desirable features which are explained in our perfecting press catalogue. You may have it for the asking.

We manufacture Lithographic, Drum Cylinder, Two-Revolution, Stop-Cylinder, All-Size Rotary, and all kinds of magazine and newspaper presses.

Is Unequaled for Fine Presswork

A *special* line of presswork that has in it one or a number of *cuts* that are difficult to produce, usually requires special attention regarding the working condition of the ink.

ACME INK REDUCER very *quickly* produces the condition desired—will very readily reduce the ink to the shape required and will not affect the color or injure the quality of the ink used.

Paper will not "pull," "pick," or "peel" when the *Acme* is used in your inks, and wherever you use the *Acme* kind the *best* presswork is guaranteed.

Try it. Sample free—postpaid.

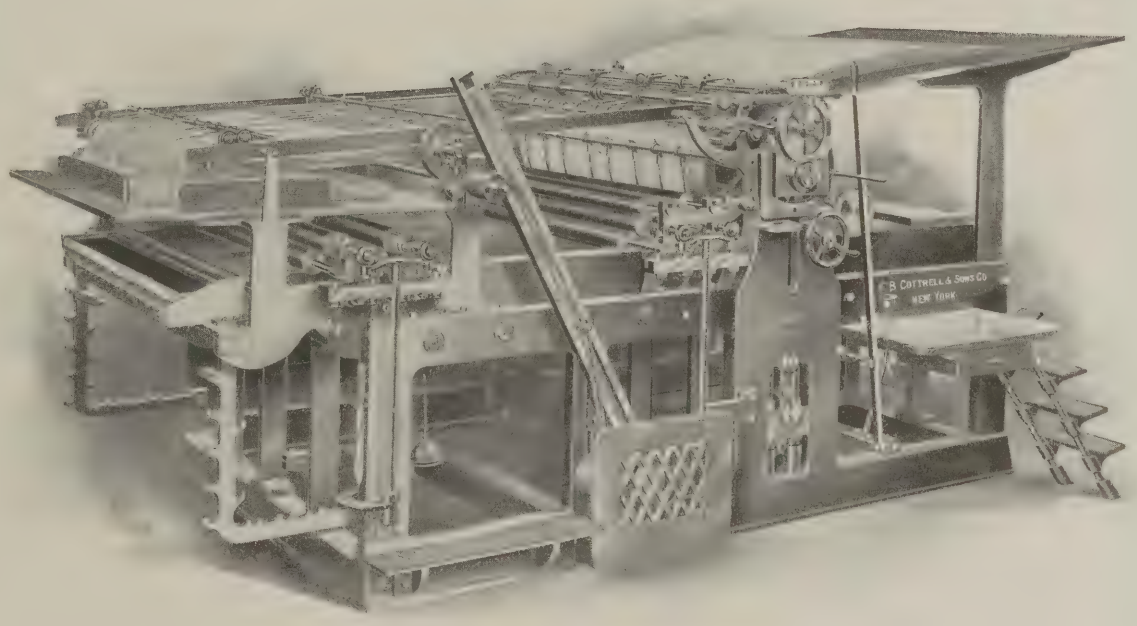
ACME COMPOUND CO., Elkhart, Ind.
Representative. YALE PRINTERS' SUPPLY CO., NEW HAVEN CONN.

Inkoleum is a pure colorless liquid and does not affect working properties of inks like paste compounds introducing foreign matter, wax, tallow, etc., which lessens strength of color. **Inkoleum** spreads pigment evenly and gives best results. Try it and note the difference.

Ink Reducer and Dryer
INKOLEUM
THE OLDEST AND STILL THE BEST
PRICE 50 CENTS. NO SAMPLES.

Use Inks of heavy body and reduce with **Inkoleum** as paper requires. Thin inks are reduced with varnish and color weakened. **Inkoleum** will start your presses cold mornings without washup. The only reducer **sold by supply houses** everywhere. That tell's the story.

The "Cottrell" High Speed Two Revolution Press



Specially designed For the exacting demands of three color printing where perfect register is absolutely necessary. New features have been added for facilitating the production of the finest work.

¶ The press is furnished with our Patent Convertible Sheet Delivery which can be set to deliver the sheets printed side up, or it can be changed to the regular fly delivery in five minutes time. The convertible delivery is operated by a variable speed crank motion which dispenses with the fly spring, thus saving the power required to compress the spring, at the same time making the motion more simple and convenient.

CHICAGO: 279 Dearborn Street

C. B. Cottrell and Sons Company

WE want to impress you with one very important fact—and a vital one to the permanent success of your business—and that is, that most printers are unable to discriminate between a color properly adapted to a particular purpose and one that appears to be. And it is not their fault.

The Ink business has grown beyond the narrow limits of simply mixing and canning colors for sale. The ink-man's business is to interest himself in the printer's business to the extent of saving him money lost in useless experimenting in the pressroom.

We offer you the benefit of a very extensive knowledge in this respect. *INKS FOR EVERY PURPOSE.*

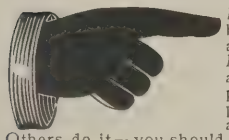
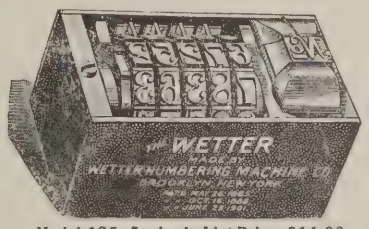
Don't send your work out to be numbered. You can do it quicker and at the same time you print by using a

WETTER Type-High Numbering Machine



Makes possible numbering and printing at one impression; the Modern way – used by all printers. Makes possible a good profit, otherwise given away to the numberer. Others do it—you should. All typefounders and dealers carry in stock and endorse the "*Wetter*." Get our circular.



Model 125, 5 wheel; List Price, $14.00

WETTER NUMBERING MACHINE CO., 337 Classon Ave., Brooklyn, New York, U. S. A.

The Age *of* Specialists

The Credit Specialist whose field is confined exclusively to the Paper, Book, Stationery, Printing and Publishing Trade, and the only Specialist in this field, is THE TYPO MERCANTILE AGENCY. Its Credit Books, Special Reports, Bulletins, Collection Department, and every feature, are designed to meet the special requirements of those whose customers are in this Trade.

The Typo Credit Book stands in a class by itself; it is more than a Credit Book and much more than a mere Trade Directory. It gives every firm, large and small, in this entire Trade, with ratings for capital and credit, and street addresses in all cities. It reflects the result of constant investigations in the Trade itself, and thus indicates the undesirable customer, no matter what his capital, and points out the safe risk. The business classification is such as to give practically distinct lists of each branch of the Trade, which makes it as indispensable to the salesman as to the credit man. It is issued every January and July.

The Typo Bulletin gives all the changes and happenings in this Trade affecting credits, and in such condensed form that it saves the credit man much valuable time in gaining these facts, essential to his protection. It is issued weekly.

The Typo Special Reports are prepared by specialists who have made the conditions in this Trade their special study. They contain the Typo records, and the facts given and deductions drawn are based upon information gleaned with the greatest care through local, general and trade channels. The special feature which makes them superior to every other report is their exhaustive Trade investigations, which show the past experience of others. They are issued in answer to inquiries.

The Typo Collection Department offers the most effective as well as the most economical method of dealing with delinquent debtors and collecting doubtful accounts. Knowledge of these debtors gives the Department every advantage, and its special position in the Trade forces many a worthless debtor to pay a just account otherwise uncollectable. Many slow accounts may be collected promptly and at nominal cost through the Typo Drafts.

The Typo Service meets every requirement, and the testimony of Subscribers of years' standing is indisputable evidence that the Service is unequaled.

The SIMPLEX

One-Man Type Setter

"More than pays for itself"
"Never out of commission"

FTER a publisher has used a machine for several years, he is in position to give a final expert opinion on it, based on his own long experience. The unsolicited opinion of such a man as Mr. R. S. Osterhout, News Publishing Co., Hudson, Mass., ought to carry great weight.

SEE HIS LETTER:

Hudson, Mass., Dec. 20, 1904.

The Unitype Company, Brooklyn, N. Y.

Gentlemen: We have this day paid the last note on our Simplex which was installed in our plant June 20, 1901. During this time we have spent less than $50 for repairs and renewals of worn parts, and this includes one grinding. The machine is in as good shape to-day as the day it was first started, and in fact it has never been out of commission. We have averaged over eight hours for every working day and have run it 14 hours during Town Report Seasons. Last year, besides setting the type for our eight newspapers we set eight town reports on the machine.

We cannot see how any newspaper office can afford to set type by hand when a machine of this kind will more than pay for itself. We have always kept two on the machine—girls—and they are the only ones who have ever learned to operate.

Very truly yours,
NEWS PUBLISHING COMPANY
R. S. OSTERHOUT.

His plant is worth $1700 more than before the Simplex was installed, which extra value has not cost him a dollar since the machine has paid for itself in payroll reduction.

Why don't YOU do that too, Mr. Publisher? Our terms make it easy to do so, without any strain on even limited resources.

LET US TELL YOU ALL ABOUT IT

Seventeen Feet Too Short

THEY were planning a bridge to connect two towns in a Western State. After the plans had been approved and paid for, the bridge was found to be seventeen feet too short. ¶ When the engineer was asked how he came to make such an error, he said that he got his measurements by stretching a wire across the river from a house on one side to a tree on the other, and guessed he hit it about right. ¶ But he would have gone ahead with the building of that bridge, putting his error down in iron and stone. ¶ You plan to connect your customer with your business. You come about seventeen feet short of doing it if you plan by guess-work or loose calculations. ¶ There are known ways of bridge building or estimating printing so that it will reach the customer and connect him with your business. You should charge enough for the output of your factory to sustain and build up your business on a safe and firm foundation, and to do this, you should have the right kind of literature. Apply yourself to those things that directly interest your business. ¶ You should take a course of study in THE PRINTERS' SCHOOL OF ESTIMATING. We know of no study providing a like quantity and quality of information. Associate with those who have a correct basis of estimating cost of time and raw material, and fixed expense. Education along this line will prove beneficial not only to you, but to your associates. If you are interested, for further information, address

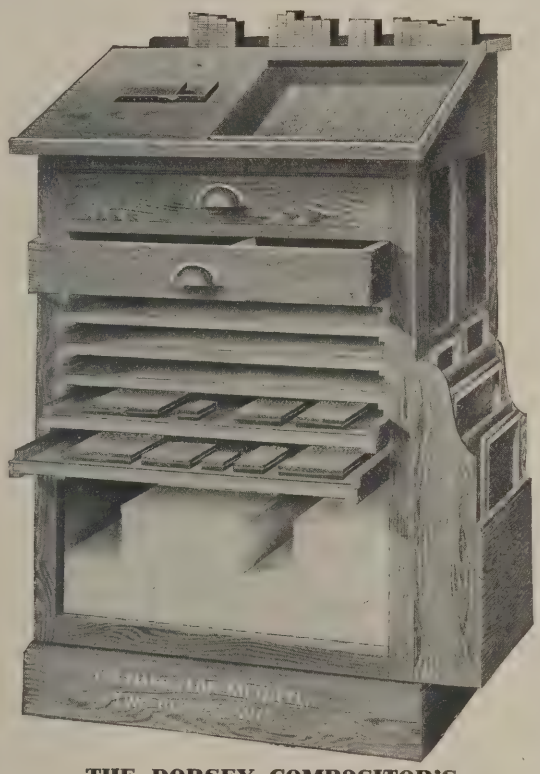
ANOTHER NEW TIME SAVER FOR THE JOB OFFICE

THE DORSEY

COMPOSITOR'S WORKING CABINET

(PATENT APPLIED FOR.)



THE DORSEY COMPOSITOR'S WORKING CABINET
(Patent Applied for.)

WE have thoroughly perfected this Cabinet before placing it on the market and it has been fully tested by some of the best printers who indorse it unqualifiedly. This Cabinet is the same height as the ordinary News Stand. The slanting top on which to place the Galley is the same size as the ordinary Lower Case, accommodating almost any size Galley and providing a very convenient working space for the job compositor. The *flat top* at the back 8 inches wide affords a convenient place for copy, cuts, furniture, leads and slugs or other articles needed while constructing a job.

¶ Notice the handy GALLEY RACK attached to the side and built to accomodate four Galleys, one of each size Job Galley 12½x18 and 15½x22, and two regulation single column Galleys, each having a separate pocket.

¶ This handy arrangement is a great *time saving* feature of the Cabinet, making it unnecessary for the workman to go on a scout about the office swapping or hunting for Galleys. The two drawers at the top each divided into two compartments provide a convenient place for bulky copy, samples or style books and place for the Rule Case, Sticks and greasy rags to keep the sticks from rusting. The five LETTER BOARDS beneath the drawers will be found very convenient for holding tied-up matter, work held for approval of proofs, etc. The space under the Letter Boards can be used for storage of stationery, etc. and which will never be found out of place.

¶ This Cabinet is a TIME SAVER in every sense of the word and by its use the covering up of Type Stands and Cases is avoided and the amount of pi and litter about the office lessened. Space that can be used for no other purpose will accomodate this Cabinet as it takes up very little floor space and can be set against the end of a Stone Frame or against the wall.

Shipping weight, including the Letter Boards 300 lbs.

Price, complete $36.00, subject to usual discount.

For Sale by all first class dealers in the United States and Canada.

WE ARE THE EXCLUSIVE MANUFACTURERS OF THIS STYLE OF CABINET.

The

SIMPLEX

ONE-MAN TYPE SETTER

"Doing all it is advertised to do and a little bit more."

THIS explains the wonderful success of the Simplex. Claims are easy to make, but it is their actual performance by which machines (and men) are judged. See what the Simplex is doing in a Fargo job office:

THE UNITYPE COMPANY: FARGO, N. D., December 15, 1904.

Gentlemen,— In connection with the Simplex machine we wish to say that we have had no trouble whatever with it. It has done its work satisfactorily and well, doing all that you advertise it to do, and sometimes a little bit more. In a job office the size of ours, where the initial cost is a great deal, it seemed like a lot of money to put into a machine, but we do not see how we could get along without it. In rush work we would have to hire two or three compositors temporarily, and in a town like Fargo they are hard to get, but with your machine we are able to sit down and get out the job. Even though the machine were kept idle half the time, still it comes in handy when we do want it and want it badly. Yours very truly,

THE PORTE PRINTING COMPANY.

Many a publisher is getting along without a Simplex who can not afford to do so. Are you one of them? Let us tell you all about it.

THE UNITYPE COMPANY

BABCOCK OPTIMUS

In a Chicago pressroom where there are many machines, representing all makes, the pressman says the Optimus is the strongest, and his make-ready quickest.

The Optimus IS the strongest. What of it?

STRENGTH insures Rigidity of Impression,
and affords that firm and delicate touch so necessary in work of highest merit.

STRENGTH guarantees Fast Make-ready.
The pressman's confidence is in a STRONG press. The quality and amount of work is increased by it.

STRENGTH makes Speed possible, and Speed is Capacity.
Three Optimus presses will do the work ordinarily obtained from four others.

STRENGTH gives Smoothness and Quietness in operation,
and great steadiness, which is quite as important.

STRENGTH prevents Guttering,
and the consequent damage of forms. The Optimus is the only press that does not gutter.

STRENGTH conserves Perfect Register.
The Optimus is never out between bed and cylinder. If out at the guides it is the operator's fault.

STRENGTH is Endurance.

The Optimus IS the strongest. Compare it.

The BABCOCK OPTIMUS

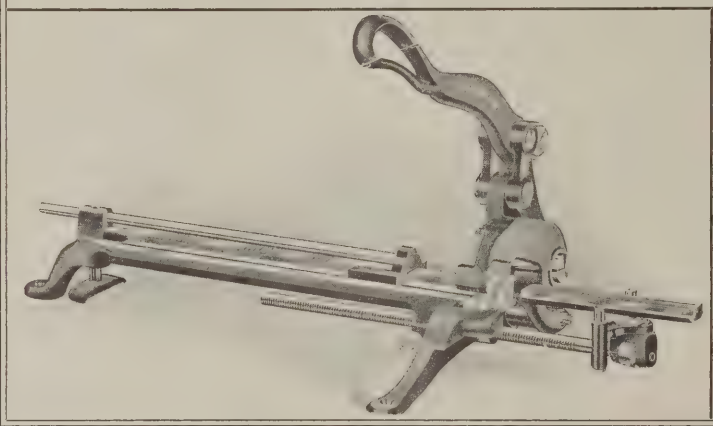
American Lead and Rule Cutters

HAVE been on the market five years, and their sale now exceeds the combined sales of all other lead and rule cutters made in America. There are many reasons for this, but the chief reason is, that they *produce results* quicker and better than any similar machine. If you would know ALL the reasons, buy one and let it do its own talking. Better order one to-day from your dealer. If he is 'on to his job,' he has them in stock and can ship at once; if not, and he is a *bona fide* dealer, he will get it for you, Made in three styles:



No. 3 . . . 12.00
Gauges to 105 picas by nonpareils, also to 45 picas by points.

No. 2 . . . 10.00
Gauges to 105 picas by nonpareils.

No. 1 . . . $ 7.00
Gauges to 14 inches, not graduated.

MADE ONLY BY

H. B. ROUSE & CO.

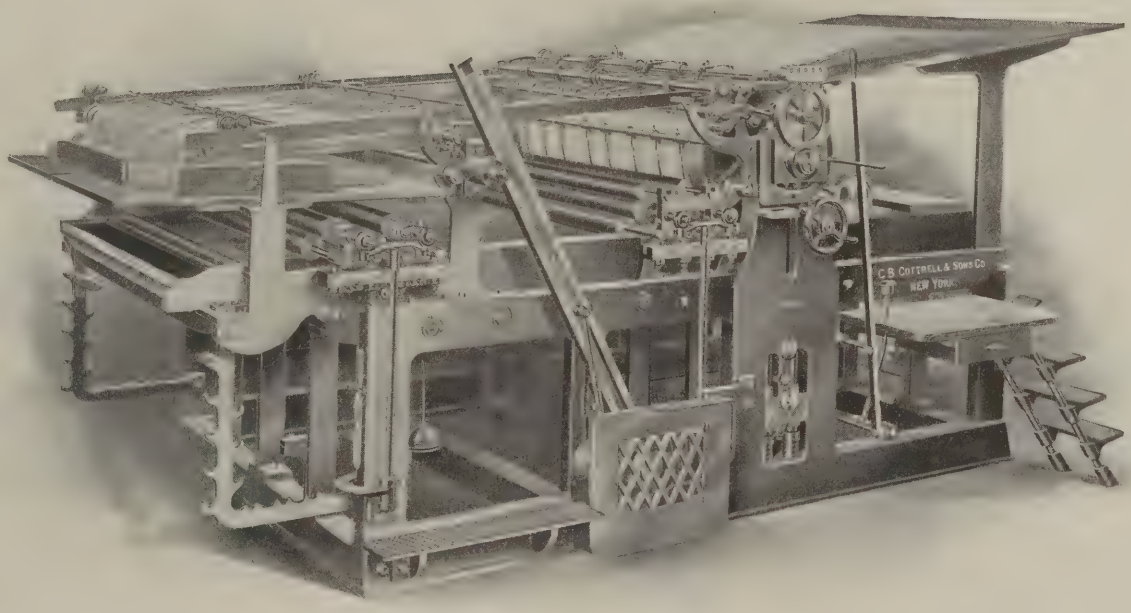
The "Cottrell" High Speed Two Revolution Press



Specially designed For the exacting demands of three color printing where perfect register is absolutely necessary. New features have been added for facilitating the production of the finest work.

¶ The press is furnished with our Patent Convertible Sheet Delivery which can be set to deliver the sheets printed side up, or it can be changed to the regular fly delivery in five minutes time. The convertible delivery is operated by a variable speed crank motion which dispenses with the fly spring, thus saving the power required to compress the spring, at the same time making the motion more simple and convenient.

THE MONOTYPE

A TYPE FOUNDRY *in* SMALL COMPASS

THE MONOTYPE possesses one signal advantage absolutely peculiar to itself, which differentiates it from every other type-casting and setting machine.

¶ Not only does the Monotype cast the type which it uses itself to produce its own composition, but it casts complete fonts of job or display faces in all sizes up to 36 point.

¶ So cheaply and efficiently does it do this that the printer using the Monotype may at trifling cost accumulate a type outfit which will preclude the loss of time "picking" sorts and the inconvenience of distributing standing matter in order to re-use the type.

¶ Time, money and labor are thus saved by THE MONOTYPE.

THE LINOTYPE

BOOK WORK of the highest class, with all that comprehensive expression implies in effective and artistic printing, can be produced with the Linotype at a cost materially less than hand composition. On the following pages there are three specimens of Linotype work, produced by the Burr Printing House of New York. The specimens, which speak for themselves, are actual commercial examples and were not especially prepared for exhibits.

MIXED FACES for text-books and similar work requiring different bodies and many special characters, can be produced on the new Double Magazine Linotype as a continuous operation and without change. This class of work, slow and cumbersome by hand, can be done quickly and at greatly reduced cost by the new Linotype.

CATALOGUES which make up a substantial part of the average printer's business, can be handled so readily with the Linotype as to be an object lesson to the printer in the art of money-making.

CHAPTER VII

CHRISTMAS DAY IN THE MORNING

"THAT girl has purloined a pie," said Miss Scadding wrathfully. "She insists that some gipsy must have abstracted it from the larder ledge, but I know better, Susan."

"Yes, aunt, of course you do." Susan looked languidly up from her strip of muslin.

"It was a prune pie, Susan, and you are partial to prunes."

Miss Scadding sat down, fidgeting with her prim black apron, showing in her strongly marked and homely face all the annoyance she felt at the delinquencies of Sally Wing, the little servant who had come to her, on promotion, from the charity school.

"It's time for your port, Susan." She hobbled up and opened a door of the bow-fronted sideboard. "Drink it down, like a good maid. Port is so supporting, and taken regularly will restore your whole sys-

for brandy-balls or peppermint-dumps. The world was not yet well aired enough for fine ladies in search of embroidery silks.

"By all means, my dear Martin Heritage—if you will allow me to pursue my reading," she returned, bending to polite compromise. "May I select a volume for you? Here is one that I purpose presenting to our sweet Susan on her wedding morn, *Sage advice to a Young Female on Entering the Wedded State.* You may care to peruse the pages."

She held forth the book, but he waved it aside—with a piteous gesture.

"I'd rather talk with you awhile, Miss Scadding, until Susan steps in."

"Methodists are not given to conversation as a rule," she said, putting her book aside rather testily.

"We are not encouraged to indulge in unprofitable conversation, but this morning my—"

"Your heart's full. Dear lad, I understand." Miss Scadding nodded at him kindly. "Talk on until Susan comes in—but not about your religious connexions. You know that I can never approve of Methodists."

"They are a despised people, Miss Scadding. They endure scoffings and revilings for righteousness' sake."

"And they deserve revilings," she answered energetically. "What right have they to turn against authority or to obtrude religion into the domestic circle? The world is full of rebels. I read in the newssheet only last week of a sect whose craze it is to wear white hats and long beards. And then there are the unknown tongues, and not long since there was that madman Thom."

From "The Story of Susan." Copyright, 1903, by Dodd, Mead & Company

COMPOSED ON THE LINOTYPE IN 11 POINT SCOTCH BY THE BURR PRINTING HOUSE, NEW YORK

resistance to be 0·03 ohms per square inch of contact area (p. 118) we have as the $C^2 R$ loss at the commutator

$$2 \times 800 \times 800 \times \frac{0{\cdot}03}{29{\cdot}75} = 1320 \text{ watts.}$$

The peripheral speed of the commutator is

$$\frac{70 \times 3{\cdot}1416 \times 85}{12} = 1560 \text{ feet per minute.}$$

Assuming the brush pressure to be 1·5 pounds per square inch, and that the friction coefficient is 0·3, we have as the friction loss of the commutator

$$\frac{1{\cdot}5 \times 58{\cdot}5 \times 1560 \times 0{\cdot}3 \times 746}{33{,}000} = 930 \text{ watts.}$$

Hence the total loss by brush resistance and by friction is

$$w_b = 2250 \text{ watts.}$$

(5) *Friction and ventilation losses.* Taking these as 1 per cent. of the full-load output—an ample estimate—we have

$$w_f = 4400 \text{ watts.}$$

The total full-load loss is the sum of the five losses above, or

$$w = w_c + w_i + w_x + w_b + w_f$$

$$w = 33{,}390 \text{ watts.}$$

Therefore the full-load efficiency is

$$\frac{440}{(440 + 33{\cdot}9)} = 0{\cdot}928$$

$$\eta = 92{\cdot}8 \text{ per cent.}$$

Probable heating.—

(*a*) Armature. From the drawings the heat-radiating surface of the armature is found to be about 11,000 square inches. The peripheral speed is

$$\frac{90 \times 3{\cdot}1416 \times 85}{12} = 2000 \text{ feet per minute.}$$

The watts lost in the armature at full load are

Iron-loss . . .	6380
Copper-loss . . .	$800 \times 800 \times 0{\cdot}172 = 11{,}000$

making the watts wasted per square inch of radiating surface

$$\frac{17{,}380}{11{,}000} = 1{\cdot}58 \text{ watts per square inch.}$$

A reference to the lower curve of Fig. 22 shows that the temperature-rise per watt per square inch for a peripheral speed of 2000 feet per minute is 30° C. Hence we have

$$\theta_a = 30 \times 1{\cdot}58 = 47{\cdot}5 \text{ deg. Centig.}$$

(*b*) Field-magnet System. Here the radiating surface is about 2000 square inches per bobbin, or a total of 20,000 square inches. The watts lost in the shunt coils have been already estimated at 5840, and the watts lost in heating the series winding are

$$(800 \times 800 \times 0{\cdot}0054) = 3460 \text{ watts.}$$

Hence the probable rise of temperature of the field-coils is

$$\frac{(5840 + 3460) \times 75}{20{,}000}$$

$$\theta_m = 35 \text{ deg. Centig.}$$

(*c*) Commutator. For the probable heating of this part of the machine we have (p. 120)

$$\theta_c = \frac{46{\cdot}5 \times 2250}{70 \times 3{\cdot}14 \times 8{\cdot}5\ (1 + 0{\cdot}0005 \times 1560)}$$

$$\theta_c = 17{\cdot}5 \text{ deg. Centig.}$$

Sparking.—We have already found the value of the cross-magnetizing ampere-turns, namely,

$$X_c = 11{,}100.$$

The ampere-turns required for the gap and teeth at full-load are about 25,000, the flux-density in the former being

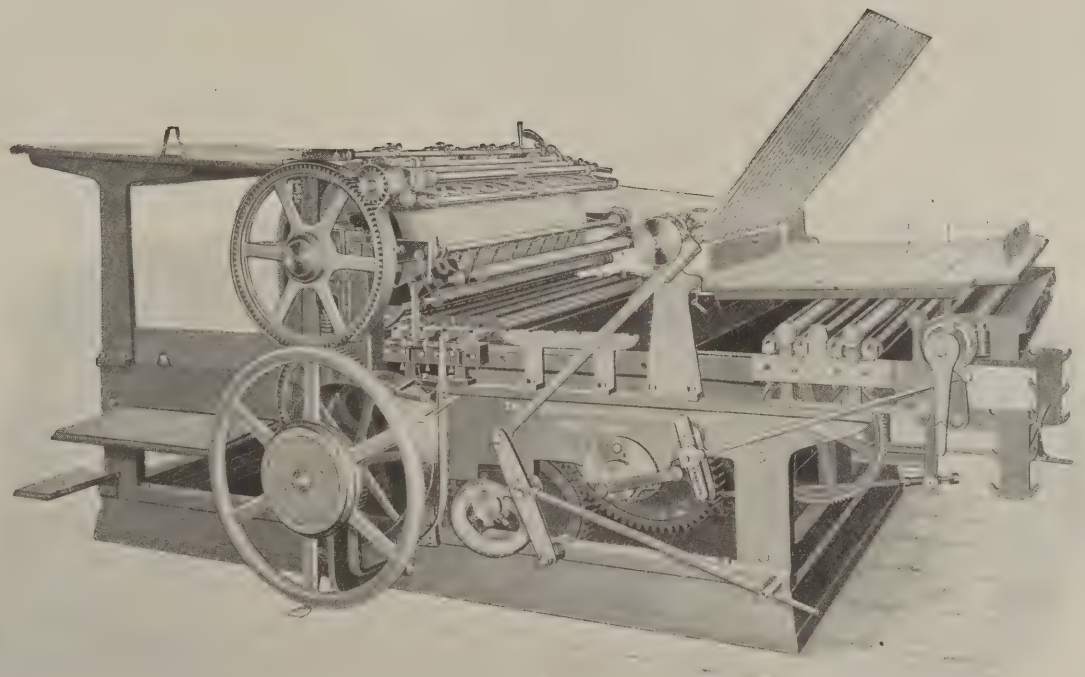
THE TWO-REVOLUTION WHITLOCK



NO Two-Revolution, four-roller front fly delivery Press is more rapidly advancing in the estimation and popularity of press users than the Whitlock shown above. It is a machine on which all the thought and care possible to exercise have been expanded. The results speak for themselves. Its perfect register, rigid impression, great speed, well-known durability, and ease of make-ready and general handling, make the machine to be desired above all others. It gives most excellent results for half-tone printing, either in black or the three-color process.

The Century

IN EVERY DAY USE.

"We have several large type forms which we run regularly, and at the time of placing the order for our No. 1 CENTURY these were printed on a press of another design and embodying what your representative called the old fashioned side rod impression mechanism, and it always required from two and a half to three hours to make each of these forms ready.

When he told us that we could run the same form on the 39 x 52 CENTURY with not over half an hour's make-ready we gave him the quiet laugh.

It's up to us, however, to acknowledge the corn. The large CENTURY does exactly what he said it would do. Our pressman pulls a draw sheet, puts on a few patches and goes ahead. We save from two to two and a half hours make-ready on the cost of each of these jobs. More than that, we run the CENTURY on this work at from 1800 to 1900 an hour against about 1500 on the other press."

Yours truly,
(Signed) ROBINSON & SMITH,
Chicago, Ill.

"I ran a job recently on one of our Centurys, the form of which had to be locked on bed of press and was solid stereotypes, weighing close to 400 lbs., and the stock 28 x 38 inches, 41 lb. manilla. It was printed to the extreme edges on the 28 inches way around the cylinder, which is two inches more than you claim is the standard printing surface of the press, and was made ready for this run in three hours and forty minutes. (I had figured on two make-readys, allowing twelve to fifteen hours, but only used one. Note the saving in time).

We averaged 1725 per hour straight through, with oil and wash-ups of thirty minutes in a nine hours day. We also ran 116,000 impressions from that one set of soft stereotypes."

Yours truly,
(Signed) ALEX. DAY, Foreman,
Outwest Printing & Stationery Company,
Colorado Springs, Col.

NATIONAL PRINTER JOURNALIST
A JOURNAL FOR PRINTING AND ALLIED TRADES

Volume Twenty-two Chicago, March, 1905 Number Three

Meeting Executive Committee—National Editorial Association.

Arrangements for Convention N. E. A. at Guthrie, Oklahoma, June 6-7-8, 1905.

OFFICIAL REPORT BY SECRETARY COCKRUM. INDIANAPOLIS, IND., Feb. 7, 1905.

PURSUANT to a call of the President, the Executive Committee of the National Editorial Association of the United States met in the Grand Hotel in the city of Indianapolis, Ind., President W. W. Screws presiding. The following officers and members responded to roll-call:

Officers:—Maj. W. W. Screws, President; W. A. Ashbrook, Corresponding Secretary; J. W. Cockrum, Recording Secretary; J. Irvin Steel, Treasurer.

Past Presidents:—B. B. Herbert, P. V. Collins.

Honorary Life Members:—Mr. Jas. G. Gibbs, Ohio; Mr. R. M. White, Missouri.

Members:—Jacob Pepperman, Alabama; C. E. Wood, Colorado; Will Curtis, Military Tract, Illinois; W. L. Jones, Republican, Illinois; Mrs. Rose L. Colby, Woman's, Illinois; L. G. Ellingham, Democrat, Indiana; Will E. Beeson, Northern, Indiana; W. S. Montgomery, Republican, Indiana; W. S. Chambers, Southern, Indiana; A. W. Glessner, Inland Dailies; W. F. Parrott, Iowa; G. P. Linn, Northeast, Iowa; W. S. McGarrah, Kansas; J. E. Junkin, Seventh District, Kans.; John Dymond, Louisiana; Louis E. Chandler, Massachusetts; W. R. Hodges, Northwest Pub. Ass'n, Minnesota; Jas. H. Duke, Mississippi; W. R. Painter, Missouri; S. E. Cobb, Nebraska; Geo. C. Fairbanks, Suburban, New England; H. J. Knapp, New York; Wm. M. Miller, Associated Dailies, Ohio; Carl A. Jettinger, Buckeye, Ohio; C. B. McCoy, Editorial, Ohio; C. E. Bryan, Hocking & Ohio Valley, Ohio; F. H. Prouty, Oklahoma; R. E. Dowdell, South Dakota; W. J. Buie, Texas; W. A. Johnson, Northwest, Texas; H. M. Youmans, Wisconsin.

The bond of Treasurer J. Irvin Steel was approved, and the President ordered it filed with the Recording Secretary.

Letters and telegrams of regret were read from Chas. M. Meacham, Kentucky; J. M. Page, Jerseyville, Ill.; Past President, Albert Tozier, Oregon; J. G. Newbill, Missouri, Southwest; John W. Jacks, Missouri, Northern; Past President Walter Williams; Past President E. W. Stephens.

On motion by Past President Collins, the corresponding secretary was directed to send a telegram to Past President W. S. Cappeller expressing the regret of the Executive Committee for his affliction and the hope of his speedy recovery. By way of explanation of his motion, Mr. Collins informed the Committee that Mr. Cappeller is afflicted with facial paralysis.

The Corresponding Secretary reported that he visited Guthrie, Okla., in September, 1904, to make preliminary arrangements for the annual meeting of the association, and that he found the people there enthusiastic concerning the meeting, and felt assured that they would do everything possible to make the meeting one of pleasure and profit. He found that the hotel accommodations were rather limited, but the citizens of Guthrie are ready to offer their hospitality to the editors who are to visit their city. By accepting the hospitality of these people, Mr. Ashbrook thinks the members will be well cared for and that the entertainment in the city of Guthrie and elsewhere in the territory will be all that could be desired. He finds that the citizens of almost every city and town in Oklahoma are making arrangements to entertain the delegates to the meeting. In fact, he said, there were more invitations already extended than could possibly be accepted and complete the tour of the territory in the time allotted.

Mr. Ashbrook reported that he was experiencing some difficulty in obtaining transportation for the editors from Guthrie to California, and thence to Portland, Ore., finding that the transcontinental lines had entered into an agreement not to extend the usual courtesies this year. He said he was taking the matter up in another way and still has hopes that he will succeed in arranging for the tour that was promised the delegates by the people of Guthrie at St. Louis in 1904.

Frank Greer, of Guthrie, addressed the meeting, and his statements were substantially those made by the Corresponding Secretary. He renewed with all of his enthusiasm the invitation from the people of Guthrie and Oklahoma Territory, and his remarks were sufficient to convince everyone that the meeting will be a success as far as the entertainment provided by the citizens of Guthrie is concerned.

Past President Herbert followed Mr. Greer with a statement in which he endorsed all that had been said by Messrs. Ashbrook and Greer, which facts he said he obtained while on a visit to Oklahoma a short time ago.

Past President Collins introduced the following resolution and moved its adoption:

WHEREAS: The railroads leading to Oregon do not show a spirit of appreciation of the advertising value of the N. E. A. to the extent of offering satisfactory courtesies and concessions as to rates, and

WHEREAS: The management of the Lewis & Clark Exposition have notified the Corresponding Secretary of the N. E. A. that they are unable to make railroad arrangements for reciprocal transportation to Portland, and therefore,

Resolved: That this association will not go to Portland if reciprocal arrangements cannot be made for transportation on the basis of advertising, but hereby instructs its Corresponding Secretary to conclude arrangements for other excursions payable only in advertising.

Mr. Knapp, of New York, moved to lay the resolution on the table. Carried.

Mr. Miller, of Ohio, moved that the date for the annual convention at Guthrie, Okla., be June 1st, 2d and 3d, and that a committee composed of the President, Corresponding Secretary, Messrs. Wood of Colorado, Glessner of the Inland Dailies, Parrott of Iowa, and Past President Collins be appointed to make all arrangements for the meeting and an excursion after the meeting. Motion carried unanimously.

Mr. Buie, of Texas, presented an invitation from the city of Dallas, Texas, to visit that city during the 1905 excursion.

On motion of Mr. Miller, of Ohio, the motion fixing the date of the convention was reconsidered. Mr. Miller then moved that the date of the convention at Guthrie be June 6th, 7th and 8th.

Mr. Junkin, of Kansas, moved to amend that the convention be confined to two days with an evening meeting preceding. The amendment was accepted by Mr. Miller and his second, and the motion as amended was carried.

On motion of Past President Herbert, the President was authorized to complete the literary program for the Guthrie meeting.

On motion by Past President Collins, the President was authorized to guarantee to the speakers outside of the association membership, at convention, that their expenses in Guthrie would be paid by the association.

On motion by Mr. Dowdell a committee was appointed to prepare suitable resolutions of thanks to those who were contributing to the entertainment at Indianapolis and other points in Indiana, and submit the same to the committee at a later session. Messrs. Dowdell, Collins and Parrott were appointed such committee.

The Committee took recess.

Muncie, Ind., Feb. 8, 1905.—By courtesy of the Indiana Union Traction Company, the Committee visited the cities of Marion, Anderson and Muncie, and were most royally entertained by the citizens and business organizations of those cities.

At the banquet table at Muncie, Mr. Dowdell offered the following resolutions, which had been prepared by the committee previously appointed and they were unanimously adopted:

RESOLUTIONS.

We, the members of the Executive Committee of the National Editorial Association, appreciating as we do the royal, unique, hospitable, profitable and enjoyable entertainment provided by our hosts, resolve with great pleasure.

In this connection we want to thank the citizens of Indianapolis in particular, and those of the State of Indiana in general.

Good jokes, whether on the pension or retired list, are always new, like champaign, there is an effervescence about them that leave dear and pleasant memories, so is it with resolutions, when honest, heartfelt, and not a perfunctory duty, the task to be performed is a pleasant one.

The enjoyable and profitable visit and hospitable entertainment enjoyed in Indiana and Indianapolis in February, 1905, and the effervescence of good cheer and fellowship experienced on every hand during our stay in the Hoosier State and City, will linger forever in our memory. We, therefore, with great pleasure,

Resolved: That hearty and sincere thanks are due to J. B. Whitehead, the Indianapolis Manager of the American Press Association. His tireless and ceaseless efforts for our entertainment are greatly appreciated, and to him largely are we indebted for the royal good show and entertainment provided. He has been the middleman and both end men of our Twentieth Century Minstrel Show, and we cordially recommend him to managers of like shows, who want something new and are seeking to make a decided hit. Brother Whitehead, accept our thanks and congratulations, and kindly remember that you hold with a secure hand the big end of the latch string to the hearts of each and every committeeman here represented.

The entertainment provided by our true brothers, the Elks, came as an inspiration and was certainly appreciated. Especial mention and thanks are due and are cheerfully given to Bros. W. W. Groves, George June and Thomas Hedian. Be it further

Resolved: That we are indebted to and will honor sight drafts of love and frienship to the Indianapolis Traction and Terminal Company, for a trolley ride over the City of Indianapolis; to the members of the Board of Control of the Indiana Soldiers' and Sailors' Monument; to the Poultry and Bench Association for pleasant courtesies extended; to the Indianapolis Newspapers and the Printers' Supply Houses, for an enjoyable theatre party; to the Postal and Western Union Telegraph Company for frank privileges; to the Hon. Arthur Brady, President of the Union Traction Company for special cars, for delightful trips to Anderson, Marion and Muncie; to the officers of the National Soldiers' Home, and particularly to Col. Geo. W. Steele, Gov., for a very pleasant entertainment and cordial greetings, to the citizens, Commercial Club and Newspapers of Anderson, Citizens and Newspapers of Marion and Muncie, who so loyally contributed to our enjoyment; to the Hampton Printing Company for pretty badges and neatly-printed programs, and to the Grand Hotel for special rates and good entertainment.

R. E. DOWDELL.
W. F. PARROTT

Attest: J. W. COCKRAN, Recording Secretary.

EDITORS ON THE WING.

CONTRIBUTED BY THE INDIANAPOLIS EDITOR OF THE AMERICAN PRESS ASSOCIATION.

IT WAS a matter of general agreement that the Resolutions Committee, appointed by the Executive Committee of the National Editorial Association at the recent meeting of that body in Indianapolis, hit the situation off to a nicety when it declared after mature deliberation: "The enjoyable and profitable visit and hospitable entertainment enjoyed in Indiana and Indianapolis in February, 1905, and the effervescence of good cheer and fellowship experienced on every hand during our stay in the Hoosier State and City, will linger forever in our memory."

There were many incidents of a memorable character connected with that meeting of which something must be said in passing. But, first,

THE MATTER IN HAND.

It was in the spacious lobby of the Grand Hotel in Indianapolis that the members of the Executive Committee of the National Editorial Association foregathered on the morning of February 7th, last. From the four corners of the Nation came they, representing in their persons the inestimable force of the freest and most enlightened press on earth, their particular mission on that day to do the bidding of the association in concluding the plans for the coming national meeting at Guthrie, Okla.

After informal greetings a social meeting was held in the ordinary of the Grand Hotel. Here the members of the committee were pleasantly greeted and bidden welcome to the city by the Hon. John W. Holtzman, Mayor of Indianapolis, whose cordial address of welcome was responded to in an equally felicitous manner on behalf of the visitors, by Mr. W. W. Screws, President of the National Editorial Association. Following these initial amenities, the visitors were escorted to trolley cars by the obliging members of the local Committee on arrangements and a comprehensive trolley tour of the beautiful city was made, terminating at the Statehouse, where the party was given fitting welcome on behalf of the State of Indiana, Mr. Union Banner Hunt, private secretary to Governor J. Frank Hanly, speaking for the chief executive, who, unhappily, was confined to his room by illness. A visit was then made to both the Senate and House of Representatives of the Indiana General Assembly, where the working methods of the

busy Hoosier legislators were observed for a time with much interest and no small degree of edification.

In the evening the visitors attended a theater party as guests of the Indianapolis newspapers and printers' supply houses. After the theater the party was royally entertained at the palatial Elks' club room as guests of Indianapolis Lodge No. 13 (save the mark!), B. P. O. E.

A FINE SIDE TRIP.

On Wednesday, the day following, the visitors were entertained in most hospitable fashion in the thriving "provincial" cities of Anderson, Marion and Muncie, in the wonderful Natural Gas Belt of Indiana, situated but a pleasant journey by trolley distant from the State capital. The trip was made possible through the courtesy of the Indiana Union Traction Company. Two splendid cars were placed at the party's disposal and before the return to Indianapolis in the evening 200 miles had been covered without leaving the lines of this one company. Hon. Arthur Brady, president of the Indiana Union Traction Company, and Mr. Charles D. Baldwin, superintendent of transportation, accompanied the editorial party and in every way possible provided for the comfort and safe conduct of their guests.

WONDERFUL TROLLEY SYSTEM.

Before passing to other things, a word concerning this same Indiana Union Traction Company and its road and equipment is but fitting, as it is literally the "main spoke" in the great system of interurban railway communication which has sprung up as by magic in Indiana in the past few years and which comprises today the greatest system of trolley lines in the world, converging at Indianapolis in a ten-story Terminal Station which has no rival anywhere.

The principal offices are in Anderson, Ind., operating substantially 260 miles of street and interurban railroad, 210 miles of which are interurban road and 50 miles of street railroad. Its interurban lines extend from Indianapolis to Muncie; from Anderson to Marion; from Alexandria to Tipton; from Indianapolis, by way of Noblesville and Tipton, to Kokomo; from Kokomo to Peru, and from Kokomo to Logansport. Its city lines are at Anderson, Muncie, Marion, Jonesboro, Gas City, Alexandria and Elwood. All lines are operated by the "three phase" system from a central power plant located at Anderson. This power plant contains five 2,000 horse-power Rice & Sargent compound condensing steam engines, directly connected to the same number of 1,000-kilowatt generators. From this power plant electricity is transmitted at a voltage of from 15,000 to 30,000 volts, alternating current, to fifteen substations, located at different points on the system. At these substations the voltage is reduced by step-down transformers, and by means of rotary converters the current is converted from alternating into direct current, in which form it is utilized for the running of the cars.

That this company is well equipped for such admirably "personally conducted" tours as was that enjoyed by the editorial party, it is stated that on one occasion it conveyed a party of 2,000 without mishap or marring incident.

NATIONAL SOLDIERS' HOME.

At Marion there is a perfect Eden of a place wherein, through the generous care of a wisely-paternal government, the battered veterans of our Nation's wars, whose lines, by any means, no longer fall in pleasant places, may receive the home-care and attention so needful to them in their declining years. This is the Marion branch, National Soldiers' Home, and it was here the first stop of the trip was made. The party was met by Colonel George W. Steele, governor of the Home, who, with the members of his staff, Mrs. Steele, and a number of Marion ladies, was present to extend the honors of the Home to the visitors. A hearty welcome was extended and the members of the party were given every opportunity to view the wonderful system which obtains in the care of the men to whom the nation owes a debt it is thus making partial payment on. It was dinner time, and the visitors could not help observing that so far as the inner man is concerned the veterans were bountifully cared for. Here is a sample day's bill-of-fare taken at random from a fortnight's bill submitted by J. W. Sanderson, quartermaster and commissary of subsistence:

Breakfast—Stewed liver with bacon and onions, boiled potatoes, bread, butter and coffee.

Dinner—Mutton stew with dumplings, pickled beets, canned apricot pie, bread, butter and coffee.

Supper—Cheese, cookies, stewed fruit, bread, butter and tea.

The visitors were, naturally, greatly impressed with all they saw at this admirable institution.

THE CITY OF MARION.

Marion was the next stop. A visit was made to the public library and art exhibit. The party was then received at the Commercial Club by President Steele, Secretary Wiley, members of the club and ladies of Marion, and a splendid luncheon was served. Colonel Steele, Mayor Covert, Judge Hiram Brownlee and E. P. McClure made fitting speeches of welcome, to which President Screws, Secretary Ashbrook, Colonel Dymond and B. B. Herbert responded.

Marion people do not believe in mere round numbers when it comes to the important matter of population. They are explicit. To the committee the declaration was made that Marion has a population of 29,087; something over fifty manufacturing industries, employing about 4,500 people, and four banks with a combined capital of about two millions. Besides the manufacturing interests Marion has quite an oil territory; about twenty miles of street-car lines; two interurban lines, one being built and two others for which the right-of-way has been secured. The National Military Home pays out in pensions about $40,000 each quarter. This is in addition to the cost of maintenance and improvements on the home. Marion's churches represent almost every denomination, several of which have fine edifices. There is also a beautiful public library, built by a donation of $50,000 by Andrew Carnegie. Their school system, they think, is second to none in the State, there being about 4,600 pupils enrolled in one high-school building and ten ward schools. The Marion Normal College has an average attendance of about 1,600 pupils, and the business college has an average attendance of 400. The government has just purchased a site costing $25,000, upon which to erect a government building, and an appropriation of not less than $100,000 is expected from this session of Congress. The Marion Commercial Club has a wideawake manufacturing committee which has just located a starch plant that will employ 250 hands and use daily not less than 5,000 bushels of corn, whose buildings will cost over $300,000 and will cover about ten acres of ground.

THE CITY OF ANDERSON.

The editors left Marion at 1:30 and arrived at Anderson at 3:30. At Alexandria they were met by a deputation of Anderson citizens, accompanied by a quartet, which sang "You Are as Welcome as the Flowers in May." After visiting the immense power house of the Indiana Union Traction Company the visitors were entertained at the Elks Lodge rooms, where a large delegation of Anderson's public-spirited citizens improved the time to add to their guests' growing appreciation of the beautiful city.

Anderson has four railroads—the Pan Handle, the Big Four, the Indiana Midland, and the Michigan division of the Big Four. There are seventy-five interurban trains arriving and departing from the city every twenty-four hours. When natural gas was discovered in 1877 Anderson became the field of large operations in the manufacturing world. The city grew like magic, from an unimportant inland town to a city

of 30,000 people. Anderson is the owner of its electric lighting plant and water-works system. These utilities have been constructed by the city at a cost of $250,000 and are self-sustaining. Anderson has $13,000,000 of taxable property, a fine school system, elegant county buildings, over twenty miles of paved streets, one of the finest sanitary sewerage systems in the country, many large and commodious hotels and a magnificent opera house, a commercial club of 500 members and a merchants' association of equal numbers. The press is ably represented by three daily publications—the *News,* the *Bulletin* and the *Herald*—all of which are up to date and always on the alert for news and for the good of Anderson. The banking facilities are ample, being represented by three banks and two trust companies, having combined assets of $3,000,000.

THE CITY OF MUNCIE.

From Anderson the party proceeded to Muncie, where the members were greeted by the President of the Commercial Club, the Mayor and Mr. F. D. Haimbaugh, of the Muncie *Herald,* and others. A splendid repast was furnished the editors at the Commercial Club and the entertainment brought out a resolution of thanks from the visitors. Muncie lays claim to being the metropolis of the Natural Gas Belt and now the center of a large and growing oil industry. Its tax duplicate shows assessments of about $12,000,000, with a population of 34,000; four miles of asphalt streets, 42 miles cement sidewalks and 97 miles macadam streets; 117 acres in public parks; a municipal electric light plant; the only fire department in the State that is ten per cent above requirements of insurance companies; eleven modern and commodious school buildings, employing 130 teachers; a complete sewerage system; a $75,000 public library, containing 25,000 volumes; three daily and three weekly newspapers; two business colleges; all leading church denominations have commodious church homes; a $250,000 court-house; a $100,000 college building; a $50,000 commercial club building; six steam roads and three interurban lines.

At 8:10 p. m. the editorial party left Muncie, arriving in Indianapolis in time to "catch" the night trains out, and thus two memorable days were passed.

It may be said in conclusion that Indiana wants the meeting of the National Editorial Association in 1906 or 1907, and if the two days' entertainment furnished the executive committee may be accepted as a "sample," the members of the association may rest assured that nothing will be left undone to insure their comfort and enjoyment should the association decide to grant the wish of that dear, delightful Hoosier State.

Conference, Appreciation and Knowledge of Men as Means to Success.

AN INSTRUCTIVE INCIDENT GATHERED AWAY FROM HOME.

We have frequently, in the past, remarked on the wisdom of the meeting together, for social enjoyment, conference, the interchange of views, the forming of closer acquaintance and friendships, of those engaged in the same business or in the same line of business, profession or calling. We happened upon an illustration in point while attending the recent meeting of the Executive Committee of the National Association at Indianapolis. Not one member of the firm concerned knows of this article or of our knowledge as to the affair mentioned. One has to go away from home, sometimes, to learn the news, as we did in this case, and we have refrained from asking anything about this at home. Wednesday evening, Feb. 1st, Barnhart Brothers & Spindler gave a dinner to their house and traveling salesmen. There were about sixty present and Mr. French, famed for his geniality, fitness and ability for such service, which he is so frequently called to perform, acted as toastmaster. We were assured by our informant that the occasion was exceedingly enjoyable and profitable, but what he particularly emphasized was Mr. French's interest in, knowledge and correct judgment of each man. He was not satisfied with the usual formalities and remarks in which he spoke of the high standard shown as a whole, or in the aggregate, by the representatives of the house as thorough business men of high character and ability, but he passed around the table and took the hand of every one separately and said some words, recognized by all as particularly applicable, adapted and encouraging, to each. Mr. French showed that he understood the position and character of every one of the gentlemen on whose work depends the success of the business. There was a sincerity, an earnestness, a clearness of proper appreciation in the words and a warmth in the hand clasp that have not been forgotten. Mr. French is a collegian, a student, a thinker, but these have not dulled his sympathies, blinded his judgment as to the worth of those employed with him, nor caused him to be otherwise than earnest in business and fervent in the spirit with which he regards others. He does not know of our opinion of him nor of our words here, nor will he have any such knowledge until he sees them in print in the NATINAL-PRINTER-JOURNALIST, and we do not write these things for him or for any member of his company but for the good of others, as pointing the way, through a practical illustration, to one of the surest means of great success in all callings and in business life, the ability to know, to appreciate at his true worth, and the bigness of mind and heart to render just commendation to every man with whom one is brought into confidential business relations. We speak of the value and necessity of such qualities in great generals or those in positions of command but these are just as essential to business success in this age when nothing can be accomplished without the combined efforts of the many, acting in accord under the direction of a competent, trusted and respected leader. No one liveth to himself or by himself in this Twentieth Century, if he accomplishes anything worth while. Society and business, the industries and the professions are too complex, interdependent and extended for the separateness or exclusive individualism of the past. However self reliant and individual one may be in his own character he must act with others for any really great accomplishment. It is not alone in great newspapers but in nearly every other great enterprise that individuality is sunk in the undertaking to the carrying forward of which many hands and brains must contribute, some as directors, others as the doers or carriers-out of the plans and details. All are alike workers. Because one must plan, map out the campaign, direct and even command, he is none the less a soldier, bearing his share of the toil, burden and worry of the contest.

EDITORIAL NOTES AND POINTS

BY BENJAMIN B. HERBERT, CHICAGO, ILL.

TOPEKA, Kansas, has excellent daily papers. The success of the publisher of the *Daily Capital* is phenomenal and worthy of study. Mr. Arthur Capper was born in Garnett, Kansas, in 1866, and entered the office of the Garnett *Journal* at the age of thirteen years, to learn the printer's trade, having been, previous to that date, a newsboy. He took his training as a printer with his studies at school, every Saturday and every vacation having been devoted to work as an apprentice in the printing office. At the age of eighteen years he graduated from the high school at the head of a class of twelve. He had worked at printing, corresponded for newspapers, and studied these and books and found that he was aided, instead of being hindered thereby, in his efforts for scholarship. When he graduated he possessed a very thorough practical education and was the master of a trade. He reached Topeka with assets of $1.25, in June of his graduation, in 1884, and secured work on the *Daily Capital* as a printer. After seven months at the case he became a reporter and at nineteen years of age reached the position of city editor. In 1891 he went to New York to learn something more of the business, and secured a place on the *Tribune,* which he held for six months and then, refusing flattering offers in the Nation's metropolis, returned to the *State Capital,* which he now owns, besides the *Mail* and *Breeze,* a weekly with 60,000 circulation, the *Missouri Valley Farmer* with 160,000, and the *Household* with 100,000 subscribers. His success is due to having kept always in touch with the practical sides of life. He got no false ideas at school and learned to use his knowledge as rapidly as it was acquired. He chose his calling early and prepared himself for the same. The *Daily Capital* has a circulation of 19,000 copies per day, which is remarkably large for a city the size of Topeka. One strong point in his paper is the constant presentation and exploiting of the resources and advantages of different sections of the State. Mr. Capper is a promotor of all that tends to the upbuilding of his city, section and State and he is a hustler and organizer in politics, though never an office seeker. Preparedness for his work, energy, organizing ability, human interest, loyalty to principles and to all worthy local and State enterprises and unflagging industry are the secrets of a success that, in some fifteen years has taken him from the printer's case to the head and ownership of an important daily paper, and three other successful publications.

President Screws, of the N. E. A., is known everywhere in newspaper circles as an able and successful editor of one of the leading dailies of the South, the Montgomery *Advertiser,* but his associates on the Executive Committee of the National Editorial Association were pleased to learn, on several occasions, during the recent meeting at Indianapolis, of his eloquence, ability and readiness as an extemporaneous speaker. His words were, on all occasions, entertaining, sound, sensible, instructive and inspiring. Out of the fulness of his mind and heart, his mouth speaketh. A love for and a loyalty to truth and a well-stored mind are above all else the requisite for an oratory that tells. Men are always glad to listen to a man who has something worth while to say and while newspaper work does not particularly train one in the fine art of finished oratory, faithfully and enthusiastically followed, it does fit one with that breadth of knowledge and of thought and that depth and broadness of understanding and sympathies that make his words, spoken or written, golden.

Newspaper work has its difficulties, trials and responsibilities, yet it has its compensations. In the right kind of a paper it binds the members of the newspaper force together in esteem and friendship. This was recently shown upon the retirement of Mr. Frederick W. Hyde, from a responsible position on the Jamestown, N. Y., *Journal,* to become cashier of the Chautauqua County Trust Co. A banquet was given in his honor, over which the widely-known and highly-honored President, Frederick P. Hall, the editor and publisher, presided. The following were the toasts to which eloquent and appropriate responses were made:

The Guest of Honor, Journalism Not Strenuous Enough so He Took to Banking—Capt. Frederick W. Hyde.

The Job Printing Department, The Journal Office of Twenty-Nine Years Ago—Paul M. Dean.

The Composing Room. The Paper Must be on the Press at Four O'clock—Herman H. Stoltz.

The Managing Editor, "Up Stairs" and "Down Stairs"—James A. Clary.

Our Society Reporter, Police Court and the Undertakers are Sometimes Added by Way of Variety—Miss Bertha Butler.

Our Rhymster, As We Appear Done in Verse—Clifton N. Hildum.

Our Junior Reporter, Fresh from Scholastic Debating to Hustling News Gathering—J. Harold Swanson.

One of Our "Has Beens," from the Nursery to The Journal Office; From The Journal Office to a Nursery—William S. Bailey. (Mr. Bailey entered the business office of the *Journal* at 14 years of age, where he remained for 16 years. He is now the manager of the Chautauqua School of Nursing.)

The Men, My Ideal! Where Can I Find Him?—Miss Jessie Young.

Our Editorial Writer, Philosophy and Humor Well Combined—Edwin A. Bradshaw.

The names on the toast, were supplemented with a statement of the years of service of each and an excellent record was shown which was in part as follows:

Frederick P. Hall, President, 29th year.

Frederick W. Hyde, Secretary, 26th year.

Editorial Rooms—Edwin A. Bradshaw, 16th year; James A. Clary, 22d year; Vernelle A. Hatch, 6th year; E. Bertram Briggs, 5th year; Miss Bertha Butler, 9th year; Clifton N. Hildum, 5th year; J. Harold Swanson, 1st year; Miss Mynetta Randall, 5th year; Miss Mary Spring, 1st year.

Business Office—N. Allison Graham, 17th year; E. Verne Bly, 2d year; Matthew E. Wright, 14th year; Miss Jessie Young, 8th year; Miss Helece Randall, 7th year; Mrs. Emma C. Evans, 4th year.

Newspaper, Press and Composing Rooms—John O. Johnson, 17th year; Clarence J. Sprague, 17th year; Daniel P. Wescott, 25th year; William Scott, 14th year; James S. McCallum, 11th year; Herman H. Stoltz, 11th year; James H. Mason, 2nd year; George Curtis. 4th year; Harry Couch, 3d year; Charles Jenner, 1st year; Fred Lindstrom, 3d year; Simon Carlson, 1st year.

Job Printing and Engraving Departments—Paul M. Dean, 26th year.

This paper has dwelt very frequently on the importance of teaching both girls and boys how to do things and, in teaching how to do, also inculcating the ideas of helpfulness, service and usefulness from which really come true happiness, all real greatness and worthiness. All doing in this world must be sustained and beneficial, must have proper reward. In the printing business, seemingly, more than in almost any other calling, this reward depends upon understanding not only how to do but how correctly to estimate the cost of work and all the items that enter therein. "The Knowing How to Estimate" is one of the precedents to effectual profitable doing in this calling and we heartily coincide in the following upon the subject that appeared in a recent issue of the *Texas Printer:*

This is a question the importance of which is becoming generally recognized by the printer. Many printers are today losing money because of an improper understanding of the costs that enter into production. The printer finds that despite all the pains he takes with the question on an order, his margin of profit is never certain. He realizes a fair profit on one job, while on the next he probably loses from 50 per cent to 100 per cent. This state of affairs is obviously wrong and should be remedied. Every job should carry its legitimate profit—no more, no less. No guesswork should enter into your calculations. You need to acquire a more definite understanding of the underlying principles of estimating. A successful estimate is based on a true knowledge of the cost of production. Here is sounded the keynote to the success or failure of every printer.

Much has been said lately of the desirability and value of that sort of education which teaches men and women how to do things. We have no fault to find with that kind of education except that it may not go far enough. It certainly is vastly important that printers should know how to estimate, but it is even more important that, knowing how, they should do it correctly. The most valuable training, whether one calls it "education" or by some other name, is that which causes one to do things and to do them in the right way. What we need most of all is education which will bring about the application of knowledge.

Every day we see instances of people doing the wrong thing when "they know better." Ignorance in these days is scarcely excusable. Is the neglect of those who are rich in knowledge at all pardonable? You yourself will say no. Then why not fall in line with others who are working for the elevation of the craft?

The National Printer-Journalist is strictly non-partizan, yet this does not prevent the editor and paper from being interested in all good things that are said about the members and officers of the National Editorial Association, in whom all the readers of this paper have a like fraternal interest. The following with regard to Secretary W. A. Ashbrook, clipped from Ohio newspapers, will be read with pleasant and instructive interest as showing the qualities of a successful editor that cause him to be highly appreciated in his own home:

W. A. Ashbrook, editor of the Johnstown *Independent,* and one of the most active business men of that thriving little town, is casting longing eyes at the seat in the Lower House now held by Dr. Watkins, of Etna. Editor Ashbrook believes that the Democrats can redeem the county next year and thinks that he can beat the genial physician statesman from the western part of the county.—Newark *American Tribune.*

Licking County Democracy has the reputation of putting forth its best men for office, consequently the county has seldom swerved from its loyalty to that party. Hon. W. A. Ashbrook, Johnstown editor and banker, is of the kind that would add lustre to the county's record, should he be nominated for Representative. His nomination would certainly mean his election for he is well and popularly known throughout every neighborhood in Licking county, and is one of the best known editors in the State. He is at present Corresponding Secretary to the National Editorial Association and prominent in the work of the several State Editorial Associations.—Madison Co., *Democrat,* London, Ohio.

The Auburn, N. Y., *Daily Advertiser* issues a four-page leaflet that informs advertisers, first, about the nature of the field covered by the paper, the city of Auburn, its citizens and their employments, the industries, trades, railways, its schools and the contributary country and villages. Following this information, that affords a key to the classes of advertising that would prove most profitable, are special facts with regard to the *Daily Advertiser* and the Auburn *Semi-Weekly Journal,* under the same ownership and management. The standing value and advantages of the papers as to service, circulation, location, age, etc., for advertising. Then follows, on the last page, the table of advertising rates as follows:

ADVERTISING RATES.

	One Day	Two Days	Three Days	Four Days	Five Days	Six Days	Two Weeks	Three Weeks
One inch	65	1 00	1 30	1 60	1 80	2 00	3 67	4 95
Two inches	1 17	1 80	2 34	2 88	3 24	3 60	6 61	8 91
Three inches	1 62	2 50	3 25	4 00	4 50	5 00	9 18	12 37
Four inches	2 00	3 10	4 00	4 96	5 58	6 20	11 39	15 35
Five inches	2 32	3 60	4 68	5 76	6 48	7 20	13 23	17 82

	Four Weeks	Two Months	Three Months	Four Months	Five Months	Six Months	Nine Months	Twelve Months
One inch	6 32	9 78	12 65	15 53	18 10	20 70	27 60	34 50
Two inches	11 40	17 60	22 78	27 95	32 60	37 26	49 68	62 10
Three inches	15 80	24 43	31 62	38 80	45 26	51 75	69 00	86 25
Fou inches	19 60	30 30	39 21	48 11	56 14	64 17	85 56	106 95
Five inches	22 78	35 20	45 54	55 90	65 20	74 52	99 36	124 20

The above rates are for regular space display advertisements taking the "run of paper." Advertising to occupy special or preferred positions, and extra display, cuts, etc., will be accepted subject to additional charges.

Additional space above 5 inches on the 5-inch basis. Open space, for all electro matter, 300 inches or more, run of paper, 12 1-2 cents net. Position (for three or more inches space), 15c net. Composition when required, 5 cents per inch.

All bills are net, payable monthly, on or before the 15th, for the previous month's advertising.

Want Advertising.—Eighteen words, three times for twenty-five cents; one cent for each additional word. *Net cash* with order. Ten cents extra, if charged.

Rates subject to change at pleasure of the publishers.

Rates for advertising Auburn *Semi-Weekly Journal,* are: For one insertion a week, 33 1-3 per cent, and for two insertions per week, 50 per cent of the rate for the *Advertiser* for the same space and length of time.

Knapp, Peck & Thomson, Publishers.

It will be noticed that this table is not based on the flat rate system—a system that is adapted only to metropolitan dailies where the composition and finding position for new ads, making-up, keeping accounts, etc., form such a small per cent of the charge of the space as not to be at all material. Where a paper can charge one, two or three dollars an inch for space each day, the extra cost of handling the advertisement for one time or many times, can be disregarded, but this is not the case in a local paper, that does a special service for advertisers. A flat rate means constant loss to a paper in a small city or of limited circulation.

While in Indianapolis attending the meeting of the Executive Committee of the National Editorial Association, we had the pleasure of paying a visit to the great printing house of Levey Brothers, and passing a half an hour or so with Louis H. Levey, chairman of the Advisory Board of the newly-established School of Lithography. This school has started out under most auspicious surroundings, as a branch of the Winona Technical School. Some twenty students have already been enrolled and these average, in ability, education and character, far above those who enter as apprentices in the lithographing establishments. The fact is the school promises much more to successful pupils than can, under existing conditions, be expected by those learning the trade in the shop, where, in this age, every minute of time of every employe must be made productive in order to keep up the expense of conducting the establishment—where every one must be assigned to some special department of work, and there is little opportunity for mastering the art or business in its entirety. There is all the time a lack of all-around efficient workmen, who can take charge of and direct the work to its profitable and artistic completion. Technical schools are necessary to existing conditions, and their existence and efficient conduct will result in the great advancement, elevation and intellectualizing of the trades and the craftsmen. In this school, Mr. Levey informed us, all modern appliances of lithography will be used, including all the approved varieties of aluminum and other presses.

The people should know for their own protection. In no other way can they be so expeditiously, fully and economically informed as through the public press. All public officials, all corporations, trust companies, eleemosynary and monied institutions should be required to report as to the capital actually invested or controlled and as to all their doings and all moneys received and expenditures made, in order to keep themselves and their agents honest as well as to inform the people who furnish the money. We are taught to pray daily, "lead us not into temptation," but, by loose methods of accounting and reporting, lead those who handle public and fiduciary funds into constant temptation. The requiring constant, accurate public accounting would save many a man from embezzlement, from prison and disgrace, and the people from loss. In our large cities and, to a greater or less extent, in smaller place, justice shops have become dens of robbery and theft, through illegal fees and extortions by justices, clerks and constables.

The proper officials should pay an honest price to the newspapers for such publications and the law should require proper fees to go into the public treasury to cover such expense.

The practice of allowing public officials to collect the pay for their own services in fees should be abolished. All fees should be paid into the public treasury of the city, county or State. Weekly reports should be made thereof and of all amounts received for interest on public funds, and statements should be published in the newspapers once a month and reports of all disbursements, to whom and for what purpose expended, should be made and published every quarter.

Thieves are brought into our lower courts to be reformed by fines or imprisonment only to find, on account of the existing secret and corrupt methods, themselves in the hands of still greater thieves. Men pay fees and give bonds in receiving appointments to offices constituted to protect the interests of the people and find those, who are expected to look to the securing and enforcing honest performance of duty, fearlessly appropriating the money that they have never earned. Is it to be wondered at, that they become careless, evaders of the law and appropriators of other people's fund, or extorters of illegal fees. Men pay taxes to carry on the government and find large shares of these taxes appropriated by those who earn but a small share of what they receive, and is it any wonder that they become tax dodgers?

The same rules of publicity should be applied to all public corporations, trusts and monetary institutions. All applications for licenses and all contracts in which the rights of the people are involved should be published in advance. No license, even to enter into marriage, should be now granted without at least one month's publication in the newspapers of the city or county where one or the other, or both of the parties, reside. Just the other day a man was arrested in New York City while trying to negotiate a twenty-third, or thirtieth, marriage, and had it not been for the publication of his crimes, the facts as to his numerous marriages and his picture in the newspapers, he would probably have been successful, sooner or later, in a score or more of other marriages. He had married and robbed twenty-two women and, if reports are true, had murdered more than half of this number. He had found marrying a very profitable business and, unfortunately, this is not an entirely exceptional case, except as to the wholesale manner in which he carried on the business. His trial will cost, doubtless tens of thousands of dollars, paid out of taxes collected from the people. He secured thousands of dollars from his victims and doubtless has thousands of dollars with which to fee lawyers. This reminds one that the courts in large cities at least, might be reformed by a wider and wiser publicity.

The people and the newspapers should coöperate in the work of thorough publicity. Publicity is the surest safeguard to the rights of the people and to the perpetuity of free institutions.

Lawyers are theoretically the officers of the court and take an oath to see justice done between their clients and the court or people, yet every possible method is used to delay and to defeat justice. Judges, drawing large salaries, are tardy in attendance, and indolent in the expedition of business. Thousands of cases drag along in the courts until those in the right are wearied and those in the wrong are encouraged. A little publicity as to trial methods and attendance at court, as to the fees taken to clear criminals, as to the time cases are kept on the docket, and the time consumed from the time cases are called until a verdict is reached, would be wholesome. There is nothing like publicity to prevent crimes and to keep men honest. Evil doers like the dark. Those who do well have naught to fear from the light.

The time has come in this country, with its great population and rush for money-getting, when every patent medicine manufacturer, every druggist, every tobacconist, every grocer or manufacturer or dealer in provisions, should be compelled to secure a certificate, guarded by penalties as to the purity of his goods and such certificate, and what it covers, should be published. Millions of dollars are collected and paid out annually for the inspection of illuminating oils lest their impurity cause disastrous explosions, but men are permitted to pour hurtful nostrums, adulterated liquors and patent medicines down the throats of millions, that sicken and slay thousands where exploding oils could injure or kill only tens or hundreds. A short time ago a great paper, the *Ladies' Home Journal,* published the facts as to some fifty-nine leading patent medicines, showing that they contained injurious drugs and more alcohol than does either beer or whisky, as usually sold, and was shown to have made a mistake as to only one of these, and it seems that this one had changed its ingredients after the putting out the specimen that was really analyzed.

In many of our States, oil inspectors, private secretaries, county treasurers, and scores of other officers of no special fitness, ability or preparation, are permitted, for very small services or responsibility, and often for no real services at all, to collect and to keep, without accounting, sums of money far beyond the salaries considered adequate for the payment of men in the highest and most responsible positions in the State, where learning, untiring industry, great responsibility and ability are required. This is simple theft. Whatever a public officer receives without rendering an equivalent he steals from the public and is corrupted and demoralized by this legalized stealing.

Electric lights have reformed many of the lurking places of crimes in our cities. We need more electric lights of publicity, required by law, supplied and paid for in our newspapers as a matter both of public economy and individual security. There is no shame to come from publicity as to honest deeds. The public press is the most effective police and the most powerful agency for the prevention of wrong doing. Our school districts, cities and states would save millions, in the aggregate, by the publication of such full and frequent reports as have been indicated.

QUESTION BOX.

Address Charles A. King, Beverly, Mass.

M. M. R., Penn.—Will you kindly publish an article on color mixing? You published an article some time ago on the harmony of colors, but what I want is what colors to mix together to form another color.

We believe our correspondent will find it much cheaper and more satisfactory to buy his colors of some ink maker, unless he is too far from market. Small quantities of ink are put up in air-tight tubes and can be sent by mail, and kept indefinitely, especially if the tubes are put in an air-tight can or bottle. Home-mixed colors are not always successful and unless a person can mix up about the right quantity for the entire run it is difficult to guess at the proper shade, unless the ingredients are weighed, and most printers have no facilities for such tests. For making tints, white ink can be added to any color and it will reduce it, and you will be surprised to see how small a quantity of color is necessary to add to a quantity of white ink to produce a light shade. In mixing tints it is often necessary to add varnish or reducer or the ink will appear dull and transparent.

The amateur color mixer should confine himself to reducing colors until he has passed the experimental stage. It is very easy to make a green or blue or yellow lighter by adding white ink, but it is not easy to make a new color. The following information is given under the heading: "How to multiply colors," in a text-book, but the writer has never tested it:

Yellow and carmine mixed give..Vermillion
Carmine and blue .....Purple
Blue and black .....Deep blue
Carmine, yellow and black.....Brown
Yellow and blue .....Green
Yellow and black .....Bronze green
Yellow, blue and black.....Deep green

Lighter shade may be produced by adding white ink.

L. B. D., Mich.—I am having some trouble with blue ink worked on coated white stock; it seems to show white spots as the enclosed sample will exhibit. 2. Can you give me any information about getting a bronze effect with blue ink? Can I stir in bronze powder? 3. I am running a very dark cover with white ink but it does not appear to be real white—the printing looks dull and greasy.

1. The white specks are probably caused by the clay coating on the paper peeling off, although it should not, on first class stock, but some pressmen claim that blue causes coated paper to peel more than any other color. We suggest that the ink be thinned with a reducer which will not destroy the lustre of the ink, and suggest you try the following: Ether, four ounces; oil of cedar, four ounces; balsam of copaiba, eight ounces; kerosene oil, one pint. To this may be added a pint of turpentine, but it is not necessary. This dryer and reducer is good for any color of ink and is worth keeping on hand. Keep it well corked and shake before using. Do not apply to the can of ink but mix a small quantity at a time. It will dry on the rollers if left over night. Do not apply but a few drops to a spoonful of ink. If you can get some thick glass for mixing ink on you will keep it free from dirt and the glass can be easily washed before the ink dries.

2. Bronze inks can be purchased ready-made. Bronze powder can be mixed with ink, but to do it properly an ink-mill is necessary, and it is a very convenient article in a printing office away from ink-makers as often ink is improved by regrinding.

3. In printing with white ink the rollers should be new, rather hard and free from cuts or pores. It will improve the ink and make it look whiter to add a trifle of blue. If the run is not too long you can dust over the job after printing, with corn-starch, the same as you would use bronze. The writer realizes that in long runs these makeshifts will not be tolerated but sometimes a printer has a short run and can afford the time to go over his work a second time, for appearance sake. A second impression on heavy stock and with heavy type is an improvement if the register is perfect.

NEWSPAPER CRITICISMS

BY O. BYRON COPPER, DE SOTO, WIS.

Address all Communications for this Department to De Soto, Wis.

WE HAVE been thinking that it is perhaps a most fortunate thing that the patrons and readers and department editors of the NATIONAL-PRINTER-JOURNALIST, and especially of this department, are all printers, and that this magazine is gotten out much after the fashion of all other printed things, else its errors could not be so fully appreciated nor so easily overlooked. Now, whether it were due to our own faulty penmanship, an oversight of the compositor, or whether the proofreader were suffering from a mild attack of ophthalmia, that one of the defects in "legibility" in our "standard of perfection of advertisement composition," in the January number, should have appeared as "neatness of display," instead of "weakness of display," as we intended, is beyond our decision. We intended to mention this in last month's installment, as we did also many other things presented this month; but while we were busy writing the March department (as we supposed, having given up hopes of getting in on the February edition), there came an urgent call for "copy" from headquarters, so we gathered up the few loose sheets at hand and "fired" them in, without further preliminaries. Therefore, we take up with the Shelton (Neb.) *Clipper,* right where we left off last month.

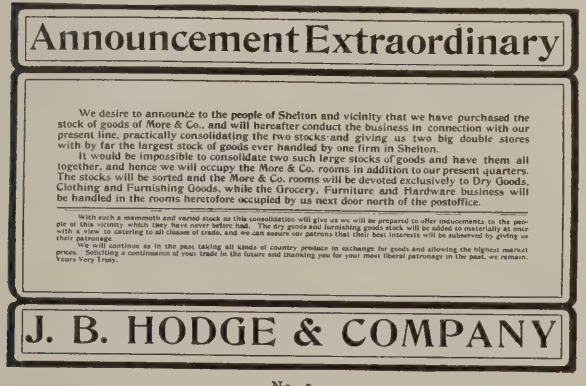
DECEMBER 2, 1904.

Mr. O. Byron Copper, De Soto, Wis.

DEAR SIR:—I am sending you by this mail, under separate cover, the two last issues of the *Clipper,* for your inspection and criticism. In reviewing the paper you should take into consideration the fact that it is published in a town that has a population of 861 (census of 1900) and it is not a county seat. No leniency, however, is expected on this account. Yours very truly,

F. D. REED.

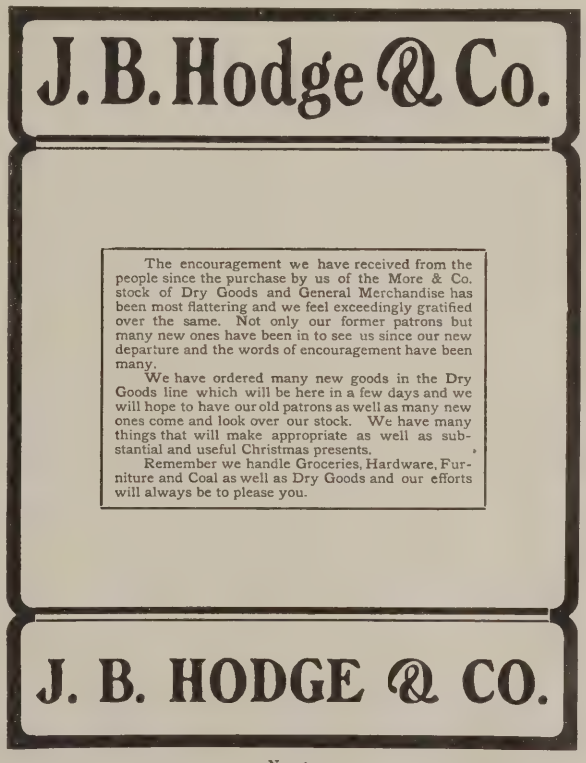
Despite the fact that Editor Reed's paper is not a county-seat product, but, rather, printed in a town of something less than a thousand population, there are many features about it that equals it with the "county-seat class"—yea, even surpasses them. The *Clipper* is made up of four six-column, home-printed pages and an equal number of patent pages.



Announcement Extraordinary
We desire to announce to the people of Shelton and vicinity that we have purchased the stock of goods of More & Co., and will hereafter conduct the business in connection with our present line, practically consolidating the two stocks and giving us two big double stores with by far the largest stock of goods ever handled by one firm in Shelton.
It would be impossible to consolidate two such large stocks of goods and have them all together, and hence we will occupy the More & Co. rooms in addition to our present quarters. The stocks will be sorted and the More & Co. rooms will be devoted exclusively to Dry Goods, Clothing and Furnishing Goods, while the Grocery, Furniture and Hardware business will be handled in the rooms heretofore occupied by us next door north of the postoffice.
With such a mammoth and varied stock as this consolidation will give us we will be prepared to offer inducements to the people of this vicinity which they have never before had. The dry goods and furnishing goods stock will be added to materially at once with a view to catering to all classes of trade, and we can assure our patrons that their best interests will be subserved by giving us their patronage.
We will continue as in the past taking all kinds of country produce in exchange for goods and allowing the highest market prices. Soliciting a continuance of your trade in the future and thanking you for your most liberal patronage in the past, we remain.
Yours Very Truly,
J. B. HODGE & COMPANY

No. 1.

It possesses an exceptionally good local news service, comprised in special headed articles and abundant "matters personal." A spicy editorial department is also maintained. The advertising patronage accorded this sheet is so liberal that, with only half the paper at the makeup's disposal, it is a puzzle to know what he would do with the displayed matter, if some of it were not inserted on the initial page. But we can see how arrangement of the ads could be greatly improved by making them up more systematically and less promiscuously. And we should think that a makeup's innate sense of good construction would naturally tend to make him place all larger ads at the bottom of the page, with all smaller ones at the top. Of course, we quite fully comprehend that "position" is frequently stipulated in the advertiser's contract,

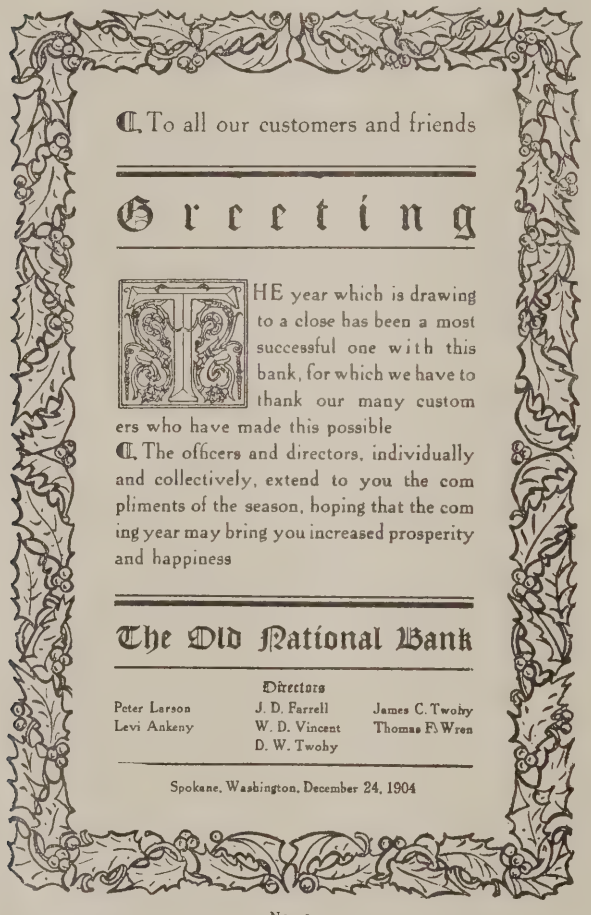


J.B. Hodge & Co.
The encouragement we have received from the people since the purchase by us of the More & Co. stock of Dry Goods and General Merchandise has been most flattering and we feel exceedingly gratified over the same. Not only our former patrons but many new ones have been in to see us since our new departure and the words of encouragement have been many.
We have ordered many new goods in the Dry Goods line which will be here in a few days and we will hope to have our old patrons as well as many new ones come and look over our stock. We have many things that will make appropriate as well as substantial and useful Christmas presents.
Remember we handle Groceries, Hardware, Furniture and Coal as well as Dry Goods and our efforts will always be to please you.
J. B. HODGE & CO.

No. 2.

but contrary to the foregoing presumption, it has been our observation that the tendency of makeups is to place the larger ads to the top of the column or page, with all smaller ones at the bottom. No rule of constructive ability can be advanced in defense of this plan and the excuse of endeavoring to favor the larger advertisers is at once inadequate and unfair. A big ad will show up far better at the bottom of the column than will a smaller one, and, moreover, a column made up with all the smaller ads at the top and larger ones at the bottom presents a far better proportioned and more balanced appearance, than one made up after the reverse style. Several of these ads in the *Clipper* are exceptionally well set. (Nos. 1 and 2.)

We recently got a letter from our friend, Stutes, late conductor of the department of "Review of Job Work"—Greenberg & Stutes, it is now, "Good Printers," at Spokane, Wash. "A letter," did we say? Well, not exactly; just a pretty envelope, containing a few printed things, but not a single scratch of the pen, nor of that invariable lead pencil of Mr. Stutes. There are two original and tasty cards and a mailing card (or something of that nature) which in its distinctly dainty and different aspect bears unmistakably the Stutes æsthetic touch. It says, in part: "Our productions have been copied by every printer's technical journal in the world, because the samples submitted possessed individuality." There is indeed an individuality—a distinctive character—about these Greenberg & Stutes samples, the same individuality that was so ably exploited by Mr. Stutes, from time to time, through this journal. There was also a newspaper ad (No. 3) in the envelope, which is not lacking in individuality, either,



¶ To all our customers and friends
Greeting
THE year which is drawing to a close has been a most successful one with this bank, for which we have to thank our many customers who have made this possible
¶ The officers and directors, individually and collectively, extend to you the compliments of the season, hoping that the coming year may bring you increased prosperity and happiness

perhaps, but not so highly commendable as the specimens of commercial printing, before mentioned. Coming at Christmas time, as it evidently did, this ad was seasonable in chosen material, well designed and well whited out. But there is a pronounced weakness about it—as the reader may see for himself. The lines in text are hardly suitable to advertising purposes, but the inappropriateness in this instance, for obvious reasons, is not so bad, after all. We beg to call attention to the double rule with the lighter line above. We are fully assured that this was quite intentional on the part of the compositor, nevertheless it is a practice which we never endorsed, simply because it looks decidedly "upside down." We once heard a compositor, on being asked by the foreman why he had employed rule thus, reply: "So's to do it different than any other duffer!" and this is perhaps the only reason "any other duffer" ever had. If in ad composition one's sole ambition were "to do it differently," why not then turn a line of type upside down? We do not know that this specimen is a product of the Greenberg & Stutes shop, but judging by the material employed in it, we would say it is.

Away last December Editor O. F. Craig, of Newark, Ark., sent us a number of copies of his publication for criticism, and we'll bet a dollar he's been "cussing" us and this department ever since. But we're going to try and square ourselves now. The Journal, as Editor Craig's paper is called, is a five-column quarto and entirely a product of the home office. The first thing we note is that between the editions of September and December a decided improvement was inaugurated in the shape of a heading of smaller Columbus caps and small caps, to take the place of huge Devinne caps and lower case. At each side of the present caption are neat little oblong "boxes" of rule, each containing these words: "All Printed at Home." The Newark *Journal* is an exceptionally neat publication. Every inch of the front page is given over exclusively to pure reading matter, always neatly arranged and frequently relieved with halftone illustrations. The makeup of the inner pages is generally as tasty, too, but in some instances some haphazardness is in evidence in the arrangement of the ads, due, no doubt, to the request of advertisers. We have said that the *Journal* was a quarto, but to make the description more accurate, let us add that it consists more properly of two folios pasted together in a most convenient manner. In the main the presswork is fair, and the ads, while not artistic, are plain and serviceable, being in most cases well whited out and legible. The news service is deserving of especial praise for its extent and abundance, and the editorial work is equally commendable. While the advertising patronage might be less, at a casual glance it would appear that Newark's business men and merchants hardly appreciated fully the strenuous efforts which their editor is making to give them a first-class local exponent—and the success with which those efforts are being crowned. However, as in the *Journal's* special New Year's edition (chiefly marked by an extra folio section) the merchants may be somewhat desultory in this matter, at times using a great deal more space than at others. We conclude with the impression, somehow or other, that Editor Craig is putting out a first-class little journal, and deserves a hearty slap on the back, and this department's congratulations.

Neche, N. D., Nov. 29, 1904.

Mr. O. Byron Copper, De Soto, Wis.

Dear Sir:—I am sending you today a number of ads set by the writer, and which have appeared in the *Chronotype* during the past few months, for review in your department of that excellent publication, the National Printer-Journalist.

Your department, "Newspaper Criticisms," has always been a favorite feature of the N. P.-J. to me, but of late the increasing number of North Dakota boys who are sending their work to you for criticism, makes it more than ever interesting. I remain,

Yours respectfully,

Rex H. Lampman.

By noting the date of the above-quoted favor it will readily be seen that here is another patron who may have been ruminating in more or less forceful terms of this department or its conductor, whom circumstances have made to appear guilty of neglect. Let our apology be a hastening to perform our duty. Our duty, in this instance, is to extend Mr. Lampman an abundance of praise as an exceptionally skillful ad-compositor. We have never had a more handsome budget of specimens submitted to our consideration, and the pleasure we have taken in their examination cannot be exaggerated. We have selected a few ads from these samples for reproduction herewith (Nos. 4, 5, 6, 7 and 8). Nos. 4 and 5 are both neat

exhibits, the former being considerably the better, both in point of economy and legibility. Specimen No. 6 is a masterpiece in point of design and general appearance. It possesses

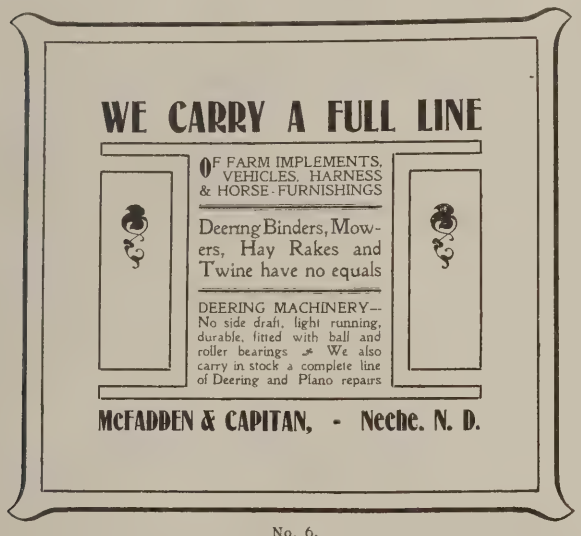
more than a little elaboration, however, which has taken time and material to execute, but in view of the beautiful effect, this can easily be forgiven. It is only in point of details that this example is imperfect. The first and most noticeable of these defects is an error cited and criticised by our contemporary, Mr. A. V. Fitzgerald, in his introductory department contained in the January number of the NATIONAL PRINTER-JOURNALIST; namely, the use of an initial letter in the middle of a statement. The black initial "O" rather detracts than adds to the aspect of the whole in this instance.

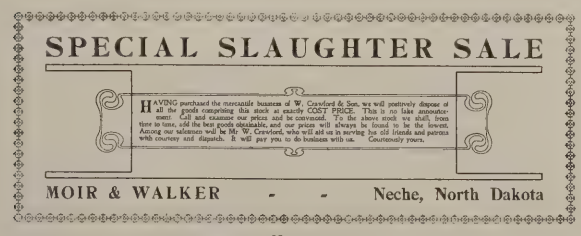


WE CARRY A FULL LINE
OF FARM IMPLEMENTS, VEHICLES, HARNESS & HORSE-FURNISHINGS
Deering Binders, Mowers, Hay Rakes and Twine have no equals
DEERING MACHINERY—No side draft, light running, durable, fitted with ball and roller bearings. We also carry in stock a complete line of Deering and Piano repairs
McFADDEN & CAPITAN, - Neche, N. D.

No. 6.

By studying these three lines a moment or two, now, no doubt, Mr. Lampman himself can see how, by the introduction of thin-spaces between letters, the initial letter might have been dispensed with and the square effect yet retained. The dash after "Deering Machinery" leaves an ugly notch in the lower "mass," which might also have been obviated by the use of copper thin-spaces. By having set the "Neche" in the closing line also in caps, like the firm name, and, if necessary, employing the abbreviation, "Dak.," for Dakota, a much more preferable line would have been the result.

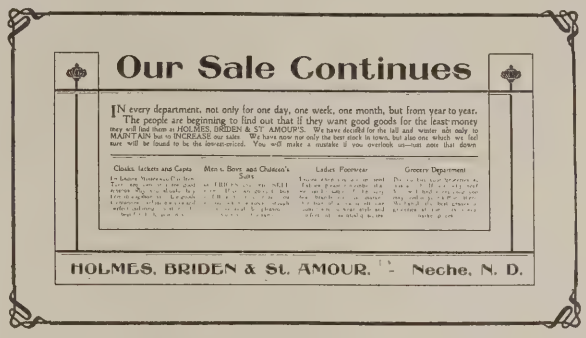
No. 7 is a fine, clean, handsome ad design with no marked



SPECIAL SLAUGHTER SALE
HAVING purchased the mercantile business of W. Crawford & Son, we will positively dispose of all the goods comprising this stock at exactly COST PRICE. This is no fake announcement. Call and examine our prices and be convinced. To the above stock we shall, from time to time, add the best goods obtainable, and our prices will always be found to be the lowest. Among our salesmen will be Mr W. Crawford, who will add us in serving his old friends and patrons with courtesy and dispatch. It will pay you to do business with us. Courteously yours.
MOIR & WALKER - - Neche, North Dakota

No. 7.

defects. In this instance the use of the initial letter is in good form, and it looks well, too; and the compositor has had the good taste and judgment to omit any punctuation after the firm name, the use of which, in our estimation, is quite superfluous in this particular scheme. No. 8 is a grand



Our Sale Continues
IN every department, not only for one day, one week, one month, but from year to year. The people are beginning to find out that if they want good goods for the least money may well find them at HOLMES, BRIDEN & ST. AMOUR'S. We have decided for the fall and winter not only to MAINTAIN but to INCREASE our sales. We have now not only the best stock in town, but also one which we feel sure will be found to be the lowest-priced. You will make a mistake if you overlook us—just once that down

piece of work, although the use of two sizes of Jenson in the upper central portion rather botches matters. The concluding line might also have been improved by following the instructions prescribed for the improvement of Specimen No. 6.

FAIRPORT, N. Y., Dec. 16, 1904.

Mr. O. Byron Copper, De Soto, Wis.

DEAR SIR:—We are sending you a copy of the *Mail's* Christmas number by this mail. There is nothing particularly remarkable about it, but we take pride in the fact that we print our own covers instead of buying them, as most papers do. The work on this edition, composition, presswork, and some soliciting for advertisements, was all done inside of three days and a half. We consider the work fairly good for this high pressure speed.

With the compliments of the season, we are, Respectfully yours,

WILL O. GREENE.

The Christmas number of the Monroe County *Mail* reached us in due season, and we should say Editor Greene has a right to take pride in his home-printed cover pages. This one is printed in three colors—red, green and black. The design has for a centerpiece a cut of "Christ Blessing Little Children," printed in black and encompassed by an outlined Christmas tree, jutted with candles, upon a field of bright red, the whole enclosed within a six-point rule in black, forming a panel which occupies the largest portion of the page.

No. 9.

Above this is a smaller panel run in black over the red tint, which contains the title, date, etc. Around these panels, then, is an appropriate border in green, representing clusters of holly, and outside of this is a six-point rule in red, which encompasses the entire page. Withal, this home-printed cover page, while perhaps a trifle glaring in its abundance of bright red, is quite as attractive and wholly as artistic as the ready-printed kind. The presswork and register on the copy before us is good. This special number consists of sixteen pages, including cover. There doesn't seem to be anything special in way of contents, although foreign, national, state, county and local news is given in abundance. One excellent feature, which always adds immensely to the character and quality of any sheet, is a well-conducted editorial page. This edition, exclusive of the cover page, contained ninety columns of space and over 50 per cent of this space is used by the local merchants and business men, in displayed advertising of their Christmas wares, which speaks more flatteringly of them and

their town than could be penned in the same amount of paper by the most brilliant writer. Mr. Greene does not say how many people were employed in getting out this edition, but, in case of a limited force, three days for all the work enumerated in the preceding letter, is indeed "high pressure." Nothing particularly original or artistic is attempted by the ad compositor on this sheet, but all his efforts are strictly clear, well displayed, well balanced effects. We show an unique heading which appears over the local news columns (No. 9).

DELPHOS, OHIO, Dec. 14, 1904.

Mr. O. Byron Copper, De Soto, Wis.

DEAR SIR:—We enclose herewith a sample of a circular letter and folder, which we have just mailed to ladies in this vicinity, whom we believe might use the articles advertised. We should be pleased to hear from you through the NATIONAL PRINTER-JOURNALIST what you think of the idea and the way we have carried it out.

Thanking you in advance for the favor and wishing you a merry Christmas and a happy New Year, I remain, Very respectfully,

CARL A. JETTINGER.

There can be no question that these things rightfully belong to the department of "More Work Through Publicity," where they would have met with the expert opinion of one who makes advertising his business; but, since we have held this matter so long, we will now venture a few remarks ourselves. The four-page folder of soft gray stock is entitled "Just a Reminder," and on the third page there is a pointed talk on the excellent equipment of the *Kleeblatt* office, which is shown up forcibly as one of the best reasons why it merits patronage, since with good materials, good work can be done. This idea of stamping upon the public mind the fact of the printing office's advantages is, in our opinion, an excellent advertising scheme. This folder is in red and black and very neatly executed throughout. We have written somewhat at length in former installments on the importance of print-shop publicity, and we are pleased to see that Brother Jettinger appreciates its importance, too. The circular letter and folder referred to in the above letter were indeed first-class holiday advertising for an office doing the grade of work executed by the *Kleeblatt* Press, namely, engraved and printed visiting cards, society stationery, etc. The letter engraved in a plain vertical text appeared upon regular society stationery with an embossed monogram at the top. It went on to say that "few people give a thought to printing offices when thinking of holiday gifts," notwithstanding that the printer and engraver supply many useful and attractive articles suitable for that purpose. Then attention is called to the accompanying circular, which contained a list of the holiday gifts for 1904, which the *Kleeblatt* Press could furnish. On the second page were the proper sizes for visiting cards for ladies and gentlemen, outlined in music face rule, and furnishing also an excellent opportunity for the exploitation of the different specimens of type faces used in that class of work. On the following page was a complete "stationery etiquette," stating just what is proper for all people on all occasions, closing with the "clincher" that "stationery is correct if you get it from the *Kleeblatt* office." The circular closed with reproduced specimens of alphabets and monograms, together with descriptive matter and prices. We will conclude by repeating that this circular letter and folder looks like a good, thorough advertisement, and we doubt not that many extra jobs resulted from its circulation.

KEWANEE, ILL., Jan. 21, 1905.

Mr. O. Byron Copper, De Soto, Wis.

DEAR SIR:—I am sending you two copies of our daily of this week and also two issues of our weekly. These are taken at random and are only an average of what we are getting out all of the time. I am also enclosing little booklet which we have just issued, and shall be pleased to have your criticism on the whole business. Yours truly,

KEWANEE PTG. & PUB. CO. (WILL CURTIS).

Prior to entering upon a review of these papers it might be well to introduce to the reader a few facts concerning the city of Kewanee, Illinois, and the Daily and Weekly *Star Courier,* gained by a perusal of the booklet mentioned above. The city contains a population of 16,000 souls approximately, and is undoubtedly a progressive and prosperous town. The *Star-Courier* is published from a fine new home of its own, "located on one of the principal streets of the city, and in appointment and arrangement the building is pronounced by experts to be ideal for newspaper work." The paper is printed on a $6,500 Duplex perfecting press with a capacity of 6,500 papers printed, pasted and folded in one hour. The office is equally well supplied with accessories, as the product plainly shows. A battery of two Mergenthaler linotype machines are kept running day and night. Seven individual electric motors furnish power for the presses, paper cutter, wire stitcher, elevator and linotypes. The daily circulation of the *Star-Courier* was, in January 3,250 copies, which, on the established basis of five members in each family, comes pretty near putting one copy daily into each home in Kewanee. The booklet which accompanied these pages is a fine piece of half-tone printing and furnishes one with an accurate idea of the ideal conditions under which the *Star-Courier* is produced, containing seven 5x7 half-tones of the *Star-Courier's* delivery boys, the newspaper press, linotype battery, business office, ad and job composing rooms, and press room. The Daily *Star-Courier* is a clean, neat, unsensational seven-column quarto, fortunate in an excellent news service and good editorial work. It is well printed, well made up and well patronized by local advertisers. The ad compositor has an abundance of good, serviceable material at his disposal, therefore his work is neat, full of force, and readable. He evidently has no time to kill, else does not believe in "killing time," hence his ads are all simple, metropolitan examples. The *Weekly Star-Courier,* with a guaranteed circulation of 1,350 copies, is the same in size as the daily edition, only it is supplemented with a folio ready-printed section, entirely free from advertising matter. The weekly has all the good features noted in our examination of the daily, and we must not fail to commend the keen and wholesome editorial columns. The ads in this retain the same healthy strength and boldness noted in those of the daily, and on the whole we must pronounce this publication one of the best specimens of modern newspaper making with which we have ever been greeted. Our concluding wish is that it may continue to prosper, and apprise this department, from time to time, of its new achievements.

SUGAR GROVE, PA., Dec. 1, 1904.

Mr. O. Byron Copper, De Soto, Wis.

MY DEAR SIR:—The enclosed piece of printing is a proof of an ad that appeared in this week's *Record.* I am sending it to you because it did some good work for us. Before running it in the paper we struck off about 100 copies on the heavy glazed paper and distributed them to prospective advertisers and followed them up with a marked copy of the paper, and received good results from it. I am, Sincerely yours,

GEORGE E. LANGDON.

Editor Langdon is another printer, then, who has found out that it pays even to advertise your advertising space. No. 10 is a reproduction of the ad which "did some good work." Just an ordinary ad it is, too, with some fair advertising talk in it, and rather a bright scheme, but nothing extra as to design and typographical effect. It is a printed thought, however, and thought reduced to type on paper loses none of its subtle hypnotic powers over humanity. It catches the human eye, catches the human mind, and then, if the "suggestion" be good and strong, it catches human patronage which after all was the main objective point.

Let people know about your stock of Christmas goods and you will make money by it.

No. 10.

HENDRICKS, MINN., Jan. 6, 1905.

Mr. O. Byron Copper, De Soto, Wis.

DEAR SIR:—Permit me to send a copy of the *Pioneer* to you for your criticism. The *Pioneer* is printed on a Washington hand-press. The work is all done by myself and an apprentice. I take an interest in your department. Yours truly,

C. P. SONNICHSEN.

The Hendricks *Pioneer* is the regulation six-column quarto on ready-prints. On an average the merchants and business men of Hendricks use ten columns of the Pioneer's advertising space, which isn't bad support. The paper's news departments are quite complete and creditable and the editor's work fair, although the somewhat brief, jerky style is not pleasing.

No. 11.

Those who thoroughly understand the manipulation of a Washington handpress can produce printing not equaled by the latter day inventions, and Editor Sonnichsen evidently knows something about it. The *Pioneer* is in its sixth volume and it is rather a surprise that its publisher has not yet reached that stage of prosperity admitting of the installation of a more modern printing machine. If Mr. Sonnichsen has been a regular reader of this department for any length of time, he must anticipate our condemnation of those displayed advertisements on the first page. Now, don't ask despairingly, "How can they be removed?" Remember that "Where there's a will, there's a way"—something all of us printers have had demonstrated more than once. Neither do we commend the practice of running ads adjacent to each other without advertising rules between them. The *Pioneer's* makeup is neat and correct and its advertisement composition of that quality which cannot be "roasted." This (No. 11) is an ad something on the "Bowman order," and we think quite superior to the ordinary in its artistic simplicity. To have set the three lines in Bold Roman, thus:

STOCK IS LARGER
AND BETTER THAN EVER BEFORE
COME IN AND SEE

and then have allowed less space between the two last lines would have been the means of greatly improving the whole design. The work of getting out such a paper as the *Pioneer* is a handful for one man and an apprentice, indeed, despite the fact that some plate is used.

COLLEGEVILLE, MINN., Dec. 3, 1904.

Mr. O. Byron Copper, De Soto, Wis.

DEAR SIR:—Many thanks for the good advices given me in the N. P.-J. When I saw the criticisms about my "attempt" in Ad Contest No. 2, I felt as a "little god in France." At present, however, I am an unhappy man. Through my own negligence I failed to see the announcement of Ad Contest No. 3, and when at last I stumbled over it, it was exactly Nov. 30. You may imagine my chagrin and how often I pulled both my ears. Since there was heard a soft murmur about "not one ad without a border," I submit such an unhappy borderless creature. If impossible to let these ads play their part in contest, kindly criticise same in your esteemed column. If this can't be done, let them land in any waste-basket 'round your neighborhood.

Wishing you and the N. P.-J. all possible success, Respectfully,

A. NADOLSKI.

This is another matter which circumstances quite beyond our control have prevented us attending to before now. It is always a pleasure to us to learn that we have, in a small way, been able to benefit our fellow craftsmen, and we are sorry, too, that compositor Nadolski missed our last ad-setting contest. His contributions (Nos. 12 and 13) however, will now

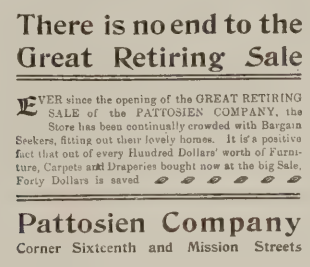
be considered thoroughly, that his efforts may not be counted as lost. Here is the score according to our Standard of Perfection:

STANDARD SCORE.

Ad Number	12	13	20	21	22
Design	5	8	10	10	10
Display	9	7	9	9½	10
Typography	9	9	10	9½	9½
White Space	9	10	10	10	10
Artistic Treatment	7	8	10	10	10
Harmony	10	10	10	9½	10
Economy	10	9	10	8½	9
Legibility	7	10	10	9½	9½
Originality	7	6	9½	9½	10
Details	8	8	9½	9	9
Total	81	85	98	95	97

In design, No. 12, we find, is chiefly defective, with its present styles, in the fact of its lack of a border (as our friend, Roy B. Child, of Florida, recommends). There is just one style of composition which we can "stomach" at all borderless, and that is the flush, or squared, style. (No. 14.) If, however, it is thought impracticable to make all lines full, as in this example, by all means in setting a borderless ad, see to it that at least the top and bottom lines are flush. No ad could well be more economically composed than is this No. 12, and the whole thing is strictly harmonious, therefore we have accorded it the mark of perfection in these two branches. Only slight cuts have been made in display, typography and white space, for, while we have always heartily condemned texts as advertisement letters, yet in this particular instance we can

see its appropriateness. This specimen gets its heavy cuts in artistic treatment, originality and legibility, and the deficiency in these branches is easily discerned. The failure to have centered all individual lines and masses accounts for the cut of two points in details. Unlike Specimen No. 12, No. 13's "strength lies not in its weakness," for its weakness of display is its greatest fault. There is nothing especially praise-exciting in its design, either, although this is not so bad. Typography is good, and white space excellent. The ad is not bad as to artistic treatment and it is perfectly harmonious, the types and border agreeing well. No extravagance of time or material is suggested and the whole thing is most easily read, hence both economy and legibility get flattering marks.



There is no end to the

Pattosien Company
Corner Sixteenth and Mission Streets

No .14.

Originality does not play a prominent part in this design, still we have given it all the benefits of the possible doubt, and credited it with six points. The omission of several punctuation points, where their appearance is necessary to the sense, and the substitution of the world "list" for "line," necessitates a cut in details. We have previously intimated the weakness of the display and wish to strengthen the remark by a repetition. How much better this specimen, No. 13, would have looked, and how much more valuable it would have been as an advertisement, had the principal displayed lines appeared in a blacker, bolder and even a larger face!

NECHE, N. D., Dec. 24, 1904.

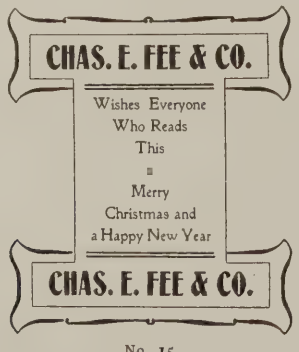
Mr. O. Byron Copper, De Soto, Wis.

DEAR SIR:—I am sending you a copy of today's issue of the *Chronotype* for criticism in your department of the NATIONAL PRINTER-JOURNALIST.

I wish you a most merry Christmas and a happy and prosperous New Year. Yours truly,

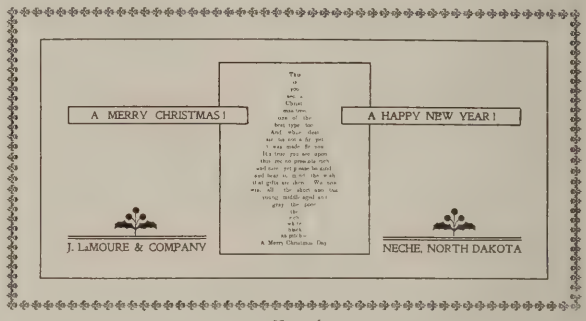
REX H. LAMPMAN.

This is rather a late date for the acknowledgment of Christmas and New Year wishes, nevertheless that's what we offer you now, Brother Lampman. This copy of the *Chronotype* was a pleasure to scrutinize. Copious evidences of an artist's hands beamed out upon us from every page. Everything about this sheet is just about right. To be sure, there



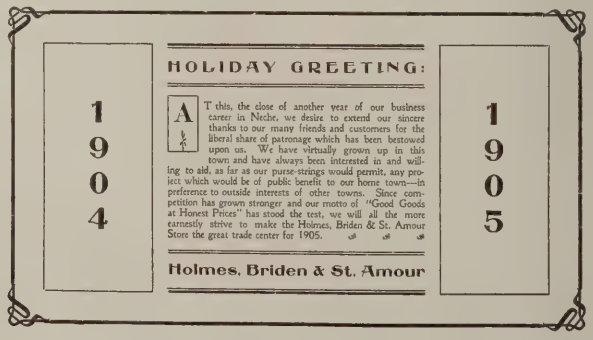
No. 15.

is displayed advertising matter on the introductory page, but even that is æsthetic in this instance, since the displayed matter in the *Chronotype* is more than an ordinary ad—it is really an ornament to the page. One can see that those who get up this paper "love their work," if such a thing be possible. There is a breeziness—a brightness—a freshness—about the Neche *Chronotype* that is enviable. Even the name is pleasing and out of the ordinary. The contents are first class and the editorial work "bully." Press work and makeup measure up to high standards and the ad composition, as models of high art and masterful workmanship are difficult to excel. (Nos. 15, 16 and 17.) Who ever saw a more perfect type picture than is represented in exhibit No. 15? What more suggestive design could be conceived? An hour glass, suggesting fleeting time—a New Year's wish—the old passing out—the new



No. 16.

gliding in. Look, then, at Example No. 16. Another veritable picture, equally appropriate, fully as suggestive, scoring, no doubt, a hundred points. But, in vain do we mortals look for perfection—even in the typographical productions of the *Chronotype* compositor! No. 17 proves his Waterloo, as it were, and brings down upon his head the first uncomplimentary comment from the critic. Everything in the main is all right—everything but the initial, which is too high and too far away from the type. Too bad that such little things practically spoil an otherwise handsome result. Another commendable feature (or is it commendable?) which we observe in this paper is the use of poems, neatly and conspicuously framed in central positions of the pages. One is by Rex H. Lampman himself, entitled "Peace on Earth"—very good and quite seasonable. Somewhat defective, metrically, in places, but so is that of some of the old masters. We like poetry, but the question arises again, "Is its use in country papers commendable?" Now, we believe it all depends upon the community to which the sheet is catering. Original poetry, written by the editor himself, if he be poetically inclined, or by really talented local bards or bardesses, in any community is certainly more or less appreciated by a large per cent of the readers; but there is an unpleasant experience liable to arise from its use, which is, that the editor may, in a short time, be pestered to death with "poems" written and submitted *for*



1904
HOLIDAY GREETING:
AT this, the close of another year of our business career in Neche, we desire to extend our sincere thanks to our many friends and customers for the liberal share of patronage which has been bestowed upon us. We have virtually grown up in this town and have always been interested in and willing to aid, as far as our purse-strings would permit, any project which would be of public benefit to our home town—in preference to outside interests of other towns. Since competition has grown stronger and our motto of "Good Goods at Honest Prices" has stood the test, we will all the more earnestly strive to make the Holmes, Briden & St. Amour Store the great trade center for 1905.

publication—not for the editor's consideration, mind you—by people illiterate, ignorant, untalented—destitute in fact of e'en the primary rudiments of prosody. These manuscripts may be decidedly distasteful to the well-meaning pen-pusher.

but the ignorant old duffers who submit them are subscribers—good subscribers, too. The country editor, therefore, cannot exercise his prerogative with immunity, as can the more fortunate scribe further up the ladder of editorial importance. This is the dilemma which confronts him: If he accept the manuscript he is assured of the would-be poet's support and subscription for life, together with his everlasting friendship; but, if he reject it, all this will be lost—and where is the country editor who can afford to throw away a subscriber, or sacrifice a friend?

OAKLAND, CALIF., Jan. 21, 1905.

O. Byron Copper, De Soto, Wis.

DEAR SIR:—Please find under separate cover ad specimens of mine from the *Enquirer*. I would send you a paper instead of the enclosed clipping, but the stereotyper got hurt and the new ones put the plates on the "bum" and I am ashamed of the result.

I feel indeed complimented by such flattering remarks in the N. P.-J. and the *Enquirer*, which have stimulated me to a greater effort each day, you criticised my ad very fairly, as indeed you did all the others. I heartily agree with you that the last specimens were much superior in every respect than former ones.

The ad specimens I send you are nothing out of the ordinary—just the general run of work we do here. They are all rush jobs. If you care to criticise them, all right; if not, all right.

What I desired to state in my other letter, but knowing you would be rushed, was this:

I see quite often the case where the first three or four words of a sentence are used as a display line, and then follows the next word, with an initial letter.

Then another case is taking part of a sentence and putting it in a panel. My idea is that only complete thoughts or sentences should be panelled. I don't always observe the rule, but strictly speaking, and technically, I am against it. I thank you for your kind criticism and may you and the N. P.-J. prosper. Sincerely yours,

1367 11th St. W. H. HOOKER.

P. S.—Since writing you concerning the initial I see that your co-worker, Mr. A. V. Fitzgerald, answers it exactly. W. H. H.

Accompanying this letter and the ads was a clipping from the *Enquirer*—a complete quotation of our review of Mr. Hooker's contribution to our late ad-setting contest and various original complimentary remarks anent their ad man's skill, all of which we are sure he quite deserves. It is gratifying to note the modern trend of employers toward giving their employes public praise. It is, too, one of the most sensible things that could be done, as it stimulates the workman to more earnest efforts, and thereby the benefit returns at last to the employer. We are glad that Mr. Hooker was satisfied with the judgments rendered in Contest No. 3, and assure him that it ever has been, and ever will be, the primary aim and object of this department, to benefit, if possible, with earnest, impartial reviews, in which both good and bad

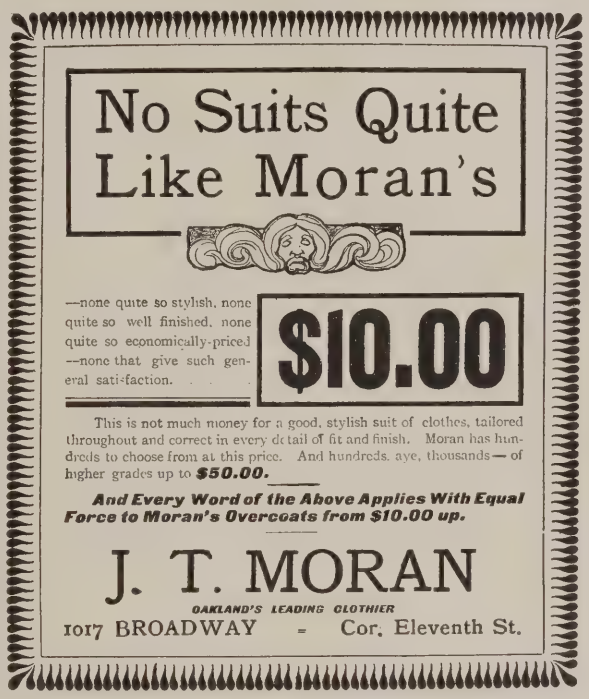
No. 18.

features are considered, as we believe it is only thus that justice can be done; for a critique given solely to the citation and deprecation of blunders and errors, is not superlatively elevating any more than is one which is devoted wholly to extolling the laudable points, without regard to mistakes. Most assuredly, Brother Hooker, will we criticise the ad specimens which you send us; that's what we're here for—and as some printer said—"not by chance, but by choice." Of course, what you get is but the individual opinions of a worker like yourself, whose fingers that pen these words are not, by any means, strangers to ink and print-shop dust; and who, we are free to confess, could possibly learn a great many things from those who patronize these columns, just as they may possibly learn from the few remarks which we reproduce here each month. You know what the sainted Lincoln said: "I don't think much of a man who does not know more today than he did yesterday." These remarks of ours, however, are backed up by a few year's of experience and a whole lot of hard study—and that reminds us of something our learned Chief says in his February "Editorial Notes and Points:" "People like to know of the people whose writings they read," which is merely human. Therefore, if we can get everything "cleaned up" in this installment, next month we may inflict upon our faithful readers a bit of personality, which we hope to make acceptable. But our introduction grows too lengthy, hence, to the ads—to the ads! If specimens Nos. 18 and 19 are not specially selected, but merely represent "the general run of work" on the *Enquirer*, then that publication's displayed columns are all right. No. 18 we consider a very neat specimen, but we cannot say that the inversion of the double rule at the bottom improved matters at all, in this instance. We have spoken elsewhere concerning this practice of turning rules upside down, and we wish to supplement those remarks with the statement that in some cases (e. g., where two rules are run over and under a central isolated mass, and very near the type), the lower rule may properly be inverted. And this is just about the only fault we have with specimen 19. There should, however, in this example, have been more white space intervening between the type and the panelled piece to the right. The whole is beautifully designed, especially well displayed, and neatly spaced and whited out. The rules extending up to the ornament used as a tailpiece in the upper panel should have joined with that ornament, if possible. If it were mounted on a wood base, then the shoulder should have been cut away sufficiently to admit of closer proximity between cut



No Suits Quite Like Moran's
—none quite so stylish, none quite so well finished, none quite so economically-priced —none that give such general satisfaction.
$10.00
This is not much money for a good, stylish suit of clothes, tailored throughout and correct in every detail of fit and finish. Moran has hundreds to choose from at this price. And hundreds, aye, thousands — of higher grades up to $50.00.
And Every Word of the Above Applies With Equal Force to Moran's Overcoats from $10.00 up.

1017 BROADWAY - Cor. Eleventh St.

No. 19.

and rules. These small matters, perhaps, do not count for much in ad composition, but one cannot be too neat and careful in anything. We fully endorse the sentiment about panels, as voiced in the foregoing missive and in Brother Fitzgerald's January department, although, like Compositor Hooker, we must plead guilty to occasional violations.

We have another letter from friend Hooker, of later date, which we quote as follows:

OAKLAND, CAL., Jan. 27, 1905.

Mr. O. Byron Copper, De Soto, Wis.

DEAR SIR:—Please find enclosed three proofs of an ad set in our office, by myself and two other ad men. If not asking too much of you, would like for you to give short criticism of each and grade them as to points. Would be pleased to hear from you by correspondence at your earliest convenience. I wish to thank you for your good words in the N. P.-J., about my "M. Balm" ad. Very truly yours,

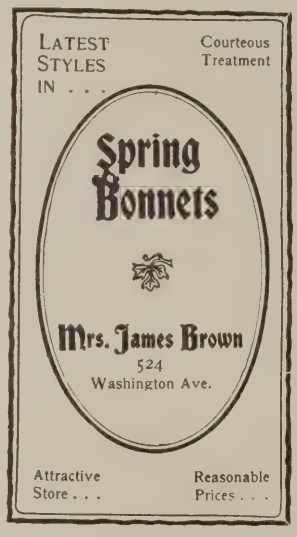
W. H. HOOKER.

Compositor Hooker has come at this in the proper way, having left no mark on either one of these examples to denote by whom it was created, thus leaving us at liberty to go ahead with our judgment unprejudiced. And with these three specimens (Nos. 20, 21 and 22) which at a glance are almost equal in excellence, he sets for us by no means an easy task—but a pleasant one, however. By reference to the foregoing standard score, the strong, as well as the weak, points of these ads, and their relative goodness, may readily be ascertained. These scores of 95 points for No. 21, 97 points for No. 22 and 98 points for No. 20, are based on the following conclusions:

No. 20.

No. 20—We have considered this exhibit perfect in seven branches, as indicated in the score. The design is neat and simple; the type plain and easily read; the white space tastefully and abundantly distributed; artistic treatment strong; harmony absolute, and the whole scheme perfectly economical. In cutting for defects, we found it necessary to deduct but two points. First, the display is a trifle weak, it being much better to have set "Spring Bonnets" in a size larger type, even if a more condensed face were necessarily employed. The design lacks a trifle of being strictly original in the true sense of that term—but, for that matter, "there's nothing new under the sun," anyway. It seems to us that the periods at either side of the line at the top are superfluous, hence the half point out in details. Technically this is at least a point the best specimen in the trio.

No. 21—This example's extreme virtues are its unique design, exemplary "high lights" and æsthetic arrangement. The display is somewhat stronger than that of No. 20, yet it is scarcely perfect, and the use of this text-like letter (strange how these names of different type faces escape occasionally from a fellow's memory!) with the old style Roman can hardly be said to give a perfect typographical effect, and also causes similar small cuts in harmony and legibility. We consider this design about equal with No. 20 in point of originality, lacking but a trifle of excellence. But once in our lives were we called upon to set type matter within a brass rule oval, and that one experience taught us that there is little economy connected with it, and we presume that was what was employed in this specimen, hence the deduction in that respect. As to details we believe better balance, and a more finished aspect would have resulted had "Latest Styles in" occupied but two lines and of the same size Roman as that appearing in each corner. The shorter lines in these squibs should have been centered under the longer ones, to give the best effect, and the address within the lower portion of the oval might have appeared better in three lines, with "Ave." centered below "Washington."



No. 21.

No. 22.

No. 22—We should at a casual glance have chosen this specimen as the best of the trio, and even placed under the "X-Rayish" influence of our Standard of Perfection, it falls but one point short of being as good as the best—No. 20. This Bradley text, or whatever it is, is just a trifle less legible than Roman, hence the small out on typography, and the delicate rule work and panelling necessitates a heavier cut for enonomy. We have already alluded to the slight illegibility of this particular letter, which causes the half-point deduction on legibility. As to details, the paramount defect in this example was the failure to have centered all shorter lines under or over the longer ones. This ad, you will note, is composed throughout of "couplets," and just imagine how much more pleasing and better balanced these would have appeared if arranged as suggested above—"prices" centered under "reasonable," "store" under "attractive," and "spring" centered over "Bonnets." Unless we had a proof for comparison we could not say definitely whether or not it would have improved this design to have omitted the three vertical pendants, leaving a trifle less space between the last two lines and have placed a three and one-point rule just over them with eight or ten points space intervening. The ad, in excellence of display and originality exceeds that of the other two; and it is considered perfect also as regards design, white space and harmony. In conclusion it must be added that these "triplets" are each and all high-grade productions, which speaks well for the California *Enquirer's* ad men who have competed in this "three-handed, home-made" contest of their own. No doubt,

Brother Hooker, but that correspondence between you and ourselves would result in much mutual pleasure and profit, but unfortunately our time is so thoroughly taken up with every-day duties, that we find it quite impracticable—if not impossible—to correspond even with our own relation, hence several such courteous invitations as yours are reluctantly—but necessarily—"turned down." We wish you success, however, and will be pleased to hear from you at any time.

COLLEGE VIEW, NEB., Feb. 7, 1905.

Mr. O. Byron Copper, De Soto, Wis.

DEAR SIR:—I send you, under separate cover, copy of two new publications that began to sway the world (?) Jan. 1, 1905. We are responsible for the printing and typography and that's all. Any criticism will be acceptable. Your department in the N. P.-J. is of great benefit to us. Yours sincerely,

UNION COLLEGE PRESS (M. E. ELLIS, MGR.).

Very sorry, Mr. Ellis, that we cannot brag much on these magazines, typographically. It seems that your compositors lack taste and modern ideas, for in the main the material is worthy of better results. However, in some instances neat effects are produced, for example, the cover page of *The Educational Messenger* of the issue of January 15th, ult., is neat and tasty, as is also the "Hallett" ad in the same publication, which, by the way, is the only displayed product worth praising. Presswork on both publications is good and the general styles, headings, makeup, etc., are usually neat and all right. We note a general change in the *Messenger* between the issues of January 1st and the 15th, and must say the latter edition is much the better, although we rather like the plan of initial letters on long articles, as in the former. We trust this changing of styles is not practiced regularly in the publication of this magazine, for it would seem proper to choose a plain, neat style of typography and maintain it throughout the year at least. We were pained to observe some uneven spacing in several of the heads in *The Western Horizon,* and would discuss further the interesting subject of getting out a magazine, typographically right, but noting the length of these columns and the yet huge pile of periodicals beside us, to curtail our remarks seems incumbent.

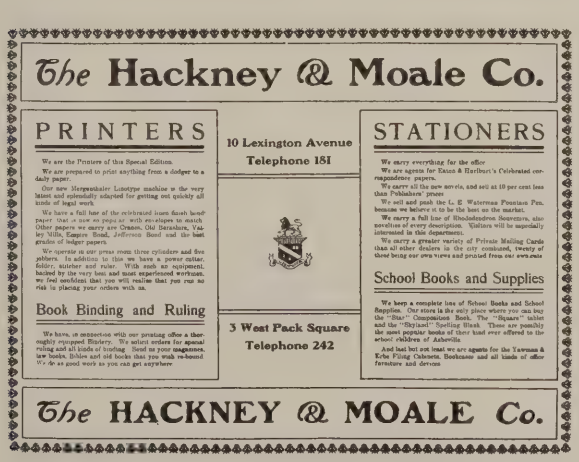
ASHVILLE, N. C., Feb. 6, 1905.

Mr. O. Byron Copper, De Soto, Wis.

DEAR SIR:—Enclosed you will find a couple of proofs of ads of my recent composition, which I wish you to criticise. The large half-page ad of Hackney & Moale Co., was for a special edition of a local paper, and we always set our own ads.

I was well pleased with the result of Ad Setting Contest No. 3, and will make an effort to land first place in contest No. 4. As ever, Fraternally yours,

H. C. HULL.



No. 23.

Dear Mr. Hull, we cannot criticise these ads—not adversely, at least. The large half-page Hackney & Moale ad (No. 23) is "just about as good as we could have done ourselves," which ought to be encouraging to one anticipating a fourth ad-setting contest. There are just two little suggestions which we might offer: The addresses and telephone numbers should have occupied a central position between the head and tail panels and the parallel rules above and below the centerpiece; and we do not like the "Co." in the Plymouth Italic, in the last line. Otherwise the ad is a beauty!

Filipino Freeman, Igorrote Center, P. I.—This is evidently an advertising joke perpetrated by the Inland Type Foundry of St. Louis, as a means of exploiting their various excellent faces for display and straight matter. The folio is dated "Sunday morning, 1904," contains many laughable articles, and its ads are rich burlesques. There is a long article anent "The *Freeman's* New Dress," which, it says, has been imported from the Inland at St. Louis, with an impended regret that the illustrations are not equally up-to-date. And those cuts would "make a dog laugh!" They are all built "a la Filipino," and figure conspicuously in both the "news columns" and the ads. One ad which struck us as most funny was the parody on the Victor Talking Machine trade mark. A homely stub-tailed canine sits gazing dejectedly at an ungainly bottle of "Head Hunter Rye" and beneath the picture are these words: "His Master's Vice." "Cascaroots—they ferment while you snooze," "Ebony Soap—it sinks," "Pale Pills for Pantless People." are a few of the ad-burlesques. If this is, as we have taken it, an advertising scheme, it may have been a good one, although we believe that a more serious effort in the shape of a newspaper, correct in every detail, and, say, replete throughout with information of importance to the printing craft, together, perhaps, with selected gems and proverbs and a number of ads set after the highest grade styles, would have been a far more perfect advertising vehicle.

White River Journal, Kent, Wash.—This weekly is published every Saturday, on good calandered stock, by O. M. Moore, editor and proprietor. It is rather an original and commendable publication. The columns differ in width—some being thirteen and others twenty ems. No column rules are used, and withal the *Journal* resembles more nearly a maga-

No. 24.

zine than a newspaper, although it is in reality a weekly newspaper. There are brains, enterprise and a thorough knowledge of modern ideas manifested in this sheet, and all mechanical departments savor of that "excellence which is Washington." Half-tone illustrations render the bright pages brighter, and in one issue where a large shipment of cream is recorded, the compositor has been called upon to illustrate the event, as shown in reproduction No. 24. This sheet is loyal to its home, democratic in politics and is worthy of success.

Enterprise, Elsmore, Kan.—Foreman H. F. Broadbent sends us a copy of this representative of Allen county. It is a five-column folio, with full page insert, printed from plates. Can see no excuse for the displayed matter on front page, however; a great deal of care and neatness in the make-up is conspicuous. The practice of beginning each column with a sub-headed head is bad form. Every other column begun with a heading is the better way. Press work is good, and ad composition fair, news features complete and editorial work praiseworthy in its staunchness. Jesse P. Decker is editor and proprietor.

Register, Stanton, Neb.—A cute little four-column octavo, about which, with the exception of contents and the clean front page, unfortunately, there isn't much to brag. The use of so many different faces in the dress merits imprecatory comment. The presswork is uneven, some pages being heavy, others faint, and the ad composition unmistakably shows evidences of carelessness. Little pages like these ought to be the easiest things in the world to make look handsome, notwithstanding there is a deplorable lack of artistic treatment about some of these. For instance, in the introductory page, the intermingling of the Cushing Old Style, or Monitone, with the Modern Roman face, is unadvisable and must certainly prove a nuisance in distribution; and the heading, "Local," within the box-heading of two different faces of rule and one end knocked in several points, are some of the evidences of slovenliness which prevent perfection. Make up the page exclusively of one type face and place a neat nonpareil border around the department heading, for which a longer caption—"News of the Week," or something like that—should be chosen and set in a smaller, neater face, say twelve-point Jenson caps. These are all the remarks we have room for this month, but if the *Register's* mechanical force will brush up their gray matter and study the pages of their paper closely, they will discover their errors, and, by incorporating suggestions offered regularly in the trade journals, finally be fully able to overcome them all and produce one of the neatest little weeklies in the state of Nebraska.

Star, Owensville, Ind.—This department has been favored with two copies of this periodical, which possesses several praiseworthy features. The regular edition consists of a five-column quarto, has a good news service, and a fair advertising patronage. Editorial work reflects credit upon Editor and Publisher James P. Cox, and his associate, J. R. Strickland. Presswork is excellent and ad composition very attractive. Makeup is all right. In the issue of Nov. 5 we note many unique displayed ads, occupying spaces of from three-inch-double up to a full half-page and all reading, "Vote for So-and-so for this office, and So-and-So for that," which is an excellent thing, as all men who believe in typographical suggestion and mental photography will admit. And these ads, set, for instance, in eight and twelve-line letters, furnish a forceful hint, and show, at least, that the candidate appreciates the value of printers' ink. Heads, when they are followed by pyramid sub-heads, look better if made to occupy a full line, especially where a large, bold, condensed letter is employed, as in this sheet.

The Pocatello (Idaho) *Advance,* Washington (N. J.) *Star,* Bronx Borough *Record and Times,* Tri-County (Bussey, Ia.) Press, Carrollton (Ill.) *Patriot,* Chinook (Mont.) *Opinion,* Springview (Neb.) *Herald* and The Thief River Falls (Minn.) *Review* were among those live, progressive and enterprising publications which came out with special holiday editions, last Christmas time, and honored this department with sample copies. The Tri-County *Press* consists of a quarto and folio section of the regular six-column size, enclosed within an enameled cream cover, with a tasty type cover page in red and green—strictly home-made. Another home-made product is the Christmas edition of The Thief River Falls *Review,* consisting of three six-column quarto sections, on good white stock, illuminated in green and red, and a four-column quarto section of pink stock. We haven't space to venture a complete review of the excellent contents, the enormous amount of advertising, and the high-grade treatment accorded every department—it would all be a long string of praise, anyhow. The Springview *Herald's* Christmas number was bound in a heavy cover of white, printed in black from an electro. The presswork appeared defective but contents and advertisement composition merit commendation. The Washington *Star* and Chinook *Opinion* both wore beautiful lithographed covers, that of the former being especially handsome. The contents and typographical aspect of both these papers are immaculate, and to do them justice by way of description and review would require a volume. The holiday issue of the Pocatello *Advance* was also attired in picturesque colored cover, and was equally commendable as to contents and mechanical get-up. The Carrollton *Patriot* and Bronx Borough *Record and Times* were gotten out more on the magazine style, as fully described in our last month's installment. Their excellence could not be exaggerated, and we only regret that we have not an entire National Printer-Journalist in which to review them. The *Patriot* is entirely a product of the "home-office" and in itself is a great compliment to that establishment, as indeed is also this edition of the *Record and Times* a compliment to its creators and The Bedell Press, of New York City. The latter is a poetical number, each lefthand page containing a seasonable poem, while the page on the right holds the ads—all high-grade specimens, typographically. The cover design of the *Record and Times* is artistically made up of half-tone reproductions of Bronx local views, while that of the *Patriot* is very unique—being a large group of babies—half-tone reproductions of real photographs. Down in the right-hand corner is an expectant little male trio waiting for Santa, no doubt, while in the center of the page within a red circle, eight inches in diameter, is the main group. At the "northwest" corner of the sphere one little boy with his back toward you penetrates the circle, and stretching away up between the two words of the paper's title is another group of little ones. This number of the *Patriot* fitly dedicates a new dress of Century Expanded, which is now being used in the regular editions of this progressive publication.

Following is a list of the papers which have been received, and which will be given notice in our next installment: *North Star,* New Richland, Minn.; *Herald,* Harvard, Ill.; *Kansan,* Concordia, Kan.; *Times,* Canal Winchester, Ohio; *Enterprise,* Waxahachie, Tex.; *Evening Sentinel,* Sedalia, Mo.; *Messenger,* Neponset, Ill.; *Nonpareil,* Central City, Neb.; *Frontier,* O'Neill, Neb.; *Teller,* Lewiston, Idaho; *Evening Tribune,* Fremont, Neb.; *Daily Gazette,* Stillwater, Minn.; *Breeze,* Bolivar, N. Y.; *Sunbeam,* Wood River, Neb. Patrons will kindly examine this list and, if their publication is not included herein, they will know that, if they sent us a copy thereof, same has become lost in its transmission through the mails, in which event another copy should be forwarded. Furthermore, should the contributors of any of the above-listed publications desire that a later edition should be reviewed, they are at perfect liberty to mail us another copy.

O. Byron Copper.

This necessity of great publicity may not have existed in new, sparsely-settled, simply-conducted States, with few industries conducted wholly by individuals who knew and dealt personally one with the other, but in a populous Nation with complex business agencies, it has become indispensable.

Next to protection of the people as to officials and expenditures, comes matters touching sanitation and education. We believe in a law that requires the publication of the ingredients of every so-called medicine that is offered on the market. This should extend also to foods and liquors.

THE PLACE OF

THE TWENTIETH ANNUAL CONVENTION

THE NATIONAL EDITORIAL ASSOCIATION

JUNE 6-7-8, 1905.

A VISIT BY THE EDITOR.

IT WAS on January 18th that the editor of this paper reached Guthrie, Okla., by the Santa Fe Railway. That the city proved a pleasing surprise will be fully realized by all who view the illustrations contained in this article. These halftones are from excellent photographs and tell most truthfully of the wonderful accomplishments in a city that is only fifteen years old. In handsome residences, public buildings and business blocks, there are many prosperous cities of equal and even greater population fifty years old that cannot present the like. The location is on high rolling land commanding splendid views and furnishing many sightly locations for beautiful homes, schools, churches, library and other public buildings.

It is beautiful for situation and what the architect and builder have added is well exemplified in our illustrations. Guthrie received her first citizens April 22, 1889. All before this was undisturbed nature, with hills and vales, prairies and streams rejoicing in the wild beauty with which they came from the formative, modeling Hand of the Creator. Today elegant homes for which Guthrie is already famous, temples and schools, business houses and factories, cover the beautiful sites, adding life and all the humanities to the beauties furnished by nature.

During our visit to Guthrie the legislature was in session and attendance on a banquet given by the Governor to the members, and a visit to King Fisher with the Territorial Officers and Legislators and other prominent citizens and participating in a banquet, and speeches in honor of the completion of the raising of the first hundred thousand dollars endowment for the King Fisher College, afforded excellent opportunities to meet, and to learn the views of, the leading men from all over the Territory who are laying the foundations of this new commonwealth. These foundations are being laid deep in education and intelligence, and these men, from every part of the Territory, bore testimony to the rapid advancement in all the schools everywhere, from the common to the High and Normal Schools and the State University and the Agricultural and Mechanical College. At the Governor's banquet the representatives from every section gave abundant testimony as to the resources and advantages and rapid progress of every section.

At the King Fisher College banquet, spread in the auditorium room of one of the three college buildings—the Secretary of the Territory who has charge of the Public School Lands, the Superintendent of Public Instruction, the United States Attorney of the Territory, leading educators and divines bore evidence as to the high ideals and hopes of the people.

Every State of the Union is represented in Oklahoma by enterprising, intelligent citizens. The King Fisher College is a Congregational school, the foundations of which were laid at the very commencement of settlement through the zeal of Rev. Parker, a missionary and minister, ably seconded by others, and that this institution has been built up, supported and endowed by private subscriptions and enterprise, speaks volumes for the wise public spirit of the citizens, and this is but one among other such colleges, notably the Epworth College at Oklahoma City, in which both the M. E. Church South and North have aided. "May this school be a harbinger of the reuniting of that great denomination, which certainly should not much longer be divided by sectional lines. Besides these, there are the Oklahoma Baptist College at Blackwell, and Oklahoma Presbyterian Academy at New Kirk, and a private Military Academy at Oklahoma City.

But the Territorial institutions are the especial care and pride of the people.

Opera House and Hotel Royal.

Place of Meeting and Headquarters N. E. A., June 6-7-8, 1905.

The State institutions are controlled by boards appointed by the Governor. They consist of the University at Norman, the Agricultural and Mechanical College at Stillwater, the Central State Normal at Edmond, the Northwestern State Normal at Alva, the Southwestern State Normal at Weatherford, the University Preparatory School at Tonkawa, and the Colored Agricultural and Normal University at Langston.

The course of study is so arranged that the pupil may begin his education in the most distant district school and may graduate at any State institution. The last legislature made provision for the establishment of kindergartens in the cities of the first class.

The secondary schools of the Territory consist of the University Preparatory School at Tonkawa, the preparatory school in connection with the University, the Agricultural and Mechanical college at Stillwater, the normal schools, the Logan County high school, and about forty high schools in various cities. These schools are quite up to the standard. Most of them offer a four-year course which articulates with Eastern universities. The past year has observed a marked development in the number and efficiency of schools offering courses in secondary education.

We give this resumé of the schools from the excellent report of School Superintendent L. W. Baxter, first, as indicating the great progress made.

It would be pleasing to dwell at some length on each of the Territorial institutions, but only two illustrations can be given of their efficiency and designs. In speaking of the Central Normal School the Governor says in his message to the Legislature, on January 10th, 1905:

The total enrollment for 1903-1904, including normal and training department, was 852.

At the beginning of the present term, steps were taken to establish a manual training department.

In speaking of the Agricultural College, he said:

The Agricultural and Mechanical College of Oklahoma, while not neglecting the culture features of education, makes a special effort to qualify students to *do things* in life, and emphasizes the demands of the day for an industrial education.

An education which does not contemplate the practical things is incomplete.

The student should not only be taught to *think*, but should be taught to *do*.

More prominently than ever before, the requirements of existing conditions point to this idea as a distinctive feature in our educational work.

From the report of Director John Fields we find that the agricultural experiment station covers a wide field of useful and practical work. Its great importance to the farmers is strikingly established by the fact that only one other experimental station in the United States exceeds that of this station, in this new Territory, in the amount of correspondence through which the farmers are kept fully informed. In many Territorial institutions many of the students work their way through, taking the complete courses of study, by teaching and other employment.

The University of Oklahoma has the following buildings, all heated by steam: University Hall, Science Hall, Library, Gymnasium, a Women's Gymnasium, Workshops, Anatomical laboratory and heating plant; but what interested us most was a statement as to the grounds, as indicating the kind of improvements being made elsewhere throughout the Territory:

The University campus, comprising 60 acres, lies at a slight elevation overlooking the surrounding country, one mile south of the business portion of the town. The grounds have been divided into six quadrangular plots, with drives. Four of these quadrangles will be given over to the buildings, one to athletics, and one is unassigned at present. In each square the buildings will be grouped eventually around an open court.

Eleven years ago the boulevard was set out in elm trees. From the first they made remarkable growth and are now of a size to make the drive one of the most attractive in Oklahoma. Since then other large plantings have been made, for the most part elm and ash trees. During the present season it is proposed to continue the work by planting 5,000 elm, pecan, persimmon, cedar, and other trees, together with shrubs and hedges. It is the desire of the University management to make the grounds as attractive as possible in themselves, as well as a fit setting for the buildings.

The unity of purpose manifested by all, as we visited the different Territorial offices at Guthrie, and the wise zeal everywhere apparent were most pleasing as giving promise of the greater things in the future. We were particularly interested in the work of the Board of Agriculture, where there are such varied and inexhaustable agricultural resources—in a land where all crops, from cotton to wheat, thrive and yield an unsurpassed abundance and all varieties of fruits and vegetables flourish.

This Board, besides doing an independent work, holding farmers' institutes, collecting an agricultural library, sending out information on soils, grains, grasses, irrigation, drainage and all other farm matters, actively aids and forwards all existing agricultural and horticultural societies.

It was, however, in the Governor's report to the Secretary of the Interior, and in his annual message to the Legislature that we found an inexhaustable fund of information.

Governor Ferguson's able report naturally opens with a brief history and description of the districts of the "Land of the Fair God," or, interpreting the common Indian vernacular, aside from the beautiful traditions made known by Gen. Lew Wallace in his wonderful book—the "Beautiful Land."

Nothing can be more profitable or pleasing to the editors of the United States, who are to visit this region than the following brief resumé of history, pioneer grit and zeal and resulting progress:

Oklahoma, the last commonwealth born of the Louisiana purchase, was taken from a part of this "Indian empire." That portion of the Indian Territory which embraced Oklahoma had been ceded to the Creek and Seminole Indians when they were brought west in 1834, but they had ceded it back to the Government in 1866. The Government had declared its purpose to settle friendly Indians upon the lands acquired by the treaty of 1866. As no Indians were placed upon the lands in the Oklahoma country, and they remained for years occupied only by herds of cattle, an irresistible crusade was commenced to induce Congress to open the country to settlement, the contention being that these lands were a part of the public domain.

After years of incessant and persistent effort, the goal was reached and the people won. The lands were opened to settlement. Bishop W. Perkins, Congressman from Kansas, just before the adjournment of Congress in the spring of 1889, attached to the Indian appropriation bill a "rider" which provided for opening to settlement the Oklahoma country.

Then, on the 22d of April, 1889, came the great race for homes. Never before in the history of States or Nations was a commonwealth peopled under more novel or romantic circumstances. During all of the struggle that preceded the opening it was the same old-time story. The spirit of resolution and determination that has in all ages characterized the march of the pioneer was manifested. But victory had come. It was the victory of the common people. The squatter sovereign had come to exercise his authority upon his own domain. It was his. It was his by right of conquest—conquest over all obstacles, conquest over delay, privation and uncertainty, and conquest over all the forces that had combined to thwart him in his plans to establish a home and build a commonwealth.

* * * * *

Who were the people by whom fair Oklahoma was rescued from the wilds and brought within the confines of civilization? They were not adventurers in quest of spoils, or mere seekers for whatever thing of interest the novel drama might produce, but they were pioneers in the true sense. They came to find a place to found that greatest of all institutions, the home. It is true that the major portion of them brought but little with them, for they possessed but little. They did bring with them a kind of riches more precious than gold—good character, hopeful hearts, clear heads, and strong hands. They were destined victors. Soon after the opening the dugout, the sod house, and the unpretentious prairie cottage appeared in countless numbers all over the new land.

It is true that there were not many luxuries in those humble homes. There were hard times experienced. In those homes were hope and faith—hope in the future and faith in their own efforts to succeed.

But all this was years ago. The hand of magic—the magic of American industry and courage—touched the dugout, the sod house, and the prairie cottage and transformed them into splendid homes. They have followed the spirit of the age and expanded. They are homes in which can today be found just as many of the comforts of life, just as much refinement, just as much taste, and just as much culture, as can be found in any of the older commonwealths. No place in the world contains more happy, prosperous homes, according to population, than Oklahoma.

Oklahoma is, as has been suggested, the youngest child of that splendid family of commonwealths bequeathed to our Nation by the Louisiana purchase, but while last she is not least, not least in moral, intellectual, and material development, not least in the diversity and greatness of her resources.

Oklahoma is the midway of the Continent. She is the central point between the East and the West, as well as the point where the North and the South meet and shake the hand of friendship. Her people are from all parts of the Union—every State and Territory is represented. The energy and progressive spirit from all the States manifest themselves in Oklahoma. Her products are the products of the entire country. Upon a single farm in our splendid Territory can be seen growing at the same time the products that grow in the States from Minnesota to Florida, and from Maine to California. Again, Oklahoma is an agricultural country. Her wheat, cotton, corn and other farm products are unsurpassed in quantity and quality. The Oklahoma fruit is a marvel to fruit growers all over the country. In no part of the United States can fruit be raised more extensively and of better quality than in Oklahoma. This year, as in the past, our fields have been filled with golden grain and our orchards with delicious fruit.

VIEWS AT GUTHRIE, OKLAHOMA.

In days gone by the Spaniard searched for gold on the soil of our Territory. Tradition says that he did not find it. The Oklahoma farmer is coining the gold that the Spaniard failed to find—coining it from the soil.

"LAND OF THE FAIR GOD."

In the historic land of the Montezumas, while he toils and hopes, the Mexican Indian dreams of the day when the Fair God will return and restore his people to the glory of the days when, according to tradition, they lived in a land where happiness was the only ambition and righteousness the only law.

To the imaginative mind of the child of old Mexico, the Fair God of the ancient Aztecs was a god of perfection and beauty. Wherever he journeyed, by a touch of his magic hand, the sterile places became gardens of beauty; vice gave way to virtue; despair vanished into hope; sorrow was changed to joy, and death surrendered to life. The Fair God was the embodiment of the good. Nothing evil could remain in the domain over which he reigned, nor could aught but beauty dwell in the land through which he passed.

No doubt that he had this pleasing Mexican tradition in mind when Milton W. Reynolds, a distinguished journalist who once accompanied Henry M. Stanley across the American Continent, stood on a beautiful prairie in Oklahoma on the morning after the first opening, looking at the magnificence of the scene before him, enraptured and thrilled by the transcendent beauty of the picture presented by the verdant prairie in its springtime mantle of unrivaled loveliness, and exclaimed, "The Land of the Fair God." Milton Reynolds rests beneath the soil of the land to which he applied the above significant term, but Oklahoma still continues to be, and will continue to be called, very appropriately, too, the "Land of the Fair God."

One of Guthrie's Churches.

A Guthrie Residence.

Oklahoma has a magnificent public school fund estimated at some $20,000,000 and consisting, principally of nearly two million acres of unsold school lands from which rents are being now received for the support of the schools. Oklahoma is essentially an agricultural commonwealth. Over seventy-one per cent of its population are engaged in this wonderfully productive occupation, with a climate on the whole approaching that of "Sunny Tennessee," and, in many sections, permitting the raising two of certain lines of crops in a year.

Oklahoma has extensive salt plains and vast deposits of gypsum, both in rock and dirt sufficient to supply a large number of cement mills for hundreds of years. The Territory is traversed by the Wichita Mountains, rising to 3,000 feet in height and in these mountains are many mining districts, and building stone of great value is found in abundance in several portions of the State. Especially is this the case in Greer County, where great fields of granite are found, that consist of high and massive mountains. There is such an abundance above ground as to supply the granite-using world for centuries. The quality is the very best. The greater portion is solid red granite, pronounced by experts to be the equal of the celebrated Peterhead Red Scotch granite and equally adapted for monumental and building purposes. The Oklahoma granite may be quarried in great blocks, which adds much to its monetary value as well as increases its desirability for building purposes.

Petroleum oil and natural gas are found in several parts of the Territory. For a number of years crude oil has been known to exist in the region of the Wichita Mountains, and considerable development has been carried on in this region in the vicinity of Granite, Hobart, and Lawton. The oil is found at depths varying from less than 100 feet to about 500 feet, producing an asphaltum oil.

The Indian Territory, now added to Oklahoma, abounds in minerals and the two combined will make one of the richest mineral States in the Union, probably equaling Missouri. Coal is found and rich veins are said to very nearly equal in value the famed Anthracite of Pennsylvania. Streams abound and the rainfall varies from twenty to thirty inches per annum, so that irrigation is not necessary or even desirable, except in the extreme western portion of the State, where irrigation might profitably be made to supplement the rainfall and a part of the Government irrigation reclamation to which Oklahoma has contributed could be more profitably expended there than elsewhere, as less would be required to produce immensely profitable results and to guard against droughts. Oklahoma has a wealth of alluvial river valleys, some of which are subject to innundation in seasons of flood and some of this wealth of waters should be stored against the coming of the day of need on the western farms of this rich region. Timber abounds plentifully along many of the streams and eighty varieties have been reported including oak, walnut, elm, cottonwood, hickory and cedar. Oklahoma cedar has been shipped to Europe and especially used for the manufacture of pencils, and logs of "curled walnut," with a peculiar grain adapted to the manufacture of furniture and ornaments have been shipped East and sold at fabulous prices.

So much for a brief glance at this Territory of varied scenery and resources in which the editors will find much of great interest and beauty. Now to return to Guthrie, the capital city, centrally located in the united Territories and abounding in men of enterprise, in wealth of resources and railroads. It might be well to remark that there is not a county in the Territory that has not its railroad line, notwithstanding the fact that there still remain in the Territory 2,095,477 acres of unoccupied public lands.

For three days during our stay in Guthrie, members of the Masonic fraternity were at work in the great Masonic Temple —one of the most attractive, costly and complete in furnishing in all the great Southwest, conferring the Scottish Right degrees. The membership reaches twelve hundred and the attendance and interest taken showed Guthrie to be the great

SOME OF GUTHRIE'S PUBLIC BUILDINGS.

fraternal center of this whole region. The other orders are fully represented. It is as the capital, the political center, and the men who devote themselves to governmental affairs and politics are able and influential. The Birthday Issue of the Oklahoma *State Capital,* on April 22, 1904, said what is true and evident to every observing visitor:

Education and wide reading has lent to the people of Guthrie a distinct literary and scientific bent, and the private homes are all prominent for the excellence of their libraries and the number of patrons for the public library.

Social matters in Guthrie receive that careful attention which marks the city's refined people, the centers of erudition and culture. Many delightful homes here afford ample opportunity for lavish entertaining, and the social season in Guthrie is never dull.

The residence streets are beautiful lanes of forest trees—all grown since the town was opened, fifteen years ago—and the arid prairie of then is a garden and fairy landscape of now. Neatly painted cottages and massive brick and stone residences dot the green of perfect lawns here, and the roses and honeysuckles clamber in fragrant verdure about the galleries and windows for more than half the year.

Picking Cotton in Oklahoma.

Guthrie has the proud distinction of having the first and only County High School in the Territory—the Logan County High School. Right here we want to stop to remark that Oklahoma has not only provided for County High Schools but for the uniting of adjoining school districts in the building and maintaining graded schools. It is beginning in all its educational advantages at the very highest point reached by any of the most advanced States of the Union. Guthrie is the seat of two most interesting benevolent institutions, the Oklahoma Sanitarium and a School for the Deaf and Dumb.

Guthrie is the social center of Oklahoma and the number of social and literary clubs and the membership therein is not exceeded by any other city in the United States of anywhere near its size.

The *State Capital* properly devoted two full pages of its great Birthday issue to an account of twelve of these clubs and excellent portraits of twenty of Guthrie's brilliant cultured, intellectual and beautiful women, holding offices therein. One important club is known as the City Federation, formed for the purpose of uniting the efforts of the various clubs in the common object of making better homes and a better city. One movement put on foot was the inducing of the school children of the city under the eighth grade to plant and cultivate flowers at their homes. The result is likely to be that Guthrie will be known as the "Flower City."

Guthrie is the County Seat of Logan County, one of the richest counties in the State, that is celebrated for its good roads and, as evidence, built sixty substantial bridges last year.

Guthrie has eight railroads—the Santa Fe, Rock Island, 'Frisco, Katy, Fort Smith and Western, Denver, Enid and Gulf, and the St. Louis and Elreno.

The taxable valuation of Logan County for 1904 is $5,033,760.

Guthrie has two daily papers—the Oklahoma *State Capital,* a morning paper, and the Oklahoma *Daily Leader,* an evening paper. Mr. F. H. Greer is at the head of the morning paper and Senator Niblack, of the Territorial Council, of the evening paper.

Weekly.—Guthrie: *State Capital,* Oklahoma *Leader,* Oklahoma *Farmer, Register, Guide, Southwest World, Searchlight.*

Monthly.—Guthrie: Oklahoma *Churchman,* Oklahoma *Medical Journal, Practical Pointers.*

Guthrie is traversed by the Cottonwood river and built on the gentle plateau arising on either side, giving the place splendid surface drainage. Another stream, the Cimarron, passes within a mile, to the North. The water supply is excellent and with the natural, perfect drainage, the sanitary conditions are unexcelled.

The whole County of Logan is well watered. It would be difficult to find a hundred acres without good, living water.

It is the great peach-growing county of the Territory. There is plenty of timber for domestic purposes and an abundance of an excellent grade of building stone and also building sand in large quantities. It is a fertile agricultural, fruit-growing and stock-raising section and here the Alberta peach reaches the highest perfection. The county has millions of peach trees and over 50,000 already in bearing, and next in importance comes the apple and the cherry. The editors will see the orchards and the grain fields at their best.

Guthrie has six miles of vitrified brick paving; perfect sanitary sewerage system, costing $65,000; 50 miles of brick and cement sidewalk; fire department, consisting of three well-equipped stations and the most perfect waterworks system in Oklahoma Territory, costing over $100,000; $150,000 gas plant; two telephone systems.

There are forty manufacturing establishments, covering twenty separate and distinct industries.

There are twenty wholesale houses, handling eleven lines of goods.

Churches.—Seventeen buildings. Practically all denominations are represented.

Schools.—Six city school buildings and one county high school building, the first in the Territory; Catholic convent, the largest and best equipped business college in the southwest, and a conservatory of arts and music.

Railroads.—Guthrie has eight railways, and the ninth building.

Banks.—Guthrie has four banks, with a total deposit of $1,800,000.

A pretty good showing for a city of fifteen years' growth and yet improvements are being made so rapidly, that the editors will find many things to add by the time of their visit in June.

The Masonic Temple cost $65,000, Public Library $40,000, City Hall $55,000, and Government Building $100,000.

The Guthrie *State Capital* has one of the finest and best-equipped newspaper buildings in the West, but this deserves and will receive a separate article.

One of the pleasing sights at Guthrie is the Highland Fruit Farm, the country home of Gen. J. C. Jamison, located one mile west of the city and containing two thousand fruit trees. One of the potent factors in the development of the city is, and has been, the Guthrie Commercial Club. It has been wisely said that "a town is what the business men make it," and the business men of Guthrie have united from the first in making Guthrie great, and all new comers, investors and visitors welcome. The Commercial Club has been and is officered by men of Territorial and National importance, among the officers having been an Attorney General, a Gov-

ernor, a Chief Justice and many of the foremost professional and business men of Oklahoma.

The members of the National Editorial Association will have the pleasure of meeting and becoming acquainted with the officers, committees and members of this Club.

The club has the entire upper floor of 111 West Oklahoma Ave., and has a large reading room, business office, stenographer's office, and billiard and pool room fully equipped. An agricultural display is kept in the rooms, showing the resources of Logan county and this display attracts a great deal of attention from visitors from all over the world. The club has furnished from this exhibit samples to go to England, Ireland, Russia and Germany. These samples were given to representatives of these nations sent for the purpose of securing information in regard to Oklahoma.

The Club issues complimentary cards to visitors from points outside of Logan county and Oklahoma Territory giving them the privileges of the rooms for the year. These cards are eagerly sought after and at all times a throng of visitors will be found in the reading room and billiard parlor, representatives of all States and Nations.

In this article we have been compelled to confine ourself to a mere outline of what we witnessed and learned during our brief visit. We think that enough has been told to show that there is much worth seeing and learning in this new commonwealth and in its capital city, Guthrie, that started with the advantage of the experience and knowledge of all the other commonwealths and cities back of them, reached through from a half a century to two centuries of development in this free land of opportunity and unequalled resources.

101 RANCH—OKLAHOMA.

Editors to be Entertained—Celebration of Dissolution of Tribal Relations of the Indians—And the Disappearance of the Cow Boys—Buffalo Chase, Rounding Up and Roping of Cattle—Sham Battles—2,000 Indians, 500 Cowboys and 500 U. S. Troops to Participate. Barbecue of Buffalo Meat and Great Banquet for Editors Tables to be Spread for One Thousand—Members of the N. E. A. and Editors of Oklahoma, Indian Territory and Kansas as Guests of the Miller Brothers.

ONE of the most interesting places visited during the short stay of the editor of this paper in Oklahoma was the far-famed "101 Ranch." Arriving, with Committeeman Prouty at Bliss, a station of the Santa Fe Line, on the border of the 101 Ranch, a carriage, in waiting, was taken to the Mansion House, a distant view of which is given herewith. It was reached after a six-miles' drive across the beautiful prairie. The house is three stories in height and built after the Southern style, with broad verandas and great, airy rooms, so constructed as to be thrown together affording free circulation of the air and enticing shade and coolness in warm weather. In the parlor is a magnificent old-style brick fireplace, and everything is arranged and furnished for luxury and comfort.

Distant View of Mansion House, 101 Ranch.

We were first ushered into the Ranch office and then into the parlor, where we were welcomed by Mrs. Miller, the mother of the Miller boys, a stately, white-headed Kentucky lady, who gave us a most hospitable greeting. The sons had unavoidably been called away on account of settlement with Indians by the Government over lands that had been sold. Household duties requiring Mrs. Miller's supervision, we were made at home with papers, magazines and books for a couple of hours until the young men arrived, when dinner, presided over by the venerable mother, was served by colored waiters, making us feel that we were certainly in the Southland. A twenty-four-pound turkey, rich, white and juicy, was the piece de resistance at the head of the table and was quickly carved by Mr. J. C. Miller, as the head of the family. After an enjoyment of the sumptuous repast, enlivened by conversation, with incidents as to the Ranch and as to the life of the Indians, some of whom had been paying a visit and awaiting the arrival of the Messrs. Miller, while a squaw and children waited in a light wagon outside. The squaws always accompany the men, but do not enter the house. On this occasion the dusky colored wife and mother, wrapped in blankets, sat in stolid indifference outside while the "big Indian" contentedly smoked a long, wooden-stemmed pipe within.

Conversation followed the dinner. The Ranch was opened many years ago by Mr. Miller, the father, now deceased, while still living in Kansas. It now contains eighty-seven thousand acres of land and is farmed after the manner of smaller farms, with a diversity of crops, only on a larger scale. Wheat, corn, oats and other cereals, and vegetables, are raised, and also horses, mules, hogs, cattle and poultry. Some twenty thousand head of cattle are marketed each year, and a hundred thousand bushels of wheat and so on. Near the Mansion House are lodging houses, a kitchen and mess rooms, for the men, barns, sheds and other buildings. This is the headquarters but there are, necessarily, other living houses and centers for storing products and feeding stock scattered over the Ranch at convenient points.

Buffalo being Fattened for the Editor's Feast.

Later in the afternoon a drive was taken over to the Indian agency and Indian school, some three miles away, but the editors are to see for themselves, besides, a gentleman connected with the Indian Agency, and who thoroughly knows the country and has viewed such sports—only on a smaller scale—as are to be given for the delight of the editors, has kindly furnished a description for the pages of the NATIONAL PRINTER-JOURNALIST, that will be vastly more accurate and informing than could be given by us after a one-day's visit as

delightful as that proved. After the drive a very delightful evening meal was enjoyed and one incident connected therewith showed most impressively how closely the whole world has been brought in touch by modern improvements. Mr. J. C. Miller, seated at the head of the table, had by his plate a telephone receiver, and as he conversed with those present, would stop to respond to a call over the 'phone.

At one time it was a message from a Station, nine miles away, with regard to cars for the shipment of carloads of fat cattle, for which he had been arranging. Then one of his nearest neighbors, some six miles away, informed him that their little child, who was sick, was better, and he told the gratifying news to his mother. There were four of these brief aside conversations over the wire during the half hour or so at the table. They have a long-distance telephone and can sit in the dining-room or office and talk with people in Chicago. Then there is a daily mail delivery so that, though miles away from the nearest neighbor, they are as near through these agencies for conversation and securing the daily news as though in the center of a great city. We noticed, on the reading table, four or five daily and a great number of weekly papers and magazines; the parlor also contains a fine piano. In the third story is a billiard room.

We enjoyed a look at some splendid fat cattle ready for shipment and one of the great buffaloes—a picture of which is given herewith—that is being especially fed to afford a feast for the editors.

The next morning, a drive of nine miles across the prairie, behind a team of four splendid Oklahoma mules, brought us to another Station on the Santa Fe, from whence we took the cars to Oklahoma City.

Famous Joe Miller and National Committeeman Prouty, in Feathers and War-paint, Rounding up the National Editors at 101 Ranch.

Now, a few words as to the entertainment, and then we will step aside for the more informing article of our Oklahoma friend, who, by the way, is from Chicago. The entertainment will be given at Bliss Station, on the edge of the Ranch. The occasion is to be made, as noted in our caption, to celebrate—in honor of the knowledge-gathering editors—the dissolution of the tribal relations of the Indians and the disappearance of the cowboys from Oklahoma.

All concerned are entering with zest into the plan. Consent has been obtained from the Government for the detail of soldiers from two forts, and the Indians are alive to the greatness of the event. Two thousand members of the tribes of the Poncas, Otoes, Kaws, Osages, Cheyennes, Arapahoes, Tonkawas, Pawnees, Omahas and Comanches are expected to participate. These will arrive the day before and will be living in their teepees in the genuine Indian style, on the arrival of the editors, so that true aboriginal life can be seen. This will be no make-believe, but the genuine thing—the Indians on their native heath—as may be gathered from our illustrations taken upon the occasion of the installation of an Indian chief last year, and more fully described in our contributed article. Five hundred U. S. Regular soldiers will be in camp and five hundred cowboys on the grounds. The entertainment will commence with the buffalo chase and the roping of cattle and "the killing" for the barbecue. Then will follow sham battles between the troops, and the Indians, and cowboys and Indians, then the feast, followed by the round-up of two thousand cattle from the prairie, Indian dances, etc., etc. All that is to be seen and enjoyed is told as follows by J. Harrison Lewis, who, while connected with the Indian Agency, is somewhat of a newspaper man himself and a writer on the Bliss *Breeze:*

One Hundred and Forty-two Reapers Harvesting Wheat on 101 Ranch.

NATIONAL EDITORIAL CONVENTION AT GUTHRIE, OKLAHOMA, JUNE 6, 7 AND 8, AND THE ENTERTAINMENT TO FOLLOW AT 101 RANCH.

Oklahoma, in the vernacular of the red man Beautiful Land, presents at this hour, to the tourist, a large variety of enchanting scenery and a more interesting class of settlers, than any other locality of the great and progressive Southwest.

Within the memory of the boys, scarcely out of their teens,

Portion of the Herd of Buffaloes.

springs up the wilderness, covered with buffalo grass, and game-filled preserves. Nomadic redskins roamed sweet-willed across the plains as eager then to stem the advancing tide of immigration as they are now anxious to possess a pale-face neighbor.

What magic wand has touched with momentous influence the pristine and vigorous splendor of the wilds and converted a sovereign dominion into a settled, staid center of civilization?

Cities whose splendors rival that of communities of a

century's growth dot the limitless expanse, all scarcely sweet sixteen yet mature, aggressive commercial centers. Through their arteries flows the life blood of elements destined to produce greatness. Here the reckless cow-puncher, soldier and government scout, within themselves, living and complete novels, of dare-devil adventure, jostle the tenderfoot, the Indian and the keen-witted tradesman in their mad scramble for worldly gain.

"Roped."

But the onrushing torrent of settlers has not entirely eradicated the beauties of the reconstructed frontier. Enough remains of its picturesque beauty to bring its former wildness and its marvelous latter-day improvements together as close tenants. Rich soil, bright blue Italian sunny skies, sparkling clear Castalion springs, extravagantly numerous, rains in abundance, have gorged ponderous granaries year after year and bulged fat pocketbooks, built railroads, churches and schools, farm houses, cities and villages, orchards and vineyards, good roads and driveways, and public improvements the equal of some seen in our oldest and best established States.

Who has so soon forgotten the stirring incidents attendant upon the opening of the Cherokee strip? Is it possible that here, where shrieks the locomotive whistle as it skirts the river valley and rising height, cow-boy and red-skin poured out in deadly encounter their red, vital, warm, living lifeblood? See yon crumbling fort and military barracks, while nestling cosily within the grim shadows of the ruins, a Missouri model schoolhouse surmounted by a pretentious belfry may be seen.

Scarce have the reverberating echoes of the reveille died away upon the evanescent morning breeze before there breaks upon the receptive hearing the merry clangor of the school-bell summoning the babies of today and the masters of state of the tomorrow to learn the lessons of citizenship.

Kay county on the north, the banner agricultural community of Oklahoma, is the first district traversed by the Santa Fe railroad. Your route lies through Indian reservations, and bustling cities. The redskins may be indulging with sacred significance in their religious ceremonies, the sun-dance, the ghost dance or the war-dance. Hundreds, yes, even thousands of visitors have attended these savage festivals, to which danger is no longer attached. Painted, feathered, beaded, bespangled and blanketed forms, as they move through the evolutions of the dance, form a picture of no little attraction. There are nearly six thousand Indians in Oklahoma. They own ten million acres of tribal and allotted lands, most of which are leased to the white settlers.

The tribal relations are fast being broken up and with them there is being relegated into history a class of men who proudly claim as one of their number, no less a leader than the personage of the peerless Roosevelt—our President.

Cow-boy life has all but passed away on the great ranches, yet one may meet with a healthy contingent, in wide sombreros, leather trousers, high-topped, high-heeled boots, with clanking spurs and big revolvers, upon the famous 101 Ranch, located near the Ponca Indian Agency and adjoining the little hamlet of Bliss, Okla. The writer will devote an article to this wonderful institution at a later date.

The river scenery of Oklahoma is singularly striking. Hunting is a sport worth the while. Deer, wild turkey, prairie chicken, quail, duck, geese and prairie wolf being found in abundance in season. More deer are found upon the Osage reservation than in any other portion of the United States.

The population of Oklahoma is now around one million.

The National Editorial Association, in convention assembled, at the World's Fair, last May month met under most favorable auspices. Every courtesy that good breeding dictates was meted out to the visiting editors and their relatives and friends. The contest for the rendezvous of 1905 was a spirited three-cornered fight, New Jersey, California and Oklahoma being the aggressive bidders for choice. Oklahoma finally triumphed and the next annual convention of the association will transpire at the capital city of Oklahoma, Guthrie, on the 6th, 7th and 8th day of June, 1905.

THE ENTERTAINMENT AT 101 RANCH.

Among the foremost propositions provided for by the entertainment committee and as a side issue will be a grand assembling of the Indian tribes of Oklahoma, a real old-time buffalo hunt, Indian fashion, ruling the boards. The Miller Bros., of 101 fame, possess the genius and faculty of great circus managers, easly ranking with Barnum, Forepaugh, Buffalo Bill and the Ringling Brothers, and their promise to bring together at 101 Ranch an array of Indians, cow-boys and buffaloes for this occasion in greater number than ever before, at any one time, is as good as their bond.

The Tribes in their Tents.

On May 8, 1904, the inauguration and induction into office of Horse Chief Eagle, the head chief of the Ponca tribe of Indians, was celebrated amid regal pomp and splendor. One thousand Indians were assembled, including Poncas, Otoes, Osages, Kaws, Comanches, Cheyenne and Arapahoes, Wichitas, Omahas and Tonkawas. They played la Crosse and other Indian games, sung their native songs and executed their pipe and pony dances and other equally impressive ceremonials. Brass bands, gaily-uniformed, marched and countermarched and filled the crisp brightness of the perfect spring day with resonant tones. Cow-boys with calf-skin shaps, high-topped boots, and whirling lariats spurred high-strung and spirited mounts into bursts of furious speed as they roped vicious steers and raced across the arena, a forty-acre wire-fenced inclosure.

Roping contests for a prize of $200.00 brought together

Clyde Sharp, of Osage fame; Hugo Milde, of Kaw; Warren, of Silverdale, Kansas, and Curt Reynolds, of 101 Ranch. Reynolds startled the cow-boy fraternity by roping, throwing and tying his steer in the wonderfully brief interval of 22 seconds, breaking all former records and earning for himself the title of champion of the world. He was given an ovation.

He will again appear, June 11th, at the National Editorial Association, gathering upon 101 Ranch. Several prizes are offered this year, among them being a gold medal donated by the young millionaire physician of Chicago, Dr. H. E. Thomas.

The glittering kaleidoscopic events of that day pursued each other, without cessation nearly all day, terminating at sunset with the grand final number of the program, the buffalo hunt, which was real and exceedingly spectacular.

Preparing for the Buffalo Chase.

The best riders in the country had ridden the most unmanageable mounts. The Santa Fe railroad had joined hands to insure the success of the occasion and 15,000 spectators from as far as Chicago to the north and Galveston, Texas, on the south, vied with each other in lauding the event. Had the weather of the previous night been more favorable twice as many admissions would have been recorded.

The Ponca Indians, of Oklahoma, are being allotted their tribal lands. The tribal lands heretofore occupied for grazing purposes only will soon smile and bloom with the products of the white farmers' industry. The tribal relations will terminate and merge into the solitude and oblivion of the weird past and the Poncas will assume the garb of civilization and join the march of progress as it circles the universe. A call has gone out to the Indian tribes of Oklahoma to assemble upon the occasion of the closing chapter in their tribal associations. The success of the former occasion is the harbinger of the success of the contemplated event. In Oklahoma phraseology the boys will "make good," and in this instance even exceed themselves in honor of their unusual array of guests.

Former efforts will be eclipsed by the preparations which the manager will soon set on foot. Refreshments of every description, a buffalo barbecue and a western dinner a-la-mode plainsman, will be dispensed for the benefit of the newspaper men, absolutely free of cost. A strict search of the N. E. A. will be instituted at Guthrie, before proceeding to the grand doings, and anything bearing the faintest resemblance to money will be confiscated, and later returned. Three or four buffalo will be hunted by picked bands of Indians from the different tribes and killed in a humane manner in the arena. These buffalo will be selected from one of the finest herds now in existence, and they will form the nucleus of a rich, fat, juicy buffalo barbecue especially designed for the editors. Not a free-for-all hand-me-out affair, but an exclusive function prompted by a course, served in a befitting manner; in a style approved by strict up-todate table etiquette.

Not a single feature of the day's programme will savor of boisterousness or vulgarity, not a word or an action to mar the sensibilities of the most fastidious, but the whole will be a high-class, moral, instructive and pleasing entertainment. Don't imagine that the cowboys are a lot of howling, swearing, shooting, whiskey fighting terrors of the plains, for this is an erroneous conception.

The cowboy has been very much exaggerated in song and story and the 500 who will gather from all parts of the Territory and adjoining States are gentlemen in the full sense of the term, and will celebrate the passing of the cow-boy.

No more delightful entertainment for the National Editorial Association will be furnished it or framed up during its long journey to the golden sunset of the west. At this opportune period, the month of roses, Oklahoma arrays herself in her most resplendent attire. The proud and queenly dominion of the magnificent southwest is clothed in the golden garb of a ripening wheat harvest on fields that stretch beyond the range of vision to all the cardinal points of the compass. Cloudless blue skies, that rival in azure splendor the beauty and glory of Italian skies, predominate through the long, early summer days, followed by cool and refreshing breezes during the nights.

The plaintive melody of the meadow-lark thrills the hearts of happy mankind or mingles in sweet communion with the melancholy of the sad. The long stretches of prairie are covered with a profusion of wild rare blossoms. The sparkling rivers reflect the dancing sunlight and wind themselves with murmuring sweetness through the landscape, like bands of silver. All nature is alive and joyous. From hill and valley and plain comes the glad hum of the toiling multitudes, the evidence of a thrifty, hustling, contented people. Success and prosperity walk hand in hand, congratulating the citizens of their adoption, upon their public spiritedness, energy and whole-souled Southern hospitality.

The Indians in their Annual Sun Dance.

Who has not tasted of genuine Southern hospitality? Let him rise and heed well this friendly counsel. Come to the celebrated 101 Ranch and stranger though you be, with none to recommend you, you will receive a welcome in the superlative degree. The beautiful Southern mansion headquarters, with its broad porches and wide-open doors, seem to beckon you to tarry, and where the cornucopia of health and plenty has been distributed with lavish generosity you will find no restraints, no stiff-bosomed formalities, but instead good, whole-souled, old-fashioned kindness, that warms the heart, removes the wrinkles of care and brings sunshine and gladness. Very truly yours,

J. Harrison Lewis.

THE OKLAHOMA STATE CAPITAL.

A DAILY PAPER FOUNDED IN A TENT, APRIL 22, 1889. NOW OWNING AND OCCUPYING ONE OF THE LARGEST AND BEST EQUIPPED BUILDINGS AND PLANTS IN THE SOUTHWEST.

The growth of a country and the character of a city are, in this twentieth century, indicated very largely by the growth and character of its newspapers. Measured by the history of its leading daily the Oklahoma *State Capital*, rapid, substantial progress, enterprise and thrift must be the verdict as to the business men of Guthrie and the people of the whole Territory which the paper serves enthusiastically, and splendidly represents and from which it receives loyal and liberal support. It is sometimes said that newspaper men are unpopular and unappreciated, but we found during our stay in Oklahoma, that there was nowhere to be found a more popular and more highly-appreciated man than is F. H. Greer, the founder and publisher of the Oklahoma *State Capital*. He commenced with the beginning of things in this new land. set up an office in a tent and issued the first number of the *Daily Capital* on the day of the opening of the Territory to settlement.

It is said that no people is great without a heroic beginning. Certainly the heroic was not lacking on that great "opening" day. There were no enemies to destroy, but there were brave hearts just the same. There were thousands of hardy pioneers with nothing but courage and hope, seeking not glory or conquest but homes. Twenty thousand people settled a city in a day and in the second day organized a city government and elected a mayor and common council, and from the tent of the first newspaper the news was published to the people. The newspaper was even ahead of the settlement for the first copy of the paper had been printed in advance at Winfield, Kansas. It is certainly in place here to give a couple of incidents illustrating the strenuous conditions of the founding of the paper and the new city. Mr. Greer relates these in the fifteenth Birthday Issue of the *State Capital:*

Building and Office of the Oklahoma State Capital.

I remember after bidding my wife good-bye and giv-

ing her ten dollars of the thirty-nine dollars I had in my pocket, I went to the home of my mother. Before bidding me good-bye, she said she desired to commit me to the providence of God, whom she knew would protect my footsteps and prosper my future. We went into her bed-room and there knelt down by the bedside, and I remember how fervently she appealed to the Lord about the prospects of the wonderful new land, and submitted to His care her boy who was going to cast his lot with the new Eden.

I recollect my thoughts on leaving the house—with that prayer fresh in my mind—and tears still in my eyes—of the peculiar ambition of a young man starting into a new country with but twenty-nine dollars in his pocket and nothing but this amount of cash capital and the hopes and prayers of a sainted mother and a loving wife on which to found a newspaper business, and expecting as firmly to found it as though he had a million.

Then of the organizing of the new city, he writes:

The editor of the *State Capital* was secretary of the first townsite meeting in Guthrie proper. This meeting was held where the Patterson Furniture store now is. It was presided over by Major Constantine of Wisconsin, a man of fine presence and excellent ability. He stood in a wagon and presided over nearly fifteen thousand people. These were about all men as there were but five women then on the townsite. One of the cherished memories of this meeting was the presence of my mother. I remember after the chairman and secretary had been elected, my mother, the only woman visible in the crowd, raised her hand and said, "Mr. Chairman, we are about to open the chief city of a great empire. We are to have a country here rich in resources and full of possibilities. We should not start such a city, or begin life in such a country, without first asking for the blessings of God upon our doings."

The chairman then called upon Mrs. Greer to lead in prayer and I remember the fervency of that prayer; how she spoke of the hopes of the people and the great future all felt certain for Oklahoma. She asked that divine wisdom would guide the citizenship of the new state; that the people would follow only the paths of righteousness to the glory of the commonwealth and the benign approval of Heaven.

Seven years after the opening of Oklahoma and a week before my mother passed away, she said one of the proudest things of her life was having made the first prayer in a public meeting at Guthrie. She said in recording the history of Guthrie, I could do her memory no greater honor than to tell of this prayer.

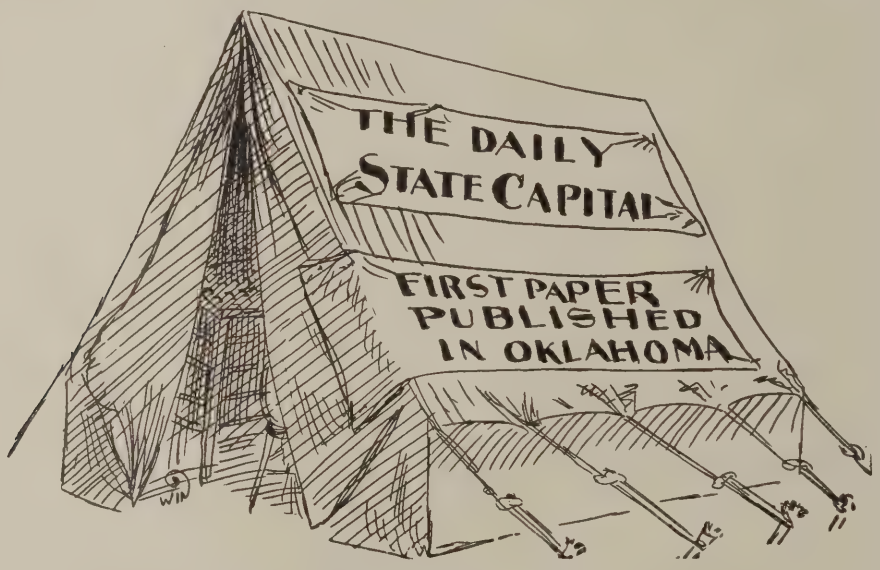
The paper succeeded though fifteen rival publications were started—several with considerable capital—lived and died in the first year of the town history. The *State Capital* has not only grown into the proud position of being one of the leading dailies of the Southwest and the representative paper of Oklahoma, but has built up a great publishing house. How this has been acomplished is instructive as well as interesting:

The weekly *State Capital* was founded by Mr. Greer on March 30, 1889. This was three weeks before the opening of the Oklahoma. The first issue of the paper consisted of an edition of 15,000 copies and was printed at Winfield, Kansas, the temporary home of the plant. This edition contained the proclamation of the President opening the territory to settlment, together with a great deal of valuable information in regard to the country and the methods to be followed by homesteaders who came into Oklahoma.

The next issue of the *State Capital* appeared on April 20, two days before the opening of the country. It gave a big description of the thousands of prospective settlers camped along the borders of the new land, and editorially said under the head of "The World's Wonder":

"Oklahoma will be the wonder of the world. People will flock to it the first day of the opening. Two million acres will be open to settlement on the 22nd. This spot has been heard of and talked of in every household in the United States. It has been heralded as America's Eden."

On April 22, at 4 p. m., on the afternoon of the opening, the first issue of the *Daily State Capital* appeared. It was issued from a tent on "Squatter" domain, on the lot taken by Mr. Greer on the corner of Cleveland Avenue and Broad Street. The leading editorial in this issue said:



First Office, Oklahoma State Capital, April 22, 1889.

"As a strong representative of this embryo metropolis steps forward the *Daily State Capital.* This number is only a small and hurried one. The *Daily State Capital* is the first daily paper ever published in Oklahoma Territory. This issue gives you an idea of the merit it will possess."

A PLATFORM STEADILY FOLLOWED.

The *Daily State Capital* in its issue of May 12—three weeks after the opening of the territory, laid down its territorial platform as follows:

"The *State Capital,* above all, is for Guthrie and it realizes that Guthrie cannot prosper unless it is sustained by a prosperous territory. We need to tear down no other town or community in order to build up Guthrie. The *State Capital's* columns will never purposely contain a line derogatory of any town of any part of Oklahoma. Here is bound to be the head-center, the chief city and supply point of Oklahoma. There can be but one great city in this territory. Guthrie has lead all other towns from the first, and it has a start that insures future greatness. Here will be the capital, temporary and permanent. From here will radiate the spirit of enterprise certain to build up an empire, the start of which will be looked to as only the precursor of far more marvelous things to come."

This much for history of the paper and the platform

from which it has builded. In addition to the daily, the weekly is continued and a live, successful agricultural paper, the Oklahoma *Farmer*, published, but it is of the daily and the plant we wish principally to speak:

The *State Capital* is today recognized as one of the great newspapers of the United States. Its equipment is thoroughly modern and its news features always up-to-date. It is run on the latest improved Goss Straight Line Perfecting Press which cuts and folds a sixteen page paper of either six, seven or eight columns to the page. It has a battery of six linotype machines and a plant generally which cannot be understood without a pictorial view, and this will be found in our special magazine supplement. The entire plant is propelled by two fifty-horse Ball automatic engines—one for night and one for day work—and in the boiler room there are two boilers—one of fifty-horse and one of sixty-horse power. This plant is going every hour of the day and night, except Sunday. It is indeed a perpetual motion machine. The *State Capital* does in job work, book binding, stereotyping, lithographing, and newspaper work between $300,000 and $400,000 worth a year. This work comes from all over Oklahoma, Southern Kansas, Indian Territory and Northern Texas. Seven traveling solicitors are out continually, and the competition of all the great book houses is met and discounted. The finest work is the *State Capital's* distinguishing feature. It employs none but the best workmen and will let none but perfect work go out.

Engraving on Corner-stone of Oklahoma State Capital Building.

SKILL IN ALL DEPARTMENTS.

The *State Capital* is proud of the merit of its employes. It is careful to select well, and when it gets a good man, keeps him. It seldom changes employes.

LAW BOOK PRINTERS.

The *State Capital* is the publisher and has the exclusive

copyright of Wilson's Revised and Annotated Statutes of Oklahoma, in two volumes. It is the publisher of Wilson's Digest of Oklahoma Supreme Court Reports. It also prints the Session Laws and Supreme Court Reports of the territory. The law book work of the *State Capital*—like all of its work—is fully the equal of like work done anywhere in the United States.

The daily soon moved from a tent into a frame shanty and from there on July 16, 1890, into a substantial brick building, which it bought in 1897 and then in 1900 occupied with its job office, the Brook's Opera House Building.

On March 30, 1902—Easter Day—the entire plant of the *State Capital* Printing Company was burned. The proffer by the people of Guthrie of $50,000 for the rebuilding of this plant was the wonderment of the newspapers of the country and exhibited in a marvelous degree, the confidence of the people of this city in their great newspaper, the *State Capital.* The record was made of completing one of the largest business buildings in Oklahoma in four months and in six months after the fire, being installed in this new building with a complete plant—one of the most complete newspaper and job printing plants in the United States. The most conspicuous building of Guthrie is the *State Capital* building, and there is probably no newspaper plant in the United States so conveniently arranged for the business.

The corner stone of the new building was laid with Masonic ceremonies by the Grand Lodge of Oklahoma, assisted by Albert Pike Lodge, No. 2, A. F. & A. M., August 7, 1902, as shown by the engraving on the stone at the entrance of the building a reproduction of which is shown herewith.

Frank H. Greer is president and manager and chief stockholder, of The State Capital Company. He was the founder of the paper, and has been manager of the business from its inception. Mr. Greer was born in Leavenworth, Kansas, July 21, 1862. He went into the printing business as a printer's devil at the age of seventeen and became a job printer, case printer, business solicitor, city editor and editor-in-chief in turn, so he has thoroughly mastered the details of all the departments of the business.

He is an open-hearted, enterprising, independent, all-around newspaper man. His independence of spirit was manifested in his refusing to accept, otherwise than as a loan for five years at six per cent, the splendid testimonial sum of $50,000 raised by the citizens as a gift. He did not wish to feel any restraint of obligation beyond that of friendship and gratitude to the liberal donors.

FRANK H. GREER,
Publisher of the Oklahoma State Capital.

The *Daily State Capital* possesses the Associated Press franchise and carries the full morning report. It covers Oklahoma Territory most thoroughly, having a special correspondent in every town. It is represented by a special correspondent in Washington, and in the foreign advertising line by a special agent, N. M. Sheffield, in the Tribune Building, New York City. There is not a better advertising medium in the Southwest than the Oklahoma *State Capital.* It is a full-sized, seven-column daily of from eight to twenty-four pages and its special anniversary issues running up to forty-eight pages and above,

have been the admiration of newspaper men.

We have said that Mr. Greer is an all-around newspaper man. His paper shows it and his training was of the practical kind to make him such. At a very early age he was made to feel the weight of responsibility in the care and support of his mother and younger brothers and sisters. He acquitted himself nobly. He first worked as a farmer's boy, then as a grocer's clerk, and then on the advice of his mother, as he had no time, opportunity or means to attend school, he took a position in a printing office to secure an education and a trade or calling at one and the same time. He commenced at seventeen years of age as a printer's apprentice and has been constantly in the business for twenty-six years, though now only forty-three years of age. He is a ready writer and a popular and eloquent speaker. Being a native Kansan, he is naturally a stalwart Republican and his paper is the recognized official paper of that party in both the Territories soon to become one State and to add another lustrous star to the flag of the Union. He is always fair and independent in his newspaper and numbers his friends by the thousands in both parties. His character is stamped upon Oklahoma and its institutions. He is a lover of his home and of books and has one of the largest and best selected and arranged private libraries in the country. The only wonder is how so busy a newspaper worker could find time to select and read so many books. His estimable wife fully sympathizes with his literary tastes. While in Guthrie, we were a guest at their beautiful home and they both made this editor-man to feel that it was one of their highest delights to entertain a welcome visitor. Theirs is one of the elegant homes of Guthrie and so much was added to the pleasure of our visit by the hours passed therein that we craved the privilege of presenting a picture of this home to the readers of the NATIONAL PRINTER-JOURNALIST to show something of how an Oklahoma editor lives.

The house has large, airy rooms and is most comfortably arranged and furnished, and the over five thousand choice volumes in the library look out of the golden oak sectional cases, from every wall. Sitting before the fireplace under electric lights, with the table filled with the leading weeklies, dailies and magazines, surounded by the world's best books, one feels as though he were in close communion with the greatest minds of the present and the past. It is one of the largest and most delightful rooms in the pleasant home and is so much in use by both Mr. and Mrs. Greer, that it might well be called the living room, where they live with their ever-present friends, good books and papers, and to which they are always glad to invite their visitors.

The Residence of Frank H. Greer, Proprietor and Publisher of the Oklahoma State Capital, Guthrie, Oklahoma.

To give the news, to promote education, sanitation, trade, all worthy enterprise and greater prosperity, to help the great to be greater, the good to be better, and all to be happier, are the well-established objects of every worthy, up-to-date newspaper in this land in this twentieth century. Any newspaper that falls short of these falls short of its opportunities and duties.

ADVERTISING RATES PROMPTLY FURNISHED UPON APPLICATION

The NATIONAL PRINTER-JOURNALIST is unequalled as an advertising medium in its field. No attention paid to postal card requests. Information cheerfully furnished to all patrons.

Subscribers and patrons will confer a favor on the National Printer-Journalist Company by sending in the names of responsible newsdealers who do not keep the monthly on sale regularly.

Manuscript sent in for publication must be accompanied by a letter of explanation and return postage.

CHICAGO, MARCH, 1905

Advertising sense, as well as news sense, or "a nose for news," is one of the superior endowments of an all-around newspaper man, or publisher, in this age of newspaper advertising. To make advertising pay advertisers so that they will not only continue to advertise but will be able and willing to increase their advertising, is the only legitimate way to worthily win in newspaper publishing. Newspapers have come to be published so cheaply that all the gain and much of the cost of production must come from the advertising department and advertisers have a right to expect a reasonable return and profit on the money invested. It is up, then, to the newspaper publisher to make advertising profitable. It is folly to seek advertising that can not be made to bring adequate returns to the advertiser.

Having accepted an advertisement it is not only business wisdom but business honesty and a moral duty to use every possible means to make good, to earn the money received for the same. The advertiser may himself defeat the end sought by failing in persistency, in following up an advertisement until an impression is made, attention, interest and a favorable verdict won. In such a case the publisher may be released from his financial or moral obligations, but he suffers just the same through a loss of confidence and prestige, a loss that may not stop with the dissappointed and dissatisfied advertiser.

Certainly every newspaper publisher owes it to himself to be able to show a good cause for the failure to reach results and to establish his own sincerity and honesty in the unfortunate transaction, where there is an undisputed failure. The one great trouble is the impossibility of always tracing results and, next to this, is the lack of comprehension on the real object of advertising on the part of the advertiser.

All advertising should be educative, informing and convincing, and should reach those interested in the purchase of the thing or things advertised. When all these conditions are present and the advertiser is able to make good, to satisfy in the same convincing manner the expectations raised by the advertisment, no advertising can be without some results, whether these be realized in immediate sales or in sales that come later from the established reputation or fame. Those to be reached must have faith in the honesty of the paper and must be made to believe in the reliability of the advertiser.

We have frequently remarked on the injury to a newspaper, and the deterioration of the value of advertising space therein, from fake or dishonest advertising. No money can pay a publisher for printing dishonest advertising; certainly is this so if the advertising is also immoral or leads to loss by injury to the buyers induced to purchase through the advertisement.

Nearly all patent medicine advertising is known to be dishonest, misleading and fraudulent, and should be avoided as a matter of wise business foresight. We have for years insisted on the truthfulness of what is contained in this assertion and are pleased to know that the most successful newspapers everywhere are coming to this same belief and are putting this belief into practice.

Right here we wish again to remark that the newspapers owe a debt of gratitude to Edward Bok, of the *Ladies' Home Journal,* for what he has shown with regard to "Patent Medicines," for we believe that many newspaper publishers have sinned through ignorance—have done injury to their own reputation for reliability, to their business and to their trusting patrons, through not knowing what they ought to have known, as to the fraudulent character of the nostrums advertised. We hope that all newspaper publishers, who have not read the last article by Editor Bok, printed in the March, 1905, issue of the *Ladies' Home Journal,* will obtain a copy of that paper, and give it a careful reading. The facts are clearly established beyond question and some of them are astounding. We quote the following from this article: "No man has the moral right to take the responsibility of our lives into his hands unless he is willing to tell us, frankly and unreservedly, what are the ingredients or the methods he intends to employ. The highest confidence we can repose in a man is when we give our health and our lives into his hands, and, as an equal return, we have reason to expect that he shall give us his fullest confidence. This the 'patent medicine' man refuses. * * * If the public were once to know exactly what is in the average secret nostrum, the greater part of the 'patent medicine' industry of this country would see its finish so quickly that the public itself would be amazed."

Now do not the patrons of newspapers trust their health and lives into the hands of newspaper publishers when they confidingly buy and take, through their faith in the reliability of the advertising columns of the newspaper, the patent medicines advertised therein? Ought the newspaper publisher to trifle with the health and lives of his patrons, to take this terrible responsibility, to the discrediting of his own paper, and the depreciating the value of his own advertising columns, without knowing or caring anything as to the character of the nostrums advertised? But the case is worse than this, because any well-informed publisher must know that nearly all patent medicines are useless, very many of them hurtful and all of them dangerous, when self-prescribed by laymen who are entirely ignorant of the proper treatment of the disease, real or imaginary, with which they suppose themselves to be afflicted. It has been shown over and over again that these nostrums, claimed to be harmless vegetable compounds, are compounded of cheap or hurtful drugs, contain alcohol, cocaine, sulphuric acid, ether, ether oil, morphine—these, too, in remedies recommended for women, children and little babies. The *Ladies' Home Journal* editorial, among scores of other instances, gives the following: "A mother was found recently giving to her child five times daily, a teaspoonful of a certain 'purely vegetable extract,' to build her child up. But the lassitude of the child grew worse. Finally a friend offered to have 'the purely vegetable extract' examined." There was no "vegetable extract" in the ingredients, unless 41.6 per cent of alcohol could be called such. She might better have given the child six glasses of beer or six drinks of whisky a day. A "headache cure," after causing the death of a user of it, was recently found to contain an amount of chloroform dangerous to any one with a weak heart.

Earnestness is the great dissideratum in all newspaper work. "Seest thou a man diligent in his business? he shall stand before kings," was Benjamin Franklin's favorite scripture text, which it has often pleased us to quote. It should be the favorite text of every newspaper worker. Education, literary ability, style and ideas are all very valuable, but without earnestness—an ever-present consuming zeal—they will not bring success. The hustling office boy or printer's devil, without schooling and little knowledge of books but with unflagging earnestness, will outstrip the collegian, equipped with all learning and philosophy, if the latter has not his heart in his work, or lacks that earnestness which keeps one ever on the alert for attainment and winning, useful service. It is not a university education or great learning that prevents success in this most practical of callings, but the lack of that loving diligence which is necessary to success—that soul-inspiring zeal before which all difficulties vanish.

Scarcely any department of the modern newspaper is more important than that covered by correspondents who give, from week to week, the news of the different cities, villages or neighborhoods in which the newspaper is circulated. The Springfield Republican has maintained a National circulation, yet one of its strong features is its neighborhood news department. Many measures have been employed to please, interest and to make more efficient these local correspondents.

Of course no one in this world is so perfect but that there remains room for improvement. Our attention has just been called to this matter by the receipt of a letter from H. C. Hotaling, proprietor and publisher of the *Blue Earth County Enterprise,* published at Mapleton, Minn., ordering the NATIONAL PRINTER-JOURNALIST to be sent for one year to each of his correspondents, and enclosing the cash for the same. He writes: "It is an experiment, but I believe it will result in better correspondence." We believe that his expectations will be realized and we hope that each and all of these correspondents will feel free to present any suggestions, that may occur to them in their work, which they may think will be helpful to others and to make known any difficulties that they encounter and to ask questions with regard thereto.

This paper is intended, in no small part, for a mutual exchange of views, opinions and experiences, as well as to help, through suggestions and the imparting of practical knowledge.

The *Enterprise* is an excellent and successful newspaper with a splendid correspondence department, and some of the correspondents will doubtless become newspaper editors and publishers or newspaper writers on a broader scale and in a wider field. They can help others and receive help in return from those employed in like manner all over this Nation.

That the readers of the NATIONAL PRINTER-JOURNALIST get results was pleasingly brought to the notice of the publisher and editor of this paper in a letter that came in the same mail with the letter from Mr. Hotaling. This subscriber writes: "I have at all times greatly enjoyed the NATIONAL PRINTER-JOURNALIST and have taken many valuable points from it." To prove this assertion, this subscriber, who signifies that the facts may be used, shows, in figures, that, in twelve years, he has nearly tripled the value of his office and accumulated property, outside of the office, of the value, at a conservative estimate, of $9,000, and sustained, during the time, one heavy loss by fire, and he lives in a small city in the Southwest. We can help each other to greater success in our work. Of course improvement requires attention, and keeping the eyes open for new, helpful points and suggestions.

It is wise to read the NATIONAL PRINTER-JOURNALIST, as is the practice of some of our subscribers, with pencil in hand, to check every idea, suggestion, method, reproduced specimens of telling publicity or excellent composition, of advertising or job work, with the commendations or criticisms of the same, that may seem practical and adapted for use, and then go over these checked pointers from time to time and adopt them whenever the opportunity occurs. One practical plan or idea worked out and proved by another, can often be made to bring in tens or hundreds of dollars. It is all in the knowing how."

Being useful is what brings rewards. It is the basis of all compensation, and wisely the source of highest gratification and truest, most enduring pleasure. It is because a modern newspaper can be more useful to more people, every day and every week, that it should command greater ability, industry, thoroughness and painstaking care and receives higher honor, greater rewards, more of fostering care and attention, than any other agency or institution for good, usefulness and accomplishment in the community. The community that starves its newspapers, starves and weakens itself and the editor who starves his paper deserves starvation for himself.

Connecticut Editorial Association. Annual Meeting.

HON. WM. J. BRYAN PRESENT AT BANQUET.

The Sixteenth Annual Meeting of the Connecticut Editorial Association was held at the Tontine Hotel, New Haven, January 23d.

The business meeting was held at an early hour, 6:30, as the banquet was down for 7:30. Secretary and Treasurer Ela made his report, which showed a slight increase in the membership, and receipts of $133.23, with disbursements of $61.60, leaving $71.63 on hand. The election of officers resulted as follows:

President, A. S. Barnes of the Bristol *Press.*

Secretary and Treasurer, Elwood S. Ela, of the Manchester *Herald.*

Vice-presidents, Hartford County, J. A. Morse, Windsor Locks *Journal;* New Haven County, Lew Allen, Meriden *Journal;* New London County, Geo. A. Sturdy, New London *Globe;* Litchfield County, James P. Woodruff, Litchfield *Inquirer;* Middlesex County, E. L. Prann, Deep River *New Era;* Tolland County, Thos. S. Pratt, Rockville *Journal;* Windham County, A. N. Colgrove, Willimantic *Chronicle.*

Auditor, H. B. Hale, East Hartford *Gazette.*

Delegates to National Editorial Association at Oklahoma in May, C. H. Scholey, Shore Line *Times,* Guilford; W. J. Sharpe, Seymour *Record;* H. B. Hale, East Hartford *Gazette,* and these were empowered to appoint their alternates.

The matter of uniform prices for legal advertising in both dailies and weeklies was favorably discussed, also, the passage of a bill by the legislature empowering towns and cities to tax billboards. These matters were brought before the meeting by a special committee from the Connecticut Associated Dailies, and a vote was passed endorsing the plan and instructing the president to appoint a committee of five to act jointly with the visiting committee.

At 7:30 some fifty of the editors of the State, with a number of invited guests, sat down to a sumptuous banquet, the guests being members of the Associated Dailies.

The speeches which had been arranged for this occasion were entertaining, witty and uplifting in their general tone. Especially was the latter true of the speech made by the Hon. Wm. J. Bryan, who very kindly consented to visit the gathering, coming from another dinner specially given in his honor. This visit of Mr. Bryan came as a complete surprise to the editorial banqueters.

After the inner man had been satisfied, Vice-President Barnes made a witty speech of welcome to the guests of the evening, and referred in an earnest way to the educating influence of the press.

Mr. Barnes called to the chair Geo. C. Woodruff of the Litchfield *Inquirer,* who acted as toastmaster for this occasion. Toastmaster Woodruff responded briefly and called upon Thomas Dudley Warner of the Hartford *Times* to speak to the first regular toast, "The Passing of the Newspaper Bum." Mr. Woodruff, in his introduction, referred to the value of cranks in the world; every man who works out the ideas in which they believe, and in the best way, is more or less a crank.

Mr. Wells in a bright and witty way called down Mr. Woodruff for the manner in which he had made his introduction. He went on to say that the linotype machine had eliminated the dissipated compositor, and improved methods in the editorial room and the counting-room and rendered it impractical to employ any but men of good character and good habits as reporters. Nowhere was the element of personal equation more carefully considered than in Connecticut, and newspaper workers were required to be able, honest, intelligent men, responsible as to their writings and able to form correct judgment in the matter of facts.

Colonel N. G. Osborn of the New Haven *Register* responded to the toast, "Morals." He regretted that the counting-room dominated the editorial room—the passing of the old-fashioned editors, like Dana, and Greeley, and Bowles, who edited their papers regardless of the policy of the counting-room. He urged that the members of the press should be honest and fearless in the performance of their duty. The time was sure to come when selfish interests would not control the action of the editor, but he would then do his duty on the principle of the greatest good to the greatest number.

Hon. Theodore Bodenwein, secretary of state and editor of the New London *Day,* responded to the toast, "The Associated Dailies." The speaker complimented the hosts of the evening on the success of the occasion and then proceeded to present the desirability of the two associations uniting on the matter of uniform rates for legal advertising, also advocating the idea of taxing billboards, and the formulating of a law which should empower cities and towns to pass ordinances governing the same.

Perhaps, among so many excellent speeches, it may not appear to discriminate when that of Rev. Watson L. Philips, D. D., of New Haven, is referred to as the most uplifting and eloquent of the evening, in responding to the toast, "The Press and the Pulpit—Allies for Truth's Sake."

In the meantime a committee consisting of General Phelps Montgomery of the Connecticut *Farmer,* and Alexander Troup were attending to the duty of escorting to the Tontine, Hon. William Jennings Bryan, who entered the banquet hall soon after 10 o'clock. Long-continued applause greeted his entrance.

The toastmaster introduced Mr. Bryan as the owner of the largest weekly in the world. This he modestly denied, but said perhaps it had the largest circulation of its age. He had made it a weekly because he could not afford to own a daily and he believed the editor of a paper ought to own it. Only under these conditions can he say in his paper what he wants to say. Few dailies represent the conscience of any human being and hence were not as influential as they should be. Instances were referred to in illustration, where candidates opposed by all the dailies in the city, are elected. The weekly paper represents some one personality, and its utterances carry the weight and influence of the individual.

Mr. Bryan urged purity in politics. Political debauchery in this State, he said, had made the name of Connecticut a hissing and a by-word. We prosecute the poor fellow who under temptation sells his vote, but do nothing about the corporation that spends thousands to cary an election. The speaker warmly commended President Roosevelt's recommendation of compulsory publication of campaign contributions, and said if the trust which contribute a million for campaign purposes were compelled to publish the fact the publication would lose for its party more votes than the money would purchase. With other of Roosevelt's ideas he did not agree, notably those of creating a big navy and a big army. When a community can be made more peaceful by putting firearms in the hands of every citizen, then a nation will be more peaceful with a big army and navy.

Mr. Bryan saw in the development of the last few months indications of a growing sentiment against vote-buying. All parties are beginning to recognizing the assault on the purity of elections.

After Mr. Bryan had closed his speech an informal reception was had, giving all an opportunity of grasping the warm hand of Mr. Bryan.

Thus closed the finest and most successful gathering under the management of the Connecticut Editorial Association.

T. S. Pratt.

MORE WORK THROUGH PUBLICITY

BY HARRY A. WOODWORTH

Address all Communications for this Department to
349 Jarvis Street, Toronto, Canada

I AM sorry that some of the letters and specimens submitted by D. Gustafson, of Red Wing, Minn., appear to have been overlooked in the rush of getting out this department, until they are many months old. And yet the style of work done by Mr. Gustafson is a kind that should not go out of fashion in a hurry. His panel-schemes retain freshness and originality at a time when ordinary panelling is somewhat apt to pall. In a general talk on trade journal criticism, contained in a letter to Mr. FitzGerald, Mr. Gustafson seems to think that some departments are too much inclined to uniform praise. I trust Mr. Gustafson does not refer to this department, which has, however, generally, if not entirely, given uniform praise to the work of this clever compositor. I do not think he does, for he has written me expressing thanks for my reviews, so I cannot believe he thought I was trying to "jolly" him. Mr. Gustafson and others may be assured that there has never been a word of praise—or of adverse criticism—in this department that did not represent the honest opinion of the writer. And I believe the same may be truly said of every department in the N. P.-J. If it cannot be, my colleagues and myself are simply not obeying the orders of the editor. The criticisms in this department may be wrong, and many things in respect to such work as is reviewed here are, anyway, merely matters of taste. I don't believe in criticising anything merely to be nasty; but I have certainly never refrained from friendly adverse criticism where I thought a lesson could be given to the doer of the work, or to others. Of course it is not often necessary to "roast" the work of a beginner who appreciates his faults far more than his excellences. And it is a constant source of gratification to see what original and striking ideas, both in printing and advertising, come from some of these very beginners, who really do not seem to realize the latent power that their work—crude though it naturally may be in some respects—shows them to possess.

As a general rule, I reproduce and quote from different specimens of work in this department, more particularly to show some of their good points for the education of others than their originators. However, it often happens that a point can be best made by the reproduction of a poor job, or a quotation from a poor bit of advertising. This, however, does not seem to me so important a part of education (although it is certainly a very valuable one) as that which uses the good work others have done.

In all education it is deemed necessary to distinguish the bad from the good. Hence a sight-acquaintance with the bad is often of the highest educational use. Religious students are informed as to the "pomps and vanities of this wicked world;" it is extremely useful to the student of logic to be able to spot a syllogism when he meets one; the best grammars give many pages of "false syntax" in order to teach learners to use a language correctly; and it is likewise a good thing for the student of typography to know a bad job when he sees it, in order to avoid its faults. But this negative education is always considered secondary to that which shows, by example and precept, that which is good. So it is that this journal spends a large amount of money in the reproduction of work by the study of which any printer can learn to be an artist and an advertiser, and can inspire his helpers with a sense of what constitutes tasteful typography.

A brilliant red mailing card comes from the Fresno (Cal.) *Democrat*. The title on the stamp side is "Advertising Talk No. 1." The original version of the "early to bed, early to rise" advertising couplet is given in one of the lower corners. The talk on the other side is well composed, both as to type and wording. At the end a personal talk is suggested "with Davis the advertising manager."

A blotter from the Eustis (Neb.) *News* is a good example of a poor kind of composition. There are no less than seven panels, fourteen ornaments and forty-one pieces of rule on the blotter, whose entire wording is this: "Remember the Eustis *News* when in Need of Job Work. H. S. Moores, Editor." The lower part of the job has an oblong panel divided into seven spaces. It does not appear to have any motive except ornamentation, as it is not a correct seven-inch rule or anything else that is useful. The man who set this job has the ear-marks of a good workman and should develop artistic possibilities by a study of the trade journals. He would find that better advertising and more artistic composition could be produced with an immense saving in time and material. I want to hear from this compositor again when he has taken this friendly hint.

A small January hanging calendar of the Beck Engraving Co. is entirely Scottish in design. Three "brither Scots" are pledging each other in (I presume) Scotch. A bagpipe and several thistles, which look rather more like pineapples, comprise the ornamentation. The pictures are very strikingly colored, the plaids giving a very pleasing effect. On this calendar the red-letter days are January 1, 2, 3, 4, 5, 6 and 7, which is a longer period than the majority of canny Scots take for New Year's celebrations at the present time. Why is not the birthday of Burns honored by likewise being painted red?

A booklet "Concerning the *Star-Courier*, Kewanee, Ill.," has just been received. For years the annual booklet issued by that live newspaper, of which Will Curtis is the manager, becomes larger and larger. "Just a Few Words and a Few Pictures" is the announcement on the cover of the booklet, and this also appears on the title-page in the same composition. The leaves of the book are narrow, their purpose being to give information concerning the large half-tones with which the book is illustrated. The titles of the pictures are: "The Boys Who Daily Deliver the Large Edition of the Paper," "The Press Which Can Turn Out 65,000 Papers, Printed, Folded and Pasted, in One Hour," "The Battery of Linotype Machines," "The Business Office," "Where the Ad-

vertisements Are Set Up," "The Job Composing Room," "A Section of the Press Room," "The Pony Optimus Press," "One of the Job Presses Put in to Fill Up this Page."

The booklet proves an ever-increasing measure of prosperity for this live paper. Two detailed statements for the year 1904, one for the weekly and the other for the daily, are enclosed in the booklet. The Kewanee Printing and Publishing Co. have a striking idea in respect to the statements of circulation. The composition on the left hand side of their letterhead gives the names of the firm, its capital stock, etc., and ends thus: "Weekly circulation 1500, Daily Circulation ." Below this last printed line the following is typewritten—"yesterday was 3,250." Why not make a similar change in the statement of circulation of the weekly? Surely the idea is not to give the impression that, while the daily is constantly increasing in circulation, the weekly is standing still at an even 1,500.

A booklet of 16 pages and cover, 8x4, bears the title "Good Printing As Exemplified by Levey Bro's & Co., Indianapolis, Ind." On the cover, which has a buff face, is an embossed picture of a girl gathering flowers. The tint-block is violet. This makes a beautiful cover. The first, second, fifteenth and sixteenth pages of the booklet are on a heavy tinted stock, and the other pages are on the cover stock. The plate pages, which are partially printed, show a heavy impression which somewhat mars the appearance of the booklet. The combination of this expensive white stock with the cover stock does not seem particularly happy. The art-nouveau design on the title page is out of the ordinary, as such a design has to be these days. The composition is excellent, but it is the text which is the most striking part of this booklet. The tinted pages contain "The Story of the Seven Catalogues." The catalogue whose price was a little higher than the others was the one that pleased both the junior and the senior partner. The time devoted to each job in each department of this concern is measured by the calculagraph, an exact cost recorder. "You do not pay," say the firm, "for a minute's time which you do not get." The initials in the book are printed in purple and red. The red background is furnished by an art-nouveau design, which encloses a view of the Levey establishment, and over which every initial in the book is printed in purple. A scroll at the bottom contains the word "Levey." A good advertising idea.

A tastefully-printed sheet announces that C. Townsend Wells and Hollis Corbin, of Philadelphia, have no longer any connection with W. M. Ostrander and shall hereafter devote their entire time and attention to the Wells & Corbin business.

A blotter from the Times Printing Co., of Chattanooga, Tenn., contains considerably more reading matter than is usually found. It is in 12-point Jenson, and refers both to the printing and publishing departments of this concern. The introduction is suggestive of the opening verses of the "Rubaiyat" of Omar Khayyam:

> When the Golden Hunter of the East puts the Stars to flight and floods our gilded dome with a shaft of Light, its Brightness is not greater than our ambition to Excel, nor is its altitude higher than our aspiration to keep pure and unsullied a reputation as THE OLD RELIABLE, a soubriquet which has been conferred upon us for the past thirty-five years by pleased and persistent customers.

This is quite a mouthful. I presume that the dome of the Chattanooga *Times*, like that of the New York *World* and the Sultan's turret, is gilded. If this is so, and the expression "our gilded dome" not merely a fantastic allusion to the "Rubaiyat," what a splendid chance there would be for illustration in connection with this blotter! I can see it in my mind's eye, the warm sun of Tennessee striking against the shining turret. Doubtless the dome of the *Times* building is not so altitudinous as the dome of the Pulitzer building, which may even yet be called lofty, and so the figure of speech is a trifle weak. "The *Times* aspiration—to keep pure and unsullied their reputation"—it sounds like poetry—should be as high as Arcturus, to say the least. I am sure that the ad-writer has been rather hampered in his diction by the necessity of having nine lines of equal length and composition above and below the red display-line on both sides of the center panel, although the matter contains some such crisp sentences as this: "We do not importune, but our work does."

A unique and appropriate cover is that which contains a booklet advertising the Ottawa *Free Press*, the oldest evening paper in Canada. It simply consists of two slips, 7x3½, cut from a matrix of that paper. There is no fold in the cover, as there is to the pages, the parts being kept in place by ribbon passed through round holes. An oval cut in the cover shows the words "Ottawa *Free Press*," which are on the title page. Among other striking and interesting remarks the following offer is made: "We will send you free a fifty-cent illustrated view book of Ottawa, with one thousand illustrations of the City of Ottawa, and a map of the surrounding country."

Harry A. Woodworth, 349 Jarvis St., Toronto, Canada.

DEAR SIR:—I have noticed some different samples of advertising in your department of the NATIONAL PRINTER-JOURNALIST, and have derived a good deal of benefit from the department. I enclose you a couple of our letterheads and billheads. Any criticism will be gratefully received.

Material in a country office is generally limited and possibly this will excuse unmitred corners.

I do the job printing for the above office and am nineteen years old. Thanking you in advance, I remain, Yours truly,

Hillsboro, Ore. IRVING BATH.

The memo head which Mr. Bath sends has as the base of the composition two tint-blocks printed in yellow, upon which are superimposed some tasteful composition in red and black. As a specimen of artistic composition this job is particularly good, the ornamentation furnished by the tree in the center panel at the top being particularly tasteful. However, as Mr. Bath suggests, the rule-work is decidedly out of keeping with the rest of the job. Mr. Bath is undoubtedly an artist, but he has yet to prove himself a first-class mechanic. I feel sure that a little more care in respect to the rules would give results worth while. The register is likewise considerably off on this particular job. But I cannot praise too highly the hypnotic effect induced by the white spaces between the two yellow panels, set off, as they are, by heavy black rules. I should certainly advise Mr. Bath to get a mitring machine, or else to use some of the other appliances by which the effect of mitring is given, such as, for instance, the compositions for filling the joints of brass and metal rules. The Hillsboro *Independent* billhead is particularly good as to color-scheme. It is admirably whited out, and the only fault anyone could find with this job is in the rule work. The same remarks may be made concerning the letterhead of the *Independent*, which likewise employs a tint-block, and which is set entirely in Gothic. I am confident that Mr. Bath will be one of the "coming" contributors to this department. I believe that he could do wonders in the method of composition advocated by Will Bradley in the "chap books" of the American Type Founders Co. His skill in whiting out will keep him from the Scylla of over-ornamentation, into which such composition is liable to lead one, and he would also not be up against the Charybdis of crooked and poorly-fitting rules. Let us hear from you again, Mr. Bath, with something I can reproduce in this column as an example of mechanical perfection as well as tasteful composition.

An admirable blotter in green, purple, gold and aluminum, with disks of the latter colors, is received from the Berlin Ink and Color Co., Philadelphia. Black and various colors render this design a particular force which should be especially effective in advertising inks. An engraved imprint in the corner reads, "Robert H. Dippy, Philadelphia." Mr. Dippy is an old contributor to this department, and I am pleased to see that the users of his designs seem so willing to allow the use of his imprint on their advertising. It is certainly a sign of good work.

That excellent engraving concern, the Sanders Engraving Co., of St. Louis, certainly believe in printed matter as a means of advertising their own business. The most of this is to be commended in the highest manner. They have just issued a house-organ entitled "Quality," embellished with specimens of their work, useful information as regards halftones and etchings, and extracts from the NATIONAL PRINTER-JOURNALIST and other papers. A recent advertisement of theirs is a folder on black stock. I find nothing to criticise in the drawing or engraving, but certainly consider the twenty-seven long lines of 8-point, printed in dark red, to be about as unreadable, on this particular kind of stock, as anything I have seen for a long time. I have read it with considerable pains, some of them being in my organs of vision, simply because it is part of my work. The reading matter is excellently written and would make a good impression were it more legible. A recent catalogue lately issued by this company is one of the finest specimen books ever issued by an engraving firm.

A very pleasant letter from George French says that he is now, as ever, entirely a free lance, and states that he is not, and never has been, an employee of the Matthews-Northrup Works. He is special sales agent for the company, which have decided that "they will only undertake to make very fine books that have no annoying price limit." Mr. French is right in his belief that I have "an earnest desire to aid in the uplifting of printing," however humble my endeavors in this line may be.

I want it understood that I realize thoroughly that a commendatory remark regarding this department is far more of a compliment to contributors than to the conductor. I am sure the editor, who asked me to print as many letters such as the following as was possible, realizes this. I am quite as willing, also, to print any gentlemanly remarks which criticise adversely any work shown in this department, or any criticism made by its conductor. I believe a full and free discussion is welcomed in every part of this journal, both by the subscribers and the staff. A letter complimenting the department is, I consider, a tribute to those who take such a splendid active working interest in it. Without their coöperation, I know full well, the department would be small potatoes and few in a hill.

Harry A. Woodworth, 349 Jarvis St., Toronto, Canada.

DEAR SIR:—I am sending you in a separate envelope, a few specimens of my work, and I wish you would spend a little time in looking them over and pointing out the weak spots and faults. This is the first lot of samples I have ever sent out for inspection and if they prove fairly well I shall try again.

I enjoy your department in the N.P.-J. and it should surely be a winner for the paper. It is the best department I have yet seen in any of the magazines I have yet seen published for the benefit of the "fraternity." Hoping you will not overlook any odd lot of *plain* work. Respectfully,

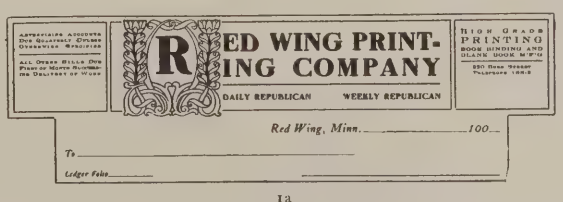
Adel, Iowa. VAN V. BOYCE.

Mr. Boyce sends a large number of samples of the work he has done for others, which are more appropriate to Mr. FitzGerald's department, and would, I believe, be more ably criticised there. I am sure that many of these would receive Mr. FitzGerald's hearty commendation. Mr. Boyce sticks largely to the idea of few series and several sizes; yet these series, which are "few" in comparison to the multitudinous and often out-of-sorts series so common in some country printing offices, are of sufficient variety to give patrons an individuality of their own, combined with the individuality of the printer. I think that if I were Mr. Boyce I should try to induce my patrons to have new halftones made, as the ones from which some of the illustrations he sends me are made appear to be pretty well worn and scratched. I notice that one job of Mr. Boyce's is not in keeping with suggestions I have frequently made in this department, wherein I suggested that the meaning of phrases was a particularly important matter in display composition. Mr. FitzGerald, upon resuming charge of the "Review of Job Work," gave particular force to this same idea in the first article which he printed in his department. He showed how a compositor made a typographical story concerning "Cook County Building," when the matter referred to the institution known as "Cook County Building and Loan Association." On this job, chastely beautiful as it was in the exclusive use of one old-style series, 24-point was used for these first three words, and the others were in 6 and 12-point. Mr. Boyce has done the same thing in his history of "Dallas County Farmers' Institute." The composition makes the tale about "Dallas County," which is in 24-point, for the important words "Farmers' Institute" are in so comparatively an insignificant a size as 10-point. It always seemed to me that the general run of Old English series had to be handled with great care when used exclusively in the composition of many lines of many sizes.

Old English, when used exclusively in a job, should follow more the style in which the original monkal old English lettering was done. And its use in modern letterheads and billhead composition in which there is considerable matter, would better be varied by harmonious faces which are more easily read. Mr. Boyce's personal letterheads and envelopes announce him as an "Artistic Arranger of the Alphabet"—which certainly seems to be an original description of and for a typographer. I should like to see something more strictly in the lines of printing-advertising from Mr. Boyce, as I have no doubt he can do work in this line for himself which will be the means of securing work to do for others.

The letterhead and envelope used by James H. Daley, in writing me from the office of the Le Sueur (Minn.) *News*, shows very striking uses of tintblocks and fine reproduction of text, to represent torn pieces of the first page of the *News*. I beg Mr. Daley's pardon for having so long overlooked a request to decide on the merits of two jobs, one of which a customer wished altered. I'll send the jobs to Mr. FitzGerald, *without* the letter. And I feel sure Mr. F's idea will be the same as Mr. Daley's, though what that is, is merely inferred from that gentleman's letter. Please forgive me, Mr. Daley, but don't forget me.

This job of Mr. Gustafson's (No. 1a) has the initials "R," "W," "P" and "C" in red on one letterhead. Others with the



1a

same design are in one color. I should like this pleasingly-contrasting job better were the second line of the firm name indented. At present it gives, at first glance, the effect of an acrostic, part of which one is tempted to read "Ring

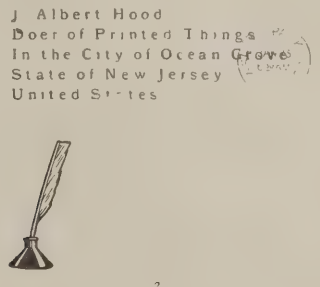
Company." The rule-work in No. 1b is hardly up to the mechanical perfection usually found in Mr. Gustafson's work,

1b

but the design as a whole is an example of originality and taste in panel work which should help to retain the popularity such composition has enjoyed of late years.

I have noted with much pleasure the work of J. Albert Hood, "the Printer-Writer-man of Ocean Grove, N. J.," in other departments of the PRINTER-JOURNALIST, but his first contribution to this department was sent in at the first of the year. It consisted of a New Year's greeting. A little later he sent me still another very gracefully-worded and printed souvenir of the New Year. Both these were evidently purloined in connection with others, as was announced in last issue. Both these will, if reproducible, be reproduced at the approach of the next holiday season—if Mr. Hood sends me them. I am glad that Mr. Hood, though he did not come "early" to my department, is now coming "often."

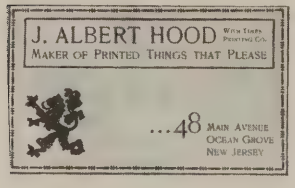
An envelope design lately received from Mr. Hood is herewith reproduced (No. 2). The spacing of Old Style Antique in a number of unjustified lines gives, to my mind, a pleasing effect. It will be noticed that the spacing between



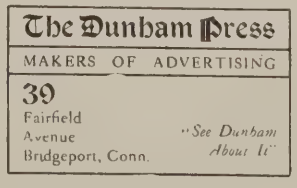
2

the words is large enough to show at a glance what the different words are. So many examples of spacing between the letters have the fault of not giving enough space between the words. The wording is in black and green, the ink bottle in red, like that of red ink, and the pen in black. Of course it took three printings to make this envelope design, but surely the effect is worth the extra time.

A robin's egg blue card is reproduced as No. 3a. The rules and ornaments are golden, and the balance is green,



3a



3b

with the exception of the leaders and the figures "48," which are in red. This emphasis of the number has been found by many to be good on a card. In connection with this a late card of the Dunham Press is shown, No. 3b. The very prominent figures are in red, as are the rules and the line "Makers of Advertising." Speaking of the number in addresses I find that the figure "3" in my address at the head of this department is of a character which is easily mistaken for a 5, even by many with the educated eye of the printer. A very large amount of my mail is returned to the postoffice, with the words "No such number," and has to be re-addressed to 349 Jarvis St. This is a point worth considering by printers and type founders.

"About Ourselves" is a booklet issued by Greenberg and Stutes, Spokane, Wash. The booklet has a buff cover printed in white. There is a square hole cut in the cover and surrounded by tasteful rule ornamentation. This is to show the first initial of the page of the booklet, which is printed in red and black on an orange stock. The initial is a particularly handsome setting to the subdued colors in the cover stock, but it is the initial "W," which does not seem to have any bearing on the wording of the cover unless it might be presumed to stand for "Washington." This initial idea would have more advertising force if it represented the initial of the firm. Of course there is more than one initial in the name of the new Spokane firm, and in this case I should almost rather have seen the initial "G," with the rest of the firm name printed on the cover next the initial. This booklet is a model of uniformity, inasmuch as it contains four pages with exactly the same number of lines. There is a red and blue initial below the heading of each page, and the surrounding rule work is in yellow. The initial is outside of the rule work, in which the only break is that before the caps of the initial word. The headlines are in 18-point of that old English known as Caslon Text. The body is in 12-point Avil. There are just sixteen lines of Avil on each page of the book, the last line being flush like the others. At the foot of each page there are four lines in 6-point Typewriter. This small talk refers to remarks about the Greenberg and Stutes Printing Company made by the Inland Type Foundry, the *American Printer,* the *Inland Printer,* and the NATIONAL PRINTER-JOURNALIST. This is a very pleasing specimen of booklet making, and is the first which I have seen from the new firm. This is a sample of the talk:

REPRESENTATIVE PRINTING.

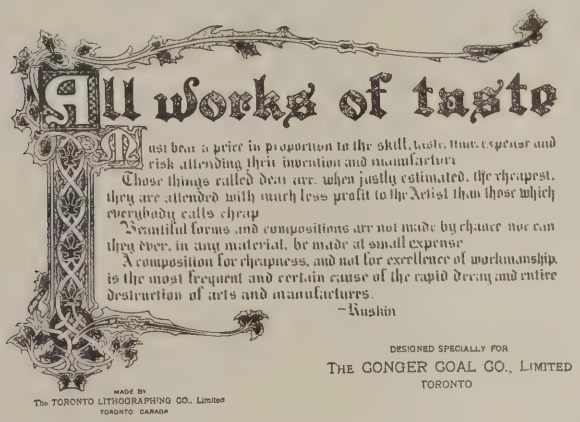
Every piece of printing produced ought to represent the business. It ought not to misrepresent. Successful printing is distinctive. It has something about it that people remember. They may not know that they remember it, but if the impression is favorable, it sticks. A man is judged by his printing. No business would think of having dirty windows and a ragged sign, but there are some really good business men who send out printed matter that would be a disgrace to a peanut stand. Our productions represent the business.

I am sorry that I cannot reproduce the pages of this particularly neat booklet, but I think I have given a pretty clear idea of their appearance. The booklet is contained in an envelope with this cover design, No. 4. The wording is in

4

orange and the ornamentation in light green. It is certainly a unique piece of composition. The sweet pea ornaments are tasteful and out of the ordinary, and have a very pleasing effect in their original colors.

I have received a sheet which, in handsome old English lettering, makes use of the words of Ruskin which were quoted in a recent installment of this department (No. 5). I have seen this used during the last month in various specimens of printing-advertising. It seems to be a particularly happy quotation to apply to the advertising of printing. But a remarkable fact about the slip here shown is that it is issued by a firm which deals in *coal!*



All works of taste
must bear a price in proportion to the skill, taste, time, expense and risk attending their invention and manufacture
Those things called dear are, when justly estimated, the cheapest, they are attended with much less profit to the Artist than those which everybody calls cheap
Beautiful forms and compositions are not made by chance nor can they ever, in any material, be made at small expense
A composition for cheapness, and not for excellence of workmanship, is the most frequent and certain cause of the rapid decay and entire destruction of arts and manufactures.

Harry A. Woodworth, 349 Jarvis St., Toronto, Canada.

DEAR SIR:—Herewith I enclose you two blotters that I have gotten out. This is the first time I have submitted anything to your department and a few words of explanation are doubtless in order. A country shop, you know, can never spare the money to have plates made for anything in the way of advertising matter, and in my case I find that I seldom have any time to devote to that kind of work, anyway. I started in this year, however, intending to get out a blotter each month of the twelve, and by utilizing my few idle moments and putting in a little time evenings I have succeeded in completing those for January and February. These have cost the shop nothing save the paper and ink. On the January blotter the "nigger" was printed from one plate by pasting sheets to the grippers and cutting out for each color. The heavy violet panel on the February blotter was cut from a patent medicine electro and mounted on a wood base. The tint-blocks were made from some old pieces of pressboard that came as packing in a box of patent medicine electros. The card indices I fished out of an old case of ornaments and various odds and ends that were found in the shop. Necessity is the mother of invention, you know, and by utilizing the almost useless things I have "conjured up" these blotters, and have had calls for more than the edition printed. Will continue to send you each month's effort. Whatever criticism you have to offer will be kindly received. The letterhead is one of mine. I am a reader of the NATIONAL PRINTER-JOURNALIST and am always interested in your department. Yours very truly,

Portage, Columbia Co., Wis. JACK EVANS.

Few letters from new contributors to this department, enclosing samples, have given me so much pleasure as this. The man who can evolve such work as that of Mr. Evans, from such a lack of material, would have found some way to have run a printshop on the Island of Juan Fernandez had he been placed in the position of the prototype of Robinson Crusoe, with only a man Friday for solicitor and "devil." The successor of Friday depicted on one of the blotters (No. 6a) is as remarkable in his simplicity of attire as Joseph must have been in his "coat of many colors." However, his raiment has but two colors—red for the shirt and purple for the trousers—but these are very striking in their intensity. He casts a green shadow, and the turtle is a green turtle—olive green. I do not, as a general rule, care a great deal for such combinations of headline and comic picture as that on this blotter, but I have made an exception in this case. The really striking colors of the picture add to the value of the card as an advertisement, besides increasing its comicality. I certainly hope that the camera will grasp this job, although the calendar, with the exception of the Sunday figures, and the text, with the exception of the catchline, are in purple. But it is a strong purple, and is effectively whited out on a white stock. The Sunday figures and the heading are in red, as is the second rule. That Mr. Evans is a mechanic is well shown by the rule-work on this job, especially as the purple lines, which seem to me to be excellent, call for first-class rule composition. Note particularly the elimination of the periods from this design. On No. 6a the quadding after the final word of the sentence and before the paragraph seems to be just about right to give a good effect to a job in which the periods are left out. I like the omission of the periods in this job better than in No. 6b, although I can really find no artistic fault with the scheme on the other piece of work. And it seems to be about as tasteful in omission of punctuation as are many of the jobs which omit hyphens at the end of lines, etc. On the "winning hand" blotter, the reading matter and calendar are printed over gray tint-blocks. How the tints are secured is explained in Mr. Evans' letter. The playing-card characters are in their usual red and black, and the talk and the calendar, with the exception of the word "February," the Sunday figures and the "22" which represents George Washington's birthday, are in green, as is the heavy rule surrounding the whole job. The balance of the calendar is in purple, as is the irregular border round the talk. I like the rudeness of the heavy violet panel as contrasted with the preciseness of the surrounding panel. I must congratulate Mr. Evans upon reaching, in his first effort as a contributor to this department, a very high position among its artist contributors. This is all the more worthy of praise because of the lack of material which he naturally has to contend with in a town the size of Portage. His work should be an inspiration to many others who have thought their field too small to emulate the productions of the leading typographers, or to originate work of which they need not be ashamed. I want Mr. Evans to send more samples and write more letters.

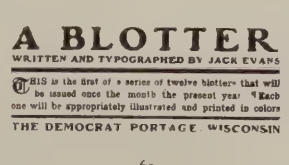
6b



A BLOTTER
WRITTEN AND TYPOGRAPHED BY JACK EVANS
THIS is the first of a series of twelve blotters that will be issued once the month the present year. Each one will be appropriately illustrated and printed in colors
THE DEMOCRAT PORTAGE, WISCONSIN

6c

The envelope in which the January blotter was enclosed had No. 6c as a corner. The rules and the initial "T" were in red, and the balance in purple.

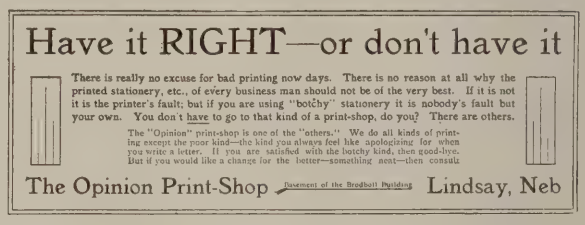
A Toronto tailor made use of a timely idea in connection with the recent Toronto municipal contest (No. 7). It closely followed, as to color, type, etc., the style of the cards of the candidates who took this method of soliciting votes. It is reproduced as a hint to hustlers for local advertising like Mr. Shaw and Mr. Coyle.

7

Neatness—that is the typographical keynote of the house-organ *Suggestions,* issued by the Freegard Press, St. Louis. Pithiness—that is the keynote of the articles it contains. At the bottom of each page is an advertising aphorism. But these are hardly more concise and clear than the articles on publicity and printing, which the little volume contains. An article entitled "Fittedness" refers to the preparation of catalogues, etc. Another article entitled "The Paper," contains just the kind of hints which many advertisers are looking for. It would be hard to conceive a more concise article on the subject, which is one in which printers are finding really careful advertisers are taking a considerable interest. There is a commendable absence of technicality—the public are being written to—and it is sure that such a frank and intelligent "talk" will not only teach the ordinary advertiser a good deal about paper, but will also convince him that the Freegard Press are a firm to whom it is safe to entrust an advertising job. The frontispiece of the January number is reproduced as No. 8.

8

There is a clear-cut appearance about this blotter (No. 9). The ad-writing is good. But why not take especial care in the proofreading of such a job as this? "There's really no excuse" for "now days." Such an abbreviation as "Neb" would be much better with a period after it. Would not some ornamentation of a more ornamentative nature than the inner panels have been better? They would counteract the tendency to too much white, and would look better within the large panel. The heading is forceful—an example of making type help to tell the story. The heading, the inner panels and the 10-pt. are red; the balance is blue. The job is printed on several colors of stock.



Have it RIGHT—or don't have it
There is really no excuse for bad printing now days. There is no reason at all why the printed stationery, etc., of every business man should not be of the very best. If it is not it is the printer's fault; but if you are using "botchy" stationery it is nobody's fault but your own. You don't have to go to that kind of a print-shop, do you? There are others.
The "Opinion" print-shop is one of the "others." We do all kinds of printing except the poor kind—the kind you always feel like apologizing for when you write a letter. If you are satisfied with the botchy kind, then good-bye. But if you would like a change for the better—something neat—then consult
The Opinion Print-Shop
Basement of the Brodbolt Building
Lindsay, Neb

9

With each job sent out by Ward, the Printer, is a slip of buff or yellow stock which shows the true spirit of the publicity which has as its aim getting close to the public.

WE THANK YOU FOR THIS ORDER, AND TRUST THAT IT WILL BE ENTIRELY SATISFACTORY
ANY FURTHER ORDERS WITH WHICH YOU MAY FAVOR US WILL BE APPRECIATED AND WILL RECEIVE PROMPT AND CAREFUL ATTENTION
VERY RESPECTFULLY
WARD, THE PRINTER,

34 CLARKE STREET NEWPORT, R. I.

10

(No. 10.) The courteous wording and apparent anxiety to satisfy should do much in that important part of publicity whose object is the Retaining of Customers. The initial is embossed in gold, shaded with green.

Harry A. Woodworth, 349 Jarvis St., Toronto, Canada.

DEAR SIR:—Many months have passed since I have submitted any of my work to you for criticism. But having a few specimens of my own "publicity" upon which I would like to have an able critic pass judgment, I enclose them herewith for your observation. My absence from your "publicity circle" does not indicate that I have given your excellent department of the N. P.-J. the "go-by." Oh no! I have been continually "loading up" with the many good things read and seen therein. Thanking you for past courtesies, and in advance for compliance with request contained above, I am, Yours ever,

Streator, Ill. L. WIETLISPACH.

A strip of new violet stock, folded three times, contains on the title page in black and aluminum this title. "A Few Pages of Toots, Tooted by Wietlispach, The Printer, Streator, Ill." The circular which this covering encloses is on an opaline stock, printed in dark blue and light brown. On the inside of this sheet, placed where one sees it on unfolding the cover, are these words, in that peculiar foreign italic, which has formerly been the mark of individuality in Mr. Wietlispach's work: "He who tooteth not his own horn, the same shall not be tooted." I should like to reproduce the three panels that make up the design of the inner part of this circular. Toots No. 1 and 2 are blown in regard to two contests run by the *Inland Printer.* Toot No. 3 and No. 4 refer to the blushing honors which were showered upon Mr. Wietlispach in two contests in the NATIONAL PRINTER-JOURNALIST, in one of which he secured tenth prize, and in a later one of

which he was awarded first prize with a score of ninety-nine points and a certificate of excellence. In caps with an appropriate initial he says:

I was the only printer in the world whose name appeared among the leaders in four successive contests conducted by the two magazines that have come to be looked upon as the text-books of artist printers, publishers and newspaper makers of all countries. This ought to be some slight evidence that I know my business, and when I say I do *good printing,* I have the papers to back it. If you need any job printing, 'phone me (Independent 98). I would like to talk to you about it.

L. WIETLISPACH, Streator, Ill.

Below this short advertising talk are two letters from the American Type Founders Co., and Barnhart Bros. & Spindler, in which mention is made concerning Mr. Wietlispach's standing in the contests conducted by the two journals. The composition of this job is admirable. The ornamentation consists of two butterflies on the inner sheet and a lion rampant on the cover. In such a job as this it seems to be a pity that there were not available some of the ornaments which represent "a tooter a-tooting," such as are, I believe, in the specimen books of the Keystone Type Foundry. Mr. Wietlispach's English is open to criticism. He says, for instance, that "there *was* 143 contestants," and he uses "would" for "should." In the latter matter the language is so subtle as to lead many students of English astray. The phrase, "those who emulated for supremacy" is not a particularly happy one. It is quite possible that English is not Mr. Wietlispach's mother-tongue, but that should make him all the more careful in his advertising writing. Specimen No. 11 is a new note-head of

11

Mr. Wietlispach's. The rules are in light brown, and the balance in black. The ornamentation is reminiscent of some of this gentleman's earlier work, and gives a pleasing individuality to the style he has adopted in connection with the new faces he has secured.

A New Year's card, which is sent by this gentleman, has the endorsement: "This is not original, I got the inspiration from your department in the N. P.-J." I acknowledge the success of Mr. Wietlispach's inspiration, and I must say that, although he has taken a hint from the New Year's card of the Union Bank Note Co., of Kansas City, Mo., he has gotten up a design which is strikingly original. And I hope the color of the stock will be so bleached by next December that I will be able to reproduce it as a hint to others who may make as good use of it as Mr. Wietlispach did of the former reproduction.

I do not know whether the makers of the Monotype pay for the printing and distributing of the square card upon which the advertisement signed "Wright & Joys Company" appears (No. 12). However, even if they did not do so it is

THE "MONOTYPE"

lately installed by us, is the greatest saver of money and the best producer of good work ever placed in any printing plant. Write us for specimens of its work, and get our prices on your next order.

WRIGHT & JOYS COMPANY

12

still a good advertisement for that live Milwaukee firm. This is an out-of-the-ordinary advertisement as to size and shape. It is printed on a superior quality of Bristol board. The rules and ornaments are in bronze red, and the balance in green. This makes a rather catchy distribution of color.

[Written in violet ink, as are all Mr. Pirsch's letters.]

My dear Harry A. Woodworth, 349 Jarvis St., Toronto, Can.

[I like this style of address.]

How are you, and how is the world using use? My sincere wishes for a prosperous year.

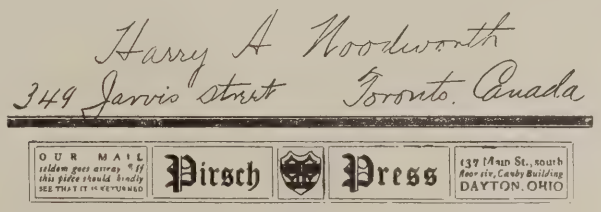
How do you like the invitation, also envelope? Believe me,

Sincerely,

Dayton, Ohio. WM. CARL PIRSCH.

As to the invitation, it is one which I wish to consider in an article on invitations which I have been engaged to write for another trade journal. In the meantime I do not mind telling Mr. Pirsch that I think it is all right.

Despite the fact that the envelope is printed in purple, I am going to ask the engraver to try to reproduce it as No. 13.



Harry A Woodworth
349 Jarvis street Toronto. Canada
OUR MAIL seldom goes astray. If this piece should kindly SEE THAT IT IS RETURNED
Pirsch
Press
137 Main St., south floor city, Canby Building
DAYTON, OHIO

13

The heavy rule is set off by two light rules. This is also the color scheme of the bands of the double "P" mark. The design is of the entire width of the bottom of the envelope. It seems to me that the space devoted to the sentences, "Our mail seldom goes astray. If this piece should, kindly see that it is returned," might have been better employed in an advertising talk. It is simply an admonition to the post office, which the post office will probably not read, as it has merely the appearance of an advertisement meant for the general public. The post office does not need this advice when the address is so plainly printed.

A brochure which is, to my way of thinking, a more artistic adaptation of olden ideas to modern instances than the latest number of the *Chap Book,* is the beautiful "White Book," of which the cover-design, with its Missal capitals is shown as No. 14. Some of the initials are in red, and others

The White Book which is also called the Book of Cloister
Wherewith are Shown the Flemish and Missal Capitals
Thereafter follows the French Book of Grasset the whole
Rubricated with divers Borders from the old Wood Block
Prints by Wynken de Worde ~ Imprinted Anno Domini

American Type Founders Company, U.S. America

14

in light blue, which I hope will reproduce sufficiently to show the general plan of the design. The colors are distributed with great taste. The design is at the top of an Old Stratford Parchment cover-page. The old-time printers of "Morte d'Arthur" would surely be pleased with the White Book, full, as it is, of artistic suggestions as to Old English composition.

This card of Mr. Ewing, with the Robertson Printing Company, St. Louis (No. 15) might be given some idea of by means of a halftone, though most of Mr. Ewing's jobs are hopelessly unreproducible. It is certainly a striking in-

stance of modern ornamentation. The card is of black cover stock, in aluminum and red and green. The flowers on the

15

white tint-blocks are red as to blossoms, green as to stem and leaves, and the lower rule has a red magazine rule printed over it. It's a card that will be looked at.

Harry A. Woodworth, 349 Jarvis St., Toronto, Canada.

DEAR SIR:—Believing that you appreciated my efforts on my first advertising novelty (the barber card), I herewith enclose another one. The first was not a success. I printed fifty, took one to the barber. He laughed and said it was pretty good—asked me if I had any more. I told him yes. Whereupon he took a nickel out of his pocket, told me to go and have a smoke on him and fetch the cards over. It is needless to say he has not got the cards yet.

I put one of the cards in our window and watched the results for a few days. Two traveling salesmen stopped, read the card, then came in and told me it was one of the best barber ads they had ever seen. Another stranger with about two weeks' growth of beard on his face stopped to read. I followed him when he left and he went direct to the shop advertised. Citizens of our town have told me, after reading the card, that never would they shave themselves again. Am satisfied that the card is a business-getter, but don't care to give this particular barber the benefit of the scheme. It is good anytime, anywhere.

However, I was not entirely discouraged, but set to work at once upon No. 2 and it was a howling success. Have cleared over $25 to date and am not all sold out yet. My only expense was 25 cents for a bottle of liquid glue. The jingles I wrote myself. The wall-paper covers cost nothing, as druggists and paper hangers always have any amount of old wall paper sample books lying 'round. The stock for the printed pages came from the waste pile in the stock cupboard, so of course that cost me nothing. My employer is a right good fellow, so I gave him two page ads in the rear of the book. Most of the work was done on my own time, except one day for composition, and a half-day to dispose of the finished product.

Even at that you can hardly say that we lost much time, for we ran the poem in the paper that week. It killed three columns of space and made fairly interesting reading matter for non-resident subscribers who were well acquainted here. Each cover was different, and I tell you it was a gaudy display. I might have printed the title on the cover, but then it would have looked like a "chap book," and that is something I haven't got used to yet, although I notice some of the leading printers' journals are advocating the "chap book" as quite the correct thing. I did no soliciting till I brought the booklet round for sale. It was quite a risk but ended in a howling success. * * *

Yours truly,

Mayville, N. D. DELL SHAW.

It will be noted that Mr. Shaw's dealings with the barber are different from the experience volunteered by Mr. Coyle for the January number. It will be remembered that he said:

> Another of my ideas that has proven to be a very successful one with me is to get out the plan of some catchy advertisement and take it to the customer and show it to him. If he wants it, all O. K., if not, I am out scarcely anything, but I have yet to find the first customer to turn me down on this kind of proposition.

Barbers are not a class that have fully awakened to the benefits of advertising by means of breezy, argumentative talk, such as that used in Mr. Shaw's card. They stick to the olden method of publicity, employed in the ancient days when their profession was an adjunct to that of the surgeon, and when the barber's pole advertisement was designed, in which the red part represented blood, and the white part the bandage.

The clever editor of the *Practical Barber,* a St. Louis journal, endeavored for several years to overcome the tonsorial prejudice against modern advertising, but I am afraid he did not make a great success. I have found in my case, through conversation in a barber shop with artists who were engaged in removing the cuticle from my tender chin, leaving, however a considerable portion of my stubbly beard, that they made up for the suffering by giving me some of the best tips I ever secured as to possible "scoops." But though I have generally found barbers ready to put a small card in any combined advertisement, there is very little anxiety among them to do advertising after the manner of the butcher and the baker, to say nothing of the clothier and the laundryman. Sir Richard Arkwright with his card, "Come to the Subterraneous Barber. He shaves for a penny!" was an advertiser far ahead of his day, but he soon gave up the barbering business and went to inventing. The "No. 2" to which Mr. Shaw alludes is a brochure of 32 pages and cover, three by about five inches. This is contained, as Mr. Shaw suggests, in a wallpaper cover. As each of the covers is different, each book is an edition de luxe, which would make the Roycrofters of East Aurora, N. Y., and the Boy-Grafters of Evanston, Ill., throw a fit of rhododendron-green-eyed envy. The particular cover which I received is a buff-laid, printed in white and gold, with a laurel wreath on the front cover, and a brilliant margin on either side of the fold. And yet it is not pretty—it is simply odd. I do not know whether the "chap book" design, in connection with the wallpaper samples, would have improved the cover or not, but I believe that the old-time whimsicality of the chap books would be appropriate to the setting of this booklet, which is entitled "When Yankee Doodle Came to Mayville. What He Saw, What He Did, When He Saw." The last part of the title is almost as thrilling as the well-known enigma "Why is a hen?" The poem, which comprises most of the booklet, resembles one which I wrote probably thirteen years ago, inasmuch as it brings in the names of the local dealers of the place. Specimens of the verses follow:

When Yankee Doodle came to town,
You bet he was a dandy.
First he went to Nelson's store,
Said it was right handy.

The Pure Food Store received a call.
Old Yank said, "I'll be beat,
I never thought to find a store
So tasty and so neat."

["I'll be beat" is not, in this connection, a particularly good advertising expression, any more than the famous one of the musical instrument dealer, "Our drums can't be beat." The impression that one would be "beat" by dealing at the Pure Food Store may not be particularly pronounced, but it is there.]

Of course the Laundry got a call,
He found it run by steam,
Equipment new, was large, complete
And scrupulously clean.

Old Yankee sent a bundle there,
And back it came next day,
Everything washed sweet and clean,
It was the laundry's way.

His underwear it did not stretch,
The shirts wan't torn or burned,
No saw edge did the collars have,
No streaks, but neatly turned.

[Possibly it shrunk.]

[These last few lines are somewhat faulty in diction, but

INLAND TYPE FOUNDRY

BUFFALO
CHICAGO

INVENTOR AND MANUFACTURER OF THE CELEBRATED
STANDARD LINE UNIT SET TYPE

TO OUR CUSTOMERS, PRESENT AND PROSPECTIVE:

This month we show two new series, the Condensed Title Gothic No. 11 and the Smith Premier Typewriter No. 1. Both faces are intended to meet the everyday needs of the printer, and their general utility is apparent at a glance. In the Condensed Title Gothic No. 11 our designers have shown that, even in a Gothic, beauty of line and proportion need not be lost, and the perfect grading of color in the various sizes is typically Inland. The series combines force with dignity and durability, and is a valuable addition to our family of Gothics.

Among printing specialties, none has grown so rapidly as the "process letter," and the progressive printer has materially added to his income by catering to this class of work. As the advertising public becomes better acquainted with the value of this method of publicity, it demands "real reproduction". We already have quite a number of typewriter faces on the market, and now add an exact fac-simile of the characters used on the Smith Premier. Like the Oliver, the matrices have been cut from the original punches furnished by the manufacturers of the machine, enabling the printer to give his customers "the real thing" in a process letter. The demand is going to be large, and the first to avail himself of its possibilities will have a distinct advantage.

INLAND TYPE FOUNDRY

The above circular is printed in imitation of "process letter," while these lines are printed direct from type.

SAMPLE SHEETS AND PRICE LIST OF BOTH FACES WILL BE FORWARDED ON REQUEST

ELEVEN years ago The Inland Type Foundry originated its system of type-making—**Standard Line and Unit Set**—saving the printers a vast amount of time. Today this is the only type foundry having all its types on one system. Let us show you where you can increase your bank account; we have shown your competitors

TYPE WHICH IS NOT STANDARD
LINE IS DEAR AT ANY PRICE

certainly give good points in respect to the advantages of patronizing a particular laundry. The localism "wan't" would be all right were the poem intended as dialect verse, but as it is not, it would seem better to use the abbreviation "weren't."]

[The first and second verses quoted below, and the fourth, fifth and sixth are examples of killing two advertising birds with the one stone.]

While stopping at the Cady House,
He asked the waitress sweet,
"Where did you get this lovely steak?—
I'm sure it can't be beat."

"We buy from A. Mathiason,"
She sweetly did reply,
"And if you're coming to this town,
From him you ought to buy."

A lunch he took at Sabin's place,
(In French they say Café),
For things were fixed right up in style—
The decorations were gay.

Oh, my! the things they had to eat,
Such bread, and oh, such cake;
Old Yankee said they tasted like
His mother used to make.

And afterwards he talked with Sam
(I think it was an hour),
Then he learned the bread and cake
Were made from Peerless Flour.

[That portion of the poem which alludes to the *Farmer* will be of interest to the readers of the N. P.-J.]

You bet the *Farmer* got a call.
He said, "I like your town;
Just put my name upon your list,"
Then twenty "plunks" laid down.

The sight of such a pile of "mon,"
And all at once, by gosh;—
The editor grew sick and faint,
That's true—it ain't no josh.

["At sight" would be an improvement. Or does it sound too much like the drafts an editor is wont to receive?]

Old Yank said, "I've called on all
Who advertise with you,
And found they were a right good lot,
And full of business, too."

He said, "I like the *Farmer,* and
I've also heard it said"—
He heard a gasp and looked around;
The editor was dead.

For he had slowly starved to death;
His readers did not pay.
And now his soul's in Paradise—
We hope so, anyway.

[The last verse is as follows:]

That day the train was very late.
He went the Cummings way,
And Newton furnished him the rig.
That's all, kind friends, good-day.

At the bottom is this note: "Of course there are other business firms in Mayville, but as only those carrying ads in the current issues of the *Farmer* were eligible to mention in the jingles, they had to be omitted."

I remember that the verses of mine, to which I alluded, recorded the life and tragic death of two young housekeepers, beginning with the physicians who announced their births to the local newspapers and ending with the undertaker who laid out their "corses," which is poetical for "stiffs." This was the last verse:

L'ENVOI.

This pair, so sensible and good,
So saving and so wise,
O'er them a tombstone should have stood—
It really, really, really should—
But not a marble cutter could
We get to advertise.

My verses were bargained for in the contract in connection with display advertising, and a story, and editorial squibs, which made up the rest of the paper. But Mr. Shaw's verses were evidently a complete surprise to the parties who are mentioned in them when brought out in book form and likewise in the paper. The balance of the talk is devoted to the City of Mayville. There are lists of the city officials and of the lodges and churches. Another commendable paragraph in the book is devoted to a list of industries which would be likely to find a "good opening" in Mayville. One of the two pages of straight advertising which Mr. Shaw devoted to the *Farmer* is here shown as No. 15. The wording may not be

Swallows

business
hum.

15

so good as that upon the opposing page, but it is here reproduced particularly as being an example of how a strikingly symmetrical design may be made more or less by accident, as in this unindented piece of composition. (I received some time ago a typewritten letter from M. Lee Starke, who was then the New York representative of the Indianapolis *News* and other papers. The letter was on the ordinary width of letter paper with the customary printed heading. The address was at the side of the sheet, unindented, I believe, by the typist, and the bulk of the letter, which referred to the marvelous growth in the circulation of the *News,* was arranged in precisely the same manner as the specimens of Mr. Shaw's composition. It is not a style of typewriting which one would recommend for all correspondence, but it was a piece of clever advertising. My letter, which lay on a table in my office for some time, attracted the careful attention of all who saw it). Parts of their business need looking after if such stock as was used for this 32-page book was relegated from the waste pile in the stock cupboard.

In giving so large a space to Mr. Shaw's effusion I do not intend to give the idea that he has, as yet, mastered the art of verse-making. Neither Mr. Shaw nor I are poets, and the advertising work we have both done in verse may be very poor poetry, and yet may have its place in the realm of publicity. I once wrote some advertising verses for a firm for which I had done a great deal of hard prose which was warmly appreciated by them. However, they objected to my poetical effusions as being "doggerel." But I believed in those verses —believed in them from the standpoint of publicity

MERIONTYPE

DESIGNED FOR, CUT FOR, AND CAST AMERICAN LINE

IMPORTANT NOTICE!—THE MERIONTYPE LETTER IS PATENT APPLIED FOR IN AMERICA AND IS REGISTERED IN ENGLAND

THE Meriontype Series is introduced because of a justifiable demand from printers and advertisers for a modern type face available as a substitute for the numerous simple type faces so long in public favor. While its design is not what might be termed severely plain it is devoid of oddity. It is

Send for Specimen of Missal Initials

Lewis and Clark Centennial Exposition

A Western World's Fair now Building.

BUILDINGS OF SURPASSING BEAUTY AND STATELINESS—A SITE UNRIVALLED IN SCENIC GRANDEUR—WHAT THE EXPOSITION COMMEMORATES—PORTLAND AND THE PACIFIC NORTHWEST.

BY FRANK L. MERRICK.

Buildings of surpassing beauty and stateliness are fast having the finishing touches applied for the Lewis and Clark Centennial Exposition, to be held at Portland, Oregon, next year, opening June 1 and closing October 15. This event although not so large as some other expositions, will be a World's Fair in every sense, reflecting the progress of all participating nations, and particularly of Western America.

This Western World's Fair will be quite unlike its predecessors in that it will combine with its broad scope the idea of compactness without crowding in the laying out of the grounds and the housing of its vast number of exhibits. There will be no dreariness of architecture to tire the eye, no miles of aisles to weary the limbs. All will be perfection, or at least the nearest approach thereto ever achieved by an exposition.

Like the Louisiana Purchase Exposition, the Lewis and Clark Centennial will make a feature of live exhibits. Not merely the products of human ingenuity and skill will be shown, but there will be exhibited first the raw materials and then step by step the method of handling them and the processes by which they are changed from their natural state of usefulness and beauty. The Exposition will thus become a thing of life and motion in all its different departments.

The Centennial, which will be the first international exposition under the patronage of the United States Government, ever held west of the Rocky Mountains, will demonstrate the marvelous progress of the Pacific Seaboard. Five million persons live in the section of country which is directly interested in making the Exposition the true exponent of its development.

This World's Fair will celebrate the 100th anniversary of the exploration of the Oregon Country by an expedition commanded by Captains Meriwether Lewis and William Clark, and planned by President Jefferson. The Oregon Country which comprised what is now the States of Oregon, Washington, Idaho, and parts of Montana and Wyoming, was the only acquisition of territory made by the United States through discovery. It was just after the formal transfer of the Louisiana Territory to the United States that the sturdy band of explorers under Lewis and Clark started on their long and perilous journey to the Pacific Coast. Although this eventful undertaking was not primarily one of adventure, the trip was full of exciting and interesting happenings. And that it was not lacking in romance is shown by the journals of Captain Lewis in which he mentions the brave and heroic deeds performed by Sacajawea, the Indian girl who guided the party and who was instrumental in its reaching its destination. After eighteen months of toilsome journeying, in which the travelers suffered many hardships, the Pacific Ocean was reached at the mouth of the Columbia river. The surrounding country was partially explored and the party then started on its return trip, reaching St. Louis, the starting point, September 25th, 1806, having been absent nearly two and a half years.

The result of this expedition, the acquisition of the great Oregon Country by right of discovery, extending our frontier to the Pacific Ocean, adding a vast and rich territory to our domain. It was one of the direct causes of the acquisition of California, and the subsequent acquisitions of Alaska, Hawaii, Guam and the Philippines are related to it. The sentiment which inspired the people of the Pacific Northwest in the preparation of this great exposition is therefore one in which every American must share. It celebrates the centennial of the peaceful acquisition of a wilderness that has yielded up its riches generously as a reward for the unceasing toil of the pioneer and home-builder. Where the savage dwelt a few decades ago, are now the cultivated farms and the flourishing cities of a progressive people.

The growth of the Pacific Northwest in the past fifty years has been remarkable. From a population of 13,294 in 1850, the country has been so rapidly settled that its people now number 1,200,000. While the States are essentially agricultural, extensive manufacturing interests have developed until their value in 1900 was $175,000,000. Foreign commerce plays an important role in the progress of this great country, its value amounting to $36,000,000 yearly.

Grand Stairway.

The mineral resources of gold, silver, copper and lead are valued at $70,000,000. This enormous growth of population and wealth over so vast a territory in so short a time, has much to do with the importance of the Lewis and Clark Exposition to the world at large. The Exposition has a local as well as an international value to those who participate. The attendance from the States of the Pacific Coast will be large and many will come from the middle West and the far East so that the Exposition must prove to be an incentive to trade beyond estimate.

In speaking of this wonderful country, mention of its scenic grandeur must be made in passing. No matter what kind of scenery one may desire, it is here. Mountains upon mountains, snow-capped peaks, waterfalls, rock-ribbed rivers, foothills, lava beds, bays, caves and lakes are at the choosing of the sightseer. Perhaps the most charming bit of scenery is that along the Columbia river from Celilo westward to where the Williamette joins its waters. The river's course is marked by beetling cliffs, with here and there waterfalls of rare beauty. In natural scenery, it rivals the Rhine and the Hudson.

Portland, the Exposition City, is the principal city of the Northwest Coast, and has a population of 130,000. It holds extensive commercial intercourse with the whole world, the chief export commodities being lumber, flour and grain. The city does a wholesale business of $175,000,000 annually and the product of its factories was $50,000,000 last year. The name of the "Rose City" has been given this western metropolis on account of the large number of beautiful roses that are constantly in bloom here all the year 'round. The climate is exceptionally mild on account of the warm currents of the Pacific Ocean. Mild winters and cool summers are the rule. It is in the first rank of American cities for health, the

death rate being only 9.5 per thousand of population. Portland is equipped with complete systems of electric railways, 163 miles in length, extending to every part of the city, and all of them running to the Exposition grounds. Thus the visitor to the Exposition of 1905 may choose his quarters in any section of the city, however remote from the Exposition grounds and be assured of means of travel within reasonable time between the Centennial and his lodgings. From the central portion of the city the grounds may be reached by the street railways in fifteen minutes.

In choosing the site for the Exposition the many interests of the city were duly considered, with the result that the most convenient, the most beautiful and the most picturesque site was selected. It occupies 402 acres adjoining the principal and residential district of Portland.

Oriental Exhibits Building.

The beauty of the site and superb view to be had from it are far beyond an adequate description. They must be seen to be thoroughly appreciated. Nestling at the base of the foothills of the Cascade Range, on the gentle slopes and terraces overlooking Guild's Lake and the Williamette river, with an unobstructed view of 65 miles which embraces the snow-capped peaks of Mt. Hood and Mt. St. Helena, the site presents a picture entirely original in exposition building. There is no need here to build papier mache mountains as scenic accessories for refreshment purposes. One may sit on a commanding roof garden and while dining drink in the pictorial sublimeness of real snow peaks of mountains that rival the Alps in grandeur. Of the gross area of the site, 180 acres are on the mainland and 60 acres from a peninsula extending out into Guild's Lake, a fresh water body 220 acres in extent, which is separated from the Williamette river by a narrow strip of land. In the river may be seen the heaviest of draft vessels of all nationalities and during the Exposition warships of our own and other nations will be anchored here, adding a picturesque feature to the water front.

The Exposition grounds are made up of hill and dale, and in one portion a natural park of trees and shrubs affords an opportunity for landscape work of a most attractive character. In the arrangement of the buildings thorough consideration has been given to the convenience of the visitors and the attainment of a rich and beautiful architectural effect. The main group of exhibit palaces consisting of eight structures occupies the ground bordering on the lake, and forms nearly a straight line with their short sides facing the water. These buildings are: Agriculture, European Exhibits, Liberal Arts, Oriental Exhibits, Forestry, Mines and Metallurgy, Fine Arts and Machinery, Electricity and Transportation. Around these structures on the outer edge cluster the State, territorial and other minor pavilions. The Administration Building in which the executive offices of the Fair will be located, stands at one end of the Colonade Entrance, the main gateway to the grounds. On the peninsula in the center of Guild's lake is located the United States Government display. Here will be an imposing Government building characteristic of Uncle Sam's Exposition structures, with two towers each 260 feet high. Besides the main building there will be several minor structures, among them being the United States Forestry, Fisheries and Irrigation pavilion and the Life-Saving Station. All of the main exposition structures are in the style of the Spanish renaissance except that the Forestry building which is true American type, being constructed of huge logs in their virgin state, thus exemplifying in its composition the timber resources of the Columbia River region.

The central features of the Exposition are Columbia Court and Lakeview Terrace. These two spots have been made the tween the Agriculture and the Liberal Arts buildings and object of elaborate embellishment. The court is situated beconsists of two wide avenues between which are spacious gardens, with perling fountains and beds of vari-colored flowers. In the center of the gardens is a heroic bronze statue of the heroine Sacajawea. Passing through Columbia Court one comes to a parapet at the head of Lakeview Terrace. From this parapet a series of broad steps flanked on each side by massive balustrades lead down to a boat landing on the shore of the lake.

On either side of the Grand Stairway, as these steps are called, flowered terraces add color and beauty. Here at night on this entrancing spot with thousands of lights reflected in the still waters of the lake, will be given band concerts, pyrotechnic displays and other outdoor features. And this is not the only section of the grounds where the landscape artist has shown his genius. On a slight elevation in the western portion of the site is Centennial Park, a natural woodland where are growing many varieties of trees and shrubs and where the visitor may find secluded nooks and sylvan dells in which to rest after sightseeing. This Park also overlooks a Model Farm in a small canyon below, and the visitor may sit upon a rustic bench and see all the different varieties of crops raised in the Northwest growing side by side.

Agriculture Building.

The "Trail" which is the amusement street of the Centennial, corresponding to the Pike at St. Louis and the midways of other expositions, has an entirely new and original environment for this feature of the World's Fair. It is situated upon an ornate bridge which spans the lake and connects the peninsula with the mainland. With the unrivaled water facilities thus offered much attention will be directed to concessions for aquatic features. Many new and attractive shows will grace this bridge and when the visitor goes up the Trail next summer he will experience many a new sensation.

Intra-mural transit will be furnished in many different

ways. Automobiles will traverse the main thoroughfares and roller chairs and jinrikashas will be at the service of the visitors who desire to be trundled about the grounds and through the buildings. Guild's Lake will be plied by many different craft, including the seductive and romantic gondola with the picturesque singing gondolier, and the more prosaic electric launch and row boat.

European Exhibits Building.

The Centennial when opened will represent an outlay of approximately $5,000,000. This includes the cost of laying out the grounds, and the amounts expended for buildings, exhibits and all other purposes. The largest participant is the United States Government, which has made an appropriation of $475,000. As the Government has already on hand an exhibit worth more than $300,000 which requires little reinforcement, its action is equivalent to $800,000. Next in rank is the State of Oregon, with an appropriation of $450,000, which is at the rate of nearly $1.00 for every man, woman and child in the State. No State having so small a population as Oregon has ever appropriated so large a sum toward an exposition. Strange as it may seem, Oregon is better able to give so large an amount than many of the

View of Experimental Gardens from Centennial Park, showing Trail and Esplanade in construction.

older and richer States, for the reason that it has no State debt and is constantly increasing in population and expanding its industries. The Exposition company, which was organized and financed by the people of Portland, will expend $475,000 raised from the sale of stock and other sources.

Other States that have appropriated sums ranging from $10,000 to $35,000 are California, Montana, Idaho, Utah, Missouri, Washington, Wyoming, Nevada, North Dakota, Minnesota, Arizona, Virginia, New York and Massachusetts. The total State appropriations aggregate $560,000. Besides the above-mentioned States many others will probably make appropriations when their legislatures meet this winter.

Foreign participation will be extensive, the exhibits being largely drawn from the Louisiana Purchase Exposition, as the countries could not be expected to make new efforts for an exposition following so close upon the St. Louis show. As a result only the cream of what the foreign nations displayed at St. Louis will be transferred to Portland.

Installation of exhibits will begin in January and the advanced condition of the grounds and buildings insures a completed exposition when President Roosevelt presses the button on opening day.

GOOD FELLOWSHIP IN THE PRINTING BUSINESS.

BY EDMUND BURKE, DALLAS, TEXAS.

In consequence of the increase in press facilities and labor-saving devices, and our continued growth in population and intelligence, the printing business has become a prominent feature of commercial life. Leaving out of consideration the time and money expended in acquiring practical knowledge, there is probably more actual capital invested in the printing business, in proportion to the volume of trade, than in almost any other manufacturing line. The average business of a printing office is made up of a multitude of transactions, varying materially in character and conditions. For this reason, it is necessary to have a well-appointed establishment to do even an ordinary line of commercial printing, and it frequently occurs that the annual output is not more than the actual capital invested. It is therefore dangerous to indulge in ruinous or jealous competition. There should always be healthy business rivalry, but the fact that the business is essentially fluctuating should never be lost sight of. How to compete without wronging others is the question now attracting the attention of the printers, publishers and stationers throughout the country, and the most practical scheme so far suggested, is the formation in the different cities of Printers' Social Clubs, organized with the object of promoting good fellowship and eliminating that jealousy among competitors, which has too frequently been allowed to overcome better judgment and good sense. There is no denying the fact that among the printers there has prevailed to a great extent, a spirit which has caused them to feel better over beating a competitor out of a job than over making a fair profit for themselves.

These social organizations are exerting a very beneficial influence on the business in teaching the printer that there can be a competition in which neither builds himself up by injuring the other. They meet, associate, exchange ideas, and become better acquainted, not to tear each other down, but to help build each other up on that broad principle, that an injury to one is an injury to all, and that the well-being of one is promoted by the well-being of all. These gatherings are of great benefit to the young man entering the field, and he certainly can make no better investment of his time than to attend the meetings and get the benefit of the experience of others, who will help him to overcome the difficulties which they had so much trouble in surmounting. Their beneficent influence is manifested in making plain the fact that no individual or concern in the printing business in any community can afford to act regardless of his neighbors or competitors; that it pays to know who their competitors are, and demonstrates that mutual knowledge modifies jealousy and makes competition more friendly, restrains unkind expression, and brings their interests closer together.

They are helpful, in a general way, in promoting the general acquaintance and good feeling of their members, and

in a special way, by educating, through a free interchange of experience and information, the true value of work. This knowledge has its influence on the prices obtained and is fast bettering conditions. The discussions started by these organizations are resulting in establishing a minimum standard cost, below which conservative printers believe it unsafe to go.

The members of these clubs find it a pleasure to impart to their less-experienced friends the knowledge they possess, feeling satisfied that the information thus given will be honorably used. In this way the element of ignorance, which has done so much to demoralize the craft, is being overcome, and one of the most dangerous factors of competition destroyed, as the knowledge, kindly imparted, makes a business friend of one who would probably otherwise become a business foe.

AN INSTRUCTIVE SOUVENIR EDITION.

The souvenir edition of the Puyallup Valley, Washington, *Tribune,* went very far, by its many enumerated facts and splendid illustrations, toward proving its assertion of "Puyallup—Richest Valley of the West." The record of its own prosperity was additional and most convincing proof of the richness and prosperity of the region from which it draws its support. It told of its new building, erected for a newspaper office, built of pressed brick and concrete and finished in Washington fir, at the mills of the city—home products being used in every instance where procurable. There are conveniently arranged stock rooms as well as editorial rooms and other conveniences not always to be found in cities of much larger size. There is an immense skylight over all the printing and press rooms and a concrete foundation for the cylinder press. The structure is well lighted throughout, has the best of water and electric light connections and complete plumbing and sanitary arrangements throughout. A new Campbell cylinder press, a Chandler Price jobber, Polhemus cabinets and large and fine assortments of new types have been added, and with the paper only sixty-three weeks old. The regular issue of the paper is an all-home print of eight six-column pages. They do things in Washington which is making rapid strides in its development toward becoming the richest State in all this Union. The paper is ably conducted and edited by Robert Montgomery, editor and publisher. Its local and neighborhood news departments are commendably complete and well handled, and the mechanical appearance of the paper shows a perfection worthy of its new office and equipment. These latter generally insure an excellently, economically and profitably printed paper. Puyallup is "under the shadow of Mount Tacomah, "nourishing mother." This edition of the paper is worthy of especial editorial notice, by reason of all the points of excellence mentioned that tell by example better than we can by editorial teaching of the points most essential in the making a newspaper—good news service; useful, able editorial work; a zeal for the highest attainment and for the locality served; plans and efforts for highest usefulness; a well-equipped, well-arranged, lighted and comfortable building and perfect mechanical equipment, with newest machinery and up-to-date type faces. If Tacomah means "nourishing mother" to the Valley, the *Tribune* means a wise counselor, and able defender and upholder of its people and their interests.

BUSINESS NOTES

This Department is conducted for the benefit of advertisers, and expresses their claims and views

The Inland Type Foundry shows, in insert, this month, two very useful series of type—the Condensed Title Gothic No. 11, and the Smith Premier Typewriter No. 1.

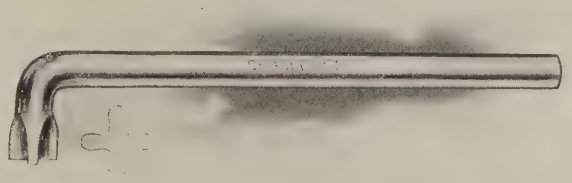
An examination of the same will convince any practical printer of their every-day utility in the printing office. The Gothic series combines force with dignity and durability and shows that, even in a Gothic, beauty of line and proportion need not be lost.

The American Type Founders Co., employs an able corps of artists and type designers, at work studying out and designing new, useful and attractive type faces, borders and ornaments, to supply the demands of the rapidly-advancing printing art.

Never before in the history of the craft has there been such variety and originality of designs in types, and such attractive material furnished the printer as in this beginning of the twentieth century.

The "Meriontype Type" series shown by the American Type Founders Co. in the NATIONAL PRINTER-JOURNALIST this month is distinguished by the qualities of strength and clearness with just enough of the modern finish and beauty to be pleasing and yet to be devoid of any detracting oddity or obscuring ornamentation. It is legible, dignified and useful. It is excellent for job work and yet wonderfully adapted for display in advertising columns—clear, clean and sharp.

"Why did I not think of that myself" is what our pressman remarked when he first saw the Challenge Right Angle Quoin Key made by the Challenge Machinery Co., of Grand Haven, Mich. It is made of tool steel in tool finish, and can



be used for any make of Hempel Quoins. It is an excellent tool for the cylinder pressman and will save him lots of time and keep him in good humor. We advise our readers to send to this company for information if interested.

The Dexter Folder Company report unusual activity in business, and particularly in their Press Feeder Department. Among the recent purchasers are the following:

Chas. Scribner's Sons, New York, 3.
Frank A. Munsey, New York, 10.
Hill Publishing Co., New York, 12.
Berwick & Smith Co., Norwood, Mass., 6.
Stecher Litho. Co., Rochester, N. Y., 2.
Doubleday, Page & Co., New York, 4.
Hollenbeck Press, Indianapolis, Ind., 4.
Chapple Pub. Co., Boston, Mass., 2.

Atoz Ptg. Co., South Whitley, Ind.; National Ptg. Co., Omaha, Neb.; Maple Press Co., York, Pa.; C. S. Severson, St. Louis, Mo.; Elite Pub. Co., Pittsburg, Pa.; W. D. Hoard

Co., Fort Atkinson, Wis.; Methodist Book Concern, Toronto, etc.; including several machines for export to France and South America.

There is naught in this world so intelligently informing as actually seeing. Object lessons are necessary to a sure and perfect understanding of all mechanical processes. Acting on these now well-established truths, the members of the Philadelphia Typothetæ have been of late taking some practical lessons through actual observation in trades whose products are used in "the art preservative of all arts." The visits are made, one each month, by the members in a body. A visit to the Keystone Type Foundry was on the program for February 10th and proved immensely entertaining and profitable. The Foundry, at Ninth and Spruce Streets, Philadelphia, was thrown open to its guests and every facility offered for carefully examining every step and process in the manufacture of types. Everything was carefully and practically demonstrated. Letter-designing, punch-cutting, matrix-making, mould-making, foundry machine shop, matrix vaults, metal-mixing, casting, rubbing, setting, dressing, inspecting, paging, fonting, brass rule-making, brass galley-making, brass and copper space-cutting, lead and slug making, power plant, stock rooms, sales-rooms, shipping-rooms and other features going to make up a type-founding business were all shown and explained to the entire satisfaction of the Keystone's guests.

The difficulty and expense to the Foundry in filling small orders for sorts was made so plain and the enormous amount of time and labor in proportion to these orders was shown to be so great that it is doubtful if those present will feel like finding fault with the price and time necessary to secure a small quantity of sorts hereafter, as they now know what it means to fill such orders.

The affair was the result of no special arrangements or plans. The visitors were conducted through the Foundry in groups of five or six by its own people familiar with the routine, and in this way each one was able to understand the details of the work.

The Keystone is a surprisingly big, busy, clean, well-equipped, well-organized, modern institution, and every one was highly pleased with the visit and felt repaid for the time spent. After the visitation the printers were invited to dine at The Bourse, on Fifth Street.

Souvenirs were twenty-four point Keystones, cast and distributed hot, also a suitable character cast upon ninety-six point body, nickel-plated, making a handsome paper weight, and a Menu emblematic of the Foundry.

Mr. E. Lawrence Fell, of Franklin Printing Co., President of the Typothetæ, and Mr. Edward Stern, of Edward Stern & Co., formerly President of the United Typothetæ of America, made a few remarks thanking the Keystone management for the entertainment and Mr. F. W. Ayer of N. W. Ayer & Son, and Mr. S. M. Weatherly, the Keystone's Treasurer and Manager, responded for the Foundry.

In this tour of observation and investigation, these employing printers of the city of Brotherly Love and of practical education and wonderful attainments in all the arts and trades, have so far visited a paper mill, an ink factory, an engraving establishment and a type foundry. We will give a dollar to any one of our readers who will name the greatest number of other manufacturing establishments, which these employing printers, publishers, bookmakers, lithographers, binders and blank-book manufacturers could still profitably visit in the study of all lines and branches of manufacturing contributory, through manufactures or machinery, to their related and interdependent callings.

The Keystone Gothic Series, cast by the Keystone Type Foundry, of Philadelphia and New York, while always a very popular face, has, by the addition of the five new sizes, and the placing of the complete series, of Universal Title Line and Point Set, become practically indispensable to the modern printing office. The complete series is well shown on a two-page insert in this issue.

THE MISSION SERIES.

For years faces of unusual breadth, showing character and strength in the absence of hair lines, with large lower cases and short ascenders, have been the rule with type founders, and have been furnished in great variety. Now there is a well-marked and easily-accounted-for reaction; and strong semi-lean faces of legibility, pleasing contour, long ascenders, firmness of line and serif, with no more than proper relief of white in their closely-fitted characters, furnish that variation so long needed.

All knew a change was impending; just what form it would take none could say. Little by little it seems to have solidified in the style of which the Mission Series is an excellent example. This face is substantially a monotone. Nearly all strokes are of like weight. The absence of hair-lines and the short, well-bracketed serifs, insure durability, while the long ascenders bring it into the class of faces that are just now so fashionable. The style is popular, and will be in vogue for years.

Mission is closely fitted, an advantage made possible by the short, stubby serif and the general characteristics of the face. It is much more condensed than is apparent from a study of the printed specimen. The graceful curves and openness of the small characters suggest a freedom and broadness that do not actually exist. Much can be got into small space, with a resultant strength and clearness, an ease and dignity, not possible with straight romans. Size for size, Mission presents the larger face, a more intense color, a more attractive individuality.

The capitals by themselves are decidedly pleasing in a stately way; and the figures are large, plain and desirable for any work.

Altogether Mission is dignified, and devoid of freakishness. It is plain and strong in the beauty of simplicity, and can be used most agreeably in hundreds of jobs, to each of which it will impart distinction. Its range of use embraces the business card and the catalog, and almost all between. The little folder; the handsome brochure; the leaflet; the circular; the announcement; the letter head; the invoice blank; the report; the envelope card, and scores of other impressions on paper will be all the more attractive and satisfying because of its use.

Mission is an aristocrat among types, free from taint of vulgarity. It is of distinguished nobility; and its characteristics are well preserved in the uniformity of style and general effect throughout the series.

Of course it is point-line, point-set, point-body, and with those characteristics of B. B. & S. type—deep-cut matrices and copper-mixed metal. The series will be completed to and include 48pt. It will prove the handsomest, most distinctive and most useful series the printer can buy, adapted to use in many places.

There is just one caution as to its use. It should not be widely spaced either way, neither between words nor lines. Its beauty is accentuated and maintained by keeping the spacing in harmony with its face and fitting, which are close. This applies to its use in the mass. In open display it can be used as any other, and will have an attractiveness all its own.

It is like and unlike any other. We are proud of it.

The Age *of* Specialists

The Credit Specialist whose field is confined exclusively to the Paper, Book, Stationery, Printing and Publishing Trade, and the only Specialist in this field, is THE TYPO MERCANTILE AGENCY. Its Credit Books, Special Reports, Bulletins, Collection Department, and every feature, are designed to meet the special requirements of those whose customers are in this Trade.

The Typo Credit Book stands in a class by itself; it is more than a Credit Book and much more than a mere Trade Directory. It gives every firm, large and small, in this entire Trade, with ratings for capital and credit, and street addresses in all cities. It reflects the result of constant investigations in the Trade itself, and thus indicates the undesirable customer, no matter what his capital, and points out the safe risk. The business classification is such as to give practically distinct lists of each branch of the Trade, which makes it as indispensable to the salesman as to the credit man. It is issued every January and July.

The Typo Bulletin gives all the changes and happenings in this Trade affecting credits, and in such condensed form that it saves the credit man much valuable time in gaining these facts, essential to his protection. It is issued weekly.

The Typo Special Reports are prepared by specialists who have made the conditions in this Trade their special study. They contain the Typo records, and the facts given and deductions drawn are based upon information gleaned with the greatest care through local, general and trade channels. The special feature which makes them superior to every other report is their exhaustive Trade investigations, which show the past experience of others. They are issued in answer to inquiries.

The Typo Collection Department offers the most effective as well as the most economical method of dealing with delinquent debtors and collecting doubtful accounts. Knowledge of these debtors gives the Department every advantage, and its special position in the Trade forces many a worthless debtor to pay a just account otherwise uncollectable. Many slow accounts may be collected promptly and at nominal cost through the Typo Drafts.

The Typo Service meets every requirement, and the testimony of Subscribers of years' standing is indisputable evidence that the Service is unequaled.

LIVE STOCK AND POULTRY CUTS—Catalogues free if you write upon your business stationery. Chas. L. Stiles, Columbus, Ohio.

A COLD SIMPLEX STEREOTYPING OUTFIT, $17.00 and up, produces the finest book and job plates, and your type is not in danger of being ruined by heat. Simpler, better, quicker, safer, easier on the type and costs no more than papier-mache. Also two engraving methods costing only $5.00, with materials, by which engraved plates are cast in stereo metal from drawings fmade on cardboard. New stereo half-tone engraving method, no photo work, sor $1. Come and see me if you can; if not, send postage for literature and samples. HENRY KAHRS, 240 East Thirty-third Street, New York.

THE VAN BIBBER ROLLER CO., Sixth and Vine Sts., Cincinnati, will give you *the best rollers* that can be made for any season or press. Our facilities are the best, and we use the latest Gatling Gun and compressed air apparatus. It pays you to have good rollers, and they count more in presswork than anything else. In writing or shipping, "Cincinnati" is sufficient. Everybody knows us.

ANYBODY CAN MAKE CUTS with my simple transferring and etching process. Nice cuts, from prints, drawings or photos, are easily and quickly made by the unskilled on common sheet zinc. Price of process, $1. All material costs, at any drug store, about 75 cents. Circulars and pecimens for stamp. THOS. DAY, Box P, Windfall, Ind. My Simplex Mailer only $5, send for circular.

EMBOSSING AND STATIONERY DIES, SEALS, SMALL STEEL AND BRASS STAMPS. JOHN KIOLA, 155 Madison Street, Room 59, CHICAGO, ILL.
Correspondence regarding Sketches, Prices and Particulars, invited.

If you own or intend to start a job office, you need my trade-getting plan. Has been worth thousands of dollars to me. Nothing equals it. Fully explained for $1.00. (California reserved). F. H. COOK, 930 W. 36th st. Los Angeles, Cal.

IT MAKES NO DIFFERENCE HOW STIFF OR TACKY YOUR INK MAY BE

ACME INK REDUCER will quickly mix with *any* kind without affecting the color or injuring the quality of the ink used—and while its *drying* qualities cannot be surpassed it does not dry on the press.

GREAT FOR COLORED INKS

By using the *Acme* kind in color inks, you can produce fine-line cuts (halftones, wood engravings, etc.) as clear and sharp as with the best qualities of black or blue-black inks. Try it—Sample free—Postpaid

ACME INK REDUCER is *double-value* for all printers' use.

ACME COMPOUND CO., ELKHART, IND.

Representative. YALE PRINTERS' SUPPLY CO., NEW HAVEN CONN.

Inkoleum is a pure colorless liquid and does not affect working properties of inks like paste compounds introducing foreign matter, wax, tallow, etc., which lessens strength of color. **Inkoleum** spreads pigment evenly and gives best results. Try it and note the difference.

Ink Reducer and Dryer

INKOLEUM

THE OLDEST AND STILL THE BEST
PRICE 50 CENTS. NO SAMPLES.

Use Inks of heavy body and reduce with **Inkoleum** as paper requires. Thin inks are reduced with varnish and color weakened. **Inkoleum** will start your presses cold mornings without washup. The only reducer **sold by supply houses** everywhere. That tell's the story.

A TIP TO MR. PRESSMAN

Niles, Ohio, March 15, 1905

Mr. Peter Pressman,
New York City,
Dear Sir:

We learn that you are anxious to better your condition both in the way of getting higher wages, and more consideration from your employer.

It has doubtless occurred to you already, that your employer cannot give more pay for less work than you produce at present. You know already that to go back to the hand press, would be to go back to one dollar and twenty-five cents per day—the old hand press wage.

Being an intelligent man, you know also that what your employer can do for you on the basis of the output which you produce at present is very closely affected by what other employers have to pay for the same work; and that in a general way he cannot pay you more for the same output of work than other employers pay their workmen. He must produce as cheaply as they do, or lose money, because he has to sell his product at a price fixed by competition.

You have already considered these things, and as an intelligent man, you are looking about for some way in which you can help your employer to help himself, and therefore be enabled to help you. You can do this measureably by giving strict attention to your work, as his interests require it to be done. If you are the man we take you to be, you have done this already, and are now looking for something which will give you a still better reward. We think that at this point you will need to avail yourself of the brains of some one else to use in connection with your own. For this combination we suggest a Harris Automatic Press.

The more automatic the machinery becomes, the higher the skill, knowledge and responsibility required from the person who is responsible for its working, the greater the output, as compared with other machinery for the same purpose, the greater the fund it produces for the payment of the workman, as well as for the profits of the owner

Now while our automatic printing machines like a hundred other automatic machines for weaving, spinning, knitting and doing a large part of the world's work, can be *tended* by little-skilled operatives, there must be always in charge of our machines, a person of brains and responsibility, having some special knowledge of those machines, which his fellow workmen will not share.

This person may take responsible charge of a whole row of automatic presses, as well as of one, and if his employer is an enterprising man, and if he himself is equal to his opportunity, the one Automatic Harris will grow into a line of them, and the compensation of the man in charge will increase with his responsibility. He will combine the brains in his head with the brains in the machine, and the five-fold output of the automatic will enable him to receive a reward from both.

Is not this worth while thinking about? And this too! Tomorrow the slow press will be a machine of yesterday. When tomorrow comes, do you want to be a pressman of yesterday or a pressman of the new day?

How you can become a Harris pressman is a matter largely up to you. You may attend a school of instruction: you may induce your employer to put in a Harris press for you to run (in which case we will teach you), or you may get a place where you can learn the Harris under the instruction of some one already familiar with it.

We have in mind a young man who first familiarized himself with ordinary press work, then on the Harris became an expert, and now applies for a position as an apprentice at our machine shop. What he is looking to is the superintendency of a large printing house, and we think he is qualifying himself in a way that will certainly get him the position. It is not necessary for you, Mr. Pressman, to go as far as this in order to better your condition. You can do it in the way we have suggested above.

Very truly yours,
The Harris Automatic Press Co.

BABCOCK OPTIMUS
BABCOCK OPTIMUS

Your profits are what you make them. Your success is the sum of your profits.

Your plant is what you make it. Upon it depend both profits and success.

Profits are most liberal when the best is furnished. This is true of everything.

The best can be furnished only by the best.

In printing the press is the most important tool. It dominates all else. It is practically the entire plant.

The Optimus embodies strength, accuracy, speed and endurance in greatest degree.

It is the Best. It produces the Best—the best high-grade work at high speed, and the best fast work of any grade.

It conserves profits. It fosters success. It gives most of a superior product. No work exists beyond its easy achievement.

BABCOCK OPTIMUS

SET IN BARNHART BROS. & SPINDLER'S MISSION

The Right Printing Inks

ACT in two ways that materially affect your success and profit.

FIRST—everything you make, from an envelope to a catalogue, will look better if printed in the right ink, not necessarily high-priced ink, but the kind *just* suited for the purpose.

SECOND—it's a fact that the concern with a reputation is the last one to get dull and the first to get busy, because their output is not an uncertain quantity, much of which is due to the fact that they are not parsimonious with their ink expenditure. Berlin Inks are good, high-grade inks all through, and they will help you to success and profit.

THE FOLLOWING pages, which are haphazard samples taken from the regular work done on the Monotype by the Roy Press, of New York, serve a useful purpose as directing attention to one of the most admirable features of the machine.

By its aid an order for tabular matter becomes one of the most profitable that come into the Monotype printer's office. No other machine can separately justify different portions of the same line as can the Monotype. No machine can handle rule-and-figure work with any approach to the economy and facility of the Monotype.

Thanks now to the new system by which the Monotype casts figures on the regular type-founders' en bodies, so that the set is identical with that of the ordinary foundry characters, an additional advantage is added.

Taken in connection with the new attachment for casting display and job type in all sizes up to thirty-six point, the Monotype's facility in the production of all varieties of tabular matter renders it the most profitable machine the printer can employ.

MONOTYPED BY THE ROY PRESS, NEW YORK

AGE 84—51 PAY'T LIFE

ACTUAL RESULT OF

POLICY No. 844,658—AMOUNT $10,000

Class, Free Tontine—Accumulation Period ends August 5, 1905.

OPTIONS TO ASSURED

1. TO CONTINUE THE POLICY (*NOW FULLY PAID-UP*) FOR - $30,000.00
   and draw CASH DIVIDEND of - - - - $2,291.01
2. TO CONVERT POLICY AND DIVIDEND INTO PAID-UP ASSURANCE FOR - - $31,450.00
   Subject to approval of risk for excess over amount of original policy.
3. TO DRAW SURRENDER VALUE OF POLICY IN CASH, - - $6,578.80

In considering these results, it must also be remembered that if the Policy had terminated by death at any time during the Dividend Period, the Society would have paid $10,000.

The results on the above policy per $1,000 are as follows:

1. PAID-UP POLICY - - - $7,000.00
   and DIVIDEND IN CASH - $429.31
2. PAID-UP POLICY - - - $5,149.00
3. CASH VALUE, - - - - - $751.52

(Six Kinds of Type With Two Operations)

NEW YORK, March 10, 1905.

Messrs. Wood & Nathan Co.,

No. 1 Madison Avenue,

New York; N. Y.

Gentlemen:

We send to-day by mail a few specimen table pages and other Monotype work, taken off-hand from various publications and other work done by the Monotype machines at our office.

Our plant consists of three keyboards and two casting machines which are giving entire satisfaction. We expect to increase our plant on the Monotype machines during the year. For book, table and job work we think the machine far ahead of any other on the market. Now that we have the machines we would not be without them under any circumstances. As a sort and space castor, the saving of time and money is something that cannot be calculated.

Yours very truly,

ROY PRESS

THE CENTURY

THE CENTURY PRESS MAKES GOOD AND HAS THE STAYING POWER

The Charles Francis Press, New York City, said last month:

"The Century is still the press of the century. We herewith enclose order for our fourteenth machine."

The American Label Mfg. Co., Baltimore, Md., says:

"The last No. O (43 x 56) Century installed (our fourteenth) is incomparable, with its continuous rotary distribution, inking our heavy label forms to a nicety. The impression and register of all our Centurys combine to give entire satisfaction at the record speeds we make."

SECURING AND HANDLING ADVERTISING.

THE TRUE FOUNDATIONS OF BUSINESS SUCCESS.

IN the following from an address delivered by Manly L. Gillam of the New York *Herald* before the employes of the advertising department of the Brooklyn *Eagle,* many things, many ideas and principles, will be found of value in any part of the printing and newspaper publishing business, that when applied to the soliciting, securing, handling and holding advertising are beyond estimate; they are the foundation truths on which success can be surely built without the possibility of failure:

"I have known cases where young people were said to be brilliant persons, of great mental capacity, and folks have said 'So and So will make a great success.' But, after all, he doesn't make a very great success. I remember in the little town where I was born there was a little merchant named Doty. He had a store about twenty feet square, and his whole stock might not have amounted to over $50. In that town there were several rather pretentious grocery stores, and a general store, and people used to speak disparagingly of Doty. To illustrate the tip end of smallness we would say 'Doty.' When I returned to that town, after an absence of about twenty years and asked 'Where's so and so, and where's so and so?' people would say, 'Well, so and so's dead, and so and so's carrying on business here and there'; but when one asked what had become of Doty, the people said 'Doty is the merchant of the town.' Doty was there during business hours, and when any one wanted Doty, Doty was there. Nobody ever estimated that Doty had any capacity, but by and by the people began to find a reason for the growth of Doty's business, and they found that he had the very elements of business success. When people were making fun of him, he was attending to business, and the result was that he had a large business.

JOHN WANAMAKER BEGAN BUSINESS LIFE IN A BRICK YARD.

"Take John Wanamaker. He worked in a brick yard at the hardest kind of work. He was but a boy. He carried the bricks and stacked them up and I don't believe there was a boy with less outlook, less promise, or less ability than John Wanamaker. He had no education, no schooling of any amount. There he was. He was simply a boy who did his work well. He didn't study between meals, either. No human being can have a higher regard for education than I have, and I believe that no man or woman can know too much, but you can know in the wrong way. John Wanamaker was a boy who had had no schooling facilities, but was a sturdy, earnest and energetic boy who was willing to work. You know what he came to. He is the man who has revolutionized merchandise in this country by his energy, his originality, his earnestness. Earnestness is a tremendous thing. When he went to Philadelphia he was a boy, and there were probably 50,000 with the same outlook, the same promise and a great many with more reasons for success than he."

Mr. Gillam said he was a country boy with no schooling facilities whatever, except three months each winter until he was 11 years old. Some time later, he said, it occurred to him that there was such a thing as shorthand and the very idea that anybody could make a mere mark that meant a word was fascinating to him. In 1860 he sent to Ben Pitman, in Cincinnati, for a manual of phonography. Without ever having even seen a man who could write shorthand, or knew anything about it, Mr. Gillam said, he took up the study and became a very swift stenographer. Then he outlined a series of rapid strides which he made in shorthand writing, telling of his engagement by the Pinkerton National Detective Agency in Philadelphia and then his identification with the big Philadelphia dailies. Then he went to Boston, covering the state legislature for the *Globe.* From here he drifted in the advertising business in Philadelphia, through a variety of interests held by the owner of the *Record.* One was a very fine herd of Holstein cows, from which butter was produced to sell at a dollar a pound. Mr. Gillam was given the task to place the product before the public and he got up a series of advertisements which resulted in selling the entire output to people who were willing to pay $1.

"In writing advertisements," said Mr. Gillam, "think of what you have to offer, who will be interested and how you will interest them. I thought of something that would catch the eye, that would catch my eye and catch me and then I asked myself, 'Do I really understand what I know?' I knew that the cattle were from Holland and when I began reading up, I found that the oldest breed of cattle in the world was the Holstein. I said to myself there is an advertising point. I wrote four advertisements, had them set in Wanamaker type, for that was the most conspicuous in that day. I presented a history of the cows and cuts of four different Holsteiners. Under my little story about the antiquity of the cattle, I wrote: 'Butter from a herd of Holsteiners will be on sale at the market after 10 o'clock this morning.' An hour later not a pound of butter was left. John Wanamaker came down to the office the next morning and wanted the man who wrote the advertisement.

THE SUCCESSFUL CANVASSER THE MAN WHO SELLS PUBLICITY.

"The successful canvasser? You are dealing with an intangible something. You are selling publicity. As a newspaper solicitor you ask people to pay you for publicity and the tendency is to regard publicity as being measured by the number of papers that are sold. A great many publications, as you know, are very shy about saying what their circulation is. Some others are anxious to say, and if you think at all you will notice that, in spite of those truly great figures, somehow, the results don't seem to follow, and in cases where figures are not given results do follow. I tell you that the mere question of the number of circulation isn't of the least consideration to me. We have in Europe a Paris edition of the *Herald*, which has an actual circulation between 15,000 and 20,000. About two months ago when I was talking with Harmsworth he said: 'Mr. Gillam, I am willing to say to you in regard to the circulation of the European edition, that the *Herald* edition is more valuable than the 750,000 or 800,000 of the *Mail*. My papers go to the Continent, to people who are there to make money, and your papers go to the people who are abroad to spend money. I don't hesitate to say that, for such advertising, your paper is more valuable than mine.'

"The New York *Herald* has nothing like the circulation of the *Journal* or *World*, but what does that signify? It is the results that count. So you gentlemen who are solicitors are selling an intangible thing. Who is going to say what a circulation is worth? Take the *Herald*. It brings results to the man who uses it and pays the price which we fix. Ninety-nine times out of a hundred the man will be satisfied. Take the Brooklyn *Eagle*. The man who uses the Brooklyn *Eagle* and pays the price that the Brooklyn *Eagle* fixes will, ninety-nine times out of a hundred, be satisfied.

"You can't use a footrule. You can't put an absolute measure upon the value of a medium. I believe that a solicitor should be so solicitous that he should be anxious to be helpful to the advertiser, as well as to his paper. I believe that no paper should have a solicitor who will simply go out with a dragnet and gather in everything in sight, regardless of whether his medium would be helpful or not.

MUST THINK FOR INTERESTS OF BOTH PAPER AND CLIENT.

"If you believe (knowing your paper as you do, and every solicitor has to know the capacity of his paper) advertising will readily be helpful to a man, and if you prove that the amount of advertising is a proper amount for him to use, go in for it with all the energy you have got. If you believe the space is too much, I say that you should tell the advertiser so. I think that an advertising solicitor is best to the interests of his paper and to his client if he simply thinks with both sides of the question. I tell you that there is a field for advertising solicitors and there always will be a field worthy of your best endeavors. The possibilities of little concerns are almost infinite. The condition that I am talking about is an ideal condition, but nevertheless it is a condition that should exist and I believe that the successful paper will get more and more in that way. You won't find two more successful papers than we have mentioned so often tonight. It is a time when there is a tendency to reduce prices. Take the Brooklyn *Eagle* at 3 cents and the New York *Herald* at 3 cents. I have not a doubt that, if the *Eagle* would come down to 1 cent, its circulation would be greatly increased, but I doubt very much if the advertising value would be increased."

Mr. Gillam related an incident that occurred in the Cafe Margery in Paris, from which, he said, newspapers could draw a little lesson. The story is told by Gordon Smith, Berlin correspondent of the *Herald*, who was seated in the Cafe Margery eating dinner, when a very pompish, military, Frenchman came in, called the waiter and ordered something to eat. When it was served he looked at it, frowned upon it and said with disgust: "Take it away!" He denounced the waiter and declared the dish was not fit to eat. The waiter protested, but the Frenchman was unreasonable, and just then M. Margery, the millionaire proprietor, came along. He asked the waiter, "What's the matter?" The waiter explained and when M. Margery looked at the dish, he, too, sternly ordered the waiter to "Take it away." The crestfallen waiter took the dishes away and a few minutes later Mr. Smith, who happened to have ordered the same dish, spoke to M. Margery and asked what was the trouble with the order.

"With me," said M. Margery, in French, "and in my house my patrons are always right."

"It makes no difference what your patrons say, please them. You can't go too far. There is a principle underlying it all. A paper has to have a canvasser that is worthy of the paper. I don't believe in dragnet business. If a paper has a circulation at all, that circulation is of some value.

"I think that the writing of advertisements is an excellent thing to do. A seductive solicitor encourages a small business man to try a little advertising and results may be good. The next step is almost always to put him so far in that he cannot recover. I tell you, you want intelligence behind it. If you show an advertiser that advertising will be helpful to him and that there are possibilities of increasing his business then encourage him to do a little more; help him to prepare his ad and make it look attractive, so that he will get results from it.

"A most important factor in a solicitor's work is to make it easy for an advertiser to advertise. I think that the *Eagle's* idea of having a stenographer in the business office for the convenience of advertisers is a most admirable thing. Anything which a newspaper can do to help, to advise and to cooperate with the advertiser is helping the paper, as well. The solicitor should be able to say why he thinks advertising in a certain paper will be helpful. It is publicity and influence that the paper can dispose of and it is a fact that the Brooklyn Daily *Eagle* can knock at any door and get into any home in Brooklyn."

BRYAN MAXIMS.

"Taking things as they come" is not optimism, and pointing out the wrongs that abound is not pessimism.

The man who reaps joy today is the man who sowed smiles yesterday.

The best way to measure a man is to put him alongside a big issue.

It's a selfish man who insists on sharing the benefits without helping to bear the expense.—*The Commoner.*

AN EDITOR WITH THE BROTHERS OF ST. PAUL.

SOME POINTS ON HOW AN EDITOR SHOULD BE KEPT IN TRAINING AND HOW HE SHOULD EDIT.

BY JAS. H. FERRIS, OF THE JOLIET, ILL., DAILY *News*.

AT a meeting of the Brotherhood of St. Paul in the Richards Street M. E. Church, Joliet, Ill., Mr. Jas. H. Ferris, editor of that very successful paper, the Joliet *Daily News* — a paper which has illustrated the fact, that absolute independence in political views, provided an editor is earnest, candid, consistent and honest, does not in the least stand in the way of the success of a wideawake newspaper that stands *ever pat* for the highest truths and the best interests of its city, that is useful, aggressive and informing—recently gave a general talk about editors and editing that will be of interest and instructive value to the readers of the NATIONAL PRINTER-JOURNALIST. We have frequently referred to the work performed by the newspaper press toward that city's improvement. Joliet is one of the cleanest and best-governed cities, with fine boulevards, tree embowered streets, parks and private grounds all made lovely by borders of flowers or neatly cultivated gardens and flower beds. It is evident that the citizens who have taken up the work, initiated by and written about in the newspaper, appreciate the local press and hence desire to hear one of the editors talk about newspaper editing. Editor Ferris said in part:

To be sure there are all kinds of papers for all kinds of purposes. On this occasion I have in view the ideal newspaper, something conducted with the view of giving the public full and honest value, without concealment of purpose, evasion, subterfuging, dodging or sneaking.

"I have had little to do with the advertising end, as should be the case with an editor who hopes to sometime publish an ideal paper. The editor should be just as far from business as possible. He should have a tutor in language, a caretaker in clothing, and a trainer to keep him in an excellent physical condition, and in a bright frame of mind. The football champion should have no more careful training. In physical matters in comparison with the prize fighter, the fancy horse, or the game chicken, the editor should have the best.

Under this roof I am talking to people who give liberally of their resources towards upbuilding the principles upon which this sanctuary was founded. Naturally you are interested in those features and those people who should assist your own work and your own ideas of the proprieties of life. There should be much in common between the churchman, the editor and the public official, and I know you ask frequently why it is that there is not more in common, more coöperation. Why is it that editors and officials do not stand up more resolutely for those good things which are also popular and easy? I presume you ask this question more than any other pertaining to public work. I have pondered at this point many years, and I am still pondering, for there is nothing so popular and profitable and pleasant as the simple matter of doing the right thing.

EASY TO BE GOOD.

An editor should be truthful, frank, consistent, industrious, kind and good natured. It is very easy. He should strive in every manner possible to benefit the commonwealth. Not a Republican only, a Methodist, a relative, a personal friend—but all the people. There is more money and enjoyment in this than in anything else in the newspaper business. To be good natured at all times is probably the most difficult feature. When you believe a program should be pointed in one direction, and another believes it should be pointed in a different direction, you are very apt to ascribe improper motives for the other's action. The temptation then to use violent and bitter terms is very strong. The agents of the slot machines and the entertainment features of the saloon, the gamblers, and the devil, are so persistent and insistent, and the methods of the grafters, the predatory class, the whole motley crew of avarice and greed, are so audacious and inconsiderate it is hard to maintain good nature year in and year out. At many points it will be found easier to call names than to unhorse the enemy.

WHY THEY ARE UNLOVELY.

I am not sure that it is possibe in every instance to pursue a thoroughly conscientious course and at the same time maintain a smiling countenance. It has seemed to me that some who have made the most effectual battle, who obtained most lasting results, were really unkind in their methods, harsh, disagreeable, unlovely; and that their countenances became wrinkled and knotted from the violence of their thoughts and the earnestness of their purpose.

Perhaps some one person, upon some one time, or perhaps as a general rule, one may accomplish more by singing sweet songs or ladling out honey, than by strenuous contention and stubborn resistance, but the purpose, the object to be attained, is greater than the mere details of doing. The manner and method are local conditions, not biblical demands, and should be taken advantage of at the time and place. For the long fight honey alone, I am sure, will not be enough.

To give battle to the hosts of the ungodly is disagreeable employment, and in a large measure the cause for so many failures among editors and public men. They delight to bask in sunshine and favor as other men do. They dislike to criticise a friend or cloud the face of an acquaintance. Sometimes it would seem that good nature and the love of a glad hand are actual sins and among the greatest, for there are times when it is positively necessary for a newspaper man to steel his heart, set his teeth, and go out and do things for which his family, his friends, and all the people of the town will denounce him, or misinterpret his motives.

Those injured by an editor will injure him back. Those benefited expect a recognition of their own worth, and say nothing. Then, too, habit is something. An editor will not swear out a warrant against slot machines because other editors are not in the habit of doing it. It is not the fashion; it is not professional.

THE EASY EDITOR.

Editors are too good natured, too easy. They dislike to be disagreeable, and there is this dread of doing unkind things. Their friends upbraid them, and the hosts of the ungodly call them up by telephone to phone threats and distasteful epithets. The telephone is something of a convenience to the coward.

The easy editor is frequently tender hearted, but tenderness or pity may be misapplied. Too often the tenderness is for the grafter who has been caught; for the poor fellow arrested; or a sorrow for the criminal convicted by conscientious and courageous officials. Knocking against these good fellows is a grave offense; with some editors more grave than the offense of the criminal. Their thoughts run too shallow, and apply only to things nearby or convenient. It is not deep enough for the young woman found in a pond or ditch, her head crushed by a bludgeon. There is no thought for the mother, the ruined home, no thought of the disgrace and havoc. There is none for women and children in poverty, robbed by the brace game, and the slot machines, and the knock-out drops, or of the many other tricks of the gambler, confidence man and bum resort keeper.

A BAD CASE.

Too often editors and reporters meet these robbers in a pleasant way, knowing them to be such, apparently pleased with an acquaintanceship and a familiarity with notriety. A case of this misapplied official pity, to illustrate, happened in this city a few months ago. A man was arrested and confined at night in the police station for rape, that most brutal and loathsome, low-down, horrible crime. It was a flagrant case. But the officers were sorry for the man —not for his aged victim beaten into unconsciousness. The ruffian was released and encouraged on his way. This official is a public enemy; likewise the newspaper man who shields him. It would be as well to turn the offices and papers over to the criminals themselves. This is one of the situations where every editor, high or low, religious, political, independent or a Philistine, should be a knocker.

An editor should study the Bible, the statutes, and rhetoric with exceeding care, and then commune with the stars. Advice and discussion are desirable, but the editor must emphatically be the man with the hoe himself. These merchants, these politicians, these advertising men, these

persons and these friends are not at the helm constantly. They are not in touch with the currents, and the weather, and the things that went down stream, and the things coming. If they were there would not be so many different opinions among themselves. Not two men who ascend the editor's stairs in a day would write the same article in the same way, or give advice upon the same thing in the same way. Yet all these advisors, are useful to the editor. All add to his sum of knowledge. He picks up a little here and there from all to add to his store, or is no good.

EDITORS GETTING BETTER.

To have Horace Greeley or Samuel Bowles again with us in their prime would seem refreshing, but the editors are improving. The tribe is becoming more assertive, and the editor's name stands out a little more prominently, and the pretentious, but irresponsible, corporation is dropping back. And it is right the editor's name should stand, and the man belonging to it should be one of sufficient capacity to uphold the name with honor.

As a rule the editor may not be rightfully charged with criminal intent. Criminal neglect would be nearer the mark. Humanlike he desires ease, contentment and the indifferent opinions of his neighbors. This is the prevailing idea of Heaven. Often the editor is overworked, distracted by poverty, or occupied with other employment. He may desire an office, or have interest in a New Mexican mine, a job office, or a real estate speculation. He may not be lazy, but mankind shrinks from publicity, preferring a warm room and a good lunch above the victories or rewards to be obtained in any glorious overthrow of the hostiles.

These opinions have been hastily assembled, and in a rough way are merely the commencement of a complete course of instruction to be compiled for the editor's use later on. The editor should do the utmost possible for his community, and at any time you can add to this general outline, please put it in tangible form. I have been in Missouri often enough to be shown.

LITTLE SERMONS FOR ADVERTISERS.

From Rusty Mike's Diary.

Fish cannot live in still water—neither can progressiveness live with the man who don't advertise.

Small obstacles on the track don't keep the train from moving on—yet sometimes a mighty little disappointment in advertising will cause a big man to falter.

One advertisement hasn't the power to increase a business any more than one grain of corn has of fattening a chicken.

Watering the lawn once won't keep it green the rest of the year—advertising once won't make any noticeable difference in the annual profits.

It would take an unlimited amount of fuel to heat the whole out doors—yet a great many advertisers would like to reach the four corners of the earth with a $50 advertising appropriation.

Men never become prominent by the things they did't do—it's the "doing" that counts—advertising for instance.

A trolley car with the "juice" off, like a business minus the advertising appropriation, soon comes to a standstill.

Better a poor man than a dead one—better a little advertiser than none at all.

Dark clouds do not always signify storm—neither do slow returns from advertising always mean failure.

Betting on the baseball suits instead of the ability of the players, like selecting a medium for looks instead of merit, often results in disappointment.

The best medium won't improve poor copy any more than a fine frame will add to the looks of a bad picture.

The finest horn in the world is no good if it isn't blown—neither is the best advertising campaign ever planned of any use if it isn't put into execution.

It's as easy to run an ocean steamer with a sewing machine treadle as it is to build up a business in the way some merchants advertise.

If people traveled as fast on the railroad as they expect to travel in advertising it would take about twenty minutes to cross the continent.—*White's Sayings.*

A BUNCH OF ERRORS.

In the announcement of a furniture and undertaking firm, recently printed in a Minnesota paper, appears this startling line: "We retain the dead in our upholstery department." The writer of the advertisement doubtless intended to say "lead."

"Fine line of hand sawed gloves" attracts special attention to the advertisement of Merchant Carpenter in a Missouri paper.

This appeared in the announcement of an Iowa clothier: "If contemplating a journey this cold, damp weather, equip yourself with one of our famous boats."

"Hat styles" in another Iowa paper read "Cat styles."

The result of a dropped letter is shown in the statement, "Our prices are hard to eat." Again, "There beats in every male beast a heart that warms to fine underwear."

A big black line, "Women's Walking Skirts," amused most readers of a small daily not long ago.

"Medicines for the rabies" is what happened when a druggist attempted to call attention to his stock of preparations for the cure of infantile disorders.

But perhaps the funniest result was caused in the clothing advertisement by the simple substitution of an "e" for an "i." It said: "Buy one of our stylish overcoats in vicuna, kersey and freeze.

A Western grocer, who attempted in his local paper to exploit after the style set by the professors of the conversational school a certain brand of breakfast food, found his name attached in big black letters to this somewhat extraordinary announcement:

"Gives you strength and the desire to accomplish something—that's what our own special kind of rolled oats do. Try 'em for breakfast once."

One of the advertisements put out by a small but ambitious Kansas druggist, who seriously contemplates the making of a fortune in the proprietary medicine line, contains this:

"If, suffering one, you would try a course of our famous tonic and restorative, life would become to you as sweet and beautiful as a full blown nose."

Another Kansas merchant—a hardware dealer—unintentionally hits the nail upon the head thus:

"Buy one of our 75 cent fool chests for your boy."

It was a Pennsylvania haberdasher who was made by the careless printer to announce "She shirts for men" in letters fully an inch high.

The Hotel Servoss, in a bustling, enterprising little town in the far Northwest, tried a local reader in the town paper. Unfortunately a space was misplaced, and this is the way it appeared:

"Many travelers tell of the excellence of the Hotel Servos stable. Try it next time you are in the city."

A Michigan shoe dealer, in a special rubber advertisement, unintentionally declares that "We have studied the robber business for twenty years."—D. H. TALMADGE, in *Fame.*

There is no excuse for a publisher's advertising a useless or hurtful patent nostrum. It is going into partnership with a thief, for a very small share of the stolen money, to help rob, if not to render ill and to aid in killing, his own patrons or subscribers. The public have an interest at stake and should see to it that the sale of hurtful drugs and compounds is not permitted.

THE BEST PERIODICAL FOR PRINTERS.

We received a copy of the NATIONAL PRINTER-JOURNALIST of Chicago this week, and it is the best periodical for printers we have seen for years.—*The Messenger,* Kansas.

A BUILDING THAT IS AN EXHIBIT.

FORESTRY BUILDING AT LEWIS AND CLARK EXPOSITION SYMBOLIC OF FOREST WEALTH—AN UNIQUE EXPOSITION STRUCTURE—ONE LOG CONTAINS LUMBER ENOUGH TO BUILD A COTTAGE.

BY W. E. BRINDLEY.

IN erecting the Forestry Building at the Lewis and Clark Exposition, the managers of the Western World's Fair have scored a double triumph; they have constructed a building which is absolutely unique in the history of Exposition building, and which is in itself an excellent exhibit of one of the greatest resources of the country which the Fair is designed to exploit. That part of the world which visits Portland during this coming summer will marvel that man's skill could erect such a structure, and that nature should have produced such immense tree columns as those used in its construction.

The building might be called a log cabin, if it were not so large, and so magnificent in detail. As it stands, it is a log palace, the second largest structure of logs ever built. It has already attracted more attention than any of the other Exposition structures, and visitors from the East will find it the most interesting thing about an Exposition in which nearly everything will be interesting.

Forestry Building.

The mammoth structure, American in design, American in construction, is distinctly northwestern in the materials of which it is constructed. Nowhere else in the world could one find many fir trees six feet in diameter for a length of over fifty feet, and one fir tree as great in thickness and length as a railroad coach.

The building has an environment admirably suited to its nature. On one side stand the other Exposition palaces, a long row of stately structures gleaming in the ivory whiteness of their coats of staff. On the other side is a little stretch of woodland, then a beautiful little canyon, and beyond, the foothills of the Cascades, their sides covered with native fir trees that have stood there since the days of Lewis and Clark. From the galleries of the Foresty Building the view on one side embraces the main Exposition picture, with all the life and motion, and color, and noise and gaudy display that must characterize a world's fair, and on the other the natural woodland, quiet, somber, serene, with the valley which nature's hand has chiseled, and the foothills which no man could ever build. The contrast is vivid, pleasing, and never to be forgotten.

It is hard to reduce a description of so wonderful a building to the hard reality of figures and facts, but nothing else can so impress one with its magnificent greatness. The building is 205 feet long by 108 feet wide, thus occupying half the space of a Portland city block. Two miles of five and six-foot fir logs, eight miles of poles, and tons of shakes and cedar shingles were used in its construction. One of the monster logs, no longer than many others, was found to weigh thirty-two tons.

There is an old song that runs:

"For it's fourteen miles from Schenectady to Troy,
Remember that when you're walking it, my boy," etc.

If one of the base logs in the Forestry Building, 52 feet long and six feet in diameter, were cut into standard size flooring boards one inch thick and three inches wide, the boy in the song could walk all the dreary fourteen miles on these flooring boards placed end to end.

To figure it another way: One of the logs contains enough lumber with which to build a two-story cottage, 40 x 40 feet in size, with a fence around it, and board walks to lead up to it. And there would still be enough wood left to kindle the fire in the grate for many months.

While in a general way the building looks like a log house, the details of the structure distinguish it and give it a stateliness of appearance in keeping with the general architectural excellence of the Exposition structures. The upper half of the building is constructed of cedar bark shingles, placed eighteen inches to the weather. The ends of the structure are gabled, and two balconies, set into the ends, one above the other, add to the architectural appearance. The entrances on the long sides are between tree pillars set up to form a colonnade. Primitive methods of construction have been used as far as possible. There is no carpentry work about the building, the logs being framed together with tree-nails and old-fashioned wooden pins. An over-hanging roof adds much to the appearance of the structure.

The interior of the building, as well as the exterior, is in itself an exhibit of the forest wealth of the Pacific Northwest. As one enters by the main entrance he sees before him a veritable forest of fir trees, as thick as a man is tall, and towering to the roof fifty feet above. The timbers with the bark still on, like the logs used in the construction of the sides, stand straight and sturdy as they did in the primeval forest where they were cut. There are fifty-two of these woodland giants which support the roof, and as many more, not so tall, which support balconies which run around the entire building. Rustic stairways give access to the balconies, and rustic railings protect the visitors from danger of falling to the floor below.

The forest giants used in constructing the building were felled in the Columbia river forests, about seventy-five miles from Portland. After being shorn of their branches they were placed in cradles to guard against the bark being torn off, and dragged to the river bank, where they were formed into rafts and floated down the river. From the Columbia, the logs were guided into the Willamette, and from the latter stream they were floated at high-water over the narrow strip of land that separates the river from Guild's Lake, the natural "grand basin" of the Exposition.

From the lake the trees were raised to the site of the Forestry Building by means of a giant skidway more than a quarter of a mile long. A mammoth crane, operated by means of a specially-constructed 40 horse-power donkey engine, was used to set the logs in place. Twelve thousand feet of wire cable were necessary for the hoisting and guys.

While the building will exemplify in its construction the forest wealth of Oregon, its contents will show the progress of the sawmill industry in the Pacific Northwest. In the balconies and in other parts of the building will be displayed a

complete exhibit of finished timber products, together with samples of all the woods grown in the Pacific Northwest. The exhibit, taken in connection with the structure which will house it, will convince people of the greatness of the Pacific Northwest timber resources as nothing else could.

THE MISSION OF THE EDITOR'S WIFE.

A LITTLE OF ADVENTURE AND STRENUOUS EXPERIENCE—THE SIMPLE LIFE AND THE PHILOSOPHY OF HAPPINESS, USEFULNESS AND SUCCESS.

BY MRS. M. BEAUMERT.

KEWANEE, ILL., Feb. 4, 1905.

B. B. Herbert, Editor National Printer-Journalist, Chicago.

DEAR SIR:—I am sending you paper which Mrs. M. Beaumert of the Nauvoo *Independent* read at our meeting at Galesburg, Jan. 27th. Mrs. Beaumert had quite an experience getting to our meeting. Nauvoo has no railroad, so she had to cross the Mississippi to Iowa and go by train. Part of the way across the river was made on a handsled and part on a skiff. Her boat came very nearly capsizing by being hit with floating cakes of ice, but she managed to get over in safety and reached our meeting in time to read her paper.

We had one of the best programs that I have never listened to at an editorial convention. The symposium on the Value of the Local Paper was especially interesting. I am enclosing to you clipping from a Galesburg paper which gives something of a synopsis of what the speakers had to say on that were the symposium.

The old officers of the association were reëlected as follows: President, Mary Davidson, *Republican,* Carthage; vice-president, E. E. Fitch, *News,* Galva; Secretary-treasurer, Will Curtis, *Star-Courier,* Kewanee.

WILL CURTIS.

AN editor's wife has a mission to perform in this world the same as any other wife. Her first mission of course is to be "queen" of the home and attend to the multitudinous duties that devolve upon a housewife. Her mission as relating to her husband's vocation is not easy to define, but must be similar in its relationship to the mission of the merchant's wife, or the mission of the wife of any other business man, and that is to do what she reasonably can to promote her husband's interests.

The newspaper business offers an unlimited field for labor since there is no end to the work to be done. A wife who has literary talent, and is so inclined, can be of incalculable assistance to her editor husband. She can assist him by writing editorials, obituaries, accounts of weddings, church sociables, entertainments, etc., which every editor knows would be a welcome relief. She can learn to set type, make up the mail, feed the press, and do other work about the printing office. She can also relieve him of the onerous duty of collecting the bills. I have known editor's wives to solicit advertisements. If she delights in this work it is well; and it is well also to know how to do these things. Occasions may arise when her services would be actually needed and in that case she would of course promptly respond to the call.

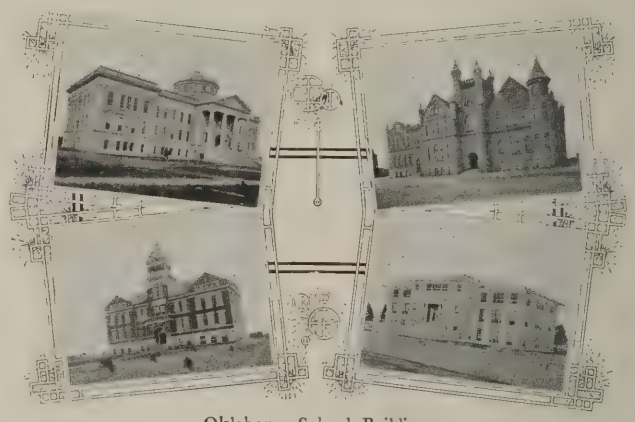
Fortunate is the editor who has a wife. Boarding house life is not conducive to good health and the editor who persists in living thus must, sooner or later, become mentally warped and his paper will eventually not only show a paucity of news, but will grow decidedly prosaic. Therefore take warning ye bachelor editors!

The experience of the world has shown the truth of the old saying that "the way to a man's heart is through his stomach." Good cooking insures proper assimilation and a healthy and active brain. Evidently this is what an editor needs. If an editor has a wife who looke after his wants in this respect she may consider that she is performing a real mission, and it is safe to assert that he will be better able to perform his office work and have a better paper.

The newspaper business is one of the most honorable professions on earth. An editor's wife can help maintain its dignity in a small town. If an editor becomes careless and shiftless his paper will reflect this same characteristic. If he is energetic and takes a pride in his work his paper will reflect the same commendable enterprise. I have never heard of a married editor who didn't have a good newspaper.

I have heard of towns where the newspaper business resolved itself into a question of finance—frenzied finance if you please. I verily believe that the editor's wife could remedy such a condition if given control of the purse strings.

I used to think that editors were regarded as sort of idolatrous beings. I have since discovered that they are not appreciated as they should be. The editor as a rule receives little thanks and much less praise for his labors. The very nature of his work makes him one of the most helpful citizens of a community. He needs praise and sympathy and this his wife can give him. "It is as balm to broken spirits."



Oklahoma School Buildings.

The University, Norman. Agricultural and Mechanical College, Stillwater.
Preparatory School, Tonkawa. Carnegie Library, Norman.

Every editor has an aim in life and this, generally speaking, is to attain success. He and his wife should work with unanimity of purpose. She should be a counselor, and if he frequently seeks her advice he will have a better understanding and better spirit for his work.

The mission of the editor's wife depends much on her environments. The wives of some editors may have many duties that differ perceptibly from the duties of others, but I shall not attempt to go into detail.

In these days of Rooseveltian strenuosity there is prosperity in the land and the country editor's wife is seldom called upon, through necessity to help out in the office. If she does anything at all it is probably due to her love for diversion.

From time immemorial we have heard of the editor and his exploits, but the editor's wife, one of the real propelling forces behind printerdom, has been heard of but little. Silently but not sphinx-like she stands, a mighty power in a noble work, and in this work she will always be glad to faithfully do her part.

RELATIVE DUTIES OF THE PRESS AND PEOPLE.

It is the duty of the newspaper to stand for public health and sanitation and is the duty of the people to sustain the paper in all such work. It is the duty of the newspaper to treat every office as a public trust and to insist on the performance of that trust by every public officer, to teach that no one is made great by holding a public office, but that all the greatness consists in faithful, efficient performance, all honor in conscientious, loyal service and in strict accounting.

Among the Associations

"In Unity is Strength"

JANUARY, February and March have been, emphatically, association convention months. Owing to the crowded condition of our pages, last month, it was deemed wise to omit this department in our March issue and to make the April, essentially, a state convention number. The editor was out among the associations and from such visits and other sources the accounts given below have been secured.

The first convention attended was that of the Kansas State Press Association at Topeka. It was very successful and received brief notice in the February issue of the NATIONAL PRINTER-JOURNALIST. The attendance was large, the papers able and the discussions animated and practical. The annual address of the President has already been given. The Topeka *Daily Capital*—speaking of this first session said:

"An important subject presented at the afternoon meeting of the association was the needs of newspaper legislation. Senator George Tucker, editor of the Eureka *Herald*, was down on the program for a discussion of the subject, but could think of no legislation needed by the newspaper men of Kansas.

"'As a member of the Legislature,' said Mr. Tucker, 'I refuse to be interviewed. If, however, the Kansas newspaper men feel that they are in need of legislation to protect their interests, I am in a position to assist in its enactment.'"

"'B. B. Herbert of Chicago, editor of the NATIONAL PRINTER-JOURNALIST, also addressed the afternoon meeting.'"

Mr. Herbert said in part that if Kansas has reached a point where no further legislation was needed as to libel laws, no further provisions as to the publication of legal notices in the newspapers for the purpose of protecting the people in the securing of safe and honest administration of public offices, and the prudent, careful handling of public funds, and the accounting for the receipts and the expenditures thereof, and as to the entire solvency and the proper conduct of corporations, insurance companies and all public or semi-public fiduciary, trust, and monetary institutions, both the newspapers and the people are extremely fortunate. He then dwelt on the necessity and power of newspaper publicity for the securing of good, honestly-administered government and the economic management of all public institutions and the complete protection of the people in their rights. He thought that, if all this had been provided for, there was yet a noble work that might be aided by the State Legislature for the good of the newspaper calling—that is of more importance to the people than is any other calling—namely, to provide for the special training of newspaper workers. He had recently visited the Kansas State University at Lawrence and had there seen, in course of erection, a worthy building for the law department. He had naught but commendation for this expenditure, and a liberal provision for training lawyers at the expense of the State. Lawyers of broad knowledge and of trained intellects and well-grounded in all the noble principles of the law—the science of human rights which is said to be founded on common-sense, experience and to be the perfection of wisdom—and in all the higher principles of true ethics, loyalty, duty, honesty and patriotism, are needed. But the modern newspaper informs all the people and prevents wrongs against the people as well as by or against individuals. The lawyer deals only with private quarrels or wrongs, with injuries by or to individuals or by individuals to the public. The lawyer works for his clients with little view to the public's interests or welfare and seeks only punishment or redress, or escape from punishment, for wrongs already committed. If he be honest and wise, he can do much good but only in a private, limited field. The newspapers prevent more wrongs than all the lawyers in the world could right or punish. The newspapers build up and help to higher attainments in every field of knowledge, aspiration and endeavor. The newspapers work publicly every week and every day for better conditions, better homes, better schools, better morals and better government, for improved industries, agriculture and transportation, for better roads, streets and parks, for all the means of greater prosperity, security, enjoyment, well-being, uplifting, informing and enlightenment of all the people. To fit one to perform, with greatest possible efficiency all the duties and to meet wisely and promptly all the demands of a calling, so broad in its scope and possible usefulness, requires a training and broad instruction far beyond all now to be obtained in our best and highest schools, colleges and universities. What you are teaching each other here in your association, from year to year, and what the members of other associations are teaching each other, after years of study, experience and many failures, can be taught to novitiates, to the young men or young women preparing to enter upon this calling, in the schools, that they may begin with all the knowledge and inspiration to which you and the true leaders of the calling, everywhere, have attained. It is a matter for congratulation that studies, looking to a special preparation for those expecting to enter this arduous and responsible calling, are already taught in your State University. In this you are in advance of many other States, but Kansas has ever been noted for aggressive leadership in the new and higher ideals. The department of journalism in your university should be made complete. It is easy to map out a two or three years' independent course of special studies in newspaper making, the pursuing of which would give a preparedness that could not be reached by twenty years of experience, would save beginners from humiliating failures, and render them a hundred times more useful to themselves, to the calling and to the public, and equip them for attainments far beyond all that is now possible. Other States and Universities are moving in this matter and Kansas, having made a wise beginning should not now lag behind. The maintaining of such a department and the erection, beside of the buildings of law, medicine and engineering, a worthy and suitable structure for the accomodation of the students therein, would add character to this branch of professional study, to the University and indirectly to the newspaper calling throughout the State. Just as a calling is held in honor or dishonor by its members, so is it judged by the people. The calling, the preparation for which requires two or three years of special study, will be more highly prized,

better protected from empirics, charlatans and ignorant adventurers, and be more honored and beter paid, than a calling into which it is conceded anyone can enter regardless of ability, preparation, or fitness, with no standards of excellence, no professional requirements, ethics or obligations.

THE EVENING SESSION

was held in Representative Hall of the State Capitol. President Ewing Herbert presided and introduced Dr. J. E. Roberts of Kansas City, who spoke on the topic, "The Better Newspaper." In part, Doctor Roberts said:

"The independent newspaper is logically the ideal one.

"It has had a hard struggle in the past, but so have most things ideal.

"In times not long gone by the partisan newspaper was a necessity. Men paid their subscriptions with the understanding that their paper should tell them what they thought, why they thought it, and swear that they thought right. The bitterly partisian paper was a formidable power in the last generation.

"A mighty change has supervened. Knowledge and information have been greatly diffused. The average man has put his own thinker at work. He does not go into the newspaper market to buy convictions. He goes to buy information. The instinct of individulity and independence is the new force to be reckoned with. The ex cathedra editor is a vanishing figure, and with him is disappearing the 'stop-my-paper' kind of subscribers. It is invariably a man belonging to the past, who, when he reads something he does not like, seizes a pencil and a postal card, laboriously writes, 'Stop my paper' and for long delicious hours pictures to his unspeakable delight the consternation and dismay he has wrought in the newspaper world.

"The evolution of the newspaper from partisan to independent has been accompanied by a corresponding evolution of the editor. Under the old regime, he was a fighter. He was an epitome of the people and among the people passions and hatred ran bank full. Readers rejoiced in witnessing vivisection and hailed with screams of delight the spectacle of an opponent impaled alive.

HORSE PISTOL AGE PAST.

"The tomahawk and horse pistol age of the newspaper is gone, simply because the people have become more civilized. As the public has grown more thoughtful, the editor has grown more judicial. He may be less picturesque, less in evidence, less romantic, but he is more useful. In the former times, the paper was the instrument of the man. Now the man is the instrument of the paper. As the evolution proceeds, the editor is more and more hidden. His personality is less vivid. The man loses, the paper gains. Who said it is less important? What was said is more so. And thus the perfect art is being approached when the worker will be lost sight of in his work.

"The independent paper requires bigger men and larger talents than the partisan paper does.

"It is not difficult to produce a paper for a constituency which has uniform and fixed opinions.

"It is always easy and somewhat cheap to tell people what they wish to be told. The world has always been overstocked with that kind of talent. It is a different matter to forget constituents, ignore consequences and endeavor to see things as they are and report them as seen. Yet that is what the intelligent prize in a newspaper.

"No one who has seeing eyes need be told that a new and unfamiliar movement is beignning to agitate the minds of men. Faster than we know, we are being borne away from the old sentiments and ideals. Unthinking and vociferous partisanship is a diminishing force. Persons and personalities are losing their power to charm and enthral. Party lines and alignments are less distinct. Men can not be rounded up or stampeded as once they could. Cowboy politics are in disrepute. The masses are being differentiated. The individual is emerging, and, in the long run, the man who thinks for himself will be nearer right than the man who whoops it up at the command of a boss, or gets his convictions second-hand at a banquet or a barbecue.

"In the confused and discordant noises of democracy one note may be distinguished—clear, strident and penetrating. That note is one of ethics. There is a general demand for equity, for justice, for fair play. This demand does not grow out of any moral enthusiasm or quickening. It is probably at the heart prompted by self-interest, but it is none the less determined and potent. People have become sufficiently discerning to see that inequities in politics and business constitute a scheme whereby the many pay tribute to the few. The only way for each to get his share is under the sway of justice. Corruption is good business for the few. Ethics is good business for the many, therefore ethics is the keynote of the present time. The ablest newspaper is the one that most clearly and convincingly unravels the tangled web of sophistry and sets forth the simple business truth that right and justice pay ten per cent.

"This would not be partisanship nor preachment. It would be the reflection and interpretation of the tidal sentiment of the times.

"If it is not too much to expect there be some humble virtues which a newspaper ought to exemplify. While it is not the creator of literature, yet it is the most far-reaching of all influences in shaping and forming the speech of people. Upon it more than upon any other one thing rests the responsibility of educating men and women to use the English language with clearness, force and precision. Its pages ought to be free from sins against the canons of speech.

SLOVENLY WRITING.

"It makes the judicious grieve to read that Mr. Blank 'Sundayed' somewhere. Had he gone south in the winter, he might, with no more vidense be said to have Januaryed in Florida. Slovenliness in the use of language is immoral. A plain unapologetic 'damn' is less reprehensible than a blunder in grammar. The word 'like' is a fruitful source of mischief. This noun, adjective and adverb gets mixed like thunder.

"Like enough the average writer is not ignorant, but careless. However, Talleyrand considered a blunder worse than a crime.

"There are persons who persist in using that word in this odious fashion: 'He spoke like he meant it,' whereby one is reminded of the butcher who succeeded to his father's business, and announced the fact by a signboard which bore this legend, 'John Smith kills hogs like his father.'

"Everyone remembers the crusade carried on by a New York paper against the split infinitive. There are beauty, grace, power and subtle charm in simple words well said. Nothing is unimportant in the employment of language to express thought. An entire edition of the Bible was made ridiculous and thrown away on account of a single word.

"This was the offending passage: 'Is there no treacle in Gilead? Is there no physician there?' The world still laughs at the treacle Bible. Change one word and the pathos and beauty of the lament are restored. 'Is there no balm in Gilead? Is there no physician there?'

"The tongue and the pen are the messengers of the brain. But for them it is silent, voiceless, mute. Well might the brain say to them as Jove said to a goddess whom he sent with a message:

" 'Haste thee, swift Iris, and report the words I tell thee to royal Neptune, and report them right.'

TELL THE TRUTH.

"The simple virtue of veracity is a newspaper's crown of glory. Lying is a fine art that some people mistake for genius. To overstate or half state a truth, to tint and color a fact, to sensationalize the commonplace, to elaborate and make picturesque the ordinary is a form of mendacity which has earned for certain papers a name that has reference to their complexion.

"Truth-telling is not an art. It is a disposition, a nature. It is temperamental. Some men are prone to lie as sparks to fly upward, and after a while they will fly downward and lie where the sparks are. The liar imitates, copies and repeats himself. That is what makes him wearisome. The truth-teller is original, fresh, virile, exhilarating.

"The world is good enough and bad enough for all legitimate newspaper purposes. Men and events are sometimes picturesque, often thrilling and always interesting. We wish to see them as they are. We like fiction, but not in our newspaper. We like preaching when we do it ourselves.

"After all, it is a work of supererogation to criticise. Every sincere worker in whatever field of effort, knows better than his critic knows, that his work is not perfect.

"It is the constant struggle to improve that gives inspiration to toil. Not what one has done, but would do, comforts him.

"The newspaper is vastly better than it would be if it were made by its critics. It will be still better when society is better. In short, and in conclusion, we would say a newspaper ought to be just about what a newspaper is."

D. O. McCray of Topeka delivered an address on the question, "Should the Newspaper be Read in the School Room?"

"It is far more important," said Mr. McCray, "that the children who are limited to a common school education should study the history of today than to delve in the musty past.

"The day is not distant when the Kansas teacher who is unable to sift out the important news from a newspaper and teach the children its significance and bearing upon governmental, business and social life, will have to surrender the position and seek other fields of labor.

"We do not complain of the burdens of education. We stand ready to support any movement that will advance its cause. We point with pride to our magnificient school system. If in our splendid University, Normals, Manual Training and High and common schools, texts could be supplemented with the newspapers, freighted with the world's history of today, Kansas would occupy a commanding place in educational progress."

B. B. Herbert, editor of the NATIONAL PRINTER-JOURNALIST, was introduced by the president and asked to address the convention. He said in substance, that it was worth while to exhort after two such excellent sermons on newspaper making. He believed in the use of the newspapers in the school rooms of this Nation and that every newspaper should reach the ideals indicated and be worthy of study by our bright American youth—the pure-minded, noble-hearted boys and girls.

If the newspaper is to be a reflector of men's doings, a mirror held up to the world, it should be a perfect mirror. A mirror can make one appear like a broad-mouthed, grinning Hotentot, or a dignified, intellectual, wise philosopher. Every irregularity, convexity, concavity or imperfection distorts, magnifies, belittles or conceals. The newspaper mirror is made up from or backed by human minds—dulled these minds may be by ignorance, or distorted by self-interest and prejudice or seamed, ridged or cracked by creed, self-righteousness, avarice, pride, envy, distrust or covetousness.

It is the hardest thing in the world to secure a perfect mirror, or to find a human mind or a soul that mirrors clear, perfect and true. The newspaper as a mirror should reflect not alone the dark shadows of crime and error, the rough, protruding rocks of wrong, perverseness and injustice, but should mirror forth the clinging vines of noble aspirations and purposes, the modest hiding primroses of virtue, no less than the flaunting poppies of vice, the blue bells of truth and peace no less than the flaunting red flowers of strife, the shrinking, hiding violets of humble worth in a corner as well as the bold, self-assertive flowers, self-assertives that seek to monopolize all the sunlight of public favor. All depends upon the mirror. With the mind and heart of Charles Dickens to give the reflection and hold up the mirror to nature, the purest hearts and loveliest characters were revealed hidden behind the walls of the Chelsea debtors' prison, and cruel abuses lurking there were exposed until today there is no longer imprisonment for debt either in England or the United States. The exhortation is, then, to see that your newspaper mirrors are perfest without flaw or blemish, distorting convexity of pride or belittling concavity of pessimism, that the mirrors are clean and well polished giving forth no dim, distorted, false or uncertain shadows or images.

SECOND DAY'S SESSION.

At the opening of the second day's session, the discussion of D. O. McCray's paper, "Should the Newpaper Be Read in the Schools?" elicited much interest. It was contended, on one side, that the teachers of the schools, in general, are ignorant as to current knowledge and events, impractical and without interest except as to what is recorded in the text-books. On the other hand, it was contended that great advancement had been made—that the newspapers are read by the pupils and teachers, and living history taught and passing events discussed, in many schools, and that, as shown in teachers' institutes and conventions, teachers are alive to the ideas of practical education and fully abreast the times.

The question, "Does Job Printing Pay at Present Prices?" brought out the thoughts on one side to the effect that present prices are pretty well established and cannot be materially changed, and that they could be made to pay through economical and thorough management and a perfect system by which every item of cost and expense could be known and watched and the work be expeditiously handled and loss avoided. The failure to make job printing pay arises largely from carelessness, lack of system and skill, and from slovenly work. Customers are willing to pay fair prices for good work and there is no economy in using poor material, type, paper and ink or in employing cheap, insufficient workmen. On the other hand, others deplored present price-cutting and cheapness, but again others had found it practical to avoid price cutting by a fair, friendly and reasonable understanding with competitors, an interchange over the telephone or otherwise, as to estimates given on jobs and through acting on the principle of live and let live.

Miss Anna Carlson had a very pleasing paper on "The Woman and the Newspaper," in which she showed how admirably women were adapted to certain classes of newspaper work, especially in gathering society news and in writing of those things that concerned the homes and the daily lives of the people. Woman's sympathetic nature makes her quick to discern news, those happenings that touch human interests. She did not seem to think that women are generally successful as solicitors or collectors in the business department.

"The Advertising End," presented by A. C. Miller elicited many practical views as to rates, positions, etc. All agreed that there should be fixed rates and that these should be adhered to conscientiously, and that foreign advertisers should not be given preference over home advertisers. Many contended for the flat rate, yet their explanations showed that they did not mean an absolutely unvarying flat rate, but the same rates to each and all for like services—discounts being given on large space and long-time contracts.

"The Linotype in the Country Office," was quite thoroughly discussed and brought out views from users of Linotypes and other machines in which it was pretty generally agreed that, to make machines profitable, there should be enough work to keep them constantly employed and that machines almost invariably bring more work. There was no owner of a machine who was not fully satisfied with the investment. On the purchase of a machine some one should be sent from the office to learn the operation and management and then he should teach two or three others in the office. With this precaution, there exists no necessity for keeping a machinist or hiring a high-priced expert and no necessity of the machine being idle because of the absence or sickness of the one operator who alone understood its operation and care.

Mrs. Jenny McMillan in giving her paper on, "My View of a Local Paper," talked pleasingly of the services of the local paper to the community and the high standard of purity, human interest and helpfulness that should be maintained.

The discussions following each paper were practical and informing, and it would well repay the Kansas Editorial Association to follow the example of many other organizations and employ a stenographer so that these discussions might be taken down, written out and published in the annual pamphlet of proceedings.

In the evening the editors were given a reception at the splendid Governor's Mansion—owned, furnished and maintained by the State—by the newly-installed Governor Hoch, who is himself a country editor with the wisdom still to retain his paper. A cordial welcome was extended by the Gov-

ernor and his estimable lady, with a grace and dignity worthy the office, held by the Governor, who is in every way worthy the office. He stands over six feet in height and is well proportioned and shows in his presence and bearing all the characteristics of a noble, able, high-minded gentleman of culture, active mentality and strong will and personality, yet ever affable and considerate. The editors are justly proud of their Governor—chosen from among their ranks.

The Thirty-ninth Annual Convention of the Minnesota Editorial Association was held in St. Paul, February 16th and 17th—and the dailies of that city gave very complete accounts of the proceedings. Of the first day's session the *Pioneer Press* said:

The thirty-ninth annual meeting of the Minnesota Editorial Association formally opened at 10:30 yesterday morning in the council room of the city hall, when President C. F. MacDonald of St. Cloud called the 200 or more delegates to order. The first speaker was Gov. John A. Johnson, a past president of the association. The governor said he was glad he was a publisher and could mingle with the publishers, and for these two days he wished to be regarded in the capacity of a member of the association. He bid the editors welcome to the State and to the capitol.

L. G. Hoffman, president of the Commercial Club, welcomed the editors on behalf of that organization. Mayor Smith, in a short address, welcomed them on behalf of the city. President MacDonald responded to the welcomes and then read his annual address. He reviewed the history of the association since its organization in 1866, when there were only fifty-three papers in the State, up to the present, when there are nearly 700. He suggested that a committee be appointed to revise the constitution and draft by-laws. It was his opinion that although the association is ahead of other State press societies, in most respects it is not so well organized.

The president paid a tribute to C. P. Stine, the secretary of the association, and also secretary of the Commercial Club, who had been elected against his protest last year and had later consented to serve until his successor had been elected, and to H. P. Hall, who has resigned from the board of directors after having served for twenty-five years. Mr. Hall is a charter member of the association, and has twice been its president and twice its treasurer.

WILL REVISE CONSTITUTION.

A committee of five, consisting of the president, J. E. King, W. M. James, W. A. Foland and E. E. McCrae, was appointed to revise the constitution and draft by-laws. C. A. French, C. C. Eastman and W. R. Hodges, who were appointed to consider the advisability of making an appropriation for a monument for W. G. Nye, reported later in favor of contributing $25 to the fund, and this report was adopted.

Four papers of general interest were read at the afternoon session. Three of the papers dealt with matters of purely public welfare, and the fourth, though it dealt with the matter of the subscription price, considered this mostly from the standpoint of giving the subscribers a good paper for the money.

PRIMARY ELECTION LAW.

In his paper on the "Primary Election Law," C. C. Eastman of the Wadena *Pioneer-Journal,* said: "The glorious fact is apparent that in times of war the American people exhibit a high standard of intelligence, courage and activity. Paradoxical as it may seem, these same Americans are often surprisingly indolent, credulous and timid when dealing with civic questions in times of peace. In this difference in the activity of the people lies the chief obstacle in the pathway leading to any wholly successful method of making party nominations. This timidity and indolence on the part of the people must be corrected before any plan is desirable.

"In my judgment this primary election problem will be solved only when the citizen will use the ballot as intelligently and accurately as he can use the rifle when occasion demands. I favor strongly the general principle of the direct nomination and object to any backward step, and I advocate that every citizen should be a politician. The system serves to familiarize every one with the political problems of the country and the present law has stimulated a wholesome interest along all lines in public matters. The tests prove that the people as a whole can be trusted fully as well as the politicians. I know that once a genial but erratic doctor was chosen mayor of Minneapolis under this law, but the incident has no terrors for me. No political system can be wholly successful in that town until some country editor is imported to teach them how to play the game and get good results.

"Party lines have not been destroyed by the law. The time may not yet be ripe, but is soon coming, when the State officers will be nominated by the people. The objection that there would then be no one to make the State platform, seems to be a poser, but in many years past one certain individual has always come before the committee on resolutions with a written platform and the usual indorsements for the officials who have appointed him to his office, and the platform has invariably been adopted. If we have no State convention he can go right on promulgating his platforms and indorsements from some housetop. I do not believe that the average delegate to the State convention knows much more than the average citizen."

RAILWAY RATES CONSIDERED.

John C. Applegate of the Cannon Falls *Beacon* read a paper on "Railroad Rate Discrimination." He began by saying that while he was not forgetful of what the railroads had done for the country, he was neither forgetful of what the country had done for the railroads. "I am in favor of giving the railroads the widest possible privileges consistent with public welfare," said he, "provided always the people control the safety valve, which is rate regulation. It is agreed by all, except the roads and those who enjoy special privileges, that the railroads are the highways of nations and should not be used for the exploitation of stupendous fortunes. The railroads have passed the stage of competition. So long as the lines of transportation are valued upon what they can possibly bring and not upon what they cost, the railroad rates will be in excess of the value of the service. Is it right that the people should pay dividends upon the two billions which they have donated to the roads in the form of land grants and bonds, to say nothing of paying dividends upon the six billions of watered stock?"

Concluding, he said: "The fault is often at the door of selfish and ambitious men, often of powerful corporations and associations of business men, at terminal points, who wring special concessions from the roads by threatening to divert traffic to rival lines. The policy of absorption is a mistaken policy. The building up of commercial enterprise throughout the State will result in substantial benefit to the cities. The interests and organizations of the Twin Cities which are trying to have the present agitation of this question suppressed and the legislative investigation abandoned will ere long find that this policy of absorption is alienating the trade of the State which, under fair treatment, would be theirs."

PRICE OF WEEKLY.

The paper by Leslie Matthews on the "Subscription of a Weekly Newspaper," was short but to the point. He thought the paper could be published for $1 if the subscription list is large enough, and would prefer 1,500 subscribers at $1 to 800 at $1.50. He gave figures to show that a paper could not be published for less than $1 when the list is below 1,000, and said that if the paper is sold at $1 it will usually be a 75-cent paper. "If you do not value your own product you cannot expect your patrons to value what is your most valuable asset."

MAY GO TO PORTLAND.

The members of the executive committee reported that they are trying to arrange a trip to Portland for the summer excursion of the association. They were instructed to arrange for the trip if they can come to terms with the railroads, otherwise to arrange any other trip they might see fit.

A committee of five was appointed to look over the new code and any other legislation that might be required or that might come up. The committee is E. A. Paradis, C. S. Schurman, G. S. Pease, J. D. O'Brien and J. C. Applegate. W. M. James, W. R. Hodges and H. C. Miller were appointed a committee on resolutions.

RECEPTION AT CLUB.

The editors and their wives were given a reception at the rooms of the Commercial Club in the evening by the club and the city of St. Paul. Louis Nash, who had charge of the arrangements, introduced L. G. Hoffmann, who welcomed the guests. President MacDonald, who responded, said that Mr. Hoffman had said many pleasant things which the editors know are true. He charged the editors to go home and write up the club and the city and send a marked copy to the secretary of the club.

Gov. Johnson was called upon and responded as follows: "The first intimation I had that I was going to speak here tonight was when I was told that there was going to be a vaudeville entertainement. I do not like to repeat the joke I told the dentist this morning about the value of a pull, nor the one I told the farmers' meeting about dehorning a hydraulic ram. I feel like the boy who, when asked the meaning of a vacuum, said he did not remember, but he had it in his head.

"For the last nineteen years I have attended the meetings of this association, and during that time have noticed a great transformation. The first time there were six ladies present; today there are more than a hundred. It is a great pleasure to get away from the great horde of office-seekers who throng the new capitol and get down among the editors. This is a grand city, yet back of this metropolis is a grand State. Great problems are before the country at present, and when they are worked out they will not be worked out under the shadow of the great skyscrapers of New York, Chicago, Minneapolis or St. Paul, but by the boy who follows the plow and sings 'My Country.' Tomorrow, when you come up to that grand edifice which is the crowning effort of our genius, I will throw it open to you and endeavor to 'show you.'"

The second day's session was called at 10:30 A. M., and continued until 12:30 P. M., during which time a vast amount of business was transacted, including the reading of papers, the delivery of three brief addresses, the reading and adoption of a new constitution and by-laws, the reporting and passing of resolutions and the election of officers and delegates to the National Editorial Association.

Former Congressman Eddy presented a paper—we quote from the St. Paul *Dispatch and Globe*—on "The Paper Trust" in which he defined the difference between a good trust and a bad trust as precisely the difference that exists between a good thief and a bad thief. The whole trust question, including that of the suppression of the paper monopoly was a political one. Any one who held that it was not, was, Mr. Eddy said, "either a trust stockholder, a trust promoter, a trust attorney, a trust sucker or a darned fool."

After stating that trusts could not possibly thrive without the suppression of competition, the speaker proceeded to term the paper trust as the most successful, tyrannical and indefensible of all existing mononopiles. The oil trust, though powerful enough to defy a sovereign State, and covertly threaten the national government, did not possess all the sources of light-making material. The meat trust, though capable of forcing cattle raisers to accept 2 cents a pound for their meat and of exacting 70 cents a pound from those who consumed the meat on dining cars, did not own quite all the sources of meat supply. But by the passing of a law prohibiting the importation of pulp or pulp wood from Alaska, the paper trust controlled absolutely all the materials from which paper was made.

News print paper was today twice as dear as a few years ago, although there had been practically no increase in the price of production or of the wages of those who made paper.

"This trust levies tribute on the information, education and religion of the country by being in absolute control of the paper from which newspapers, books and literature of all kinds is printed. It is a monopoly on the intellectual and spiritual necessities and as such increases ignorance, fosters crime and promotes sin. The meat trust being a monopoly of material necessities and increasing the price thereof increases sickness and want and is instrumental in increasing death," said Mr. Eddy.

> Alaska and the Hudson Bay basin contained enough pulp timber to easily supply the paper needed by the world for the next 200 years, but not a pound of pulp or of pulp wood could be imported into the United States from either of these sources, because of laws passed through the influence of the paper trust.

If the newspapers of the country were to unite to secure this they could obtain what they wanted in short order. The temporary repeal of the duty on coal during the big strike showed this. Until the newspapers of the country did show some inclination to free themselves of the burden of this monopoly by united action, Mr. Eddy did not consider that they were entitled to any special commiseration.

The convention was addressed by Mrs. Perry Starkweather, of the Relief Corps, G. A. R., in favor of the movement to provide quarters at the Soldiers' Home for destitute wives, widows and mothers of veterans of the Civil War. And, after President MacDonald spoke in favor of the movement, resolutions were accordingly passed.

CONSTITUTION ADOPTED.

The constitution and by-laws framed by the committee for the purpose were read and adopted. They provide that in the future all active members must be active editors or publishers of daily or weekly newspapers. There are several active members who are publishers of monthly papers, and the new constitution does not apply to them.

Secretary Randall spoke on the subject of advertising the State fair in the country papers, and said it had been decided to adhere to the plan of conducting the work on a courtesy basis, because of the difficulty in making a selection of papers that would not invite charges of discrimination. The association had bought the Minnesota building at the St. Louis Fair and this would be set up and placed at the disposal of the editorial association on the fair grounds. Files of all the papers in the State would also be kept there.

An appropriation of $25 was sanctioned to be contributed to the Nye memorial fund and before the convention adjourned a brief address was delivered by B. B. Herbert of Chicago, who had arrived on the morning train from Chicago in time to attend the closing session, and was invited by President McDonald to address the convention and introduced as one of the former Presidents of the Association, who during his last term of office founded and became the first President of the National Editorial Association. Mr. Herbert served as President of the Association for three terms, 1883-1884 and 1885 and declined a fourth election on account of his duties connected with the National body and because he believed that there should be a rotation in the office of president.

In his remarks he complimented the Association upon its growth and prosperity and upon the fact that when he was an active member of this association the editors only were the makers of governors, now in this State as in other States, the people come to the editors and elect honored members of State press associations for governors and, in a reminiscent vein, spoke of the pioneer days of Minnesota newspaperdom. He said that by reason of the formation of the National Editorial Association and the establishing of a paper to serve its members and all editors, printers and publishers, he had been lead into other lines and to break the ties existing for so long in this State, but it seemed very good to return home to form new and to renew old acquaintances and friendships. The following were chosen the officers for the ensuing year:

President, W. C. Whiteman, Ortonville; vice-presidents, C. A. French, Monticello; A. J. Halstead, Brainerd, and H. J. Peterson, Litchfield; secretary, C. P. Stine, St. Paul; treasurer, D. R. Ramaley, St. Paul; executive committee, H. P. Hall, C. C. Whitney and Frank Meyst.

After electing W. C. Whiteman president for the ensuing year and choosing over their expressed declinations to serve longer, C. P. Stine, as secretary, and H. P. Hall, as a member of the executive committee, the thirty-ninth annual meeting of the Minnesota Editorial Association drew to a formal close. But even though it were the formal adjournment, it was really the very beginning of the day's session, for the

afternoon was spent at the new statehouse, where the editors viewed architectural and ornamentative beauties of the building, partook in a mock session of the legislature and complimented the members of the capitol commission upon building so well.

The editors were conducted through the buildings in parties by Gov. Johnson and Chairman Seabury, of the capitol commission, who explained the different features to them.

The mock session of the legislature lasted an hour and was full of good humor. W. I. Nolan, of Minneapolis, acted as speaker, while Julius Schmahl continued in the capacity of chief clerk. Gov. Johnson and President MacDonald were made to act as doorkeepers, while other house officers were chosen with an equally keen eye to the ludicrous.

A bill for a revised libel law was passed with great eclat after a lengthy personal discussion. The bill was good in its composition and some extracts follow:

All newspapers published and printed in this State and all persons publishing and printing the same are hereby prohibited from publishing and printing newspapers in this State.

That any person, firm, company or corporation so printing and publishing newspaper in this State, who shall be guilty of criminal libel in so printing and publishing said newspaper, shall be subject to the penalty hereinafter prescribed.

For the purposes of this act, criminal libel shall be defined as follows: Criminal libel shall consist in telling the truth with respect to any politician, statesman, officeholder, employe of the legislature, or grafter, if said truth so told through the columns of said newspaper shall be unpleasant, shall wound the sensibilities of said person, or any or either of them, or the sensibilities of members of their families, their acquaintances, or any person with whom there is a likelihood of acquaintance at any time in the future, or any persons or corporations with whom there is any opportunity whatever to "do business;" that for the purpose of this act every corporation shall be held to be endowed with feelings which shall be susceptible of injury on such occasion.

Criminal libel shall also include the printing or reproduction of any cartoon of any kind whatever, unless the same shall first have been approved or stamped "O. K." by the secretary of the State art society.

That under no circumstances shall it be criminal libel to call a fellow newspaper man a "low-browed horse thief," a "cold-blooded assassin of character," a "wart on the face of nature," or any similar term of endearment; that any editor who fails to get into a circulation fight with his next-door neighbor at the first opportunity shall be found guilty of incompetency, both mental and mechanical, and shall thereupon be compelled to swallow the circulation statements of all metropolitan dailies.

This act shall take effect and be in force from and after the time that Julius Schmahl is elected president of the Minnesota State Editorial Association.

But the session was not all devoted to the lighter vein. After the frolic had run its limit there were speeches of welcome by Speaker Clague and Gov. Johnson, and a reply by the newly-elected president, W. C. Whiteman.

The Northwestern Iowa Editorial Association held its annual convention in Waterloo, February 2nd and 3rd, and the Waterloo Daily *Reporter* gave the following chatty account of the proceedings:

The meeting opened about 3:30 o'clock, President F. G. Ellsworth, editor of the Osage *News*, in the chair. I. Van Metre read a paper on "A Famous Interview." Whether Mr. Van Metre's interview was real or imaginary, he did not state to his auditors, but its composition was made by the same master hand that gave to the world through his *Tribune*, "The Lost Diamond Found," "Pat Crowe," and several other stories produced while editor of the Waterloo *Tribune*. Van's story was set in the early days in the little town of Vinton, at a time when the loss of the paste-pot and the shears was the greatest misfortune that could be befall the country editor. He engaged in the art of newspapering in the Benton county capital, buying his office from Editor Brice, who had spent several years in trying to pilot the fledgling over the shoals of adversity encountered in the work in those days. Mr. Van Metre and Mr. Brice parted after the change of ownership on the paper was made, and did not meet again until a short time ago. This constituted the second "interview" in which Mr. Brice recounted the early days and compared the journals of civilization of that day with the ones of the present time.

Editor H. E. Moffat, of the Grundy Center *Republican*, next appeared to discuss the "Postmaster and the Printed Envelope." This is a question that has come to be a perplexing one to the country publisher, and the reading of Mr. Moffatt's paper brought out a heated discussion. By some it was contended that Uncle Sam has no more right to furnish printed matter for the market than he has to furnish ready-made clothing. The government does its printing on a much larger scale, and buys its stock in larger quantities than the country publisher, and by so doing is able to underbid the latter. In offices in small towns, it was brought out, the editor of the small paper prints very few envelopes and with the advent of the rural mail service work in this line is growing smaller each year. The government entering the field, however, has a mission, and that is to teach the people that every letter sent out should on the upper left-hand corner bear the name and address of the sender. Editor Linn, of the Sumner *Gazette*, and Hon. B. B. Herbert, of Chicago, offered much information in the discussion of this subject.

"Burt Harwood, editor of the Clarion *Monitor*, who was to have addressed the meeting on the subject, "Local and Foreign Advertising," not being present, the chair called upon Editor Linn to give a few remarks on the subject. Mr. Linn gave his own experience touching local advertisers and foreign firms, such as cheap supply houses, patent medicine firms and others, who approach the country publisher annually with a proposition for placing the ad "at top of local page, and next to pure reading matter." Mr. Linn for some time made special rates to those taking a large amount of space for advertising purposes, but after what he considered a fair trial of the scheme, he went back to the "flat rate" and has found it the more profitable method.

EVENING SESSION.

"Following the afternoon session the visitors busied themselves in inspecting the machinery on exhibition by printers' supply firms, and paid fraternal visits to the editors of the various newspapers in the city. About 7:30 the evening session opened. The address of welcome was delivered by Attorney J. C. Murtagh, acting for Mayor Martin. This selection of the mayor was a most pleasing one to the distinguished visitors, for the speaker made each feel that Waterloo extends a right royal welcome to each and everyone. Mr. Murtagh and President Ellsworth were in former years Waverly boys, and their meeting last evening, just before the opening of the session, was the first since their separation which was about fifteen years ago. Mr. Murtagh took the opportunity offered him to pay his old friend a deserved compliment for the able manner in which he conducts his paper at Osage, and congratulated the association on electing as its chief executive, one who possessed so much executive ability.

"Mr. Ellsworth's response to Mr. Murtagh's words of welcome, on behalf of the association, were filled with good feeling for Waterloo, and the speaker more than once referred to the city as being in the forefront in all lines of human activity that go to make an ideal municipality. He mentioned the remark made by President Roosevelt on his visit to Waterloo during the 1900 campaign, in which the president said he did not come to Waterloo to teach wisdom, but he came to learn. Mr. Ellsworth thought if the strenuous, "unterrified" Teddy was not ashmed to acknowledge that he was not satisfied with his portion of learning and achievement, the editors should not be. Mr. Ellsworth's address was full of good pointers for Waterlooans, and it is likely those of the city who heard his address swelled with pride at his laudation. The speaker also spoke of the strong men that have been engaged in newspaper work in the city in the past who placed the craft on a footing equal to the best in the State.

"Hon. B. B. Herbert, publisher of the NATIONAL PRINTER-JOURNALIST, Chicago, read a paper on 'The Newspaper as a Mirror and the Protecting Power of Publicity Therein,' in which he thoroughly covered every phase of the newspaper profession. Mr. Herbert is one of the oldest men in the country engaged in editing a trade journal. He is sound on all questions pertaining to newspaper work, and his appearance at editorial conventions is always considered by members of the craft as a high honor paid them, and they never fail to hear Mr. Herbert's address, for he always has something good. Mr. Herbert thinks that the foundation of all successful newspapering is based upon human interest, and anything that affects the life of the people is 'news.' Mr. Herbert paid a high compliment to the late Wm. Hartman

and Hon. Matt Parrott, two of the pioneers of newspaper work in Iowa, with whom he had an intimate acquaintance."

FINAL SESSION AND BANQUET.

"The mid-winter session of the year 1905 of the Northeastern Iowa Editorial Association has passed into history, and with its passing carries some of the pleasantest memories in newspaper work to those who were present at the meeting. It has been a joyous time both to the visitors and to the entertainers, and both have profited by the meeting. Waterloo has been more favorably impressed with the class of men who preside in the editorial sanctums of the country papers in this section of the State and the editors have gained a little more information on what contributes to the welfare of Waterloo and makes it one of the best and most desirable residence cities in the whole State.

THE FINAL SESSION.

"The closing session in the meeting of the editors was held in the convention hall yesterday afternoon. This was the best-attended session of the whole meeting, and topics of much interest to newspaper makers were discussed by men most capable of giving information.

NEW OFFICERS.

"The annual election of officers resulted as follows:
President—W. W. Beals, Hopkinton *Leader.*
Vice-President—H. J. Metcalf, Lansing *Mirror.*
Secretary and Treasurer—H. J. Green, Decorah *Journal.*
Executive Committee—B. Murphy, Vinton *Eagle;* W. F. Parrott, Waterloo *Daily Reporter.*

FEAST OF EDIBLES.

"The closing event in the convention of the Northeastern Press Association was concluded last night at the banquet tendered the visitors by the city of Waterloo. Two hundred representatives of the press, business and professional men gathered at Masonic Temple, where the spread was served by the ladies of the Eastern Star.

"The hall excited much favorable comment among the guests, and the banquet served was sufficient to give them a lasting impression of the hospitality with which this city entertains her guests. The organization that had charge of the spread did itself proud and sustained the reputation it had gained for the proper serving of feasts of the kind given last night. Edward Nagel, a member of the Beloit band, discoursed music upon a harp during the early evening, and also favored with an original song, entitled, 'What the Letters Mean.'

"Among the many tempting morsels were the following: Oyster cocktail, celery, olives, pickles, wafers, beef tenderloin, mashed potatoes, cold tongue, brown gravy with mushrooms, pea patties, Parker House rolls, cranberry ice, O. E. S. salad, ice cream, assorted cakes, Bent's water crackers and coffee.

"The menu cards were unique in many respects. The front page bore the picture of a printers' 'devil,' which represented the editor in his younger days. On the second page was printed the menu which was being read eagerly by a large number of persons supposed to be editors or journalists. On another page was the festive board surrounded by the editors and in their midst stood Governor Cummins addressing the assemblage. The last page gave interesting facts and statistics of the factories and improvements contained in Waterloo. The cards were designed by W. F. Parrott and his ideas were executed upon paper by the famous cartoonist for the Chicago *Tribune,* McCutcheon. The menu cards were printed and donated by Matt. Parrott & Sons as souvenirs of the occasion.

GOOD FELLOWSHIP REIGNED.

"The program of toasts was an excellent one and was carried out in the best possible manner. W. F. Parrott presided as toastmaster. He opened the feast of reason with a few general remarks and cited a little story of how Bill Nye greeted his audience upon his appearance in Waterloo, when he said, 'I believe I have met one of you before.'

"The Waterloo quartette composed of Mesdames J. E. Brinkman and Winnie Briggs, and Messrs. Paul Davis and Arthur Bunn favored with a selection and encore.

"B. F. Swisher of Waterloo replied to the toast, 'The Lawyer and the Editor.' He told of the bitter feeling against the lawyers in the early days, how it was finally overcome, and at last of the way in which the bond of friendship sprung up between the lawyers and editors because a scribe had once been freed from the charge of libel by a noted attorney. He talked at length on the qualifications of an editor, saying that he must be a pupil of the learned and a teacher of the ignorant.

"J. F. Dalton, editor of the Manson *Democrat,* responded to 'Humor in Journalism.' He told why an editor should look upon the bright side of life through the columns of his paper. He told of what was clean legitimate news and begged the editors to leave out all suggestive stories that sometimes are printed in the country weeklies and credited to 'Ex.' He urged everyone to look upon the bright side and to do the best to help along some unfortunate.

"A song entitled, 'O'er the Hill, O'er the Dale,' was rendered in a pleasing manner by the Misses Fern and Zola Hosteter, little daughters of Mr. and Mrs. E. L. Hosteter. They responded to an encore.

"The toast, 'The Country Editor a Public Servant,' was treated by Supt. Chas. Elliott of Waterloo, who has had years of experience in newspaper making and who has occupied every position from 'devil' to editor and publisher. He called attention to the fact that the country editor is the historian of all events, the biographer of each resident, and chronicler of all pertaining to the community. He told of how the people in the long ago were obliged to refer to mythology and legends for the information of the happenings in the past, who now are able to pick up the back files of the newspapers and find it all in black and white. He also recited some of the trials and tribulations of the country editor. His address was witty and was enthusiastically received.

"One of the wittiest and most enjoyable addresses of the evening was delivered on that supposedly-staid subject, 'The Editorial Page,' by J. W. Jarnigan, editor of the Cedar Falls *Record.* He lauded Waterloo and in his peculiar way showed up the pride the Waterlooans feel in this city. He treated his subject in an excellent manner and showed that he fully understood the requirements of an editor. He urged that each editor set apart a special space in his paper for the editorials and then set forth his ideas in a concise manner.

"Rev. Mrs. Effie K. M. Jones spoke on the theme, "Men and Women." Her subject was well handled and showed considerable thought. She told of her experiences with editors in the past and spoke at length on the editor's wife, her good qualities, her shortcomings, and her duties in the newspaper making.

"'Scraps' was treated by C. R. Graves. He told why the editor should preserve the little scraps of information that may come at hand, and how they could be used at some future time. He told of how many of the packing houses and tanneries made use of every scrap of material that came into their shop. He said that in some packing establishments they used every scrap of material except the squeal and they sometimes used that to blow the whistle.

"Last but not least was Joe Trigg, who responded to the toast, 'Farming in the Moon.' Although a considerable distance away from the subject of his speech he showed that he was not unacquainted with the bearing of the moon on agricultural pursuits. He told of the superstitions of many of the farmers who will not perform certain duties unless the moon is just right."

The Buckeye Press Association of Ohio held its annual convention in Cleveland, February 16th and 17th. A very attractive program was presented. Among the questions was, "The Dollar a Year Weekly—Can the Price be Raised?" The discussion resulted in the unanimous adoption of a resolution to the effect that the "Country weekly, hereafter cannot, profitably, and should not, be published at *less* than $1.50 a year."

"The Attractions of an Entire Home-print over the Ordinary Inside Ready-print," "How to Build Up and Maintain a Large Local Circulation," "The Flat or Graded Scale in Advertising," were among the other subjects considered. A royal feast of good things and good cheer was enjoyed at Hotel Hollend on the evening of February the sixteenth. The banquet was tendered by The Chandler & Price Co., Cleveland Paper Mfg. Co., American Type Founders Co., Union Paper and Twine Co., Kingsley Paper Co., Eclipse Electrotype and Engraving Co., A. N. Kellogg Newspaper Co., Bingham & Runge, Central Engraving Co., Central Electrotype Foundry, General Engraving Co., Mugler Engraving Co., Ullmann & Philpott Mfg. Co., Chas. Eneu Johnson & Co. The following comprised the Committee of Arrangements: C. A. Dunklee, M. M. Daniels, W. H. Schrader.

The menu was a handsome piece of job printing in red and black on fine buff paper. The program of toasts, with title and motto, was as follows, and the responses to the toasts combined both eloquence and sense, and were much enjoyed:

Editorial Comment—"A word fitly spoken is like apples of gold in pictures of silver."

Toastmaster—Mr. Frank H. Clark, President Eclipse Electrotype and Engraving Co.

"The Publisher and the Advertiser," Mr. Elbert H. Baker, Manager Cleveland *Plain Dealer.*

"Press Associations," Mr. W. A. Ashbrook, Cor. Sec. National Editorial Association, Publisher Johnstown *Independent.*

"The Art of Preserving," Mr. C. O. Bassett, Sec'y and Treas. The Forman-Bassett-Hatch Co.

"A Few Stickfuls of Pi," Mr. C. W. Bloom, Publisher New Paris *Mirror.*

"The Fourth Estate," Mr. H. N. Rickey, Acting-editor-in-chief Scripps-McRae League of Newspapers.

"Reveries of an Editor," Mr. J. V. Lawler, Publisher Carrollton *Chronicle.*

The following were chosen National Editorial Association delegates: C. C. Day, Seville *Times;* J. W. Johnson, Waverly *Courier-Watchman;* C. W. Bloom, New Paris *Mirror;* B F. Gayman, Canal Winchester *Times;* C. B. Sala, Minerva *Kodak;* B. F. Jackson, Clyde *Enterprise;* Geo. Runyan, New London *Record;* W. H. Kussmaul, Granville *Times;* C. R. Callaghan, Bellevue *Gazette;* J. W. Yeisley, St. Paris *News;* C. C. Fowler, Canfield *Dispatch;* Geo. E. Reed, Prairie Depot *Observer.*

The annual convention of the Michigan Press Association was held in Detroit and a most commendable spirit was manifested and very profitable sessions enjoyed. The Detroit *Free Press* gave an admirable summary of the proceedings and the reading of the following extracts from its account can but prove profitable to association officers and members and to editors, publishers and printers everywhere:—

Progress and practicability, says the *Free Press,* are the two lines upon which the Michigan Press Association will work this year, this being the avowed spirit of the closing thirty-seventh annual meeting. The newspaper men started out well in the furtherance of their aim when they elected to the presidency W. F. Knox, of the Sault Ste. Marie *News.* Mr. Knox succeeded Charles H. Newell, of the Coldwater *Courier,* who was president of the association for two terms, and under whose guidance much helpful work has been accomplished throughout the State.

After the meeting yesterday, President Knox announced his determination to take up the work where President Newell left off, and to try, if possible, to improve even the present high standing of the association.

"I realize that I have a task in following such a hustler as President Newell," he said. "I have, even now, a few schemes for next year's annual meeting that I shall submit to the executive board. For a number of years the tendency of the association has been to get down to lines of practicability, and next year we shall try to pin right down to 'brass tacks.' We have the weekly publishers and the daily publishers to look out for, and I think a good idea would be to do away with the general topics in the annual discussions and get right down to the practical matter of dollars and cents in figuring out the operating of newspapers in these departments."

OTHER OFFICERS.

The other officers elected were as follows: Vice-president, E. A. McKinnon; secretary, (elected for the fifth consecutive year), H. A. Hopkins, of the Postmaster Everywhere; treasurer, W. R. Cook, Hastings *Banner.*

Immediately following the business meeting the executive board went into session and cleaned up the business of the year. President Knox framed up his executive committee. The president and secretary are ex-officio members of this committee, and his appointees are: C. H. Newell, retiring president, Coldwater *Courier;* B. J. Lowrey, Howard *City Record;* Theodore E. Quinby, Detroit *Free Press;* Roger M. Andrews, Menominee *Herald-Leader;* J. N. McCall, Ithaca *Herald.* All these, except Mr. Andrews and Secretary Hopkins are past-presidents of the association.

NEVER SO FLOURISHING.

The reports of the treasurer and secretary showed that the association has never been in such a flourishing condition as it is at the present time. The membership is growing and there is an abundance of money in the treasury. The last official act of the retiring president was the reappointment of W. P. Nisbett as historian, after he had deliverd the history of the past year to the present meeting.

The meeting called forth one of the most interesting papers ever read before the association. It was entitled, "The Politician and the Newspaper," and was written by Arba N. Moulton, of the Decatur *Republican.* Here are some of its words of wisdom:

"NEWSPAPER AND POLITICIAN."

"The newspaper and the politician seem to have an affinity for each other, although it is usually the latter who does the wooing. The newspaper is made for the politician to get in on. The dictionary gives two meanings for 'politician.' One is a statesman, the other is used in the deprecatory sense of the word and the definition is 'an intriguer.' It is a great thing to be a statesman, looking always to the advancement of one's country and the statesman must work in the limelight of the newspapers. His path is beset with many pitfalls and he must not let his actions become tainted in any way. He must not let a whisper of scandal mar his career. President Roosevelt is America's shining example of such a man and the power he has obtained over his people is the surest evidence that the honest politician enjoys the greater triupmh.

"And now it is up to the newspaper. From the greatest to the smallest, it has a duty to perform. It is not merely a business enterprise. As the teacher in the public schools trains the minds of his pupils, so the newspaper of today practically trains the minds of the inhabitants of the civilized world. As the wave from a pebble cast in the water travels across the ocean, so a sentiment, a praise, or a criticism published in a metropolitan daily travels across the continent. The responsibility of a newspaper is unlimited and some yellow journalists who are thriving on it in this world will find it out in the next.

"It is then the duty of the newspaper to aid the honest politician, hunt him out if necessary, and help him to the front for the common good. The newspaper that can pick the honest politician out of the crowd clamoring for its support, and will aid him in the commendable things he aims to accomplish, is doing a worthy act and its reward will come some time.

"Michigan is favored with many politicians who have the trademark of statesmanship. Some have not always received fair treatment from the newspapers, but they have proved that merit will win and Michigan, as an influential state, does not suffer by comparison with her neighbors.

POLITICIAN'S CHAMPION.

"The newspaper is the politician's greatest champion and his most dreaded enemy. Sometimes, the newspapers make the mistake of advertising a politician too much without getting the advertising rate for it. Harsh things are said about him, he is a bad, mean, awful man, etc. The politician should politically die but he doesn't. The newspaper has furnished him, for nothing, what the advertiser would gladly pay hundreds of dollars for and he wakes up to find himself famous.

"Sometimes the power behind the newspaper in the person of the editor, is himself a politician. If so, he is sure of one organ that he can depend on. Let us hope for the good of the fraternity that he is of the statesman quality. Many members of this association are politicians and I have yet to learn that one has not been worthy of his trust. And I venture the opinion that, not many years distant, a worthy member of this association will be greeted as the governor of Michigan. Every newspaperman should be a politician if for no other reason than to keep him from straddling the fence. Every newspaper that shows its colors in politics carries greater conviction than the paper that shrinks from making a positive statement."

SUBSCRIPTION PRICES.

B. J. Lowrey spoke on "The Subscription Price of Weekly Newspapers," and said that he regards a fair price, after years of experience, as $1.50 a year. He said, however, that publishers do not seem to know how to raise the price from the popular price of $1 a year and retain their old subscribers.

George B. Willard, of the Battle Creek *Journal* was assigned the topic, "A Portion of Breakfast Food for the Newspaper Man's Thought." After drawing a lifelike picture of the existence of the country editor, he gave the following "dishes," which if taken for breakfast will, he said, prove a great aid in the work—"Dish No. 1, 'Excelsior'; Dish No. 2, 'Encouragement', and Dish No. 3, 'Good Fellowship'."

"A Tribute to the Memory of Frank R. Gilson" was given by George T. Campbell, of the Owosso *Argus*. Mr. Gilson was the lamented editor of the Benton Harbor *Palladium*.

Joseph Greusel, of *The Gateway*, gave some interesting "legislative reminiscences."

RESOLUTIONS PASSED.

Among resolutions passed, that may well be taken as models for other associations in recognizing faithful services rendered were the following:

"It is thought eminently fitting at this time of our annual gathering and particularly at the close of the term of office of the officials to show appreciation in some manner of the faithful performance of the duties they assumed upon going into office one year ago. With this in mind, therefore, be it

"*Resolved*, That this association first of all, unanimously indorses and commends the officers and executive committee for the very successful way in which each individually and all collectively as a body have performed their several duties to the end that they have made this, the thirty-seventh year of the M. P. A., memorable and one that will never be forgotten. Be it further

"*Resolved*, That this association particularly recognizes that it owes much of its success to the untiring energy of its faithful, capable and much esteemed president, Charles H. Newell, who has, from the beginning, been ably supported by its very efficient and popular secretary, H. A. Hopkins, in all his efforts to build up a State organization of newspaper men second to none in the United States, and of which all are proud to own membership therein. It is further

Resolved, That this association thanks the following well-known Detroit artists who so gladly contributed their services and so delightfully entertained upon the occasion named: M. Maurice de Vries, M. Dezso Nemes, Mme. Melitta Nemes, Miss Martha Hohly and Miss Amy Louise Farnsworth.

THE BANQUET.

After a delightful repast, Toastmaster H. R. Pattengill, of the school *Moderator*, Lansing, opened the speech-making with his inimitable flow of oratorical wit, cracking good jokes and telling humorous stories that at once created a feeling of thorough good fellowship, so necessary to a successful banquet.

"The first obligation a newspaper must fulfil is to dispense the news," said President Knox, in responding to the toast, 'Partizanship.' The profession, however, has its ethica as well as its business side, even if people now say that the newspaper is only published to coin dollars for its owner.

RADICAL CHANGE.

"In the face of this criticism it must be observed that the last presidential campaign marked a radical change, showing more than ever the power of the press as a force for good or evil. The stump speaker practically disappeared and, in his place, we had the editorial, the news story of the campaign and even an almost unheard-of amount of political advertising.

"The question of a free lance or of party affiliation for his paper is one of the greatest an editor must confront. An independent, fearless press is a necessity, although its efforts are necessarily spasmodic. It is absolutely needed, however, to drive out the vultures, the corruption and the fraud that spring up at all times.

"On the other hand, the greatest reforms in the country have ever been and always will be made by the great political parties and are successfully worked out by each. Every great man the country has had has allied himself to some great political party and has stood for its principles. Why should it not be so with a newspaper?"

"BE FAIR TO RAILROADS."

"An interesting adddress was given by Dudley Walker, of the Chicago & Alton railway, on 'Railroads and the Press.' Mr. Walker said that much that is false has been said about the railroads and their business methods, and he made a plea to the editors to be fair to the railroads.

"The press and the railroads have been the greatest factors in the building up of the country," said Mr. Walker. "One has aided the expansion of thought and intellect and the other has dealt with material expansion. One is, necessarily, an adjunct of the other. I only ask that the editors look behind all false reports, now so much circulated about the railroads, and give the railroads the credit that rightly belongs to them."

"There never was a time in the history of this country when the newspapers exercised such an influence as they do today," said E. N. Dingley, of the Kalamazoo *Telegraph*. "The editors of fifty years ago were mere children compared to present-day editors, when the question of power is considered. Why, we rank our nations today by the power of the press."

OFFICERS-ELECT.

"Our Officers-Elect" was responded to by T. W. Crissey, of the Midland *Republican*, who declared that the officers of the Michigan Press Association are men 'who can do things.' He asked the members to loyally support their officers in all undertakings and expressed for the organization a confident hope that the coming year would, under the new regime, be one of the best in its history.

Roger M. Andrews, of the Menominee *Herald*, was to speak on "Our Annual Gatherings," but was unable to attend. His place was taken by George B. Dolliver, of the Battle Creek Sunday *Record*. Mr. Dolliver's address was in a happy vein and closed the banquet, as well as the convention, with the hope and wish that next year's meeting be fully as successful.

The Texas Press Association meets at Brownwood, May 11, 12 and 13, 1905.

To the National Printer-Journalist:

Following is the program for the twenty-sixth annual meeting of the Texas Press Association to be held at Brownwood, Texas, May 11, 12 and 13, 1905: Annual Essay—T. H. Napier. Annual Poem—Clarence Ousley, Forth Worth *Record*. Annual Oration—Rev. Homer T. Wilson, San Antonio. 1. The Press, the Pulpit, the Politician—Tom W. Perkins, McKinney *Gazette*. 2. Are publishers availing themselves of the improved facilities of production and distribution—C. E. Gilmore, Willis Point *Chronicle*. 3. What the Press accomplished for Texas at the World's Fair—L. J. Wortham, *Current Issue*, Austin. 4. What qualifications are essential to success as an editor—W. A. Johnson, Memphis *Herald*. 5. Value of classified ads to a daily paper—Marcellus E. Foster, Houston *Chronicle*. 6. The Bloomin', Boundin' West—J. G. Murphy, San Angelo *Standard*. 7. Ye editor as a lawmaker—J. A. Thomas, Leonard *Graphic*. 8. Is a semi-weekly issue more desirable and more profitable than a weekly—Joe J. Taylor, Clarksville *Times*. 9. My esteemed contemporary across the street—J. D. Moyer, Honey Grove *Citizen*. 10. How may we improve our opportunities as publishers—C. A. Chambers, Liberty *Vindicator*. 11. What are we here for—J. E. Vernor, Lampasas *Leader*. 12. Our advertisers, do they get the same consideration as the job patron—L. J. Rountree, Georgetown *Commercial*. 13. My country cousins—W. G. Sterett, Dallas *News*. 14. For the good of the order—Five minutes' talk by members of the association. Each number of the program to be open for discussion.

W. J. Buie,
F. B. Baillio,
Will H. Mayes,

We regret that the crowded condition of our pages prevented the publication of the above excellent program in our March issue as requested by State Committeeman Buie, but, as this number goes out the very first of April we hope the publication now will be satisfactory and give the information in due time for all practical purposes and will serve to stir up the members by way of remembrance, while the many topics therein named will, we know, serve as profitable subjects for thought and study by all editors and newspaper publishers throughout the whole year.

The Ohio Associated Dailies had an exceeding profitable annual meeting and we have received from W. M. Miller, executive committeeman, *Press-Republic*, Springfield, Ohio, the following list of delegates and alternates from the Ohio Associated Dailies to the National Editorial Meeting to be held at Guthrie, Oklahoma, in June, 1905.

DELEGATES—C. M. Reitzel, *Chronicle,* Warren, Ohio; D. D. Taylor, *Times,* Cambridge, Ohio; L. H. Brush, *News-Review,* East Liverpool; S. A. Hoiles, *Review,* Alliance, Ohio; F. A. Rowley, *Times,* Lorain, Ohio; C. S. Maag, *Vindicator,* Youngstown, Ohio; E. H. Capeller, *News,* Mansfield, Ohio; W. O. Littick, *Times-Recorder,* Zanesville, Ohio; B. J. McKinney, *Times,* Marietta, Ohio; M. Jennings, *Gazette,* Lancaster, Ohio.

ALTERNATES — H. J. Campbell, *Gazette,* Lima, Ohio; A. C. Dickinson, *American Tribune,* Newark, Ohio; M. D. Frazier, *Shield,* Mansfield, Ohio; R. C. Dicks, *Republican,* Wooster, Ohio; Mrs. Zell P. Hart, *Tribune,* Warren, Ohio; G. I. Woner, *Republican, Painesville,* Ohio; H. C. Hancock, Ohio; J. M. Amos, *Jeffersonian,* Cambridge, Ohio; Homer Gard, *Democrat,* Hamilton, Ohio.

The following letter comes from the rich and growing State in the northeast of our Republic:

SEATTLE, WASH., Jan. 21, 1905.

Dear Bro. Herbert:

Our State meeting will be held later in the year, likely toward fall. The time will be fixed by Ex-Com. As a consequence no program has as yet been prepared. The enclosed letter head will give you list of our officers.

With best wishes.

W. A. STEEL.

OFFICERS—President, Lovett M. Wood, *Trade Register,* Seattle; first vice-president, D. Carl Pearson, *Times,* Coupeville; second vice-president, John Blaauw, *Tidende,* Tacoma; secretary, Edgar DeWitt Gilson, Adams County News, Ritzville; treasurer, J. E. Houtchens, *Gazette,* Waitsburg; historian, Edwin N. Fuller, *Tacoma;* orator, Orno Strong, *New West Trade,* Spokane; poet, C. W. Gorham, *Tribune,* Snohomish.

DELEGATES NATIONAL EDITORIAL ASSOCIATION MEETING, TWENTIETH CONVENTION, GUTHRIE, OKLA., 1905—W. A. Steel, National Committeeman, Nome *Daily News;* Orno Strong, *New West Trade,* Spokane; E. D. Gilson, Adams County *News,* Ritzville; John Blaauw, *Tidende,* Tacoma; C. W. Gorham, *Tribune,* Snohomish; J. E. Houtchens, *Gazette,* Waitsburg; Lovett M. Wood, *Trade Register,* Seattle; Minnie H. Sargent, *Tribune,* Pullman; J. C. Gregory, Argus, Auburn; D. L. Gillespie, *Herald,* Brewster; DeWitt C. Britt, *Leader,* Chelan.

ALTERNATES—F. Z. Alexander, *Western Home Journal,* Spokane; James F. Morton, Jr., *Demonstrator,* Lake Bay; A. S. Randall, *Localizer,* Ellensburg; M. M. Bannister, *Columbian,* Vancouver; L. E. Rader.

It is not always the largest editorial association that gets down to the most practical discussions and work. The Military Tract Association of Illinois, this year, certainly brought out as many valuable thoughts, views and expressions as did any other organization at any of the many very successful and instructive conventions held. The plan adopted of putting outsiders on the program to tell of the value of the newspaper to them, in their respective callings, introduced an interesting and profitable feature.

The first speaker from the business and professional men of the city was Rev. Mr. Reifsnider. His address, in brief, follows:

"Very manifestly the newspaper is of the greatest importance to me. The editor is confronted with the daily specter of the coming edition and so the minister is confronted with the same specter. We both must make the old new. We speak to the same people at stated intervals. There are many times when the minister does not know what to say, then he turns to the daily paper and many times finds a text. The daily press continually helps us by giving us a bit of free advertising.

PAPER'S VALUE TO THE CLERGY.

"There are only a few that hear us each week. The newspaper supplements the voice of the minister and gives his thoughts to a larger audience. It is always ready to supplement and enforce the voice of the minister."

ASSISTANCE OF THE NEWSPAPER TO THE SCHOOLS.

Supt. W. L. Steele followed with an address on how the papers assist in the schools. His remarks, in brief, follow:

"Indeed I feel quite honored to be asked to speak here today. I come here to speak for the public schools and the public school teacher. There is no medium through which the schools can be kept before the public like the press. Not the theorists should be the judges of the schools, but the press. Every newspaper man knows what good he got there and what he did not get there. The press is in a position to speak. Every one knows that we, each in our profession, are conservative. We would not add new subjects, we would work up and develop the line we are now upon. School laws must be obeyed and if children understand this they will behave. The press can help us if it will support us in the matter of discipline."

THE NEWSPAPER AND THE MERCHANT.

In brief, the remarks of R. G. Chappell, of the Big Store, who gave an address on the value of the paper to the business man, were:

"The business man regards the press from two standpoints. First, the benefit that the press can do for his business, and secondly, what the newspaper man can do for his town. When one comes into a town, he is apt to judge it by the paper. It can do a great deal in helping out the city. For instance, if we should notice in a January 15th paper that a merchant has not changed his Christmas ad, the person immediately gets the idea that the town is slow.

ENLARGED BUSINESS BY ADVERTISING.

"I may say that within the past five years since I have been connected with the Big Store, our business has increased 250 per cent. The town has not grown that much. The only way that I can explain our phenomenal growth is that we used an unlimited amount of newspaper advertising."

Mr. Chappell's views were well expressed and favorably received.

THE MAYOR'S VIEWS.

A synopsis of Mayor Shumway's address follows:

"If I ever get out of politics and if I ever get out of the law business, I am going into a business where I can advertise 'to beat the band.' I think that most men take as much interest in a good ad as a good article. In my present honorable position I have found the newspapers back of me. In the park question the city press devoted column after column to it. Again, when the High School bonds came up they stood back of us.

"We are all here for the betterment of the human race. The local papers have a great deal of good influence."

VIEWS OF THE POSTMASTER.

F. A. Freer gave an interesting address and in substance it follows:

"The government could not exist without the newspaper. It is part of the government. The newspaper can be a pillar in the community, or it can tear it apart. Be careful, editors, in your articles. Do not write editorials that are insincere or that besmudge a man's character. The papers are the medium of news for our country."

The session closed by the members giving a vote of thanks to those appearing on the program.

COUNTY PRINTING.

The first address was by E. E. Fitch, of the Galva *News,* who spoke on the subject, "County Printing—How Best to Secure and Handle it; Prices, Etc." His subject was of especial interest to those who run county papers.

In the first place he took up the methods of securing county work. Among the ways that he mentioned were a pull with the county clerk and his own political ideas.

"A Stuffed Club" was also one of the methods which Mr. Fitch said might be employed and which he effectively used at one time when he threatened to expose a rotten deal in the county office unless the printing matter came his way. As a result he secured over $200 worth of printing.

Another way which is often used is for the papers of the county to organize and distribute the work of the county among themselves. Mr. Fitch closed his address by giving the schedule of prices for county printing in Henry county.

Following Mr. Fitch's paper was an interesting discussion in which Mr. Curtis, of Kewanee and others, joined. In the discussion Mr. Curtis was of the opinion that the county printing should be divided among the papers in control.

THE "HELL" BOX.

The next subject was by W. R. Newland, of the Bowen *Chronicle,* the "'Hell' Box."

In opening he said that every business has its wastebox. "When the devil came into the printer's vocabulary the printer also needed a place to throw the articles of waste and as he wanted a most expressive word he called it the 'Hell' box. Among the things that should be thrown into the 'Hell' box are editorials that are personal about the editors of other papers that are written only for revenge and are of no news value.

"Then there are certain classes of advertising that should be cast into the 'Hell' box. Scarcely is there a paper but that advertises things that are fraudulent to their very depth. Why is it that the papers will print such matter? It is for the money that there is in it. Do we not have the public interest to look after as our own financial interest, and should we, therefore, print advertisements that we know are meant to defraud the public?

"Then, again, there is another matter that should go into the 'Hell' box in the class of scandalous news, which should not be printed. When newspaper men write up all the crime and scandals of the county in their columns, they are dishing out injury to the young. Where it is necessary to print such articles let them be written as facts only and given the least space possible."

THE SMALL TOWN EDITOR.

Frank Krans, of the Altona *Record,* next read an interesting paper on "The Editor in the One Paper Town." In brief he brought out that the editor in the small town has a power for good or a power for evil, but that he usually exercises the former. The editor of a small town has a great diversity of work. He must look out for his editorial column, he must fill his news columns with that which is interesting to his readers, he must care for his county correspondence, he must get his own ads and at last he must look after the mechanical end of his paper and even pull off his coat and help print the papers himself.

THE EDITOR'S WIFE.

"The Mission of the Editor's Wife," was the subject of an interesting paper by Mrs. M. Baumert of the Nauvoo *Independent,* and she brought out many of the ways that the editor of a paper may be assisted by his wife in writing obituaries, ads and article of news interest. Especially can the editor's wife help her husband by having good meals ready for him when he returns home from his work, and thus give him comfort.

Mrs. Baumert's paper, and the names of the new officers elected, are published elsewhere in this issue, under and in letter from Mr. Curtis.

The following were elected as delegates to the National Editorial convention to convene in Guthrie, Okla., early in June; George W. Cyrus, Camp Point; J. C. Coulson, La-Harpe; A. E. Stetson, Neponset; W. R. Newland, Bowen; Frank Krans, Altona; Miss Mary Davidson, Carthage.

The regular annual meeting of the Inland Daily Press Association was held in the library of the Press Club of Chicago, Tuesday, Feb. 21, 1905, being called to order at 10 o'clock a. m., by President A. W. Glessner.

The president introduced, by special permission, Mr. E. F. Hamm, of the Chicago Typothetæ, who gave an outline of the work of the association, composed of master printers of the country. His remarks were followed by questions regarding the work, individual values, etc., he speaking mainly of its advantage to job printers, and said one of the lines of work at the present time was to combat the eight-hour law. No action was taken by the press association.

The minutes of the last session of the association were approved as they had been printed.

PROGRAM.

The regular program which had been arranged was then taken up. It proved to be very instructive and entertaining.

"The Press and the Post Office," was the first paper on the list, by E. P. Adler, of the *Times,* Davenport. It was a very able paper, and advanced much profitable information, as well as brought out interesting discussion. He said there was a community of interest between the press and the postoffice, the latter being of much value in building up the great publications of the day. He gave particular attention to the guessing contests, and the attitude of the postal department toward newspapers publishing them and said that they had ruled for him, that church fairs, lotteries, guessing contests on subscription, as well as gift enterprises, are under the ban by the government. He though there were enough schemes afloat to humbug the people without the newspapers taking a hand. Publishing a newspaper, he said, was not altogether a matter of making money. There was a higher ideal; a character which a newspaper should assume, that of advocating the right at all times and exposing the wrong. He put objectionable medical advertisements in the same class, and thought they should be kept out of a newspaper. He took up the matter of recent rulings on second class mail matter. He spoke particularly of a recent ruling (in December) of Third Assistant Postmaster Madden, and advised all to send and get a copy and read it. The discussion which followed brought out the fact that in some localities rural free delivery in the county, was free to publishers, while postmasters in other sections were weighing up second class matter that went on rural routes. This will bear investigating. Messrs. Whittaker, Curtis, Glessner, Rodecker, Wilson and others were parties to the discussion.

F. H. Hall, of the *Herald,* Joliet, then read his paper, "Starting an Inland Daily." He described the work in detail. In September last he had been persuaded that Joliet needed an entirely and newer kind of a daily, and that he was the man to boss the job, which resulted in thirty thousand dollars being subscribed for the stock within three hours, and thirty-five of the most active manufacturers of the city were the incorporators, and within fifty days the first copy of the *Herald* was printed. This meant leasing a building, remodeling it, looking after the carpenters, masons, machinists, hiring a force of workmen, buying machinery, and having it installed, putting in elevators, steam heating plant, electricity, a telephone system, even, linotypes, perfecting press, and also a first-class job

office, besides getting subscriptions in advance and advertising, so that the first issue consisted of three eight-page sections of seven columns to the page, to take care of the business secured, the first issue starting with twenty-five hundred subscribers, necessitating thirty carrier boys, who had to be organized. Opposition was strenuous, but to the present time the paper had given away no premiums, or free subscriptions. The present paid circulation is 4,179, 224 new subscribers being added by the carrier boys last week. "We are now arranging to install a 16-page Goss, with color attachments, so that we can take care of the list in the proper time. In the first six weeks we had over $2,600 worth of advertising. We get out five evening editions and a Sunday morning edition. The paper brought out a rapid fire of question, which Mr. Hall answered promptly, to the entertainment of the members, he being complimented greatly because of his success. He publishes serial stories, charges five cents a week for the paper by carrier, sends out telephone cards, worked up a big want ad department, gave first insertion free with card, had voting contest for two diamond rings, but made all who voted pay subscription. The discussion brought out facts regarding publishing serials the following being recommended: "Cardigan," "The Blazed Trail," "Wings of the Morning," from the American Press, "The Man on the Box," $30 cash, $40 advertising, of Geo. B. Van Cleve Co., New York, "In the Bishop's Carriage," "The Grafters," "The Mississippi Bubble," "Under the Rose," "Life and Adventures of Santa Claus," last four of the American Press.

Mr. Lowrie then gave his subject, "Railroad Advertising," orally. He discussed this question ably from years of experience, and said some railroads paid cash for advertising, some papers demanded cash, but the great majority make trade contracts, that time tables were usually published free because of their news value and the fact that railways know this and take advantage of it. The Penn lines give contract with credit on next year for all unused mileage, but most roads, cancelled all at the end of the year. He thought that transportation was in no way complimentary but earned transportation, and hence ought to be good on any train. Messrs. Brant, Wilson, Tufford, Sundine and others discussed this paper. Following it the following motion carried:

Resolved, that a committee of one from each State wait upon the passenger associations in the summer to arrange a basis of contract for advertising that will be fair and satisfactory to both association members and railways, with A. W. Glessner chairman, the committee was formed as follows:

W. L. Lane, Muscatine, Iowa.
Frank E. Noyes, Marinette, Wis.
W. Bent Wilson, LaFayette, Ind.
Scott Laird, Winona, Minn.
Harry Coleman, Pontiac, Mich.
W. Q. Adams, Owensboro, Ky.

NEW MEMBERS.

The *Herald,* Joliet, Ill., F. H. Hall, Manager.

Inquirer, Owensboro, Ky., W. Q. Adams, manager, were elected to membership.

N. E. A. DELEGATES.

The following were then chosen to represent the association at the National Association meeting in Guthrie, Okla., June 6, 7, 8:

Delegates:—A. H. Lowrie, Elgin, Ill.
John Sundine, Moline, Ill.
E. P. Adler, Davenport, Iowa.
W. L. Lane, Muscatine, Iowa.

Alternates—J. N. Klock, Benton Harbor, Mich., the president to appoint the other alternates.

The election of officers for the ensuing year was then taken up.

Officers.—Mr. Campbell, renominated Mr. Glessner, who declined, when he nominated Milo W. Whittaker, of Jackson, Mich., and the secretary was instructed to cast the entire vote of the association for him, which was done, and he was declared elected.

Mr. Robb nominated Wil V. Tufford, of Mason City, Iowa, for secretary and treasurer, his election resulting after a unanimous vote also.

The following vice-presidents and members of the executive committee were chosen:

Vice-Presidents: Michigan—J. N. Klock, Benton Harbor.
Wisconsin—H. H. Bliss, Janesville.
Indiana—Willis E. Beale, LaPorte.
Iowa—W. L. Lane, Muscatine.
Illinois—A. O. Lindstrum, Galesburg.
Minnesota—Scott Laird, Winona.
Kentucky—W. Q. Adams, Owensboro.

Executive Committee: Iowa—E. P. Adler, Davenport, chairman. Indiana—Chas. J. Robb, Michigan City. Michigan—Geo. T. Campbell, Owosso. Wisconsin—E. A. Tostevin, Racine. Illinois—John Sundine, Moline. Minnesota—John C. Wise, Jr., Mankato. Kentucky—W. Q. Adams, Owensboro.

Special Agent.—A communication was read from Ira P. Rowley, to act as special Chicago agent. The matter was referred to the executive committee to investigate and report at the June meeting.

In this connection Mr. E. P. Adler, chairman of the executive committee, Davenport, Iowa, desires each member of the association to answer the following questions, writing direct to him, if enough favoring he will call a meeting in Chicago, to discuss the matter.

Do you desire a special advertising representative in Chicago and New York?

Would you be willing to pay a pro rata share of the expense, or a fixed amount per month?

Have you such a representative now?

Kindly answer promptly, so that the matter can be taken up, and give such other information, or advance other ideas you may have to Mr. Adler.

A rising vote of thanks was given Mr. Glessner, the retiring President, on motion of Mr. Tufford, for his earnest and faithful effort for the association during the past three years.

At the close of the association session, the members retired to the dining-room of the Press Club, where they had luncheon. Then some time was spent about the city, when returning to the Club dinner was served in the evening, with the following program, arranged by the Press Club, as an entertainment for their out-of-town members and the visiting newspaper men, the out-of-town members of the club furnishing the different numbers on the program:

PROGRAM.

"A Few Remarks."—Smith D. Atkins, editor *Journal,* Freeport, Ill.

"A Little Talk Between Covers."—Robert Rexdale, author of "Rhymes," etc.

"Reminiscent Stories."—E. P. Adler, publisher the *Daily Times,* Davenport, Iowa.

"Sketches."—Mrs. Virginia LeRoy, Streator, Ill.

"A Few Short Glimpses of the Not Well Known South."—A. H. Lowrie, Elgin *Daily News,* Elgin, Ill.

"The Ute's Legend of the Flood."—Wil V. Tufford, *Times Herald,* Mason City, Iowa.

"Jonah and Others."—M. D. Kimball, Milwaukee, Wis.

THOSE PRESENT.

Scott Laird, *Republican Herald,* Winona, Minn.
F. H. Hall, *Herald,* Joliet, Ill.
F. W. Harris, *Journal,* Macomb, Ill.
Will Curtis, *Star Courier,* Kewanee, Ill.

J. N. Klock, *News-Palladium,* Benton Harbor, Mich.
A. H. Lowrie, *News,* Elgin, Ill.
C. L. Miller, *Republic,* Rockford, Ill.
Milo W. Whittaker, *Patriot and Press,* Jackson, Mich.
Geo. W. Needles, *Citizen,* Centerville, Iowa.
S. G. Goldthwaite, *News,* Boone, Ia.
F. A. Sapp, *Republican Times,* Ottawa, Ill.
John Sundine, *Dispatch,* Moline, Ill.
Phil Hoffman, *Herald,* Oskaloosa, Ia.
Smith D. Atkins, *Journal,* Freeport, Ill.
Jas. F. Powell, *Courier,* Ottumwa, Ia.
Geo. A. Perry, *Republican-Register,* Galesburg, Ill.
W. L. Lane, *Journal,* Muscatine, Ia.
E. P. Adler, *Times,* Davenport, Ia.
A. O. Lindstrum, *Mail,* Galesburg, Ill.
Thad W. Rodecker, *Times,* Pekin, Ill.
W. Bent Wilson, *Journal,* LaFayette, Ind.
Ira S. Carpenter, Chicago, Ill.
W. E. Beale, *Herald,* LaPorte, Ind.
Chas. J. Robb, *News,* Michigan City, Ind.
William T. Bedford, *Tribune,* LaSalle, Ill.
Wil V. Tufford, Mason City, Ia.
Dave Brant, *Republican,* Iowa City, Ia.
E. A. Tostevin, *Journal,* Racine, Wis.
H. H. Bliss, *Gazette,* Janesville, Wis.
W. Q. Adams, *Inquirer,* Owensboro, Ky.
J. C. Chapple, *Press,* Ashland, Wis.
M. V. Starr, *News-Times,* Goshen, Ind.

The following are delegates from the Idaho State Press Association to the Guthrie Convention of the National Editorial Association:

W. D. Smith, Moscow, Idaho.
H. C. Shaver, Moscow, Idaho.
M. A. Bates, Parma, Idaho.
J. D. Flinner, Boise, Idaho.
M. S. Parker, Boise, Idaho.
F. S. Harding, Weiser, Idaho.
Chas. A. Hackney, Meadows, Idaho.

The officers are: President, D. T. A. Mackintosh; Vice-President, Chas. A. Hackney; Secretary, W. S. Parker; Treasurer, Mabel Payne. The next convention will be held in September.

At the Maine Press Association at its annual convention, held in Augusta, Jesse H. Ogier, of Camden, was reëlected president. Edward S. Stearns, of the Thomaston *Herald,* was reëlected corresponding secretary and was also chosen essayist for the next annual meeting which will be held in Portland. Charles A. Pillsbury, of Belfast, read a very interesting paper which took the negative side of the question: "Shall a Weekly Paper Run a Job Printing Plant in Connection?"

Mr. Pillsbury said, among other things: "The job plant was once an indispensable and often the most profitable feature of the country newspaper office, but improved conditions for doing business have altered the situation.

"The ubiquitous 'drummer' invades every town and hamlet, and the country printer is thus brought into direct competition with the city offices, with their typesetting or typecasting machines, electric motors and fast presses. * * *

"I advised an old friend, the proprietor of a local job office, to lay idle rather than take work that would not give him a living profit. I recall one job taken from him which two practical printers figured on and found that it would entail a loss of $100 on the office doing the work. * * * I think I have plainly demonstrated why one country newspaper should not run a job plant.

"This, however, is not a question that can be decided collectively. It depends upon the individual and upon the location of the plant.

"As for myself, I find it takes about all of my time to look after the newspaper end; but then I am not as young as when I entered the newspaper field forty-seven years ago. A young man with only one eight-page country paper, all home print, of which he is the editor, business manager and local reporter, may find time hang heavily, but rich recreation, if not profit, in running a job plant.

"For my part I believe in a division of labor, and prefer that the other fellow should rule the job plant."

President Ogier, in his annual address, urged that more time at the meetings be devoted to the business end of newspaper publication in order that more practical benefits might be obtained by the publishers. He also called attention to the needs of a permanent legislative committee to secure the enactment of just laws for the protection and benefit of the press. In closing he recommended that a banquet be made one of the features of the annual meetings of the organization. It was voted to have the Rangeley Lakes the destination of the summer excursion this year.

At the annual meeting of the Tennessee Press Association a resolution was passed making a minimum advertising rate of five cents per inch for papers of 500 circulation and two cents additional for each additional 500 circulation. The committee on Ready Print submitted a report in which it recommended that a ready print service for State papers be inaugurated and maintained. To carry out the plan outlined in the report would involve the establishment of a central office and the employment of a business manager and an editor.

Rutledge Smith, chairman of the committee, stated that it would cost about $5,000 to establish and equip a plant, and that the salaries of employees and officers would amount to about $3,000 per year, but, notwithstanding the expenditures which would be necessary to carry out the plan, he believed that ready prints could be furnished to weekly papers of a more acceptable character and as cheap or cheaper than they were at present furnished to them.

The committee recommended that a committee be appointed to canvass the newspapers of the State with a view to determining how many of these would consent to become patrons of the proposed ready print service for one or more years, and that the committee be authorized to inaugurate the service should the committee consider that conditions warranted inaugurating it.

The report of the committee was adopted.

The following officers were chosen: Richard H. Green, of Covington, President; D. F. Wallace, Jr., of Smithville, First Vice-President; D. L. Smith, of Sweetwater, Second Vice-President; J. D. Newton, of Jackson, Third Vice-President; Rutledge Smith, of Cookeville, Secretary; H. E. Graper, of Lexington, Treasurer; W. J. Slatter, of Winchester, Statistician.

The Florida Press Association held its annual meeting at Lake City, March 22d and 25th, with the following program:

"The Linotype in a Country Office," by W. S. Johnston, De Land; "History of Florida Journalism," by Frank E. Harris, editor Ocala *Banner;* "What Should Constitute a Newspaper Libel," by George W. Wilson, editor *Times-Union;* "Industrial Publications and Their Effect on the Business Community," by J. A. Hollomon, editor *Industrial Record;* "The Society Column," by Miss Nellie E. Beck, staff of the Pensacola *Journal;* "The Circulation of a Newspaper," by Rufus A. Russell, business manager of the *Metropolis;* "Should Legal Advertising Be Open to Competition?" by D. E. Thompson, editor of the St. Augustine *Record.*

The next meeting of the Massachusetts Press Association is the regular quarterly business meeting on April 10th. It will be held at the United States Hotel, in Boston.

The association held its annual meeting in Boston in joint session with the Suburban Press Association. The following were elected officers of the State association for the ensuing year: President, George C. Fairbanks, Natick, Vice-Presidents, G. M. Billings, Milford; D. H. Huxford, Randolph; G. W. Prescott, Quincy; E. H. Pierce, Revere; W. F. Jones, Boston; Secretary, W. T. Heffernan; treasurer, J. S. Smith, Rockland; Auditor, Charles S. Parker, Arlington; Historian, George M. Whittaker, Boston.

After the business session a banquet was served to over 100 members and ladies. A number of prominent speakers were present, who addressed the editors.

The Hon. Charles T. Gallagher, of Boston, summarized the progress made during recent years in the Massachusetts law for libel, emphasizing the value of the services rendered to the press by Senator Cook, Edward L. Pierce and Representative Dowse of Malden. Today, said he, our newspapers are writing the level of the people up and not down. The press is more and more to be an uplifting influence in the community.

The Rev. John Cuckson asked consideration for the work newspapers are called upon to do. Altogether apart from business and pulpit, he said, much comes from them which is a free contributions to the enlightenment of the people. The newspaper must provide, within reasonable and clean limits, for the taste of the community. In helping to remove the monotony of life, the newspapers contribute to the health of the people, which has much need of change and recreation.

The Hon. Willard Howland said the newspaper was doing its part in the moral and intellectual growth of the people, and who, he asked, would dare to set limits to the good it might accomplish? One of the best things the press can do, he continued, is to arouse to activity the patriotism of the State so that the duties of citizenship may be performed; and so that the man who does his duty by participating in public affairs will be regarded as a good citizen, and the man who does not a bad one.

Francis Hurtubis gave the editors the benefit of his thirteen years' contact with newspaper men, and said that during all his experience at the State House he had never known one to betray a confidence reposed in him. The speaker proceeded to emphasize individuality, enterprise and originality as qualities essential in the newspaper man, but said that a greater than these was integrity.

WATERLOO, IOWA.

Hon. B. B. Herbert 1319 Ravenswood Park, Chicago, Ill.

DEAR SIR AND FRIEND:—Replying to your favor of a recent date, will say that the officers of the Iowa Press Association are as follows: C. M. Junkin, President, Fairfield *Ledger*; W. I. Branagan, Vice-President, Emmetsburg *Democrat;* O. E. Hull, Secretary, Leon *Reporter;* F. R. Conway, Corresponding Secretary, Des Moines; G. L. Caswell, Treasurer, Denison *Review.*

As yet no time has been fixed for the next meeting. The last meeting was held at St. Louis at the World's Fair. Arrangements are being perfected for a trip to Portland, Oregon, for the early summer. If this cannot be made, a Canada trip will probably be the order of things as this was promised last year. Yours truly,

W. T. PARROTT.

LEXINGTON, N. C.

Mr. B. B. Herbert, Editor National Printer-Journalist, Chicago.

DEAR MR. HERBERT:—The next convention of the North Carolina Press Association will be held in Asheville, N. C., next summer. No program has been arranged for this meeting.

The following are the officers: President, H. B. Varner, *Dispatch,* Lexington, N. C.; First Vice-President, M. L. Shipman, Hustler, Hendersonville; Second Vice-President, R. M. Phillips, *Post,* Raleigh; Third Vice-President, J. C. Caddell, *Times,* Raleigh; Secretary and Treasurer, J. B. Sherrill, *Times,* Concord; Historian, T. J. Lassiter, *Herald,* Smithfield; Orator, E. E. Hilliard, Commonwealth, Scotland Neck; Poet, John Charles McNeill, *Observer,* Charlotte.

Delegates to the National Convention: D. J. Whichard, *Reflector,* Greenville; W. K. Jacobson, *Progress,* Washington; C. H. Poe, *Farmer,* Raleigh; W. B. Westlake, *Citizen,* Asheville; Thad. R. Manning, *Gold Leaf,* Henderson; T. J. Lassiter, *Herald,* Smithfield; H. A. London, *Record,* Pittsboro; H. C. Martin, *News,* Lenoir; R. M. Phillips, *Post,* Raleigh; W. F. Marshall, *Gazette,* Gastonia; J. A. Robinson, *Sun,* Durham; M. L. Shipman, *Hustler,* Hendersonville; J. H. Caine, *Citizen,* Asheville; Rev. J. O. Atkinson, *Sun,* Elon College. National Committeeman for North Carolina, J. J. Farriss, *Enterprise,* High Point. Very truly yours,

H. B. VARNER.

BERKELEY, CAL.

B. B. Herbert, Editor National Printer-Journalist, Chicago, Ill.

DEAR SIR:—The following is the list of the officers of our association and the papers with which they are connected: President, Friend Wm. Richardson, *Gazette,* Berkeley; Vice-President, Lyman M. King, *Review,* Redlands; Secretary, Raleigh Barcar, *Reporter,* Vacaville; Treasurer, G. M. Francis, Register, Napa. Executive Committee: Allen B. Lemmon, *Republican,* Santa Rosa; W. D. Pennycook, *Chronicle,* Vallejo; E. B. Willis, *Republican,* Auburn; G. B. Daniels, *Enquirer,* Oakland; R. H. Jury, *Leader,* San Mateo; F. B. Mackinder, *Star,* St. Helena; S. H. Olmsted, *Journal,* San Rafael.

Yours very sincerely,

F. W. Richardson.

(From Guthrie *Daily Leader,* Jan. 23.)

National Committeeman Prouty and Benjamin B. Herbert, founder of the National Editorial Association, returned from the Miller Brothers' "101" ranch last night. Their mission was to get the entertainment program of the big buffalo hunt, Indian war dances and cowboy, bronchos and roping feats to be given in honor of the National Editors and ladies the first week in June. This ranch has 87,000 acres and is owned and controlled by Joe, Zack and George Miller, the cleverest trio of young men in the Southwest. These young men are up-to-date and money makers in stock and agricultural pursuits. They reside in a palace at headquarters, five miles from Bliss. They have train loads of cattle, wheat, hogs and poultry. They keep an army of men to prepare the same for market. The brothers are true blue Kentuckians and with their mother extend warm Southern hospitality to all friends.

The Millers are preparaing a grand feast of entertainment for the National visitors as well as 10,000 excursionists from the states and 20,000 Oklahomans. The largest buffalo in the United States is being fattened on the ranch for the editors' luncheon. Other buffalos will be slaughtered after the chase for the visitors and Indians. There will be 2,000 Indians, 300 cowboys, 25 buffaloes, companies of United States soldiers and ten bands of music. An elaborate program is being arranged. It will be the farewell celebration of tribal relations between the Indians, the exit of the cowboy in Oklahoma and the welcome of the plowboy. The Indians can realize more cash out of an acre from the plowboy than they can for the grass lease from the cow men, hence the soil will be tilled after this year instead of being used as grass land.

For this grand celebration Committeeman Prouty of the Oklahoma Press Association will have the railroad run "special rate" excursions to Bliss so that all Oklahomans may have the opportunity of witnessing this entertainment and meeting the National Editors and ladies. These excursions will be called "Newspaper Excursions."

The twelfth annual convention of the New York Republican Editorial Association was held at the Fifth Avenue Hotel, New York City. Many subjects outside of partizan politics were considered. The ever-recurring subject of the securing a proper and reasonable libel law was discussed.

President McKinstry presented for the consideration of the association form of libel bill which it is proposed to introduce in the legislature:

Permit me through you to extend to the members of your association and their guests my cordial greetings and best wishes for the success of the banquet tonight. I wish it were possible for me to be present in person. THEODORE ROOSEVELT.

An Act to Amend the Code of Civil Procedure in relation to the evidence and damages in actions for libel.

The people of the State of New York, represented in senate and assembly, do enact as follows:

Section 1. The Code of Civil Procedure is hereby amended by inserting therein a new section to be Section five hundred and thirty-six a, and to read as follows:

Section 536 a. In any civil action for libel the defendant may allege and give proof that the matter alleged to have been published and to be libelous, was published without malice, and that the defendant, within a reasonable time after receiving demand in writing to correct and to retract said statement, or if no such notice has been given to the defendant before the commencement of the action, did publish a sufficient correction and retraction in as conspicuous and public a manner as that in which said alleged libelous statement was published, in two successive issues of the same periodical publication. Upon proof of such facts to the satisfaction of the jury, the plaintiff shall not be entitled to punitive damages and defendant shall be liable only to pay such compensatory damages as the jury may award.

The bill was interestingly discussed by C. S. Francis, H. B. Sykes, John A. Sleicher, Jay E. Klock, H. J. Knapp, John I. Platt, J. B. Alexander. This bill is intended for the relief of those who unknowingly libel a person by reason of modern methods of gathering and distributing news from all parts of the world. The present law presumes malice on the part of the publisher, when in nearly every case he is entirely innocent. Formerly presumption of malice was reasonably fair when individual publishers prepared their own news.

There are papers that deliberately and maliciously libel people. We do not stand for them. The more severely they are punished the better for those who are fair and honest. This bill will not protect the malicious newspapers.

On motion of Mr. Sleicher, seconded by Mr. Klock, the bill was referred to the association's legislative committee, with power to amend.

Mr. Sleicher offered the following resolution which was adopted:

Resolved, That this association earnestly commends the action of President Roosevelt and Secretary Hay in endeavoring to facilitate the prompt approval by our government of arbitration agreements with other leading nations and we are glad to know that the two senators from this state were not recorded, with the majority of the senate, in opposition to the President's single-minded purpose to facilitate the pacific settlement of international disputes under the provisions of The Hague treaty.

Mr. Francis offered the following resolution which was also adopted:

Resolved, That the prompt passage by the House of Representatives of a bill to empower the Inter-State Commerce Commission to fix reasonable anu proper railroad rates upon proof by an aggrieved shipper that a rate is unreasonable or improper, is in fulfillment of the pledge of the Republican party that it will constantly seek to protect the interests of all the people—a pledge that President Roosevelt is earnestly trying to carry out.

Mr. Smyth, from the special committee on nomination of officers, presented report recommending the election of the following officers, and on his motion the report was adopted:

PRESIDENT.

W. B. Collins, *Leader,* Gloversville.

VICE-PRESIDENTS.

Elias Vair, *News,* Waterloo.
J. P. Herrick, *Breeze,* Bolivar.
A. T. Smith, *Citizen,* Herkimer.
James H. Potts, *Times,* Troy.
Jay E. Klock, *Freeman,* Kingston.

SECRETARY AND TREASURER.

A. O. Bunnell, *Advertiser,* Dansville.

President J. W. Slauson, of the New York Press Association, improved the opportunity of the Republican Editorial meeting to ask the members of the former association their preference as to the place for holding the next convention. Atlantic City had been mentioned last year, but transportation could not be arranged. There are some who would like to go there this year.

Mr. Knapp had the assurance that the railroads would provide transportation this year for editors and their wives, but not for whole families, and there are hotels of all kinds for hundreds of thousands. He would suggest that the meeting be held not later than the middle of May, so as to be out of the way of the National Editorial convention to be held the first of June, to which the New York Press Association appoints delegates.

Secretary Bunnell said a cordial invitation had been sent to the association to meet at Niagara Falls by Curt M. Treat, secretary of the bureau of publicity. Excursions on the gorge road and elsewhere, visits to the great power plants and other places of interest, where among the attractions named.

It was practically decided to hold the convention at Atlantic City.

President Slauson will appoint delegates to the National Editorial Association. A banquet was enjoyed at the Waldorf Astoria. Many excellent addresses were made and the following telegram from President Roosevelt to Secretary A. O. Bunnell was read:

Scooba, Miss.—The following are officers and delegates of the Mississippi Press Association, 1904-1905:

President, Jas. E. Norwood, *Gazette,* Magnolia; First Vice-President, Robert Lewis, *Republican,* Woodville; Second Vice-President, J. W. Buchanan, *Sentinel,* Grenada; Treasurer, P. K. Mayers, *Democrat-Star,* Scranton; Secretary (term expires 1907), J. G. McGuire, *Herald,* Yazoo City; Chaplain, W. E. Dear, Harmony *Messenger,* Lena; Orator, F. R. Birdsall, *Sentinel,* Yazoo City; Essayists, Mrs. Hala Hammond Butt, *Challenge,* Charksdale; Mrs. B. T. Hobbs, *Leader,* Brookhasen; Poets: R. T. Quinn, *Journal,* McComb City; Mrs. M. L. Turnage, *News,* Belzoni. National Committeeman, J. H. Duke, Herald, Scooba. Delegates to N. E. Association: Miss Kate Cashman, *Post,* Vicksburg; Mrs. H. H. Butt, *Challenge,* Clarksdale; R. T. Quinn, *Journal,* McComb City; Mrs. F. R. Birdsall, *Sentinel,* Yazoo City; J. W. Buchanan, *Sentinel,* Grenada; H. W. Sanders, *Democrat-Herald,* Charleston; P. K. Whitney, *Herald,* Utica; C. H. Block, *Democrat,* Tunica.

The following are the officers of the Alabama Press Association, 1904-05: President, C. H. Greer, Marion; First Vice-President, S. P. West, Birmingham; Second Vice-President, R. E. L. Niel, Selma; Third Vice-President, S. H. Doster, Prattville; Fourth Vice-President, H. Y. Brooke, Luverne; Secretary, Jacob Pepperman, Montgomery; Treasurer, S. H. Morris, Fayette; S. H. Morris, Treasurer.

Delegates to National Editorial Association, 1905: Jacob Pepperman, Executive Committeeman. W. H. H. Judson, Jno. C. Williams, H. M. Wilson, W. M. Meeks, H. E. Whitaker, J. C. Lawrence, R. H. Walker, J. B. Stanley, F. L. McKenzie, R. E. L. Niel, Geo. W. Read, W. M. Tucker, R. L. O'Neal, J. H. Meigs, E. Lesser.

AMERICAN NEWSPAPER PUBLISHERS' ASSOCIATION.

One of the most important editorial conventions in February was the nineteenth annual convention of the American Newspaper Publishers' Association in New York. This organization is composed of two hundred and more of the leading dailies of the United States and the conventions are largely attended by the business managers as well as by the editors, and the discussions are valuable to all newspaper workers. The making of the newspaper is a good deal the same in cities of all sizes. The same questions confront editors and publishers everywhere.

This year's convention of this important and influential organization was saddened by the sudden and unexpected death, Feb. 15th, just six days before the convention, of the much loved and highly honored Secretary of the Association, William Cullen Bryant, of the Brooklyn *Times,* who had been one of its founders, member of the Executive Committee and since 1893 had served in the important position of Secretary, held by him at the time of his decease. Scarcely a newspaper publisher in the country was more widely or more favorably known and by his long and important service, his kindliness, thoughtfulness and zeal in the one really important executive office of the organization, he had endeared himself to all the members, and, from the beginning to the ending of the convention, there was observant a subdued tone of sadness prevalent throughout the meetings. It was the first time in the history of the association that Mr. Bryant had not been present to greet the members in his genial, wholesouled manner.

A memorial service was held in his honor at 4:30 o'clock of the afternoon of the first day's convention, Feb. 21st. Touching tributes were paid to the memory of the deceased by L. M. Duval, of the Baltimore *News,* H. F. Gunnison, of the Brooklyn *Eagle,* E. P. Call, of the New York *Commercial,* Chas. W. Hornick, of the St. Paul *Dispatch,* John Stewart Bryan, of the Richmond, Va., *Times;* James B. Shale, of the McKeesport, Pa., *News,* Col. Frederick T. Driscoll, commissioner, H. N. Kellogg, of the New York *Tribune,* Herman Ridder, of the New York *Staats-Zeitung,* Thomas Rees, of Springfield, Ill., *State Register,* W. E. Gardner, of the Syracuse *Post Standard* and President Taylor.

The following resolutions were adopted by a unanimous vote:

"WHEREAS, The journalistic profession has met with a great loss in the death of William C. Bryant, who was for twelve years secretary of this association, it is hereby

"*Resolved,* That the members of the American Newspaper Publishers' Association in convention assembled on this 21st day of February, 1905, wish to express their feeling of deep bereavement and great loss in the death of Mr. Bryant. During the long term of his connection with this association he has served it faithfully, not only as secretary, but as manager of the New York office, a position which has brought him in close touch with all its members, who have found him invariably attentive, not only to the duties of his important office, but exceptionally considerate of the interests of its members and their associates.

"We take satisfaction in acknowledging that a large part of the success of this association is directly due to Mr. Bryant's efforts. His indefatigable energy, his whole-hearted manner of dealing with men and affairs were important elements in the usefulness of the work we have accomplished.

"The Board of Directors is reminded by his loss of the firm reliance it has constantly placed upon him during all these years, for his name and spirit have been closely associated not only with the larger work of the body, but with its endless detail, which would have been a severe strain on a man less bountifully endowed.

"Mr. Bryant not only commanded our confidence and respect, but he long ago won our most affectionate esteem. It is further

"*Resolved,* That these resolutions be spread upon the records of the association and that a copy of the same, suitably engrossed, be forwarded to Mr. Bryant's family."

Mr. Bryant at the time of his death was business manager of the Brooklyn *Times,* secretary of the American Newspaper Publishers' Association, and treasurer of the Publishers' Press. He began his newspaper career in 1875 by becoming associated with his father-in-law, the late Bernard Peters, in the publication of the Brooklyn *Times.* He was born in New York city on Aug. 1, 1849. He spent the early years of his life in Brooklyn, and his early boyhood years were passed largely upon his father's farm in Connecticut. It was here that he laid the foundation for a very vigorous constitution. Mr. Bryant was always hale and hearty and very fond of an outdoor active life. Mr. Bryant was married on Oct. 5, 1875 to Julia M. Peters, oldest daughter of the late Bernard Peters. His first wife died in 1887, and two years later he married Mr. Peters' youngest daughter, Mary W. His oldest son, William Bernard Bryant, is an assistant to Business Manager H. N. Kellogg, of the New York *Tribune.* His second son, Mortimer D. Bryant, is associated with the management of the Brooklyn *Times.* He also left a daughter, Miss Camilla Bryant, and two minor children. His second wife died last September after a long illness and Mr. Bryant's ill health dated from her protracted sickness and death. In the summer her trouble became acute. Mr. Bryant's devotion to his wife was constant, and the long strain broke his health and his friends saw that he was becoming weakened in June. Since then his effort to fight off his illness has been constant. He insisted upon attending to his duties as far as possible up to the close of the year. In January his family insisted upon his giving up business, and he was taken south to Jacksonville. Mr. Bryant insisted that he must return to Brooklyn, and when the cold wave of early February invaded Jacksonville he came back home. From that time on his failing was steady. He was removed to a sanitarium in Plainfield, N. J., where he received constant care and attention. Mr. Bryant's breakdown came from nervous prostration, which brought on paralysis of the left side.

The first session of this nineteenth convention opened on the morning of Tuesday, Feb. 21st, and from the very complete and satisfactory account, given in *Profitable Advertising,* of Boston, we glean the following that will be of interest to the readers of the NATIONAL PRINTER-JOURNALIST:

The topic, "the classification by fire insurance companies of newspaper offices as of the same risk as job printing establishments, and the percentage rate established for newspaper risks in different cities," gave rise to a long discussion.

Among those who took part was S. P. Weston, of the Seattle *Post-Intelligencer,* who objected to the daily newspaper office being classed and rated as risks by the fire insurance companies with job printing offices, as being unjust to the newspapers, expensive and inequitable.

Mr. Duval, of the Baltimore *News,* spoke a good word for the liberal action of the fire insurance companies in Baltimore after the recent great fire.

Mr. Palmer, of the Houston, Tex., *Post,* spoke of the high rates in that State on newspaper property, and General Otis, of the Los Angeles *Times,* suggested that the Association ascertain what was the proportion of loss by fire as between newspaper and job offices.

Mr. Glass, of the Montgomery Ala., *Advertiser,* spoke of the frequency of total loss where cases of type were pied during fires in printing offices, and linotypes so easily destroyed or damaged beyond repair.

On motion of Mr. Seacrest, of the Lincoln, Neb., *State Journal,* a committee of three, consisting of Jos. T. Nevin, Elbert H. Baker and Hilton U. Brown, was appointed to meet with the committee of the American Advertisers' Association for conference.

The question whether railway time-tables are news or advertising matter was threshed out, and it was found that locality had much to do in settling that question.

Upon the matter of reducing the width of margins to economize on paper bills, one speaker cited an annual saving of $15,000 per annum by the reduction, including paper and postage.

The trading stamp craze came in for consideration, and its effect upon local newspaper advertising was said to be diminishing greatly of late.

The organization of retail merchants to discipline or boycott newspapers was illustrated by one or two publishers from the South. The outcome was that the merchants at length saw the futility of their course and sued for peace.

The old subject of the restriction of amusement notices came up again, and it developed that the more drastic the measures the press took with the bold press agents, the better the theatrical men treated the papers.

At the afternoon session a particularly interesting feature was a paper by S. S. Rogers, of the Chicago *Daily News*, on "The Allowance of Agents' Commissions Direct to the Advertiser." Mr. Rogers said:

"I have been asked by our esteemed president to say something to you on the above subject. As a matter of fact, no such thing exists. No agency commission can be paid to an advertiser, because if any allowance is made to the advertiser it is not an agency commission, nor is it a commission in any sense of the term. Two people dealing directly with each other cannot have involved in the transaction a commission. A commission arises only when a third or intervening party comes into the transaction as a factor or broker or agent, and then takes for his service of intervention a percentage of the transaction. That is properly called a brokerage or commission charge. If any publisher, therefore, is deceiving himself with the idea that he is paying any advertiser direct the agency commission, my advice is for him to become cured of his delusion and call the transaction which he is engaged in by the right and proper name. A publisher who imagines that he is paying an advertiser a commission is doing nothing of the sort. He is simply making an additional discount on his rate. If he does it for all advertisers and is satisfied with the net rate which he is obtaining, I see no objection to the method. In fact, almost all of us have discounts on our rate cards. If he makes this special discount of rate to some advertisers and not to others, as I apprehend is the case where this sort of thing is done, he is simply making a better rate to one customer than another under the same conditions. I suppose I ought not to object to this if a publisher is satisfied with that type of honesty. Most of them do it; but a majority custom does not determine its integrity. The only thing which I would urge is that the thing be called by its right name. My name for it is dishonesty—it is obtaining money under false pretenses—the dishonesty of two prices—the fraud practised on the customer who pays more than your real price only because he has been misled into believing that you have no other and lower price. Such a policy violates that supremely highest and wisest rule of action, whether viewed from the plane of morals or of mere worldly wisdom—do unto others as you would be done by. Make no mistake. The wit of man has never contrived a more sagacious plan of enlightened selfishness than the Golden Rule. I commend it to your careful consideration and acceptance. Put it on your rate cards, and stop cheating the customer who isn't smart enough to find you out as to your bottom price. If you make a better rate to the Royal Baking Powder Company, or the Peruna Company, or Scott & Browne, or Mr. Post, of Postum fame, than you do to other advertisers doing the same amount of business, don't try to cloud your own vision by stirring up a lot of dust and calling the thing an advertising agent's commission. What is an agent's commission? and what is it paid for? I think I have already suggested that it is paid theoretically at least for brokerage service. To understand the matter we must have clearly in mind what advertising agents or agencies are, and what their relation to the individual paper and the newspapers at large is. Upon what theory should we allow them a commission on the business they send us? An advertising agent or agency, worthy of the name, is one equipped by capital, integrity, and experience for the solicitation and development of an advertiser's business. I accede at once to the statement which is running through your minds that many of the agencies which are being recognized by the papers of the country do not qualify, at least fully, under this definition. I realize the difficulty which arises when we come to apply the definition to the individual case. But it ought at least to be that which we are aiming at all the time in our dealing with agencies. Has the agency sufficient capital to give a reasonable assurance of its being able to handle its business and to meet the ordinary vicissitudes of business? Has the agency, or the man or men constituting it, sufficient knowledge of the advertising business, or the trade conditions which prevail in the marketing of different products, of the various methods of advertising which have been tried in the past and found either efficient or useless, a knowledge of the varied mediums which are used for the carrying on of an advertising campaign and their relative values and cost, and a thousand other things which are necessary in order to make an agency a valued and safe counselor for an advertiser in undertaking his campaign? Is the agency also equipped with competent solicitors who are at work continuously for the development of new advertising?

"Assuming now that we have some agencies, large and small, which meet measurably, at least, the qualifications and requirements which I have set forth, what shall be the relation of the newspaper publisher to them? My own judgment is that the newspapers of the country can very well afford to make a monthly or yearly contribution in some shape for the maintenance and continuance of such organizations. While I am by no means blind to the faults and delinquencies which have masqueraded under the name of advertising agencies, I do feel that the service which has been rendered to the newspapers in the development of advertising by the advertising agencies of the country as a whole, grouping them all together, good and bad, has far more than repaid the papers for their entire commission accounts during the past twenty years. I think that it would be a serious loss to the newspaper business of the country if all the advertising agencies of the country were at once to go out of business and there should be none to take their place. If I am at all right in this position, the newspaers are fully justified in dealing with the advertising agents upon an agency or commission basis, and thus contributing to the continuance of the operation of this entire machinery of stimulation and development of advertising.

The giving of soup plates, pickle forks, Bibles, and magazines as premiums for increasing circulation, and the selling of dress patterns by papers, brought out some laughable anecdotes, one publisher saying he inserted $75 worth of advertising, keeping it up three weeks, and sold 15 cents' worth of patterns! He added: "I think I sold two patterns at the full price and then sold one at cut rates."

On Wednesday morning, at the opening of the session, Col. Frederick Driscoll, the Commissioner, read his annual report on the labor situation in the mechanical department of the newspaper offices.

The Colonel reported that there had been very few labor difficulties during the year and that, as the printers were acting under the present arbitration contract which did not run out until 1907, all appeared to be serene and hopeful. He had attended the late convention of the photo-engravers and gave an interesting talk on his experiences there. He thought the present contract with the newspaper printers was satisfactory to the publishers, but not in all cases so much to the printers.

At the conclusion of the Commissioner's report and the business connected therewith, the meeting adjourned to visit the *Times* building on the invitation of the publisher, Mr. Adolph Ochs.

The members were received by Adolph Ochs, publisher of the *Times*, assisted by John Norris, business manager; Louis Wiley, assistant business manager; William J. Guard, Sunday editor; and C. V. Van Anda, managing editor.

Immediately after a few brief words of welcome, they boarded the elevators and were whisked skyward a matter of twenty stories, and there, on the twenty-first floor of the journalistic skyscraper, they sat down to luncheon as the guests of one of America's greatest newspapers.

The inspection of the wonderful twentieth century newspaper home was the most interesting feature of the visit, and the publishers manifested a desire to linger in the different departments in order to acquire more than a passing impression of the methods used in making a newspaper like the *Times*. All the latest mechanical inventions applicable to newspaper publishing were there, and were carefully examined.

The trip was full of "ups and downs" for those who participated. One moment they stood in the big tower, 365 feet from the ground, feasting their eyes on the picture spread out before them; the next they were listening to the whir of mammoth presses sixty feet below the ground, with subway trains flying along just above their heads. It was pointed out that the *Times* is the only New York newspaper having a subway station on the premises. This is known as "Times Square" station.

Profitable Advertising asked most of the visitors for their private opinions of the *Times'* home, with impressive results. These opinions were all alike in substance, some of the expressions being as follows:

"Most remarkable achievement in the history of journalism."

"Wonderful example of journalistic enterprise."

"A monument to the permanent success of a clean newspaper."

"It is so stupendous that it is impossible for me to do it justice."

"It is fitting that a really great newsaper like the New York *Times* should have a really wonderful home like this."

"A great building and a great plant. Still, neither building nor plant can overshadow the greatness of the *Times* itself."

The afternoon session was held in the Times Building, and the members took occasion to express officially their hearty appreciation of the *Times'* courtesy and hospitality.

On motion of S. S. Rogers, of the Chicago *Daily News,* a vote of thanks, prepared by Col. H. H. Cabaniss, of the Augusta, Ga., *Chronicle,* was tendered the *Times* management for its "generous and hospitable reception" to the visiting publishers.

As soon as the motion had been passed, President Taylor added: "I am sure we are very much indebted to Mr. Ochs for an opportuinity to see this building."

Colonel Ochs replied that he knew of nothing that gave him so much pleasure and satisfaction as to have the members of the A. N. P. A. enjoy their first social gathering in the New York Times Building. It was beyond his feelings to express. "I look upon the Association," said he, "as far as my experience in journalism is concerned, as a kind of alma mater. What little I have accomplished I think I have learned here in the A. N. P. A., and if there is any credit for what has been done by the *Times,* I think the members of the Association have aided in attaining it." (Applause.)

"I think," observed President Taylor, "that we shall have to send Mr. Ochs a diploma."

Mr. Freel, President of the Stereotypers' Union, appeared and was welcomed by President Taylor, and applauded by the members. His address was followed closely. Among other things he said:

"I want to say, Mr. President, that I deeply appreciate the great honor which you have tendered me in inviting me here today, and also the invitation to address you. I am glad to see that it appears to come from the heart. And we on our side tendered a similar greeting to your representative when he attended the convention that we held last August in St. Louis.

"I have no complaint to make on this occasion, and I do not know that your body has any complaint to make against us. Since I was here with you, two years ago, our relations have been most harmonious and pleasant, with one exception, which case is now before your organization for adjustment. We are trying to conduct our organization on business lines—conservative lines—and are endeavoring to give satisfaction to those publishers who see fit to employ our membership. I believe we have been successful. I desire to add that we furnish first-class stereotypers and electrotypers to the various publishers affiliated with this Association and those who are not, as well; and there are very few publishers indeed who have not either verbal or written contracts with our organization. Let me say also that Colonel Driscoll, your commissioner, who has so ably and conscientiously conducted your business, has the entire respect of our body and my personal respect."

In conclusion, Mr. Freel, on behalf of his organization, expressed deep regret over the death of William C. Bryant, the lamented Secretary of the A. N. P. A.

At the fifth session the chief theme of discussion was the labor problem, and, while it occupied considerable time, no definite solution was found. Many different ideas and opinions were expressed, none of them, however, being new.

A Copyright Committee consisting of Messrs. F. A. Noyes, of the Chicago *Record-Herald;* L. M. Duval, of the Baltimore *News,* and John Stewart Bryan, of the Richmond *Times-Dispatch,* was appointed by President Taylor.

Mr. Weston reported for the committee which conferred with the International Advertisers' Association, and the report was filed.

Discussion then took place on the Defense Fund.

Among those who discussed this topics were Mr. Gonzales, of the Columbia (S. C.) *State,* and General Otis, of the Los Angeles *Times,* two very distinguished-looking men who attracted much attention during the sessions of the convention.

Don C. Seitz, of the New York *World,* reported for the Committee on Print Paper, but he said the members had little to add to what probably all knew. They had been requested not to make any detailed report of what was under way. The attitude of the Canadian government as to the proposed duty on wood pulp and timber proved to be very instructive and suggestive.

On motion of Conde Hamlin, of the St. Paul *Pioneer Press,* last year's committee, consisting of Messrs. Seitz, Norris, and Hamlin, was reappointed for the coming year. The following resolution, presented by Mr. Hamlin, was then adopted:

"*Resolved,* That the American Newspaper Publishers' Association extends its grateful appreciation to President Roosevelt and the Department of Justice for their prompt response to the request of this Association for an investigation into and legal proceedings against the combination of paper manufacturers, which proceedings are now pending in the U. S. Circuit Court for the district of Minnesota and are being vigorously prosecuted."

President Taylor at this point announced that the time had arrived for the annual election of officers, and called for nominations for the office of President, from which he had previously determined to retire after his three years of service.

S. W. Meek, of the Cleveland *Leader,* thereupon arose and presented the name of S. S. Rogers, of the Chicago *Daily News.*

"He is," said Mr. Meek, "a gentleman who in every regard receives and deserves the respect of members of the A. N. P. A.—who is large in stature, large in heart, and pious in disposition."

C. W. Knapp, of the St. Louis *Republic,* seconded the nomination, saying: "I have watched Mr. Rogers' work in

this association for seventeen years. He has served it faithfully and intelligently, and I recognize no one in our membership who would more acceptably fill the place you have announced you were about to leave, Mr. President, than he would."

On motion of Thomas Rees, of the Springfield, Ill., *State Register,* the retiring President, Mr. Taylor, was instructed to cast one ballot to express the unanimous vote of the Association for Mr. Rogers. This was done and Mr. Taylor declared:

"Mr. Rogers is elected, and will please take the chair." (Applause.)

Cries of "speech," "speech," arose as Mr. Rogers stepped to the platform and was shaken by the hand by Mr. Taylor. In response to this demand Mr. Rogers said:

"Gentlemen of the Association: I feel very sure that I should be very much less than human were I not keenly sensible and appreciative of this very great honor which you have done me.

"I remember the names of the men who have gone before in this place: Scott, Knapp, Kaufman and Taylor—perhaps others before Mr. Scott. I don't remember one of them who has not made a conspicuous and honorable success in this business in which we are all engaged; and I am sure it is no trifling honor to be called upon to follow in the footsteps of a quartette like that. (Applause.)

"Then I remember, too, as suggested by the report made from our New York office yesteday, that we have in our membership at the present time 240 daily newspapers, scattered from Canada to the Gulf and from the Atlantic to the Pacific. I think I am not exaggerating when I say, gentlemen, that there is no single factor probably in the life of our nation more potent in the determining of the on-going of our social life, our political life, our commercial life, our industrial life, than the factor involved in the combination of these 240 daily papers."

Thanking the Association, not only personally, but in behalf of Victor F. Lawson and the Chicago *Daily News,* Mr. Rogers declared his purpose to serve the Association faithfully, and make it "better and greater than at the present time."

"It has achieved greatness in the past," said he, "and without making any invidious comparisons, I think particularly during the last two or three years. I think this association is under great obligation to the gentleman who is now retiring from this position, for his energy—for the intense and earnest purpose which has controlled him in the work of this Association. He has recognized that it means business; that it is not by-play, it is not a joke, but it is a real and earnest thing. I want to continue, if I may, that policy. Again, gentlemen, I thank you heartily for this honor which you have given me." (Applause.)

Upon the suggestion of Don Seitz, William McLean, of the Philadelphia *Bulletin,* was nominated for Vice-President.

Colonel Cabaniss, of Augusta, Ga., moved that the ex-President cast one ballot on behalf of the association for Mr. McLean. Mr. Taylor cast the ballot, and Mr. McLean was declared elected.

President Rogers then said: "By the action of the association yesterday the election of a Secretary was deferred for thirty days, out of respect to the memory of Mr. Bryant, and the Board of Directors was authorized to have delegated power to fill that vacancy as soon after the expiration of the thirty days as they may be able to do so."

Mr. Adler nominated Edward P. Call, of the New York *Commercial,* for Treasurer, and Mr. Bryan, of Richmond, Va., seconded the nomination. Mr. Call was elected by the same method followed in the case of the other officers.

The selection of four new directors was then begun.

Mr. Townsend, of the Philadelphia *Press,* nominated Charles W. Hornick, of San Francisco, for reëlection to the Board.

Mr. Hornick nominated S. P. Weston, of the Seattle *Post-Intelligencer,* for reëlection.

Mr. Norris, of the New York *Times,* nominated Col. H. H. Cabaniss, of the Augusta, Ga., *Chronicle,* for reëlection.

Mr. Call: "I would like the pleasure of nominating as another Director an unknown gentleman,—a Mr. Charles H. Taylor, Jr., of Boston." (Laughter.)

Mr. Duval: "I move that it be made unanimous. And I move as a special mark of our appreciation of the retiring President that we rise and vote his nomination." (Applause.)

This was immediately done, the whole meeting rising to its feet, and President Rogers declared Mr. Taylor elected Director, adding: "It is time for a speech."

Mr. Taylor: "You have called upon me for a speech. I have spoken all the time. Since I have known him, I have been guided by the precepts of Mr. Townsend, in my official career, if not in my private life, and I have nothing more to say." (Laughter.)

It was then voted that the nominations be closed.

President Rogers: "The four vacancies on the Board of Directors are thus filled by Mr. Taylor's succeeding Mr. McLean, who is still on the Board as Vice-President, and the three other gentlemen succeeding themselves. The ballot has been cast for those four gentlemen as members of the Board."

On motion of Mr. Duval, the present tellers, Messrs. Baldwin and Anthony were nominated and elected to serve for the coming year.

The meeting then adjourned to accept the hospitality of the Brooklyn *Eagle.*

At the close of the fifth session the members proceeded across Brooklyn Bridge to the home of the Brooklyn *Eagle,* in accordance with the invitation which had been extended to the Association by the *Eagle* management. Interest in the visit had been stimulated by the fame of the *Eagle's* plant, reputed to be the best equipped daily newspaper plant in the world, and practically all the members in attendance took part in the expedition.

The Eagle Building was reached about one o'clock, and the members were met by William V. Hester, who acted as host. As the members had been busily engaged all the forenoon in the discussion of questions of policy in regard to matters of great public interest, the first number on the Brooklyn program proved exceptionally attractive to the Eagle's guests. This was a luncheon served in Maresi's best style in the dining hall on the second floor. For the time being the question of the attitude of President Roosevelt toward monopolies took a place in the extreme background, and the first hour of their stay in Brooklyn the publishers were sincerely busy men.

Then, after cigars had been lighted, and while the hard-working servants of public interests were resting from their labors, Dr. St. Clair McKelway, editor of the *Eagle,* welcomed them as follows:

Gentlemen of the American Newspaper Publishers' Association.

"I am glad you have chosen this building as the place for the final session of your gathering this year. You are heartily welcome. We are honored by your presence. We hope to be inspired by your fellowship. We are pleased to have you as our guests. We trust that your body and this paper may reciprocally inspire a helpful fellowship. This is the home center of Greater New York. You have been accustomed to meet in the hotel center of Manhattan. You have come over to the home center of the metropolis and to the office of the home newspaper of that home center. We are gratified to be your hosts. We trust that you will be satisfied to be our guests. It is significant that we can greet you in our enlarged home.

"More space is here devoted to the making of a newspaperpaper and to the prosecution of the affiliated arts and industries which enter into the making of a newspaper than is elsewhere used for that purpose in any part of the world. This is a superlative fact. It does not, however, make us proud. It only makes us comfortable, tolerant, ambitious, and hospitable. The appeal which we made to you in the name of hospitality was sincere, and your answer to that appeal by your presence today will be the end which should crown the work and confirm the purposes which we here undertake.

"The work is the production of a daily newspaper. The purpose is to make that daily an exponent of the real rights and of the best sentiment of its constituency, and at the same time to render this establishment the competent, the spacious, and the happy work home of accordant, united, and loyal industrians. We know that we are working for our community when we are working for ourselves. We know what our constituents are thinking about when we know what we are thinking about ourselves. We know that the readers and the makers of this paper think alike on public subjects, for this working community and this reading community are on confidential terms. We think alike. We feel alike. We are alike, and we like one another.

"Brooklyn knows what the *Eagle* is thinking about. The *Eagle* knows what Brooklyn is thinking about. Each knows that the other is thinking the same things. Their views are always ultimately identical. They may not be immediately identical, for the concentrated and quickened vision of a public journal must allow for the graduated and instructed opinion of a diffused constituency. The secret of a home newspaper is to say and to think today what its constituency should say and think tomorrow. The formulation here is a little in advance of the acceptance of it by the community. But perusal and adoption so quickly follow upon formulation that the two, roughly speaking, may be said to be simultaneous.

"The secret is, my friends, to think what ought to be thought, to say what ought to be said, to think it clearly and to say it frankly, and then to rest confident that what ought to be formulated will assuredly be accepted. This is not an opportunism which is demagogic. It is a wisdom which is prophecy. It is a moral courage which is inspired by conscience and which is vindicated by faith in the plain people. It does not have its roots in cunning or in trimming. It has its roots in convictions, its vindication in courage and in patience, and in the creation of the confidence which comes alone from character, regnant and recognized.

"I am not speaking exclusively or consciously for any one newspaper. I am speaking, I am glad to believe, for many newspapers here represented. I am speaking for those which would rather be right than successful, and the experience of which has taught them that they can be both, and that they can only be successful by being right, and being that can confidentially rely upon success. What ought to be will be, in any uplifting work pursued, not for self, but for the community, for a commonwealth, for the nation, and for humanity. If we raise ourselves to the plane of the highest motives, we lift our readers to the plane of the highest purposes, and to the level of the best sentiments and of the largest achievements. The journal and the community respectively interpret one another.

"The communities are many. The journals are many. Superficially, the journals and the communities are markedly different. Fundamentally, they are wonderfully alike. The superficial differences are immaterial compared with the fundamental likeness. There is no paper represented around this board that does not essentially think the same things on the moral principles which undergird and overarch the character, the convictions, and the conscience of our common Americanism. Even demagogy in journalism is the homage which insincerity and self-seeking pay to conscience and to country. The counterfeit is sometimes repellant, sometimes alluring, and never convincing. But even as a counterfeit it carries a tribute to the qualities the counterfeiter has not, but would like to be thought to have.

"Now, you are all titularly publishers, or shall I say proprietors? Proprietors or publishers, some of you are also editors. And an editor is here talking to both for both. The fact to at least one of us is the gratifying commentary upon the times when editors or sub-editors were told by their chiefs to regard publishers as their natural and necessary enemies, and to do what they could to keep upstairs aloof from downstairs, with the advantage to upstairs and the disadvantage to downstairs. I recall those times. I am glad they are no more. I am glad that upstairs and downstairs are friends. I am glad that they often exchange workers with good effect to both fields and with a sense of promotion or preference or depletion to neither field.

"There was never need we should be enemies because we were different. There is less need to be different than there was. There was never need to be so different as we were. The desirable change wrought has been due to the realization of the unity of interests between the two fields. The editorial function is to make the journal by news and views commendable to the respect and convictions and to the conscientiousness of the community. The business office function is to convince the business side of the community that its interests, its projects, its wares, its ways, and its wants should be commended to the community whose convictions and whose purposes, whose respect and whose reason the news and the opinion side addresses. arouses, and inspires.

"Now you are not going to get out of me any comparative criticism or any exclusive commendation of either of these accordant sides. In either or both, character, capacity, sincerity, industry, and courage will find opportunity, recognition, vindication, and reward, and without those qualities failure in both will not only be encountered, but deserved. Character, courage, sincerity, capacity, loyalty are the essentials. The remainder of the problem involves simply the application of these essentials to details. For those details some have genius, some have capacity, and some have even a less equipment. They succeed or fail, they stand or fall according to the moral and the mental fitness of men to functions and of functions to men. That is the old rule.

"The survival of the fittest, the dominance of the best, the persistence of the truest. Editing and publishing are hurt or helped, mastered or marred by the same conditions which affect any other commensurate calling. The men who have obtained success in our calling are around me. Journalism is better because of them. They are better off because of journalism. Our nation and our world are better off because of them. We are glad they are with us as our guests. We are glad, as their hosts, that we are with them and of them. Gentlemen, the day, the paper, and the office are yours."

In reply to the address of Dr. McKelway, S. S. Rogers, of the Chicago *News,* the new President of the Association, said:

"I cannot refrain from expressing the heartfelt thanks of the Association for the kind hospitality extended to us today by the Brooklyn *Eagle,* by its management, by those gentlemen who have made such bountiful provision for our entertainment today. It was my privilege during the Convention a few days ago to say some things to the Association by request. I thought afterwards that perhaps my words had too moral a tone, and I want to take this opportunity of saying that we have here today a newspaper which illustrates all that I have tried to state, the same old truth, that honesty is the best policy. The Brooklyn *Eagle* stands, and always has stood, for that type of journalism. As Mr. McKelway has just said to us, the people believe in it, they have made it, they read it, and when one's associations are so close, either with a newspaper or with an individual, it is impossible to cover up dishonesty. I agree that, no matter how it may be dissembled, it nevertheless crops out. The newspaper whose readers have confidence in its integrity will have the success which has deservedly come to the Brooklyn *Eagle.* This is not the success of a day or a week, but accumulates year by year; it is not ephemeral, but permanent. This, my friends, is the type of success we see here today in the Brooklyn *Daily Eagle.*

"I simply want to express again the thanks of the American Newspaper Publishers' Association to the Brooklyn *Eagle* for its kindly hospitality and for the generous opportunity of meeting here, and for the inspection of the trophies of your office."

Dr. McKelway then arose and said: "After hearing the remarks of the gentleman in regard to our paper and our plant, I can add nothing except the assurance that every word that he has said is true."

The members of the Association then retired in a body to the reception hall in the rear of the Eagle building, where the last session of the Convention was held.

The final session of the convention, held in the Brooklyn Eagle Building, was very brief.

President Rogers announced that, all business being concluded, unless some one arose to offer something, the convention would adjourn.

Mr. Knapp, of the St. Louis *Republic,* said:

"After the exceedingly interesting trip through this great building, I move a vote of thanks to the *Eagle* management for the generous and hospitable reception and fine exhibit of a perfect newspaper shop here shown."

The question was put and unanimously carried, and President Rogers said the resolution would be sent to the *Eagle* people in due course.

"There being no further business," continued the President, "a motion to adjourn this yearly meeting of the A. N. P. A. is now in order."

On motion of Mr. Knapp, the Nineteenth Annual Convention was then declared adjourned.

A banquet, the nineteenth annual dinner, proved a great success. Able speeches were made by a number of prominent gentlemen and their instructive words will receive consideration later.

COUNTRY CORRESPONDENTS.

VERNON CENTRE, March 13, 1905.

Editor National Printer-Journalist, Chicago, Ill.

DEAR SIR:—I am one of the correspondents benefited by the "experiment" of Mr. H. C. Hotaling. He *does* publish a good paper, and I appreciate the idea of his sending the NATIONAL PRINTER-JOURNALIST to his correspondents, very much, as well as that of exchanging views and experiences therein.

It would certainly be advantageous, for correspondents to exchange views and experiences. The towns from which many of us write are small, very small, and yet people marry and die, and things occur therein.

Now, this is a tender point, but would not the papers get better service from their correspondents, if their pay was better? Possibly they pay all they can afford, possibly all the correspondence is worth; and again, possibly they are satisfied with the service. If either of these be true, the subject is closed.

The correspondents from small towns are such, for various reasons. I think about one in ten does it for sheer love of the work, the others for "what there is in it." They have other callings whereby their bread and butter comes, and some woman in the household takes it up for the pin-money, even she having her time full of household cares.

Things worthy of record are slipping past the correspondent because her time is too valuable to spend in seeking them. (I say "her," which is not always so.) If the remuneration was sufficient she could *take* time to seek out these news items which otherwise never come to her ears. As it is, the few she does get accumulated, keep her mind on the watch constantly and yet often make a poor showing in the paper. May we have some talk along these and other lines? The true correspondent wishes to do the best in the best way and eagerly welcomes instruction.

(MRS.) KATE E. THEW.

KENDALLVILLE, IND., March 7, 1905.

B. B. Herbert, Esq., Chicago, Ill.

DEAR SIR:—Mr. W. E. Beeson has asked me to give you a list of the officers of the Northern Indiana Editorial Association. They are: A. B. Crampton, Delphi, *Citizen-Times;* H. A. Barnhart, Rochester, *Sentinel*; J. S. Conlogue, Kendallville, *Standard* and *Sun.* Delegates to Guthrie, Okla., National Convention: Miss Harriet Conlogue, *Standard* and *Sun;* W. B. Wlison, Lafayette, *Journal;* Geo. Fowler, Frankfort, *Times;* C. W. Metzker, Plymouth, *Democrat;* J. D. Hogate, Danville, *Republican;* A. P. Kent, Elkhart, *Review;* J. E. McDonald, Ligioner, *Banner;* F. D. Haimbaugh, Muncie, *Herald;* Mrs. Inez M. Sutton, Logansport, *Reporter;* M. W. Pershing, Tipton. Next meeting at Rochester, Ind. Date not fixed yet. Respectfully,

J. S. CONLOGUE, Sec'y.

WITH OKLAHOMA FRIENDS.

SOME of the following things that the press of Guthrie said with regard to the visit of the editor of this paper and the preparations for the approaching convention of the National Editorial Association will be informing to editors and delegates:

(From the Guthrie *State Capital,* Jan. 19th, 1905.)

Benjamin B. Herbert, of Chicago, editor of the NATIONAL PRINTER-JOURNALIST, is in the city, having arrived yesterday. Colonel Herbert may be said to be the father of the present National Editorial Association. He is the publisher now of the official paper of the association, and is preparing an article that will tell the editors of the association what sort of a town they are to meet in next spring.

The National Editorial Association of the United States was organized at New Orleans, La., in 1885, through the efforts of B. B. Herbert, then president of the Minnesota Editorial Association, and at that time the editor and publisher of a daily and weekly paper in that State. At this first meeting, which was held during World's Cotton and Industrial Exposition, eighteen States were represented and Mr. Herbert was elected the first president of the association. In 1886, the convention was held at Cincinnati, O., and twenty-six States were represented. The editors were royally entertained and shown all the industries, attractions and institutions of that city, which even to that date, had not ceased to be called the "Queen City of the West." "Field Marshal" Murat Halstead, and Ex-Governor W. D. Hoard, of Wisconsin, were among the prominent figures present. C. H. Jones, afterwards editor of the St. Louis *Republic,* the New York *World* and the St. Louis *Post-Dispatch,* but then of the Jacksonville, Fla., *Times-Union,* succeeded Mr. Herbert as president. Thus the two distinct sections of the Union were doubly reunited through the medium of the press.

Minnesota and Florida shook hands and an enthusiastic member from one of the Southern States, in a speech of felicitation, declared that had the National Editorial Association existed thirty years earlier, there would never have been a war between the two sections of the Union, as the people would have so understood all the interests, rights and conditions in all sections and been so united through the press of the whole republic, as to have made the war impossible.

Since the Cincinnati meeting, the National Editorial Association has held conventions in every portion of the country, the editors of every State and territory have met, conferred and traveled together, and had presented before them all the peculiar interests and demands, and were shown all the advantages and resources of every region visited. They have investigated in this way, all questions of irrigation, deep water navigation, the isthmian canal, placer mining, transportation and all other matters pertaining to the development and rights, the advantages and resources of all sections and have become the advocates of every worthy cause. They have told their millions of readers in their hundreds of papers throughout the different States, all that they have been shown, have heard and learned from actual views, from addresses by governors of States, United States senators, congressmen, judges, prominent citizens and experts in every region. They were all relied upon as the cornerstone of the great expositions and took the first action with regard to the approaching Lewis and Clark Exposition, at a convention in Portland in 1899.

The association is to come to Oklahoma in June to learn of, and write about, this region, to tell of its advantages and wants, as well as to hold a convention in which to discuss matters pertaining to the newspaper calling. There will be about four hundred actual delegates, each representing twenty-five newspapers, there being one delegate chosen for each twenty-five members of the State and territorial associations. There will probably be, at least, six hundred in the party. The amount of advertising ability possessed by such an organization can be well understood.

The association met in Denver in 1887: San Antonio Texas, 1888, visiting the old City of Mexico; Detroit, 1889; Boston, 1890; St. Paul, 1891; San Francisco, 1892; Chicago, 1893; Asbury Park, N. J., 1894; San Augustine, Fla., 1895; Galveston, Texas, 1896; Denver, 1897; Portland, Ore., 1899; New Orleans, 1900; Buffalo, N. Y., 1901; Hot Springs, Ark., 1902; Omaha, Neb., 1903; St. Louis, 1904.

All parts of the country surrounding the convention cities have been visited and trips made through Mexico and Western Canada. The write-ups of these trips have been very thorough and have proved of the highest interest to newspaper readers. The editors unanimously declare that these

extended descriptions of American travel, with all the matters relating to resources and development, local interest, and the rights involved and the government aid, legislation or encouragement that should be extended, have proved next to local news in the interest manifested therein. What the editor, whom everyone in his local city or community personally knows, has to say from personal travel, observation and investigation, is sought after with avidity. It is certain that every interest of this region, including the rights of statehood, will be enthusiastically set forth by these editors—who, in ninety-nine cases out of a hundred, are the owners of their papers—as well as by the thousands of other members of their respective associations, of whom they are the chosen representatives.

Mr. Herbert is the editor and publisher of the NATIONAL PRINTER-JOURNALIST of Chicago, which is the official paper of the national association and was established in accordance with a resolution of that body at the first Denver meeting in 1887.

For fifteen years and more, Mr. Herbert has made the practice of visiting, in advance, the place chosen for the next convention and of writing and publishing, in his paper, an illustrated article, describing the city, giving illustrations of important buildings, views of local scenery, portraits of State and local officers and the chairmen of local committees, and of all others who are to take part in welcoming and entertaining the association, and whom the editors will want personally to recognize, meet and know. This article is also made to include such interesting and instructive statistics and facts as the editors will desire to know in preparing articles for their own papers, and tends to stir up an interest in and increase that attendance at, the convention. The magazine itself goes to five thousand newspaper offices each month, is printed in the highest style of the modern printing art, on durable book paper, none but the finest of half-tones being used in the illustrations. It is of octavo size, bound in paper covers, and is looked upon as a standard of authority among the newspaper publishers and printers of the United States.

Mr. Herbert's visit to this city is with the view of preparing such an article as indicated, and to aid in, as far as may be desired, local arrangements and to secure the program of entertainments, itineary, etc., for publication in the March issue of the NATIONAL PRINTER-JOURNALISIT.

FOUNDER OF NATIONAL PRESS ASSOCIATION IS IN GUTHRIE.

(From the Guthrie *Daily Leader,* Jan. 19th.)

B. B. Herbert, of Chicago, founder of the National Editorial Association, and its first president of twenty years ago and editor of the NATIONAL PRINTER-JOURNALIST, the organ of the National Press Association, arrived in Guthrie yesterday to confer with F. G. Prouty, national committeeman of the Oklahoma Press Association, in reference to the annual meeting of the National Editorial Association which will be held in Guthrie in 1905.

Owing to the fact that Mr. Prouty will be unable to attend the National Executive Committee meeting which will be held in Indianapolis, Ind., Feb. 7 and 8, which committee will arrange the program for the next meet, he makes the following suggestions to Mr. Herbert:

"That the dates for the annual meeting of 1905 be June 2 and 3. That the morning, afternoon and evening sessions of the second, and also the third day, be held at Brooks' opera house. Also that on the morning of the fourth the side trip be taken to Miller's 101 ranch to enjoy the day at buffalo hunts, Indian war dances and cowboy broncho riding exhibitions, and enjoy a feast of buffalo, jackrabbits and cigars. Also that the special train return to Guthrie on the night of June 4. That special excursions to Portland, Ore., which were promised the National Editors by Committeeman Prouty at the meeting at St. Louis last May, will leave on the morning of June 5, making a stop at Oklahoma City, Tulsa thence to Vinita, then to Dallas, Tex., where a day will be spent as guests of the chamber of commerce, thence to Houston, where a transfer will be made to the Southern Pacific, on which route short stops will be made at different places to Pasadena, Cal., Los Angeles to San Francisco, where an ocean trip will be given. Thence to Portland where three days will be spent viewing the sights of the Lewis & Clark exposition. That the return trip be made by a northern route to Chicago, stopping at points in Montana, Utah and Colorado."

Mr. Prouty suggests that the eastern and southern national delegates and their ladies mobilize at St. Louis and take the Pullman special over the Frisco to Guthrie. And that the western and northern national delegates mobilize at Pueblo, Colo., and take the Pullman special to Guthrie. On account of the inadequate hotel facilities in Guthrie the homes here will be thrown open to the national visitors as well as the hotels and the Pullman coaches will be utilized also. These suggestions made by Mr. Prouty will be presented to the National Committee at Indianapolis next month by Mr. Herbert. In all probability Oklahoma will be represented at that meeting by Frank Greer, president of the Oklahoma Press Association as a proxy of Mr. Prouty.

"Father" Herbert, as he is designated, owing to having been the founder of the organization, expresses himself as being vastly impressed with the grandeur of Oklahoma. He came here to view the territory and describe it in the official paper of the National Association, and he says that he has already seen enough, just being here one day, to write a message to the editors of this country that will make them anxious to come here to the annual convention this year.

It is "Father" Herbert's opinion, being a man of nearly a century old and having seen all kinds of people, that Oklahoma has as fine and intelligent a class of citizens as he has ever seen anywhere. He will report through the columns of his paper that the national delegates to the annual convention will never regret having taken the trip. The unprecedented development of the country, the unparalleled growth and the matchless expansion of civilization in a commonwealth only 16 years in existence will constitute the cardinal features of his story.

Large space in the next number of his paper is to be given over to the cream of the world—Oklahoma—Its vast prairies, its rich farms, its semi-wilderness, its great people and its magnificent hospitality have drawn out extended praises from the hustlers of the press.

"Father" Herbert brings the good news that the newspapers in every state in the union are writing column after column of the possibilities of Oklahoma.

If "Father" Herbert could have his way he would have every editor in the United States visit Guthrie.

BEFORE THE OKLAHOMA LEGISLATURE.

(From Oklahoma *State Capital,* January 21.)

On motion of Mr. Levy, B. B. Herbert, the father of the National Press Association, was called to the speaker's desk and delivered a fine but short address on the resources of Oklahoma and the chances for statehood. He said the people needed much education in developing the territory and in erecting mills and other industrial enterprises.

He advocated the building of schools for children taken from the streets and making men of them. The placing of boys in prison with adult criminals, he considered to be bad policy, and he hoped the bill introduced by Mr. Bone separating young criminals from the adult ones would pass.

VISITS 101 RANCH AND OTHER POINTS.

B. B. Herbert, editor of the NATIONAL PRINTER-JOURNALIST, of Chicago, and founder and first president of the National Editorial Association, returned to Guthrie yesterday from a few days' trip over the territory. He spent Sunday on the 101 ranch at Bliss, which place will be visited by the editorial association the day after the adjournment of their meeting in Guthrie.

Col. Herbert says he was treated royally at the ranch, and was greatly impressed with the beautiful southern home of the Miller brothers and the vast expanse of land controlled by them. Col. Herbert was accompanied by Representative Prouty who is also a member of the National Editorial Association. The plan of the entertainment which will be given the editors at the ranch was fully explained to them. This entertainment is to be in the form of a celebration of the dissolution of tribal relations of the Indians, as a result of the recent separate allotments of land. In connection with this they will celebrate the disappearance of the cowboy from Oklahoma. In preparing for these celebrations J. W. Miller says the Indians and cowboys are already taking an active interest. For these celebrations, which will be held on the same day, Mr. Miller expects to have 2,000 Indians, 500 cowboys, 500 soldiers from the Oklahoma forts, a herd of twenty buffaloes, besides the 30,000 head of cattle which are now on the ranch.

On the day of the entertainment as soon as the excursion trains have arrived, the buffalo chase will be held, and three buffaloes will be killed. The afternoon will be taken up by roping and riding contests. Indian games and sham battles between the soldiers and Indians and cowboys and Indians. About the middle of the afternoon a grand banquet will be laid for the editors at which buffalo meat will be served. Mr. Miller is preparing for 1,000 editorial guests, and expects fully 20,000 persons to witness the day's sport. A rate of two-thirds of one fare plus 50 cents for the round trip has been

THE prompt service of the Inland Type Foundry has been an important factor in the rapid increase of its busi ness. Nine out of ten orders are shipped the same day received. The tenth is held for some thing which even the manufac turers do not carry in stock ¶ With branches in New York, Chicago and Buffalo our service is better than ever. We know that when you order type it is needed. Hence, our sys tem which insures accu racy and prompt shipment

secured from the railroads, and Mr. Miller has advertised all through Kansas, Texas and other states. Numerous prizes have been offered for the contests which will be open to cowboys all over the country. Preparations are being made to accommodate a very large crowd with ease. A general round-up of all the cattle scattered over the 87,000 acres of the ranch will be a feature of the day, the cattle being rounded up in front of the enormous grand stand which will be erected. Mr. Miller expects to spend quite a little time and money on the entertainment, and Mr. Herbert says that without a doubt it will be worth coming thousands of miles to witness as it will probably be the last entertainment of its kind in Oklahoma, celebrating the dissolution of tribal relations of the Indians and the disappearance of the cowboys.

Mr. Herbert has visited Kingfisher, Oklahoma City and other towns of the territory. He returned to Chicago last night and takes with him 22 excellent views of Guthrie, and 18 views of the 101 ranch which together with a descriptive article on both places will appear in his *Journal* in its next issue.

AT INDIANAPOLIS, IND.

From the Indianapolis *Sentinel,* Feb. 7, 1905:

In the lobby this morning was the father of the national association, Benjamin B. Herbert, of Chicago. He started the association in 1885, and has had the satisfaction of seeing it grow until it is one of the largest organizations in point of membership in the country.

Mr. Herbert is publisher of the NATIONAL PRINTER-JOURNALIST, started in Indianapolis years ago, and now one of the substantial publications of Chicago.

From the Indianapolis *Morning Star,* Feb. 8, 1905:

One of the most interesting persons at yesterday's meeting was Benjamin B. Herbert of Chicago, who founded the National Association in 1885. Since that time he has attended every meeting of the executive committee and every national convention.

IN MINNESOTA.

From the Red Wing, Minn., *Daily Republican:*

VETERAN JOURNALIST GREETS OLD FRIENDS.

B. B. HERBERT OF NATIONAL PRINTER-JOURNALIST SPENDS A FEW HOURS IN THE CITY.

B. B. Herbert, editor and publisher of the National Printer-Journalist of Chicago, and the recognized father of the National Editorial Association, is in the city today shaking hands with old-time friends and neighbors.

Mr. Herbert was in the newspaper business in Red Wing years ago and has hosts of friends among the older settlers. For a while he conducted the Advance and in 1877 organized the Red Wing Printing Company and became editor and manager of the *Weekly Republican.* In 1885 he launched the *Daily Republican.* Afterwards he sold out his interests in the newspaper here and in 1888 established the NATIONAL PRINTER-JOURNALIST in Chicago, with which he has been connected ever since.

After giving kindly and hearty greeting to the office force, Mr. Herbert chatted pleasantly with a *Republican* representative for a few moments.

"I've just been up at St. Paul spending a day or two with the boys at the editorial association. Had a splendid time, and although it's only been five years since I was with them I was surprised at the number of new faces. I think there were only about twenty of the old guard that I still recognized. But it was a very successful meeting which was held.

"What do I think of your new state capitol? One of the finest in the country without any question. I think it surpasses the state house at Albany, New York, in architectural beauty, although the latter cost many more millions.

"One thing that has struck me with force the past few weeks. I was down in Kansas week before last at the state editors' meet and met the governor, a forceful man whom I found to be one of the country editors of the state. Then I went to Oklahoma and enjoyed meeting the newspaper boys and found again that the governor was a country editor. Now I have just returned from St. Paul where I met another country editor in control of state affairs. Really it is remarkable how many of the important political positions in the state and nation the boys who run the newspapers in their different communities occupy.

"I attended the meeting of the executive board of the National Editorial Association at Indianapolis last week. It is planned to invade the Southwest this year and the National Association will have a delightful excursion through Oklahoma, Indian Territory, Arizona and New Mexico and then on to Portland, Ore."

Mr. Herbert begins to show the frost of winters in his hair and beard but speaking of growing old he said in his fresh and vigorous way: "I'm not any older than I was some years ago—in my mind. Do you know" continued he, "I attended the Massachusetts Editorial convention a few years ago and had the pleasure of being seated next to the venerable author of 'The Battle Hymn of the Republic.' She told me among other things, of something that happened in 1829. I told her that was before my time. Then her eyes twinkled and she said: 'Don't you know that I'm old enough to be your mother—but I'm not old,' and" said the veteran journalist, " if you could have heard the fine talk she gave and seen her clap her hands time after time in vigorous applause, you would never have believed that Mrs. Julia Ward Howe was 83 years old."

Mr. Herbert left for Chicago this afternoon.

Grumbling is the grit that makes hot boxes on the wheels of enterprise.

As long as we are helping our fallen friends up they are not dragging us down.

WHERE IS H. A. HOUSTON?

BELLEFONTE, PA., Feb. 28, 1905.

B. B. Herbert, Esq., Editor National Printer-Journalist, Chicago, Ill.

MY DEAR MR. HERBERT:—Mr. James Harris, an old friend in this place, would like, if possible, to find out the whereabouts of H. A. Houston, who left Bellefonte in 1858 and went West. The last heard of him was from a town in northern Iowa, where, I think, he was engaged in the newspaper business.

It occurred to me that if you were to mention the matter in your valuable publication with a request for its republication in the rural press of the country, the two old friends might be brought into correspondence again.

With best wishes for yourself and the success of your *Journal* I am, Very fraternally yours,

GEO. R. MEEK.

Sourness is the worst kind of an equipment for an editor, and is very far from being useful in the management of a printing office. There are too many conflicting interests, too many details, too many possible delays and accidents, too many uncertainties, to leave any room, in the mind of him who would, each day, unravel the tangled skein and have order and pleasing, satisfactory results, for anything except good nature, patience and hope.

ADVERTISING RATES PROMPTLY FURNISHED UPON APPLICATION

The NATIONAL PRINTER-JOURNALIST is unequalled as an advertising medium in its field. No attention paid to postal card requests. Information cheerfully furnished to all patrons.

Subscribers and patrons will confer a favor on the National Printer-Journalist Company by sending in the names of responsible newsdealers who do not keep the monthly on sale regularly.

Manuscript sent in for publication must be accompanied by a letter of explanation and return postage.

CHICAGO, APRIL, 1905

Definiteness of aim backed by tenacity of purpose gives success and should characterize the newspaper man above all other qualities. Shilly-shally, aimlessness, hesitation and vascillating soon advertise a newspaper man as not to be depended upon.

Words, however, beautiful, be they dressed in the most elegant rhetoric, without they give facts, tersely and clearly, or news that appeals to human interest, reason or sympathy, are "as sounding brass or a tinkling cymbal."

H. B. Hale, of the *Weekly Gazette* of East Hartford, Conn., gave what he termed, "Our Midwinter Gathering," for the editor and the correspondents of the paper, with a turkey supper and a social time, on Marth 4th, at Hotel Cornish, Galtenbury. These annual banquets have become a regular institution with the *Gazette*. We acknowledge the receipt of a highly-prized invitation to be present, but duties in other parts of the Union prevented an acceptance. It pays to make much of country correspondents, and to hold annual banquets or excursions, get the correspondents together for better acquaintance and closer friendship with the editor and each other; for comparing notes, a better understanding of the work and each other, for breaking bread together, for creating a community of feeling, an *esprit de corps* and for social enjoyment.

King Oscar, of Sweden, who is a broad, practical observant and well-informed man, wise in business as in governing, is reported to have said that, to his way of thinking, an advertisement should be inserted seven times at least. The first time an ad is overlooked or merely glanced at; the second time it is observed; the third, it is read; the fourth, interest is awakened; the fifth, it is considered and talked about; the sixth wins the reader to a feeling that a trial ought to be made and the seventh time results in the sending for samples and purchasing.

There is virtue in changing ads, to give new facts and to urge new arguments, but the subject should not be changed and enough of the first advertisement should be retained, in all of several succeeding ads., to retain and to stamp deeper the first impression. In showing cuts of machines, or specimens of type faces, there should be several repetitions until the readers have formed a thorough knowledge of the desirable features and these have been stamped upon the mind.

There has been, as we believe, too much of rage to change ads just for the sake of the change.

The local paper works for the good of its city and county and has a right to expect, if not to demand, the printing and legal advertising of city and county officials. Notwithstanding this, we would not recommend one of the methods used to secure the same, that was mentioned, as reported, in a paper read before the Illinois Military Tract Press convention.

In his very excellent address, Mr. E. E. Fitch, of the Galva *News*, on "County Printing—How Best to Secure and Handle It, Prices, Etc.," is reported to have said: "'A stuffed club' was also one of the methods which might be employed and which he effectively used at one time when threatened to expose a rotten deal in the county office unless the printing matter came his way. As a result he secured over $200 worth of printing matter." To say nothing about the neglect of a sacred duty owed to his subscribers, to himself and his county, the publisher who would accept a bribe of $200, or of $2,000 worth of printing, for an agreement not "to expose a rotten deal," would lose one of the best business opportunities of a life-time for the making of his paper solid with the best people from whom valuable support is to be expected. As a matter of business policy, aside from all questions of morality, honor and good citizenship, a newspaper publisher should ever remember, as Horace Greeley once wrote to a young newspaper man that the "taxpayers always outnumber the tax eaters"—not only outnumber them but, in influence and in all possibilities for patronage and business, outweigh them a hundred fold. There is nothing that pays a newspaper so well as a deserved reputation for integrity and incorruptibility, for watchfulness and fearlessness as to the interests of the people. No newspaper man need fear any public official who enters into a "rotten deal."

Exposure when office holders do wrong and commendation when they do right will help to keep them honest and will make them the friends of the newspaper. No other three things are so destructive of a newspaper as are cowardice, corruption and subserviency. The paper that has not the fearlessness, the independence and influence, to command the respect and patronage of the county and city officials, travels on very thin and dangerous ice in agreeing not to expose

their misdeeds or neglects of public duty. Public officials need the newspapers much more than the newspapers need the public officials. They cannot afford to refuse support that is due to the press from which a loyal support is a necessity. For sending local work away from home, the newspaper has a perfect right, publicly to call the public official to account.

The Detroit, Michigan, paper, that started out on the plan of free circulation, has failed. It was run on the trading stamp idea and was to be supported entirely by the advertisers. It claimed to start with a guaranteed circulation of 100,000 copies but the trading stamp scheme was discovered to be a last year's chestnut and, after sixty-eight days, the paper gave up the ghost.

The employes of the Montgomery, Alabama, *Advertiser,* after uniting to produce the great annual number of that paper, joined in elaborating and issuing a "Baby" *Advertiser* for the annual banquet. It was filled with pith and point, sense and nonsense, wit and humor. The general manager and editor-in-chief were, for the time, retired and the name of Editor W. W. Screws appeared as "Onlooker" and of Manager F. P. Glass as "Scrutinizer." There was fun throughout the sheet, but of the pure and innocent kind. There was no stooping to vulgarity, no attempt at offensive caricature or anything like rudeness, and the boys showed their love for and loyalty to the heads of the paper in the following and other editorial paragraphs, "Let every day in this new year be as happy as this one for Mayor Screws and Mr. Glass."

In harmony with the teachings of this journal, that a newspaper should always keep up with and a little in advance of the city of its publication and the demands of the citizens, Gomer T. Davies has launched the Concordia *Daily Kansan.* The initial number, printed on March 17th, St. Patrick's Day, which fact ought to insure a blessing—is a very cleanly-printed paper. Mr. Davies states in his announcement that in starting this daily edition of his paper he has "yielded to the importunities of many of the leading business men" of his city and the liberal advertising patronage accorded the first number is pretty substantial proof of the reliability of this statement.

He refers to a promise "to keep in the fore front of newspaper work while engaged in it," and hopes for success through "hard work and honest effort to make the paper worthy of patronage and the esteem of the people of the city and county." He further adds:

"No one ever guesses, or conjectures, whether or not the editor of the *Kansan* will take sides on a matter of public concern—they know he will.

"The *Daily Kansan* will sing the praises of Concordia, all the time—in season and out of season. If you want to join the procession of boosters for a Greater Concordia, you cannot do better than give a boost to the Concordia *Daily Kansan.*"

These are good, sound ideas for a newspaper maker. A newspaper man should always be sufficiently informed and sufficiently alive and sufficiently bold always to choose a side, and the right side, on every matter of public concern and fearlessly to stand ever for the public's best interests. He should also ever recognize his duty to exalt all that is worthy or commendable in his city or county and, by proper exploitation of opportunities and advantages, just praise and encouragement, strive for development, improvement, better conditions and constant advancement. He should, as earnestly, work for the righting of wrongs, the removal of retarding injurious obstacles or hindrances to the healthy progress and for correcting of abuses. He should, like the loving, sympathetic, well-equipped family physician in the families under his charge, carefully and patiently study his community and guard its business, industrial, intellectual and moral health, strive to ward off threatening disease and death in every branch and member of the body politic and to cure existing ills. He should study the pulse, the temper, the strength and weaknesses so as intelligently to recommend a proper regime and needed remedies. He should ever acknowledge the necessity of, and his obligations for support, but should feel entire confidence that this support will come, if deserved. This should make him bold in the conduct of his paper, according to the best and highest standards. The contents should be the first care, but the appearance of the paper should not be neglected. Good composition, good paper, good ink, good press work and good make-up should not be considered among things unimportant. The Daily Kansan is up to a high standard, except as to make-up.

A paper is taken first, for the reading matter that it contains, and this should be given the greatest prominence. The advertising value of the paper depends upon its entire acceptableness to readers, the impression that it makes upon them. It should never have the suggestion of being merely an advertising handbill. For this reason the first page of the paper should be given up entirely to reading matter. The copy of the *Daily Kansan,* before us, is marred by a large quarter-page display advertisement across the top of the first page and eighth page, and in the lower right-hand corner of the same page. This is not allowable in any up-to-date paper and can but prove hurtful. It is no advantage to the advertiser who is seeking the good will of the readers of the paper just as much as is the publisher. The other pages, and especially the editorial page are marred in like manner. Ads should be kept in separate columns or in separate pages from the reading matter. We frequently see the expressive but homely motto: "Don't Butt In," over the desks of business men. It is very exasperating, as well as ill-mannered and hurtful to a man's own prospect for consideration or business, "to butt in," when the one whose attention is sought is engaged with others. It is wise to wait until attention can be willingly secured. The same principle applies alike to advertising in newspapers. There is nothing like consideration for those whose favors are sought, nothing like politeness in securing business. We know from experience, that, in starting a new paper, the publisher is naturally nervous, anxious to get advertising and timid about denying any request that is made for position. In our first year in publishing a newspaper, we yielded to an advertiser who would take no other place than a square, two columns in width, and the same in depth, right in the center of the local page. He paid an extra price but the result showed that the position did not help the advertiser in the least and injured the paper. Be as jealous of your paper's orderly appearance as you are of its contents. Advertisers will soon learn that the popularity of the paper is of more value to them than is any abnormal, unsightly position therein.

BREAKING A TEAM OF BUFFALOS FOR ENTFRTAINMENT OF THE EDITORS.

AN EXCITING EXPERIMENT THAT RESULTS IN THE SUICIDE OF ONE BUFFALO, WORTH $500.

IT is seldom that the NATIONAL PRINTER-JOURNALIST has an opportunity to indulge in stories about animals but the following (from the Kansas City *Star*, Jan. 24th), has an interest connected with arrangements for entertaining the representatives of some ten thousand newspapers that makes its publication here appropriate:

In casting about for novelties to entertain the delegates to the National Editorial Association, who will spend a day on Ranch "101" next summer, "Joe" Miller, president of the ranch company, found one which he believes would be a lively attraction. The preliminary steps of his discovery cost him $500, and the cost may be greater before he has finished.

Ranch "101" has a small herd of buffaloes, purchased at the Goodnight ranch in the Texas Panhandle. Miller decided to break two young buffalo bulls for driving purposes, believing that a ride behind two buffalo roadsters would delight the visiting editors. Miller began his buffalo "busting" one Sunday not long ago, and nearly every cowboy on the ranch joined in the sport. Two expert "ropers" saddled their ponies and started in pursuit of two young bulls that were grazing in a nearby pasture. Both bulls were wild, and galloped away at full speed when the cowboys appeared, swinging their lariats. Over and among the low sand hills of the Salt Fork of the Arkansas they raced, the buffaloes turning and dodging to escape their pursuers. The day was cold, but the high speed of the cow ponies told on the buffaloes, and their black tongues protruded further and further from their mouths.

ROPED ONE BUFFALO.

One of the bulls was roped around his neck. Being stronger than a steer, he dragged the pony with him, though the pony furrowed the sand with his feet. Then with eyes flaming like two coals and his tail erect, he gave a bellow, and charged the pony, which cleverly dodged the onslaught. Another cowboy threw a lariat over the buffalo's horns and the horsemen were safe, as they could hold the buffalo between them.

When the buffalo was drawn up in front of the cook "shack," there were shouts for "Dutch," the cook, to ride him. The buffalo stood pawing the earth and shaking his mane. "Dutch" could not bear the jibes of the cowboys, who swore that he was afraid to tackle the buffalo bareback. "Dutch" shed his long apron, and crouched for a spring upon the buffalo's shaggy back. His first approach brought a surprising demonstration of the kicking ability of a buffalo, which launched one of its hind feet seemingly a good ten feet, and narrowly missed the rubicund face of the cook, who retreated and began fiddling for a safe opening. The longer he hesitated, the less sanguine he became, and finally stood jumping up and down in his uncertainty while the cowboys shouted in derision.

White Buffalo, a Sioux Indian, the best and pluckiest horseman on the ranch, pushed "Dutch" aside, sprang upon the buffalo, waved his hat and dismounted almost before the buffalo knew what had happened. This restored the cook's confidence and a moment later, with both hands deep in the buffalo's mane, he was careering across the prairie, with the frightened buffalo running at full speed. "Dutch" could not be shaken from his seat, to the grief of the cowboys who had hoped that he would be thrown.

The prediction was made that the buffalo could not be tamed to drive. "Buffalo" Jones, now a game keeper in Yellowstone park, in the early '90s, owned a large herd near Garden City, Kas., and killed a number in attempts to tame them. Jones declared that when too greatly enraged, a buffalo seemed able to die of its own volition. It would stiffen its limbs, and in a moment or two, fall dead. Miller would not listen to warning, and said that he would have a driving team if he used up every buffalo on his ranch.

PUT BOTH TO A WAGON.

Another buffalo was roped, and the two were fastened by their heads securely to a stout corral. There was much bellowing and pawing of dirt, as the buffalo were harnessed. Bridles were slipped over their heads, and harness thrown from a safe distance onto their backs. The tongue of a heavy freight wagon was shoved between them and fixed into the neckyoke. The traces were fastened to the singletrees with a long hooked iron rod. A lariat was fastened around the horns of each buffalo, and held by mounted cowboys, to prevent a general smashup in a stampede.

Once securely harnessed, the buffaloes were turned loose. They broke, mad and bellowing for the open prairie, the wagon filled with reckless cowboys, who fired their pistols to increase the speed of the lumbering team. The buffaloes tried repeatedly to turn upon each other and fight, but were held apart by the mounted cowboys. As the buffaloes grew wearied, their sped decreased, but their rage grew more furious. Finally, they balked, and trouble began in earnest. The larger bull dropped to his knee, with his forehead in the dust. Prodding did not move him. Then he rolled over on his side and glared with red eyes at his tormentors. The other bull turned sidewise and tried to break loose from his harness. A cowboy attempted to unfasten the traces. The bull charged, cornering the cowboy between the wagon tongue and the wagon box. With an ugly toss of his head, the bull grazed the cowboy's ribs with a sharp horn, and the cowboy fell backwards across the tongue and rolled over the other buffalo to the ground. An inch nearer, and the buffalo might have killed him.

Remembering the experience of "Buffalo" Jones, the prostrate buffalo was unhitched, "tailed" to his feet and led toward the corral. When near the corral the buffalo lowered its head and charged with its full strength against a heavy corral post. The shock was terrific and blood burst from the animal's nostrils. Three times the buffalo charged like a battering ram before the cowboys could tighten their ropes.

The animal was worth easily $500 and Miller decided to confine it in a box stall in the ranch stable till its anger had cooled. When the buffalo was drawn with ropes into the stall it fastened both horns under the feed box, stiffened its legs in a desperate attempt to tear loose the timbers, and remained in this attitude for possibly ten seconds. Then it relaxed as if struck in a vital spot, fell to the ground and was dead with scarcely a struggle.

"I'll have a buffalo team if I have to buy every buffalo in the country," said Miller. "I'll bet they can be trained to drive, just the same as a steer or a horse. The trouble is we are not on to the curves of buffalo 'busting,' but we'll learn."

Next day the other bull was roped again and hitched to a buggy. The Ponca Indians had heard of what was going on and came in numbers to see the fun. In the days when the plains were covered with buffaloes no Ponca ever tried to tame one, and they shook their heads and chattered among themselves, believing that Miller was attempting the impossible. By careful handling, to avoid angering the buffalo too greatly, he was driven short distances. An Indian climbed into the buggy with Miller, and other Ponca men and women slapped their sides and laughed at the sight. This buffalo survived the drive, but left Miller uncertain as to whether or not, without spending a small fortune, he will be able to drive a buffalo team along the highways of Oklahoma next summer. In a letter to Miller, Charles Goodnight said that he believed it possible to tame a buffalo to drive, if one with the right temperament can be found, but the losses in experiment would be too great to make the undertaking profitable.

AN EDITOR'S PRAYER FOR TODAY.

Above all, that I may not be a coward: That I may have courage—courage to be unmoved by the uncertainties of life, and without dread of loss, whether of friends, of health or of fortune. That I may come with a firm and tranquil mind to the work of this day, fearing nothing—ready to meet bravely failure or deprivation.

That I may bring to the day's efforts good humor and a cheerful regard for all with whom I may come into contact. That I may not judge others hastily or with bitterness.

That I may not be grasping, but content with a fair share of this world's goods, willing to let others have theirs. That I may be diligent in the performance of duties and cheerful in manner. That I may be earnest in pursuit of the right.

That I may stand with open mind ready to receive the truth in small affairs and in large—whether in learning new and better methods, or in receiving that philosophy necessary to a brave, tranquil, well poised, well-harmonized life.—John Brisben Walker.

EDITORIAL NOTES AND POINTS

BY BENJAMIN B. HERBERT, CHICAGO, ILL.

THE Mansfield, Ohio, *Daily News,* recently published a certificate of examination of the Advertisers' Bureau of Circulation Examinations, showing the proved circulation of the *News* to have been 4,360 daily, during the year past. Few dailies in any city of the size of Mansfield can make so satisfactory a showing, but then Past President Cappellar and associates have gained a national reputation for doing things and keeping expectation and interest on tiptoe. They are in living, daily sympathy with the people, inaugurators and leaders in enterprises for their entertainment or benefit.

The "Oil Edition" of the Paoli, Kansas, *Record* showed the enterprise and the wonderful wealth of that region in petroleum. Kansas evidently has something worth fighting to keep for the benefit of her own citizens.

The Milford, Ill., *Herald* office burned out and the editor, in referring to the loss, said, with pathos and still with the genuine optimism and hopefulness of a true newspaper man:

After one becomes associated with objects for years, even though they be inanimate, they become a part of his very existence. To labor twenty years or more to accumulate these things and have them swept from you within an hour's time seems hard. Money will replace a part of these things, but time alone will only tell how highly prized many of them were to us. As the smoke clears away and we once again begin to get our bearings we find we have many things for which to be thankful. We have *The Herald* and its past good record. We have our health, we have a strong mind and willing hands and the most loyal friends that God has put breath into. They not only come single but in pairs, by threes, yea, even by the score and not only offer their sympathy but their assistance. If we had nothing left from our ruins the assurance of these friends that our efforts have been so highly appreciated would be sufficient to know that we have not lived and labored in vain.

The office was insured for only about one-third of its value, but there was no thought of giving up the publication. Other, nearby, newspapers came promptly to the aid of their brother publisher and not an issue was missed. Since the fire the *Herald* has bought the Milford *Leader,* its only rival, so that what seemed a disaster may prove a gain, as it was felt by the business men that there was not room or need for two papers. It is sometimes said that there can never be too much of a good thing, but there can be too many newspapers where there is not the means for their suitable support. One good, representative newspaper is better for a community than two poor publications. Trusts may be hurtful, but a combination of newspapers is frequently wise, and beneficial to all concerned. There is great unwisdom in supposing that a village or a city can or will welcome and give support to all the papers that may be started, and a division of what can be bestowed means starvation to each and a final survival of the stronger; still, men who ought to know better will rush into an attempt to establish a new publication where the field is already well filled or overcrowded, with the result that more money in proportion to the amounts invested is sunk in newspaper publishing than in any other branch of business.

The Brooklyn *Eagle* serves the public in many ways. One way is through an Information Bureau, and another way is through greeting new settlers in the city with a kindly-worded letter of welcome and proffered service, then by a personal call upon the lady of the newly-arrived family by a lady representative of the paper with such information and kindly proffer of services as are needed by the newcomer to the community. While making itself useful outside of the paper, in scores of ways to individuals and the general public, it does not neglect its own employes, but affords not only reading room and library for them, but instruction in newspaper work and by a course of lectures. Recently, as one lecture in a course pertaining to the calling, the famed advertising expert, Manly L. Gillam, delivered an address before the *Eagle's* advertising employes in the "Information Bureau." Mr. Gillam, who is now the business adviser of the New York *Herald,* talked on:

"Some of the First Principles and Necessary Qualifications in a Young Man to Make a Successful Canvasser—Style, Appearance, Habits, etc."

Mr. Gillam said he would relate some of his personal experiences and try to draw from them some lesson that might inspire the young men, not necessarily to do more careful work, but to make them feel that any work is honorable and that the better it is done the better it would be to the young men themselves and to their employers.

"Style, appearance, habits, etc.," repeated Mr. Gillam. "To my mind, the etcetera is the principal part of it. Style is something; appearance is something, but there is a great deal more than style and appearance. I believe that a deeper and broader principle is earnestness, for I believe that the man or woman who succeeds best is the one who is earnest in all that he or she may do. The man who watches for the bell to ring, who counts the hours and waits for pay-day to come is not the man who succeeds."

H. F. Cochrane, editor of the Hartford, Michigan, *Day Spring,* died at his home in that city on February 23d. He was born April 17, 1836, at Mathuen, Mass., and was a graduate of Union College, Schenectady, N. Y. The ministerial profession was his chosen calling but bronchial troubles rendered a change necessary and, in 1861, he became assistant city editor of the Philadelphia *Evening Journal.* In 1873 he founded the Mt. Pleasant, Pa., *Journal* and afterwards purchased and published the Dowington, Pa., *Independent.* In 1875 he moved to Petersburg, Ill., and assumed control of the Menard County *Times.* He later followed newspaper work in Detroit and Ypsilanti, Michigan. In 1898 he assumed control of the *Day Spring* and was associated with one of his sons in the editing and pub-

lishing of that paper at the time of his death. He died from chronic bronchial trouble, from which he had suffered for over forty years, the disease having assumed, at last, an aggravated form. He stood high in his state as a writer and it is said of him:

As a writer Mr. Cochrane's work was always characterized by the graphic beauty of the language, justness and vigor of the thought, pathos of the expression, and loftiness of the sentiment displayed—qualities which always gave to his publications a marked individuality.

In private life he won the love and confidence of those who knew him best, and the respect and esteem of all. No one could appreciate his geniality, his thoroughly manly character, his unwearied industry, his persistent energy in the struggles of life without honoring and esteeming him.

These are the high and worthy endowments of a true editor, whose life work is to serve his fellowmen in a very broad and useful field. Beauty of language, justness and vigor of thought, feeling or sympathy in expression and lofty ideals or sentiment are the essential qualifications of every successful, worthy newspaper editor.

Bartham Lewis says, in *Business Men's Magazine:*

"A man should be ashamed to put his name to an advertisement that he would not be willing to read before a mixed assemblage of his peers, as an example of what he is capable of thinking and capable of writing."

How about printing an advertisement in one's paper, that goes into the best families, an advertisement that he would be ashamed to read to any one?

No other man is more wisely anxious, even from the standpoint of business wisdom, to give every one a "square deal" than is the editor or publisher of a newspaper. It pays, also, ever to give a customer "a square deal" in the printing office.

Write yourself, your whole heart, soul and life, into your newspaper but yet be sure that there is nothing in that self of which to be ashamed. A newspaper must have individuality and character and it is the responsible editor's brain and heart that gives character as well in the news as in the editorial columns.

Past President P. V. Collins some time since purchased for the P. V. Collins Publishing Co. *The Home Magazine* with the name, goodwill and other franchises, and his company has since conducted and published the same. Finding that parties in Pittsburg, Pa., proposed issuing a publication under the same name he immediately informed these parties that this would be an infringment of property rights in the name and goodwill of his paper and should they persist in their design that suit would be brought. The Pittsburg parties disregarded the warning and issued the magazine. Mr. Collins at once commenced an action in the U. S. Court at Pittsburg and an injunction was granted that will be made permanent. In commenting on the decision in the *Northwestern Agriculturist,* Editor Collins justly says:

There is no more reason for taking a publication's title, by which it has been known for years, than there is for stealing a horse or any other valuable property. It requires thousands of dollars of loss or investment in "good will" before any new publication begins to make a profit. Our predecessors swore that the name, "The Home Magazine" represents an investment of $200,000 in building up the business to its present profitable basis, and it certainly behooves the present owners to defend it from infringement, and it will be the policy of the P. V. Collins Publishing Co. to so protect the title at all hazards. There will be no more issues of "The Home Magazine" in Pittsburg.

If it is asked with regard to a successful publication, "What is in a name?" it may be answered that there are very many thousands of dollars in a name—thousands of dollars of actual expenditure besides years of patient toil and waiting. A publication must grow, like a great oak; it must have care and watching over; cultivation, watering and pruning like a tree of the orchard that is to bear choice fruit. After the tree has been brought to perfection, no one has a right to steal it, or its fruit, or the particular name by which the new tree and its new and valuable variety of fruit is known. A name may be copyrighted but whether copyrighted or not, courts have always held that there is a property right in a name that has been adopted, exclusively used and made valuable. No one can go into a city, county or state and steal the name of another established paper.

Mr. Robert Mitchell Floyd of Boston, Mass., is doing a valuable work with his paper, the *Trade Press List,* devoted to trade papers. The *Journalist* of New York,— Mr. Foreman's paper, now in its thirty-sixth volume, had, February 4th, an interesting article on Mr. Floyd and his work, contributed by Mr. Aaron C. Dowse. The article, which is illustrated with portrait of Mr. and Mrs. Floyd, justly says:

Within the last year or two the conscientious active work that has been done by Robert Mitchell Floyd in championing the cause of the trade press of the world has brought him honors and recognition in every conceivable way and to-day his *Trade Press List* is the recognized organ of that class of journalism that for so long was not equitably recognized by the general press. The work that has been done by Editor Floyd is far-reaching, echoes of it coming from the Orient, the Indies, the Latin countries, Europe and the vast United States.

Mrs. Floyd is herself a most clever and acceptable writer of poetry and fiction, and Mr. Floyd is a member of an ever-ready worker, a most useful and active member of and in many editorial and other associations and clubs.

CONNECTICUT BANQUET SPEECHES.

William Green, of New York, chairman of the executive committee of the United Typothetae of America, said during his discourse: "I think the labor union has been a necessary addition to our business. If the proprietors would organize the same as the men do and do the right thing, I think there would be no trouble. We haven't always agreed with them, but in 99 cases out of 100 we have reached an agreement with the union. There would be less trouble if the members of the typothetae would attend the meetings more regularly and if you would settle all difficulties through your body with the unions you would find less trouble."

John Clyde Oswald, of New York, of the Oswald Publishing Company, was the next speaker. He related experience in the management of a country newspaper under difficulties. He told several amusing incidents in his career as an editor and publisher.

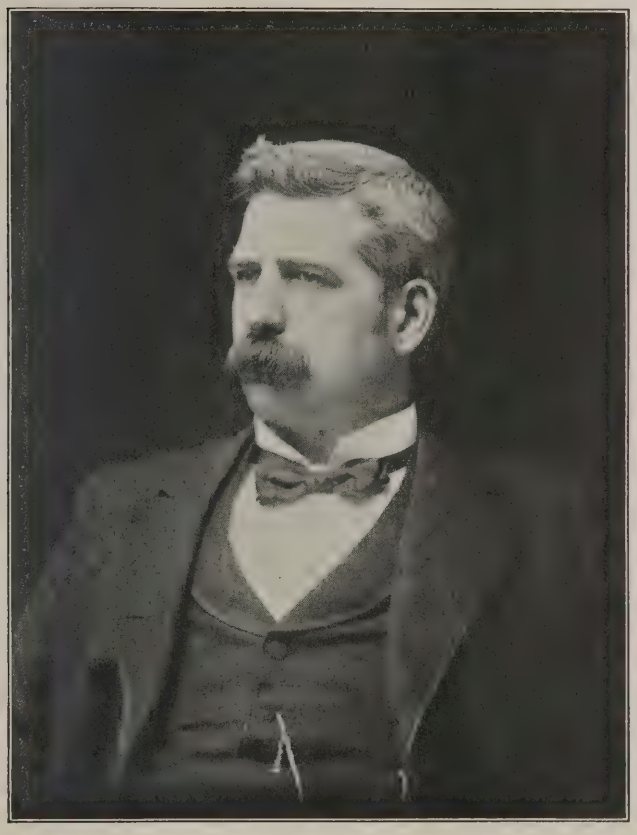
John MacIntyre, secretary of the U. T. A., said in part: "To the members of the organization there is much to be learned by attending the regular meetings. The attitude of the organization has been largely misunderstood. The employer is frequently confronted with demands absolutely unjust. I believe the national officers of your organization are doing more thinking today than the officers of any other organization. I handed to the president of your organization a most practical agreement for employer and employe, which I think is one of the best if not the best agreements ever drawn up."

The next speaker introduced was Prof. Henry W. Farnam, of Yale University. He said: "The printers seem to form a union with the university student. This organization distinctly recognizes its neighbors and aims to make its employes good citizens. This object, I believe, is of great importance to the organization."

The New President of the Minnesota Editorial Association.

The members of the Minnesota Editorial Association conferred a deserved honor, and honored themselves as well, in electing, at their recent session, William Cowan Whiteman as their president for the ensuing year. He was born in Cincinnati, Ohio, Aug. 22, 1855, but was a young pioneer in Minnesota, moving to that State with his father, Dr. Russell Whiteman, in 1857. The family settled in Meeker county and were refugees from the Indians in 1862. The family lived on an island in Cedar Lake, Meeker county, for six weeks—all their neighbors having been massacred. Mrs. M. B. Victor, the novelist, wrote a thrilling tale entitled, "Tragic Fate of Dr. Whiteman and Family."

Mr. W. C. Whiteman became the editor of the Anoka *Sun and Republican* in 1876, at 21 years of age, and was the youngest member of the State Editorial Association in that year. In



WILLIAM COWAN WHITEMAN

1879 he established the *Herald* at Herman, and later engaged in daily journalism in Stillwater as city editor of the *Daily Sun.* In 1881 he became news editor of the Minneapolis *Journal,* and later managing editor of that paper. When the somewhat famous Blethen-Haskell dynasty gained control of the *Journal,* Mr. Whiteman went with Maj. Geo. K. Shaw, to St. Paul, and when Mr. Shaw purchased the St. Paul *Dispatch* became its managing editor. Later he became night editor of the St. Paul *Globe,* when failing health compelled him to abandon daily journalism. He then purchased the Big Stone County Herald at Ortonville, Minnesota. This was in 1886, and the next year bought the Ortonville North Star, giving the consolidated paper the name Ortonville *Herald Star,* which he has published continuously ever since. Mr. Whiteman has been an active member of the Minnesota Editorial Association for more than twenty-six years and is deeply interested in the welfare and success of Minnesota publishers.

The editor of the NATIONAL PRINTER-JOURNALIST had the pleasure of close acquaintance with now President Whiteman, in the early eighties, and of occupying an office with him for a time in St. Paul, while he was looking after the St. Paul department of the Minneapolis *Journal.* The closest association strengthened a well-founded respect for the man. He is upright, honorable and earnest, a clean, industrious, high-minded newspaper man. He is rather modest and retiring in disposition, but is pure gold all through—one of nature's noblemen, and he will make a worthy and useful executive and leave the position at the close of his term with increased troops of friends among the newspaper makers of the North Star State. The more he is known the better he is liked.

The Wisconsin Press Association.

The Wisconsin State Press Association is the oldest organization of the kind in the United States but has only gained vigor by age. Its recent meeting in Madison, notwithstanding the bitter cold weather prevailing at the time, was one of the most successful in its history and the editor of this paper greatly regrets that, owing to numerous other engagements, he was prevented from accepting the invitation of National Committeeman, H. M. Youmans, to be present on the occasion. Mr. Youmans, in his paper, the Waukesha *Freeman,* gives the following interesting outline of the proceedings:

Editors to the number of a hundred or more, many accompanied by their wives and daughters, attended the annual business meeting of the Wisconsin Press Associaton. The president, Frank E. Noyes, of Marinette, and Fred T. Yates, secretary, of Washburn, had arranged an excellent program, and this coupled with the hospitality of the citizens of Madison, who form the Forty Thousand Club and supplemented the convention proceedings with a banquet given in honor of the visiting editors and legislators, formed a very agreeable and pleasing whole. In fact there has seldom been a winter meeting of the association that was more productive of pleasure and profit to the members than this one. The papers and discussions at the several sessions were noteworthy for their interest and in several instances were marked for ability and real value to publishers and editors. For instance, President Van Hise of the State University in an address designed to show the relations of the state press to the State University, gave some very pleasing parallels and contributed a great deal of valuable information respecting the past accomplishments, present work and prospective development of Wisconsin's great university.

Without invidious distinctions also the paper of C. S. Cross of Stoughton, might be mentioned as one of the brightest and best ever read before the association. Its title was "Collecting Subscriptions," and under this title of commonplace sound, he brought out points unique and bristling with humor and sense in just the proper proportions to make his paper a gem among its kind.

Col. J. A. Watrous read a remarkably interesting paper on the Growth and Possibilities of Journalism in the Philippines. Other good papers were presented by Messrs. M. P. Rindlaub, of Platteville; F. E. Andrews, of Bloomer; J. B. Bloom, of Neenah; and F. W. Coon, of Edgerton.

THE CITIZENS' BANQUET.

The banquet given the editors and legislators was a fine affair. It was held in the university gymnasium building; over seven hundred persons participated. Good management characterized every feature of the affair and the Forty Thousand Club has the gratitude of all. Ex-Senator W. F. Vilas

served as toastmaster and the speakers were Gov. La Follette, President C. R. Van Hise, ex-Gov. Hoard, Prof. Freeman, J. G. Donnelly and Senator Whitehead.

GOV. AND MRS. LA FOLLETTE RECEIVE.

On Tuesday evening preceding the convention Gov. and Mrs. La Follette gave a reception at which many of the newspaper representatives took the occasion to pay their respects.

THE UNIVERSITY VISIT.

Thursday afternoon most of the visiting editors and their wives and daughters were shown about the university grounds and buildings, and were caused to more fully appreciate this great educational institution than ever before. President Van Hise is doing some very effective work in securing a closer relation between the university and the press of Wisconsin than has heretofore prevailed, and he made a distinct hit on the occasion of the convention last week.

THE OFFICERS ELECTED.

The following officers were elected for the ensuing year:

Judge Emil Baensch of Manitowoc, former lieutenant governor, was elected president to succeed Frank E. Noyes, of Marinette, Fred T. Yates, of Washburn and Mrs. M. P. Rindlaub, of Platteville were respectively re-elected secretary and treasurer. The vice-presidents elected were: First congressional district, Edward Malone, Waterford; Second, C. L. Hubbs, Lake Mills; Third, O. G. Munson, Viroqua; Fourth, M. C. Douglas, Milwaukee; Fifth, C. W Fraser, Menomonee Falls; Sixth, H. W. Bolens, Port Washington; Seventh, George A. Markham, Independence; Eighth, C. H. Slocum, Omro; Ninth, H. W. Meyer, Appleton; Tenth, F. L. Berner, Antigo; Eleventh, Charles Lowater, Spring Valley. The following executive committee was chosen: R. W. Cheever, Clinton; O. G. Munson, Viroqua; O. S. Roessler, Jefferson; F. E. Andrews, Bloomer.

The Wisconsin Press Association is the oldest in the United States and is among the best.

JOHN M. S. HUNTER, Deceased.

OLD TOWN, MAINE, March 20, 1905.

Bro. B. B. Herbert,
National Printer-Journalist.

DEAR SIR:—It is with genuine sorrow and regret that I am sending you a copy of the Kennebec *Journal,* of Augusta, Maine, containing the notice of the death of John M. S. Hunter, of Farmington, Maine, *Chronicle,* who has been a delegate to the National Editorial Association conventions consecutively since the 1893 meeting in Chicago, and was always present with his wife and daughter, Miss Mabel E. Hunter, and would probably have gone to Oklahoma. He always wrote extended articles of his trips, and no man in the newspaper business in Maine was better known or more universally respected by the fraternity, friends, neighbors and subscribers. I think you knew him sufficiently well to supplement the notice I am sending with a worthy tribute for the PRINTER-JOURNALIST.

It was Mr. Hunter who called me to go to the assistance of your son when near drowning while in swimming in the lake at Council Bluffs, Iowa.

The funeral of Mr. Hunter is to be held Wednesday p. m., March 22. Hastily,

Yours truly,
C. W. ROBBINS.

The above letter reached the office of the NATIONAL PRINTER-JOURNALIST just as the last forms of the April issue were being prepared for the press. Mr. Hunter was one among the most highly esteemed members of the National Editorial Association and we esteemed him very highly as a man, an editor and a friend. He was of noble mind and even temperment, true, tried and reliable. He always prized, very highly, his associates in the Association conventions, the proceedings and and the excursions and the companionship of his fellow workers, in the calling, that these afforded. Time is too short now to prepare a suitable tribute for this issue, but the report of the Necrology Committee of the Association, to be made at the approaching convention in Guthrie, will present a proper memorial to the deceased that will appear in full in these pages. The article referred to in Mr. Robbins' letter, as appearing in the Kennebeck *Journal,* gives the following brief account of Mr. Hunter's active and useful life and his much mourned death:

John Minot Soule Hunter, proprietor of the Farmington *Chronicle,* and one of the best known men in Franklin county, died at his home in Farmington, Saturday, March 18, from heart trouble, with which he had been greatly troubled for a number of years. The malady had grown upon him until all of his friends as well as Mr. Hunter himself was fully prepared for the end. Mr. Hunter was born in Farmington, Dec. 14, 1846. He secured his education in the common schools of the town and in the old Farmington Academy.

While a school boy he began his newspaper education by being a carrier of the Farmington *Chronicle,* under L. N. Prescott, during the years 1858, '59 and '60. In September, 1867, he again entered the *Chronicle* office, where he finished learning the trade of a printer which he had partially picked up during his carrier boy days.

In 1869 he went to Fort Erie, Ont., with Mr. A. C. Phillips, the then proprietor of the *Chronicle,* who had been appointed consul, to act as his deputy. On a visit at home, two years later, he received an advantageous offer to become foreman in the office of the *Chronicle* again and resigned his consular position. Mr. Hunter remained as foreman during the term of service of Major Davis, later years as editor and then stayed with Capt. Keyes until 1877. For a number of years he had acted as correspondent for the Boston *Journal* and the Portland *Press,* and in June, 1877, he was called to Portland and given the position of foreman of the *Press* office, being promoted to the position of telegraph editor in 1884. Two years later he was called back to Farmington to assume the management of the *Chronicle.*

Mr. Hunter had scarcely become settled when the great fire of Farmington swept away his entire plant and his home as well, but he soon recovered and builded even better than before. In 1889 Mr. Hunter bought out Capt. Keyes' interests in the paper and from that time until his death, he was the sole proprietor of the prosperous paper. Mr. Hunter had been for some years the Farmington correspondent of the Associated Press.

He was married Dec. 14, 1874, to Eldora Nichols, daughter of Mr. and Mrs. Walter Nichols, formerly of North Searsport.

Mr. Hunter was a prominent member of the Masonic fraternity, being a member of Maine lodge, No. 20; Franklin Royal Arch Chapter; Jeptha Council, R. and S. M., and Pilgrim Commandery, all of Farmington; of the Scottish Rite bodies in Lewiston, and the Maine Consistory. He had been district deputy in the 15th district, but from ill-health he resigned only a short time ago. Mr. Hunter was also a member of Kora Temple, N. O. M. S., of Bath.

Mr. Hunter was a member of the board of trustees of the Maine Soldiers' Orphans home at Bath and was several times a secretary of the Republican State conventions. Mr. Hunter was a prominent member of the Maine Press Association and was an ex-president of that body, and nowhere will he be more sincerely mourned than in the ranks of that body.

In harmony with the idea frequently enforced in these pages, of keeping up with the interests of the people as to the events, days and anniversaries, we notice that *The Enterprise,* of Big Springs, Texas, run its head and *The Advocate,* of Laurel, Kansas, ran its entire edition in green in honor of St. Patrick's day. These, by the way, are two excellently-printed, up-to-date papers. Most of our newspapers had something appropriate the day of the great Irish Saint, and it was a compliment to the impression that the American citizens of Irish birth or ancestry have made upon all the dwellers in this land of the free. We know of no other saint or patriot of any other land whose day is so recognized and honored in America.

The National Editorial Association, Itinerary and Program.

TRIP THROUGH OKLAHOMA—ENTERTAINMENT AT 101 RANCH—EXCURSION TO HOUSTON, SAN ANTONIO AND EL PASO, TEXAS, LOS ANGELES AND SAN FRANCISCO, CAL., AND PORTLAND, ORE., WITH SIDE TRIPS AND ENTERTAINMENTS ON THE WAY.

JOHNSTOWN, OHIO, March 20, 1905.

B. B. Herbert, Chicago, Ill.

DEAR MR. HERBERT:—I am glad to comply with your request for information relating to the approaching Guthrie convention, for the April number of the NATIONAL PRINTER-JOURNALIST, but regret that all of the details have not yet been definitely determined or arranged.

Permit me first, however, to inform the officers and delegates that satisfactory arrangements have been made with the transportation companies for a side trip to California and Portland following the convention. This, I am quite sure, will be pleasing information to the many delegates anxious for a trip to the coast.

It seems to me at this time that it will be advisable to make the convention days one day later than was determined at the Indianapolis meeting, or June 7, 8 and 9, because of the fact that the 101 Ranch entertainment, it is found, cannot be given on any other day than June 11th. I have referred this change in date to the President and others and same will be fully determined and correct dates given in "little book." Assuming that the dates will be changed, we will rendezvous in St. Louis Tuesday, June 6th, leaving that p. m. for Guthrie, arriving there the a. m. of the 7th; that afternoon and evening will be devoted to the preliminary proceedings, reception, etc., leaving the 7th and 8th exclusively for the program and business of the convention. The 10th will be given up to excursion purposes in the territory and the 11th spent at the famous 101 Ranch where great preparations are being made for our amusement and entertainment. This will far surpass the day passed at Calgary. The party will leave that night for Texas. Our good Texas brethren are anxious to again show us true Texas hospitality. Stops will be made at Dallas, Houston, San Antonio and El Paso, where our pleasure will be well looked after. Those of the party who do not wish to take the trip to California may take in the Texas excursion and return to their homes, while those who wish to visit the coast will continue on to Los Angeles. The California itinerary is not yet fully made up but will include stops at numerous noted resorts in southern California. The trip to San Francisco will be made via the new Coast Line of the Southern Pacific. The California Promotion Committee is looking well after our reception and entertainment. At San Francisco the party will quite likely be divided; those who wish may go to Portland by the Shasta route, or you can make a quick run home by the Santa Fe, or run to Salt Lake City and make stops at Denver and other Colorado points. The Portland contingent will also return by Salt Lake City and the Colorado route. The number of days required to make the trip is not definitely figured out as yet, but it will doubtless take about thirty days for those who go to Portland. If you cut out the Portland trip it will be shortened five or six days. These arrangements can not be finally made until the pleasure of the party is more fully known. From these several options certainly a trip can be arranged to please everybody. It is desired that all at least take the run to Texas. My arrangements for the California trip is for a party not exceeding 300 persons. It, therefore, would be well for the delegates to make an early decision and make your reservations with the Corresponding Secretary before convention time. Our good friends, Greer and Prouty, are bending every effort to make the convention a success and all Oklahoma will combine to send the delegation away with a good impression of the people and place. Of this I have no doubt.

The "little book" will be mailed about April 1st, or as soon thereafter as possible. It requires time to get satisfactory arrangements perfected and delegates will please be patient. Credentials will not be mailed the delegates until Treasurer Steel certifies that the per capita has been paid. I will be glad to promptly answer all inquiries made by the delegates and would urge the Executive Committeemen to put forth their best endeavors to send a full delegation and the early remittance of the per capita, to the end that the 20th convention of the N. E. A. may be what all loyal members ardently desire—a success.

Very sincerely,

WILLIAM A. ASHBROOK,
Cor. Secy., N. E. A.

PROGRAM 20TH ANNUAL CONVENTION NATIONAL EDITORIAL ASSOCIATION, GUTHRIE,

Wednesday, June 7th, 8 P. M.—Music; Addresses of Welcome; Response to Addresses of Welcome; Music and Readings.

Thursday, June 8th, 9 A. M.—Convention called to order; President's Address.

Announcement of Committees: Ways and Means, Necrology, Constitution and By-Laws, Postal Laws, Officers' Reports, Resolutions and Credentials, Treasurer's Books.

Address by Capt. Richmond Pearson Hobson.

Music and Recitations.

Paper by Col. John Dymond of Louisiana *Planter and Sugar Manufacturer;* "Some Printing House Economics." Discussions following.

"U. S. Postal Laws and Rules," Hon. H. A. Castle, ex-Auditor U. S. Post Office, Washington, D. C.

"The Science of Modern Business Building," A. F. Sheldon, Pres. School Scientific Salesmen.

Question Box.—Questions Received. Adjournment for dinner.

3 P. M.—"Libel and Privilege," by Mr. D. H. Butler of the *Legal News*, Lincoln, Neb.

"Woman in Journalism," by Miss Clay of the *Democrat,* Huntsville, Ala.

Paper by C. E. Wood, of Colorado Springs, Colo., "Observations by the Way."

"How to Secure and Maintain Circulation," by Mr. H. B. Varner of the *Dispatch,* Lexington, N. C.

8 P. M.—Memorial Exercises and Annual Poem.

Friday, June 9th, 9 A. M.—Report of Credential Committee and all other committees; Resolutions, Discussions.

Address by Prof. J. W. Carr, Superintendent Schools, Anderson, Ind., "The Public Schools and the Public Press."

Paper by Mr. J. H. Potts, of the Troy *Times,* Troy, N. Y., "The Social Service of the Press."

Paper by Mr. H. R. Gilstrap of Chandler, O. T., "The New State and Its Newspapers." Recess for dinner.

3 P. M.—"Muzzles in Pennsylvania," by Mr. J. S. Benn, of the Philadelphia *North American.*

Reports of Committees.

Question Box.—Questions Answered and Discussed.

Address by Wm. Allen White.

8 P. M.—Final Proceedings; Selection of next place of meeting; election of officers; announcements as to itinerary and entertainments, resolutions of thanks, etc., etc.

Adjournment.

QUESTION BOX.

Address Charles A. King, Beverly, Mass.

F. H. C., California. We have been troubled a great deal by the runs of our wooden racks wearing out and causing the end boxes of the cases to fill with dust. Have tried several things, such as lubricating oil, parafine and French chalk, but the slides continue to wear and the dust and oil make the matter worse. Do you know of any preparation which will harden the wood, or help us?

This is a common complaint, but there seems to be no remedy unless case manufacturers will make the runs of harder wood. Steel runs are a trifle more expensive, but they will not wear out and you can crowd the cases much closer. As for the dust filling the cases, a pair of bellows or bicycle pump will remedy this, and that is about the only way out of the difficulty.

F. H. T., Massachusetts. I have no question to ask, but wish to make a suggestion to manufacturers of cabinets that have cases which set on brackets and hang over the edge. I have had cases knocked off these brackets and it would seem that the bracket might have teeth where it comes against the front edge of the case. This would assist in holding the case and it would save accidents.

B. R. F., Missouri.

DEAR SIR:—Being a reader of the NATIONAL PRINTER-JOURNALIST, and noting the creation of the "Question-Box," I would like to ask for information regarding half-tone printing. Enclosed please find three prints from the same plate, run one after the other; one on coated book, one on super-calendered paper and one on cheap news. Why is it that the one on news paper appears the best? They were printed from the same make-ready, on 8 x 12 press, with best half-tone ink. The screen is about 120. I asked advice of other printers and some said that perhaps the cuts were made for cheap paper.

The pictures accompanying the letter show that the ink is good and the rollers all right, but the editor cannot agree with the writer that the cut on the cheap paper is the best. It looks that way at first, but a magnifying glass will show that it is not. If the cut had been rolled twice (and presumably the press has a throw-off) and considerably more ink carried, the cut on coated stock would have printed much better. News and book stock require less ink in printing half-tones than coated, and it would seem that there was a lack of ink. I wish B. R. F. would put this half-tone on the press again, with the best rollers, and gradually add all the ink he can without smutting. If he has any trouble about the paper not receiving all the ink or the coating peeling off he will find a panacea for that in the N. P.-J., a few months ago, or he can add a little creosote to the ink which will make it less liable to offset, although it will be necessary to run slip sheets.

B. D., Mass.

DEAR SIR:—We are at times almost driven crazy with electricity in our paper. It bothers the platen press feeders but on our cylinder press it is sometimes almost impossible to separate the sheets, especially on the second side and the fly will not lay them even the best we can do. Is there a remedy?

I verily believe that if I knew of a sure remedy for electricity, which could be readily demonstrated, I could get rich. There are plenty of remedies, but they are expensive—or they fail to work. If the press-room is kept at an even temperature day and night there is little trouble, but in many places the fire dies down at night and everything grows cold and when it thaws out there is trouble. Type founders sell a preparation which seems to work pretty well, but it smells badly, and there is danger of offset if you print one side immediately after the first printing. Some get good results by filling the room with live steam and by sprinkling the floor. A damp atmosphere is desirable. Hang a lot of wet cloths on a line under the feedboard, between the cylinder and fly. In fact, do almost anything and you may hit upon something that will work all right. Electricians fix up an elaborate contrivance of wires, but I have seen just as good results from two or three wires hung down from the press and just touch a glass of water. This is something concerning which we should be glad to have the experience of others. Please send your experiences, and experiments, gentlemen, and get those of others in return.

A PAPER FOR CARRIER BOYS.

The *News Tribune* of Duluth, Minn., publishes a little monthly paper, called the *News Tribune Junior*. In the following paragraphs, which contain many valuable business suggestions, are given the objects of the publication by Edward Armstrong, Superintendent of Circulation:

"For some time we have felt the need of having some way of keeping in touch with our carriers; some means of communication that would regularly present to them the various ways by which their list of subscribers can be kept growing. This is the one thing in which all carriers are most interested and the *News Tribune Junior* is established for that purpose.

The *Junior* will be a monthly paper of PUSH for the benefit of the *News Tribune* carriers; it will be issued monthly and we hope to make it such a good paper that it will be looked forward to by every carrier; a paper that will be a substantial help to all the *News Tribune* hustlers.

In it we will from time to time present the best ways, as we see them, for increasing each carrier's business, and every carrier is invited to send his opinions to the *Junior*. Co-operation is one of the greatest helps in any business and if you publish in the *News Tribune Junior* the result of your work and how you attained success, other carriers will do the same and thus everyone will have the benefit of each other's experience.

Don't be afraid to contribute something to the *Junior's* columns, no matter how small, it will be welcome and will lead to bigger things for you.

With the 1st of February we are starting a contest for cash prizes; this is in order to reward those who show up the best in the way of attending to their work and getting new subscribers. On another page will be found the details. This is only one of the many inducements we expect to offer our carriers for hustling.

"We hope to make the *News Tribune Junior* the foundation for a feeling of "get-together and hustle" that will result in increased business for every carrier. We want you to succeed; your success is our success and we are here to help you win; therefore don't fail to holler whenever you have some idea that you think will boom things. We'll do the rest.

Pungency, clear, plain every-day American speech, with brevity, constitute good newspaper writing for all American newspapers.

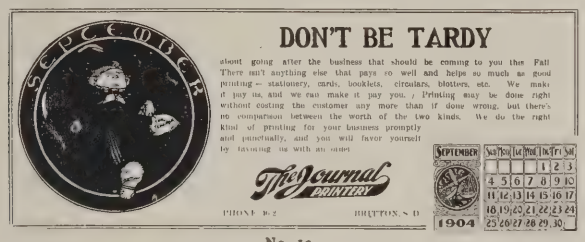
With a pleasant note from H. B. Tysell, Britton, S. D., came the blotters reproduced as Nos. 1 a and b. They came in November last—but that they were not reviewed before is no sign that they were not appreciated. Each of the blotters has a variety of colors, arranged in harmony. The especial timeliness of these blotters at the times they were issued is a very pleasing feature in connection with monthly publications in the blotter line. The different whiting out of the two blotters furnish a study in good distribution of white. Particularly is



SEPTEMBER
DON'T BE TARDY
about going after the business that should be coming to you this Fall. There isn't anything else that pays so well and helps us much as good printing — stationery, cards, booklets, circulars, blotters, etc. We make it pay us, and we can make it pay you. Printing may be done right without costing the customer any more than if done wrong, but there's no comparison between the worth of the two kinds. We do the right kind of printing for your business promptly and punctually, and you will favor yourself by favoring us with an order.

this the case in regard to headings and the lines which follow. The influence of the sense of the illustrations upon the rule-work in 1b is commendable, showing that the compositor devoted thought to his work. A good nameplate has been found by many advertisers to be a particularly valuable advertising asset. This style of nameplate has been used considerably by advertisers other than printers, and is a clear-cut specimen of the kind. Send us some more of your once-a-month reminders, Mr. Tysell. Speaking from the viewpoint of typography in advertising, the small catalogue

you did for Buckler's departmental store is one of which no department store, or no advertising printer, need be ashamed.

I hope that C. R. Beran, of Denver, Colo., is finding that the striking advertising he is doing as regards "Beran: Some of His Work," is paying as all good advertising should. I have not seen a copy of this book, but some day when I am flush I mean to secure one, as some of the work which I have received from this clever advertising compositor indicates that it is all likely to be good. Two sheets, which, with the margins, measure 9x12 inches, are shown as No. 2 a and b. It would be hard to find two specimens so widely different in typography and illustration which yet bear such a distinct individuality. The sketchy pencil drawing, with its touch of wash, makes a superb cut in the original. The heading is in orange, and the balance in black. The harmony of the zinc-etched initial with the halftone—in fact, the harmony of each constituent part of the job—is worthy of especial study. And such harmony is likewise a feature of No. 2b. How well the white space sets off the figure—the Schœffer type—the panel! The margins of this job are as follows: Top, 1 inch; left-hand side (from panel), 4 inches; right-hand side, 3 inches; bottom, 2 1-2 inches. The abundance of white on the other job is not so effective—possibly the effect is somewhat lessened by the wide margins. No. 2a is on enameled stock; No. 2b is on

Harry A. Woodworth, Toronto, Canada.

DEAR MR. WOODWORTH:—Being a reader of the NATIONAL PRINTER-JOURNALIST, and much interested in your department, I thought you might like to look at a copy of our country product, *Soundview*. Will say in explanation that the "artist" is a boy just turned 16, and that this is the third number issued under his supervision after *but* 6 *days merely incidental instruction,* and that since that time he has not had a single suggestion from a printer personally—and previously thereto he had never seen a type at short range,

If you feel to notice his work I should like your candid comment and criticism, with a view to helping and encouraging the boy. I feel much pleased with his progress. He is an eternally-at-it student—as I write at 11 o'clock at night he is poring over a copy of the *Inland Printer* (having just finished the N. P.-J.). What do you think of him and his future?

Very cordially,

Olalla, Wash. L. E. RADER,
Publisher *Soundview*.

On some of Hal Marchbanks' advertising matter there used to appear the beatitude (which sounds as if written by one Elbert Hubbard): "Blessed is the man who has found his

Strength of Character in Printing
"The peculiar quality, or the sum of qualities, by which a person or thing is distinguished from others; the stamp impressed by nature, education or habit; that which a person or thing really is; nature; disposition." Webster.
The peculiar quality, or the sum of qualities is just as magnetic and influential in proper printing as in human nature. In this rush and roar of twentieth century commercialism it is essential to have some distinguished quality in order to obtain real recognition. Your literature may require an artistic, a refined, or professional appearance, or perhaps it calls for strong, bold effects—this feature of proper dress is always governed by the nature of your business. But whatever the case may be, we can clothe it in a characteristic individuality which will demand attention anywhere. We have all the latest modern facilities for producing business literature and a corps of skilled men who have world-wide reputations in their individual lines.

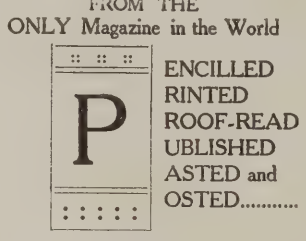
be "a cross between the *Philistine* and *Brann's Iconoclast.*" Such a magazine is vastly improved, of course, by its typographical arrangement. And that of *Soundview* is good. The magazine is supposed to be published among the evergreens by a band of Immortals known as the Society of Evergreens, who have an ubiquitous president known as the Boss Evergreen. The periodical is lovingly referred to by admirers as "the Little Green," and the Evergreens as "not so green." May I add my quota to this cheerful foolishness (or can anything cheerful be truly classed as foolishness?) by hoping that the publication is winning considerable of the Long Green? It has the earmarks of a success, anyway.

The design on the front cover is shown as No. a. This is in dark green and orange on an apple green. This design on the back cover-page has a quotation from Schopenhauer, handsomely bordered and initialed. The two designs likewise appear on the manila mailing wrapper—good idea for the



No. 3b.

enclosure of such a periodical. The appearance of the wrapper should alone convince the compositor that such a design as No. 3a requires very little margin at the right hand and bottom—to my mind, very little anywhere. The wide margins of the magazine cover give the design a decidedly bare and even disjointed appearance. Those cone ornaments of the Keystone

By EMMA E. RADER.
LIFE is only a matter of expression. To express is to manifest, to grow, to develop. What wonder then that there are so many and various phases of life—modes of expression. Politics, religion, philosophy, all are good in so far as they are a means to an end, each being a medium of expression for the ever activ life-forces of humanity. Lack of expression

Nos. 4a and b.

Type Foundry are much used in the magazine and on its stationery. And very appropriate they are, too. This (No. 3b) is the envelope corner design. This also forms part of the be-coned letterhead. The wording would be more correct if the word "of" were inserted after "evergreens."

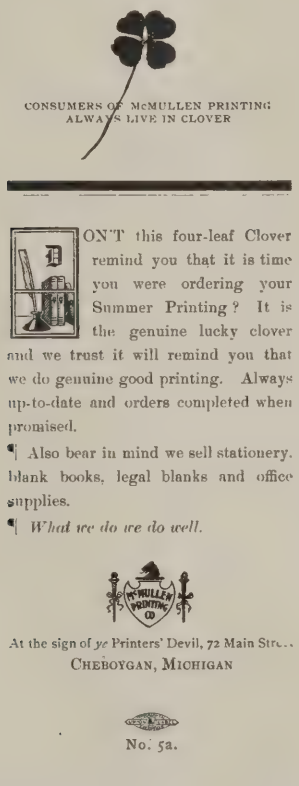
The ornamentation, headings and initials of the book are mostly in green. I give two examples (Nos. 4a and b) of the way in which the beginning of an article is handled by the young typographer. One is good, the other is not. In No. 4a the selection of floral ornaments is, of course, commendable, because of the subject, but surely there's something wrong about the ornamentation. I find it a very good thing, in testing a design, to cut little strips of blank paper of the color of the stock used, and place them over anything which you may suspect to be among "those things we ought not to have done." Try those dinky little ornaments at the side in that way. Is there not an improvement already? You see, they're not on the same scale, for one thing. With such ornaments, do the light rules add to the symphony of the design? It seems to me, anyway, that proper handling of more than one, say, of that particular large blossom ornament, is a mightily difficult thing. I remember another sixteen-year-old boy (who used to be a

frequent contributor, and whose cheery letters and promising work I miss now) who seemed to have a lot of difficulty with that very ornament.

Now, for some ornamentation of which Will Bradley need not be ashamed (and there's some of his of which I sometimes think such a real artist should be.)

Part of this (No. 4b) is the kind of ornamentation that is illustrative as well as ornamental. Here there is a delightfully humorous touch in the employment of the Kate Greenaway figures which are sold as ornaments by the type foundry as an appropriate accompaniment of the title. (By the way, Kate Greenway was well qualified to be an Evergreen.) The border and its contents, and the initials are green; the balance is black. Only part of the page is shown in both reproductions. The advertisements in the book are, for the most part, well composed in a style which suits a magazine of this size and shape.

A clever bit of advertising is the eight-page folder, "Soundview, Jr. Being supplementary and complementary (likewise just a little complimentary) to *Soundview.*" It



CONSUMERS OF McMULLEN PRINTING
ALWAYS LIVE IN CLOVER
DON'T this four-leaf Clover remind you that it is time you were ordering your Summer Printing? It is the genuine lucky clover and we trust it will remind you that we do genuine good printing. Always up-to-date and orders completed when promised.
¶ Also bear in mind we sell stationery, blank books, legal blanks and office supplies.

No. 5a.

is, I presume, merely meant to be used as an enclosure in the sending out of sample copies. Otherwise, its name might be confusing, as the term "Jr." has been applied to supplements of periodicals which were not meant merely for advertisements. For instance, the large young people's supplement to the Boston *Standard,* was entitled, *Standard Jr.* And then there has been the *Junior Munsey,* which was simply a younger *Munsey.* I don't know that Mr. Rader meant me to print his letter, as he may not care to have the boy know that he is pleased with his progress. But it seems to me a father's expressed approval is a big help to the right kind of a lad. It seems to me that the boy is all right, and his future assured.

Harry A. Woodworth, Toronto, Canada.

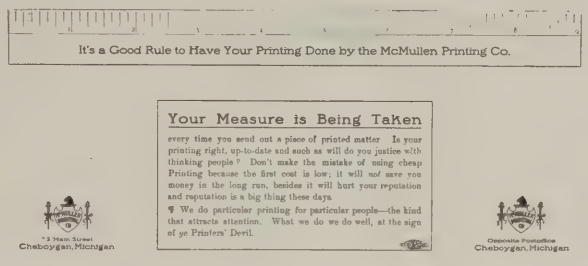
DEAR SIR:—Under separate cover have sent you a small parcel of my work, some good, others bad, but all there, for you, during your spare moments, to cast your critical eye over, with the expectation that you will *tell me* and the many thousands of readers of that most excellent trade journal, the N. P.-J., what you think of 'em.

That four-leaf clover is also enclosed. Hoping that it will bring you the best of luck, I remain,

Truly yours,

Cheboygan, Mich. ALBERT K. NESS.

Thank you, Mr. Ness, for the four-leaf clover for which I asked. I consider myself something of a naturalist, but I never had much luck in finding clovers with four leaves, though I am the possessor of genuine five-leaved, six-leaved, seven-leaved, eight-leaved, eleven-leaved and thirteen-leaved clovers, all of which were brought into my father's newspaper office by a woman who should certainly qualify as a member of the Clover Club. I don't think any of these are particularly lucky, but all the world and his wife know the virtues of the four-leaf variety. And the fact that they are not easily found makes the use of a real specimen of this pretty good-luck-bringer (No. 5a) a most appreciated adjunct of printed matter. The rule, the initial letter "D," the paragraph-marks and the nameplate are in orange; the balance is in green. "Don't"—how often this abbreviation is used in modern advertising



It's a Good Rule to Have Your Printing Done by the McMullen Printing Co.
Your Measure is Being Taken
every time you send out a piece of printed matter. Is your printing right, up-to-date and such as will do you justice with thinking people? Don't make the mistake of using cheap Printing because the first cost is low; it will not save you money in the long run, besides it will hurt your reputation and reputation is a big thing these days.
¶ We do particular printing for particular people—the kind that attracts attention. What we do we do well, at the sign of ye Printers' Devil.

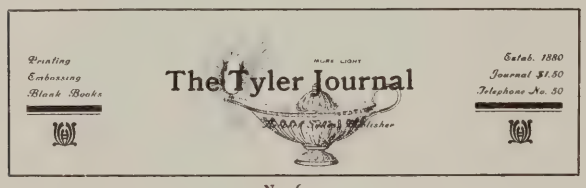
No. 5b.

where "doesn't" would be grammatical! A rule blotter with "Your Measure is Being Taken" as the headline has, I believe, already been reproduced in this department, but the composition of this rule-blotter (No. 5b) is distinctively Nessian. The blotter is on white stock, but the rule is printed over a yellow tint-block. This streak of color, in connection with the wealth of white, makes the design very effective. Several other blotters of the McMullen Printing Co. are wondrous in their original disposition of white. The use of the vignetted halftone in one of them, surrounded by plenty of white, is commendable. But I don't like the conventional leaf ornaments in the center panel. They don't seem to sympathize with the more illustrative ornament. This (No. 5c) is a late letterhead. The central panel is printed over a slate tint, which harmonizes well with the stock. Say! Mr. Ness! The card of Dan P. McMullen is one of the best dark-stock cards I ever saw, with its white, and its red shaded with white, and its black shaded with white. The composition is fine—sorry it cannot effectually reproduce.

No. 5c.

Louis Warming, of Tyler, Minn., sends this letterhead for criticism (No. 6a). It is on blue bond. The surrounding rules are in a brown. The ornament and the words "More Light" are in a brown tint. The name of the paper and the wood rules are in a bronze red, and the balance in dark blue. There's a clear-cut appearance and considerable originality about this job. I should have preferred to see the words "The Tyler Journal," register so as to have the flame come right between the first two words. This would likewise prevent the apex of the lamp from being obliterated by the

initial letter. The three lines at the left seem to have been composed not only so as to give a slanting alignment, but also with the object of having each line end with figures. The a summary of Mr. Schwartz's duties. The type, however, is made to tell this story, and the commas at the end of both line "Journal $1.50" does not seem particularly happy placed between "Estab. 1880 (this abbreviation being made merely for the typographical effect)" and "Telephone No. 50." No. 6b—very commendable in various ways—is a good illustration of a matter to which I referred to at some length in this department four years ago—an insufficient attention to the *meaning* of the component parts of a job as expressed by typography. I presume that Mr. Sykes and Mr. Schwartz are simply the members of the Tyler Land Co., and that Mr. Sykes' work is not confined solely to dealing in Lincoln and Lyon county farms. The words under and in the same type as "H. G. Schwartz," are not probably intended to be simply



No. 6a.

names add to this impression. Were the names of the firm-members in the same series of type as the name of the Tyler Land Co., or in a condensed series of similar appearance, and the period omitted, the meaning would be in keeping with the typography. It also seems to me that "Lands Bought and Sold. Exchanges"—being the primary announcement of the firm's business—would better be on the left hand. I congratulate Mr. Warming on his good presswork.

From Louis Arnold Ewing, with the Robertson Printing Company, St. Louis, comes a number of samples. One is a narrow purple slip, which comes through the mail with a stamp on it. In white ink on the reverse side, with a very long margin at the bottom, is the composition here shown as No. 7a.* This strip will attract attention through the novelty

of its coming unclothed in an envelope. The value of the slip as a bookmark is not impaired, in my mind, from having my address, and a postmark, and a cancelled stamp on it. This, in fact, gives it a personal value. I have spoken of the inspiring mottoes so freely dispensed by good printers, with their good composition. It is, however, somewhat unusual to see a blotter like No. 7b, whose largest line consists of a motto, which is amplified by a succeeding line. The all-type blotter is surely becoming popular—there's another good example of it in this installment. The composition of this blotter makes it a good advertisement, as "Happiness," "Better Printing," and a firm which brings happiness through better printing, are so combined as to show their connection with one another at a glance. The color-scheme of this buff blotter is green and brown. On one lot the rules are green, the wording brown; on another lot the rules are brown, the wording green. The envelope in which this blotter comes has the name and address of the company tastefully displayed, with the slogan, "Better Printing" between. An "M" shows where to write the first line of the address, so that the words, "We Want Your Business" come directly beneath the recipient's name. All these ideas show that the Robertson Printing Company are up-to-date—and beyond.

*Could not be reproduced.

Harry A. Woodworth, Toronto, Canada.

Dear Sir:—Since I have started to send in job work for criticism, and receiving space in the N. P.-J., I sincerely return thanks to you, Mr. Woodworth, for the several reproductions and comments. Ever since I have been taking more interest in the work, and with this writing enclose another blotter and a two-page circular for your observance.

This is all I have at present—but will try to make a better lot next time. I remain, Yours truly,

Highland, Ill. John Hebrank.

No. 8a.

I am certainly glad that any comments—complimentary and otherwise—that have appeared in this department anent Mr. Hebrank's work should have caused him to take more interest in it. The February blotter (No. 8) certainly shows that his work is steadily gaining in strength, which is refined and toned down by his lavish use of white. The rule border, the word "February" and the figures, and the words "Highland Journal," are in black. The heavy zigzag rule-work, in connection with the headlines, furnishes a rather pleasing method of holding the attention, and looks well with the red, It is a novel blotter, though there is not a picture on it. The folder is an excellent specimen of the class of work it represents, and shows that Mr. Hebrank is a student of the "Review of Job Work," as well as a reader of this department.

THE COYLE PRESS

M. Delvaux Coyle
Proprietor

Serves Well the Wants of Particular People in all that's New and Best in

Printing and Advertising

At the Cross Roads of Main and High in FRANKFORT, KENTUCKY, U. S. A.

No. 9a.

Harry A. Woodworth, Toronto, Canada.

My Dear Sir:—I enclose you herewith sample of my new letter-head—set in Roycroft Tinted, which is the newest type out. You will observe that some of the lines are a little too large, but the type is not made in smaller than 12-point, and I wanted to use the entire series. I want you to be frank, as you have always been, in speaking of this work. Please accept my many thanks for the nice things you said about my work in the February issue, I can assure you I appreciate them to the fullest extent, and I took the nice little "roast" in the manner in which it was given. I like to be told of my faults. * * * as it teaches me to avoid them. Tell me what type will work nicely with this new type.

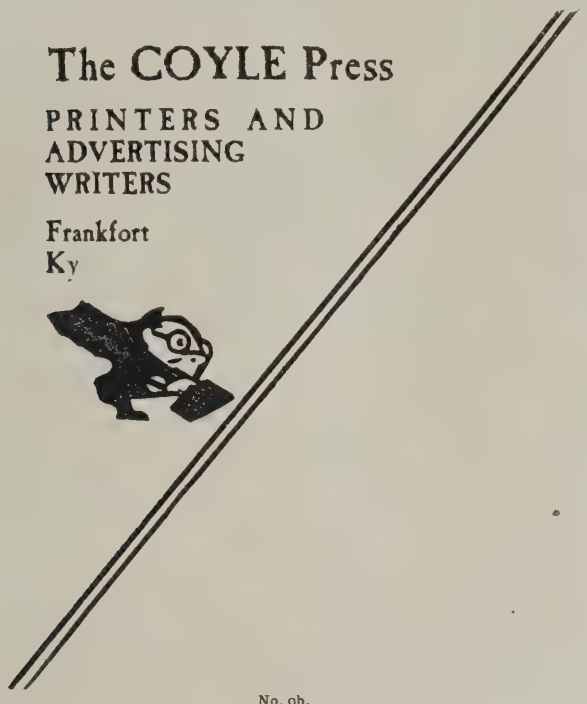
Hoping to receive your paper on time, and that it will, as usual, be filled with "good stuff," I beg to remain,

Yours sincerely,

Frankfort, Ky. M. Delvaux Coyle.

The design (No. 9a) very much resembles, as to composition, a card and a letter head of the Coyle Press, reproduced

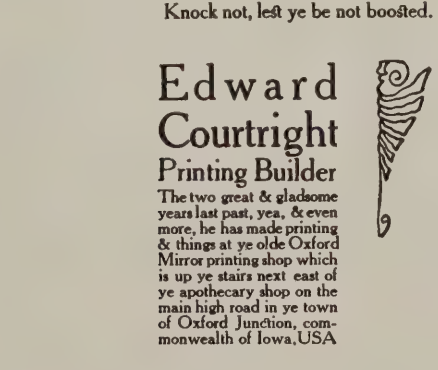
in the February number. Those were set in XV. Century, but undoubtedly in *the* twentieth century. Surely the Roycroft Tinted is one of the new and the best. But I don't agree with Mr. Coyle as to some of the lines being too large. The need of sizes between the 12-point and the 36-point is, however, apparent, though not necessarily so on this particular job. The initials "T," "C," and "P," and the line "Printing and Advertising," are in red, as is the tint-block of the



No. 9b.

picture. I have spoken of mellow effects in type. There is not only a mellowness about this new variety, there is a bloom like that on the fresh-plucked peach. As to what kind of type would work best with it, it seems to me that this face was meant largely for a life of single blessedness, such as it enjoys on the sheet before me. In fact, I am inclined to dislike the use of that rule as bringing in—or ringing in—somewhat of a discordant note. Even the original Roycroft does not seem to exactly harmonize with this elusive face. Better, it seems to me, to get the effects of the harmony of contrast or of complement by means of different colors, as Mr. Coyle has done.

As I have given, in the February issue, various samples of Mr. Coyle's playing with the Mission Toys, here is another, a



Knock not, lest ye be not boosted.

Yours in a hurry,

Oxford Junction, Iowa. "COURT."

Could not reproduce gray tint—Ed.

No. 10.—The ornamental bordering is in a gray tint, and the words "Printing Builder" in red. The balance, including the interrogation mark (?) in the panel on the left-hand are in black. It's a very striking job—and a very original one. I don't think anyone could say that Mr. Courtright has "failed" with this job, and it doesn't look as if it had been unduly hurried. And yet—

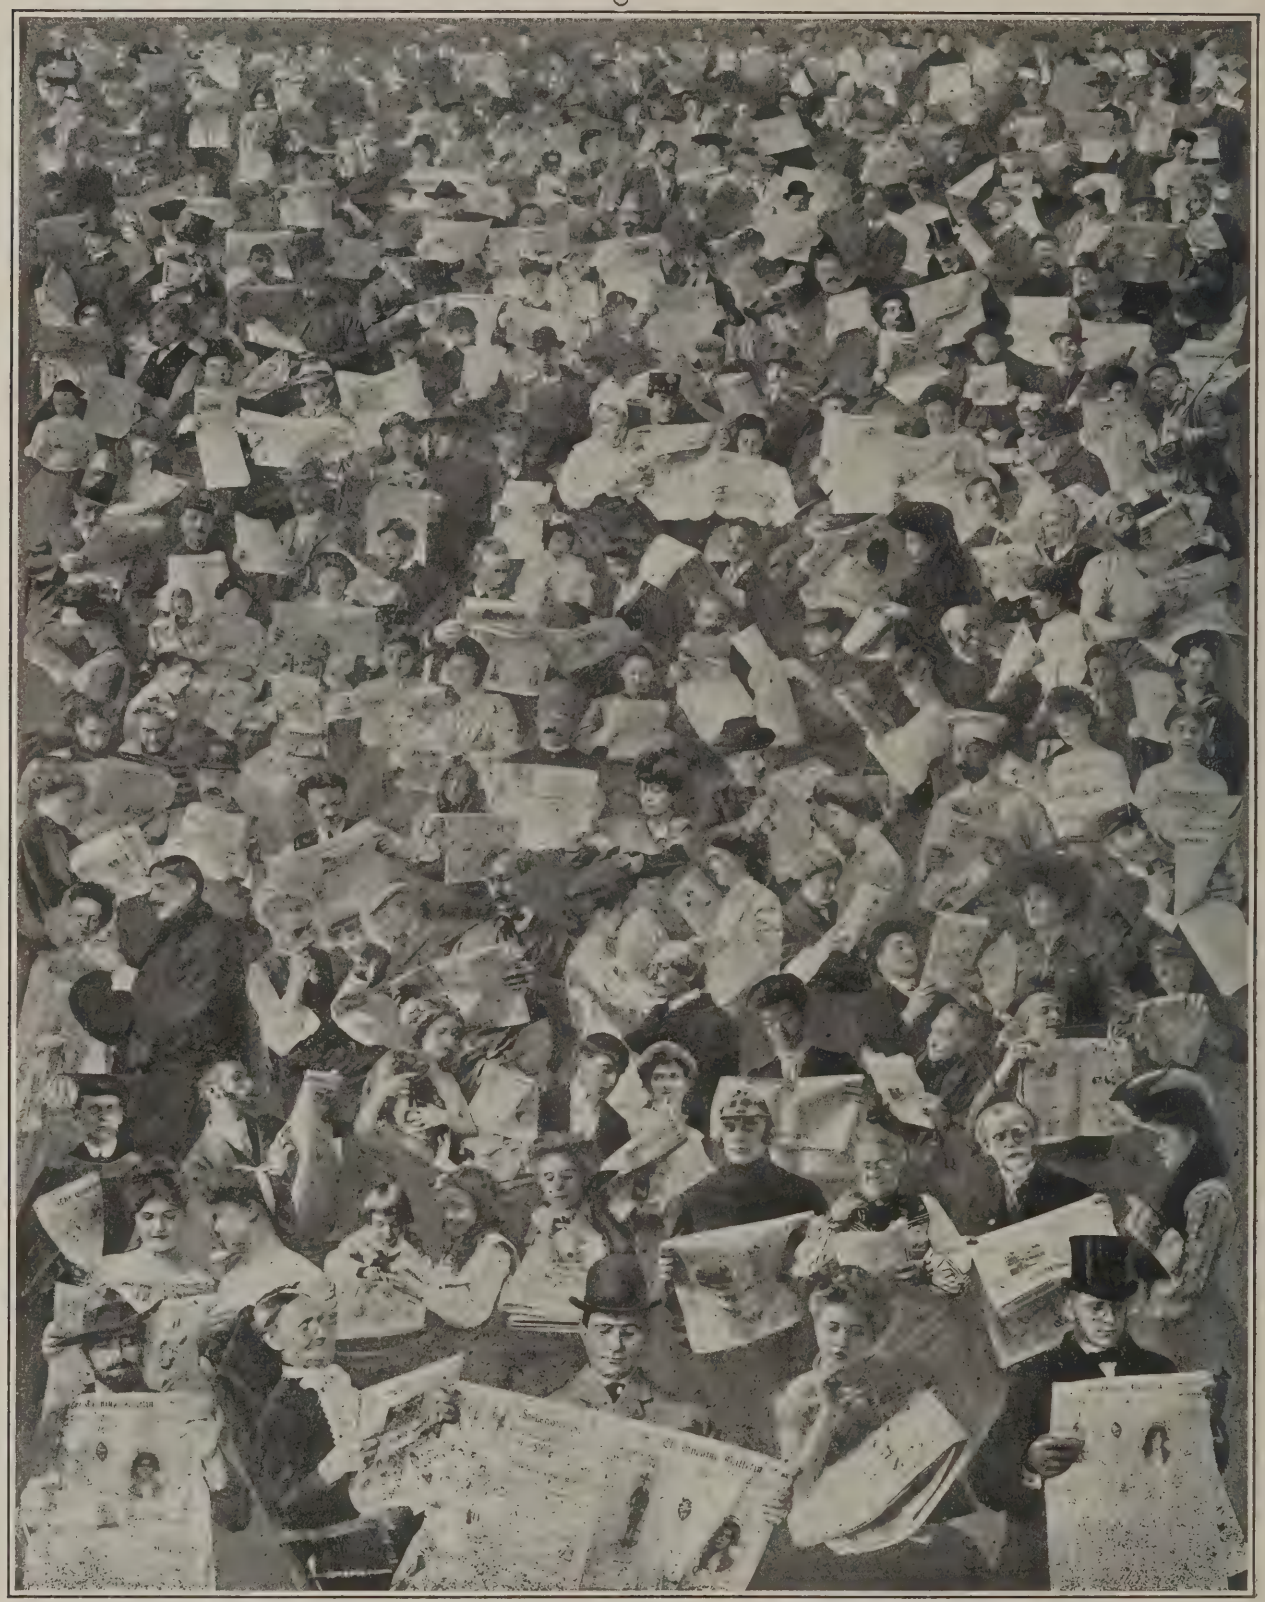
What's the answer?

This age of publicity is one in which was seen the possibilities of a new kind of composite photograph—one in which faces are not blended, but in which was a scene, in lifelike perspective—more lifelike, in a large group picture, than a group-photograph taken in the ordinary way would be. The most pretentious effort in this unique application of a rare form of art to advertising is the large photogravure issued by the Philadelphia *Evening Bulletin,* and is a striking illustration of the famous motto, "Nearly everybody in Philadelphia reads the *Bulletin.*" This remarkable production, of which a good idea is given in the large, though reduced reproduction (No. 11a) was composed of about two hundred and fifty individual photographs. "Each," it is explained, "was photographed on a separate negative, cut to shape, the edges treated to allow close pasting, and after a series of chessboard manœuvers to get everything right, the figures were pasted on a mat four feet in height. From the first the approximate row in which each character was to go was definitely mapped out. Each print was carefully pasted down and completely retouched as to background. Some persons in the rear rows were snapped in Independence Square, but with the exception of possibly fifteen such cases, every figure in the photograph represents a study in which the modeling, the costuming and the position were made to conform to an outlined list of characters previously agreed upon." Almost all of which was mightily cleverly done, but it seems to me that the young lady who is reading the *Bulletin* while she is making her toilet is decidedly out of place in such a public scene as the composite picture represents.

There are no duplicates in the entire photograph, but some models were posed in various costumes. This part of the work, it was claimed by the designer, was the most trying in the whole undertaking, "since each type must carry out the meaning, yet all elements of caricature must be avoided."

Was the time, and the care and the money expended on this unique photographical advertisement ill spent? Not on your tintype. It is an ad that will be preserved and long appreciated, and it is, moreover, one in which pretty nearly all Philadelphia will have some sort of a personal interest. It seems a great shame, however, that the picture was folded so as to make a decidedly unsightly crease in the center, which the crackling of the glaze of the surface naturally emphasized. On the reverse side there is a statement of the *Bulletin's* circulation for the last year. A slip of news stock is attached to that side by one of the golden wafers which have already been described in this department.

The Mount Vernon *Record* is a paper which, though it occupies a smaller field than the big city daily, has no reason whatsoever to feel inferiority in respect to a similar design (No. 11b), which was probably issued about the same time



No. 11a.

as that of the large city paper. On light brown deckle-edge cover stock the composite picture of the "Mount Vernon Fruit Basket," in photo brown, is pasted. It is surrounded by a red Stylus border, and there's a brown calendar at the bottom. On a flap at the top, on either side of the hole for hanging, enclosed in Stylus, are these mottoes in Engraver's Old English: "The Mount Vernon *Record* for Tasty Printing. The G. W. Kidder Studio for Tasty Photographs." This is composite advertising, of a pleasing nature. And further credit is given photographer Kidder on a write-up of the photographical "stunt," which is placed on the back, under the words, "Supplement to the Mount Vernon *Record*." The picture was made somewhat similarly to that of the *Bulletin*, pictures of seventy-five Mount Vernon babies being taken;

Individuality in Printing

THE modern trend in typographic art is for distinctive form and make-up. Some printers have a wrong impression that linotype composition cannot be used to good advantage when this is demanded. A careful consideration of the following pages will demonstrate that results can be obtained from linotype composition which have previously been thought possible only by hand work. In addition, linotype composition has its own peculiar advantages in a constantly new and perfect printing face, rigidity of form, and unlimited resources in whatever face of type may be used.

The make-up of this page and the specimens displayed on the following pages are suggestive of the results which can readily be attained by linotype composition in combination with headpieces, initial letters, and linotype borders.

CHAPTER FORTY-FOUR — SEPARATION

WITH the day, though not so early as the sun, uprose Miss Susan Nipper. There was a heaviness in this young maiden's exceedingly sharp black eyes, that abated somewhat of their sparkling, and suggested — which was not their usual character — the possibility of their being sometimes shut. There was likewise a swollen look about them, as if they had been crying over-night. But the Nipper, so far from being cast down, was singularly brisk and bold, and all her energies appeared to be braced up for some great feat. This was noticeable even in her dress, which was much more tight and trim than usual; and in occasional twitches of her head as she went about the house, which were mightily expressive of determination.

In a word, she had formed a determination, and an aspiring one: it being nothing less than this

typography and borders composed on the
otype in combination with special ornaments,

HOTEL THORNDIKE

Location

THE THORNDIKE faces on Boylston Street (the Fifth Avenue of Boston), Church Street and Providence Street, on a line dividing the business from the residential district. The Public Garden, the first and most famous in America, affords a beautiful foreground to the hotel.

Park Square is at the back of the hotel and the starting or central point of several lines of electrics. By referring to the map it will be seen that **THE THORNDIKE** is the centre of a circle which includes the principal churches, educational and historical institutions, the Library, Music Hall, Symphony Hall, Horticultural Hall, Mechanics' Bldg., Theatres, Clubs, Business Houses, Railway Stations, and Docks. Electric cars radiate from the Public Garden and Park Square to all points in and about Boston.

Recommendations

A modern structure, facing on three streets.
Accessible location within the aristocratic residential district on Boston's most fashionable shopping thoroughfare.
150 newly furnished rooms.
Running hot and cold water in every room.
Intercommunicating telephone service.
New plumbing throughout.
100 bath rooms — attached.
25 bath rooms — detached.
Incandescent lighting.

HOTEL THORNDIKE

All typography and borders composed on the Linotype in combination with special ornaments by The University Press, of Cambridge, Mass.

THE AWAKENING OF THE DUCHESS

By Frances Charles, author of "In the Country God Forgot," etc. With illustrations in color by I. H. Caliga. 12mo. Decorated cloth, $1.50.

"A charming, tender story of the awakening of a young mother to her true self through the ministrations of her half-forgotten child, told so simply that a child can understand it," is the *Washington Star's* opinion of Miss Charles's latest book. *The Literary News* considers it "deeply touching in tender sentiment and full of gentle humor. With its tinted illustrations, and its pretty green and gold covers the story is a welcome exponent of the gospel of love and tenderness."

There are few more
Southern family in redu
of bookmaking.

TO many readers these pages will undoubtedly be a revelation of the artistic results in Linotype composition. The use of borders is such a prominent feature of book and catalogue typography that especial attention is directed to the results shown, all from Linotype matrices.

We have many other attractive Linotype borders which can be used separately or in combinations. The facility of producing whatever quantity of borders may be required and their rigidity give great advantage in the make-up of borders on book and catalogue pages.

which were mounted on a large card. A negative made of all the pictures was carefully retouched. Mr. Kidder mounted the prints himself, but the job office of the *Record* is certainly entitled to a large amount of the credit of an artistic production for the chaste setting of the picture.

I must congratulate the publishers of the *Chap-Book*—now the *American Chap-Book*—on their effort for February, 1905. That is, on the Board Bound, in covers of quaint design with label Twenty-five cents the copy, Three Dollars the Year brand. Hitherto I have been honored only with the Paper Bound, Ten Cents the Copy, One Dollar the Year kind of *Chap-Book*, but I suppose the general design of each edition was practically the same. Anyway, with the February number, Mr. Bradley seems to me to be seeing things more from an advertising viewpoint. He appears to have recognized the value of display as he has not hitherto done. It seemed to me that on many of his previous chap-book designs he was in much the same position as the beginner in a country print-shop, when he turns himself loose among the ornaments to which his fancy is first attracted. His tendency is to hold all matters of composition subservient to ornamentation. Some of his first chap-book efforts were puzzles, or at least, were games of logomachy. Such stuff as this may attract attention by its novelty, but has no permanent advertising effectiveness. But from his experiments in old style ornamentation adapted to new style publicity, Mr. Bradley has evolved

No 11b.

a saneness and effectiveness which shows he is a true artist, and, moreover, has finally grasped the idea of a new style of art in appliance to a kind of art-advertising that is both art and advertising. I wish there were space to show some of the old-style-new style designs, in which even the freakishness plays a strong part in regard to their effectiveness as a means of publicity.

[Since writing the above critique—and sending it away to Chicago—I have come across former editions of the *American Chap-Book*, and I find in them designs for advertisements which quite meet with my approval both from the standpoint of an advertising man or a printer. To write such a review as I remember I did (but let it stand, [Lat. *stet.*] for it is probably already composed) is due to an expression, on my part, of the momentary impulse all critics feel on taking up anything which it is their duty to criticize. Let it stand, I say, on the same principle that accords the base-ball umpire's sudden decision a greater degree of accuracy than the one he takes considerable time to consider. A great fault with many critics (as it was with one Thomas Babington Macaulay, one of the greatest of critics) is a leaning towards that figure of speech known as Antithesis. This same figure of speech is liable to lead the critic into Unfairness, whereby the truth has been before now sacrificed on the altar of Literary Form. Of course, in any of my writings in this department, there is no effort, as there are no pretensions, made toward literary precision. But I still think my first impressions as to the March *Chap-Book*, as compared with previous issues, had basis in fact—though the lack of advertising quality in former numbers may have been somewhat exaggerated by the itch for antithesis which lovers of Macaulay sometimes unconsciously acquire. But I still consider Mr. Bradley nodded on the occasion of some of his first attempts at a style of art based upon a large amount of ornamentation. And I still think Mr. Bradley is improving, as to his grasp of art as applied to advertising, to a very considerable degree.]

Those who read, in the February issue, the description of the cards sent by Mr. L'Heureux, will be interested in the following letter:

Harry A. Woodworth, Toronto, Canada.

Dear Sir:—I wish to thank you for your kind words in the February N. P.-J. in regard to my business cards. They certainly exceeded my expectations. While I hoped, yet I did not expect more than passing notice, accompanied, as they were, by such a, shall I say laconic, note.

My object in writing you this letter is two-fold. First, to thank you. Second, to substantiate your claim that such advertising is permanent. I had not given out 25 of these cards before people began to call at the office for them. Among the callers were two ministers of the gospel, the president of the State Anti-Saloon League, the president of the swellest club in town, the clerk of the U. S. District Court (Dist. of Vt.), a member of the Legislature, and business men (the men we wanted to touch), and the New York and Boston "drummers" who call at our office—they just carried them away, to make their customers good-natured. After the cards were all given away, one of our prominent business men, a clothier, called at the office, apologized for not having been in for so long, promised to be more thoughtful in the future, and then requested me for a set of those cards. I told him they were all gone. He was very much disappointed, and asked me if I could not find a couple somewhere about the office. He said that he would be willing to pay well for them; that he had seen them, that he could not make the party that had them part with them; and that he wanted some like them very much. I told him that I thought I had some of them at my home. He said that they were a great help towards entertaining at gatherings. * * *

[Here follows a paragraph, which is quite as interesting, amusing and instructive as any other part of this letter—but I should not think of printing it without Mr. L'Heureux's permission.—H. A. W.]

In all my 12 or 13 years' experience in New York City, I never set a business card but what I wondered why it did not occur to some to put something quaint or witty on the back side, to insure them being preserved to some extent. It gives you a kind of introduction to the people; it gives them an insight into your nature; in short, they will hardly expect to meet an ogre, or very crabbed person, when they call on you.

Hoping this long-winded affair will not tax your patience too much to read, and with kind wishes for yourself, I am,

Yours respectfully,

An ounce of experience is generally better than a ton of theory; but I am pleased to see the experience coincide with the theory. And I thank Mr. L'Heureux for his good letter, which is of a kind such as is warmly welcomed in this department.

The Hudson (Wis.) *Star-Times* letterhead, printed in blue, and in an extended series of Old English, shows a tasteful modern long-line-short-line arrangement. "Don't be afraid to criticise too severely," writes E. M. Rusch, the city

rate. But they are well-printed, for all that. The compositor has learned the lesson of simplicity. Simplicity is often one of the attributes of art. But simplicity is not necessarily art. The best job by far is that done for the St. Croix County Abstract Company. It shows, moreover, a good idea as to the possibilities of a letterhead as an advertisement.

A Texas friend sends me a late number of the *Texas* editor of the paper, in regard to "a few samples of every-day work" which he sends me. Mr. Rusch's own criticism of the work, as "not fancy jobs, or extra well-printed ones" is accu- *Printer.* Its typography is superb, but what's wrong with the halftones? With a base of dark cover stock appear two jobs from our old friends, Biggers of Corsicana and Hal Roorbach Who Prints, Ennis, Texas. The jobs are on the original stock, and have but one corner pasted. The Roorbach job is a memo head; the Biggers' Print Shop job is such as adorn its private check-book. Isn't Mr. Biggers afraid of spreading his blank checks thus freely around? Neither job, despite all the trouble taken to show them, is at all remarkable as to color-scheme, as is so much of the work of those who used to work for Hal Marchbanks. And they, by no means, give an idea of the excellent typography that has emanated from both shops.

Here's a booklet with a purple cover, ornamented with white art-nouveau of the newest style—that which brings in ivy leaves, and is a slight departure from over-conventionality. This booklet advertises the Cosmopolitan series of the Inland Type Foundry, and gives various pages showing its wide range of utility. It's a handsome running letter, this Cosmopolitan, and takes the place of script in many a job where it used to be thought that script was absolutely necessary. But then it has many a use—many a modern use—many an advertising use—to which script was never supposed to be put. It's an all-around modern letter, the Cosmopolitan, and many of its possibilities are shown in this handsome booklet.

The wide range of samples submitted by E. Fred Rowe, with the printing department of James Vick's Sons, seedsmen, Rochester, N. Y., have the prevailing characteristic of neatness. This has long been a feature of Vick's Garden and Floral Guide. So good was the typographical appearance of this catalogue that Rochester folks seem to have persuaded this great seed house to do a little job printing as well.

The Sacramento (Cal.) *Record-Union* runs a paragraph on advertising of considerable length on either side of its heading, day by day. I am naturally flattered at having my remarks frequently quoted in these panels.

Exquisite as was the calendar of the American Colortype Company for 1904, it is fairly surpassed by the 1905 six-sheet art calendar, 16x12 inches, with its wide green margins, and green month-cards. My copy came to hand—very appropriately—about the 17th of March. The reproductions of oil painting and water colors, which comprise the pictures in this setting, are indeed magnificent—and show how wonderfully the art of color-engraving and printing has advanced in but a little while, since it was possible to do any kind of good through its means. On the opposite sides of the calendar are well suggested the great variety of commercial subjects which are effectively reproduced by the colortype process. The trite term, "a work of art," is truly appropriate when applied to such a calendar as this, which may, however, lose some of its advertising force by being appropriated for parlor rather than office use.

I observe that the exigencies of space required that some of my comments on the book of Dell Shaw were omitted from the March number. The condensation to which the latter portion of my remarks was necessarily subjected choked me off to such an extent, in what I meant to say, that I would fain give the original wording of what was cut down to half a stick. It is as follows:

In giving so large a space to Mr. Shaw's effusion I did not intend to endeavor to place his toes in the same crack with Shakespeare, or Longfellow, or even Alfred Austin. I do not even intend to affirm that he has, as yet, mastered the art of verse-making. Neither Mr. Shaw nor I are poets, and the advertising work we have both done in verse may be very poor poetry, but yet may have its place in the realm of publicity. I once wrote some advertising verses for a firm for which I had done a great deal of hard prose, which was warmly appreciated by them. However, they objected to my poetical effusions as being "doggerel." But I believed in those verses from the standpoint of publicity. And after they had used them, under protest, they wanted me to do some more, because they appealed to the public and helped, in connection with the other advertising, to sell goods. They were undoubtedly like Mr. Shaw's verses in being "doggerel," but for that matter practically all the advertising verse that has been written, to say nothing of other verse, is likewise appropriately designated by this expression. Although I am not a poet I have drawn pay from leading literary magazines as a critic of poetry, but I am not expected to make this department anything but a medium for the criticism of publicity. I know that my poetic taste (which is probably not so bad, as I am a warm lover of what the most of the best critics of literature consider the best in English poetry) was not offended by Mr. Shaw's verses, poor as they are from a poetic standpoint. I read the entire volume through and enjoyed it, although I do not know any of the parties mentioned and had never heard of any of them before, except our old friend Yankee Doodle. The fact is that Mr. Shaw was able to sell in a short time twenty-five dollars' worth of these little pamphlets, relying for his remuneration solely on this sale, and not on the advertisers. I know that my poem, which I would not presume to say was a whit better than Mr. Shaw's, was an appreciated bit of supplementary publicity, and was undoubtedly very widely read and quoted. I am sure that there are hundreds of men in Mr. Shaw's position who can write as good verse as either of us, to whom this detailed description of Mr. Shaw's booklet will serve as a hint in the securing of special advertising, as well as in doing what Mr. Shaw has done. A great many persons have said that advertising in verse does not pay, but it seems to me that "Sunny Jim" and the "People of Spotless Town" have been a considerable force in selling Force and Sapolio. I have met many persons who have recited almost the entire series of the Force and Sapolio jingles, who had claimed that they never paid any attention to advertisements. I heard one gentleman, to whom the Force folks owed his purchase of a package of that compound, remark in all seriousness (he was a very serious gentleman) that he liked the stuff well enough, but he did not see as he felt any pleasanter or sunnier than he had when he was eating plain oatmeal. A great deal of poetical advertising is not poetry and a great deal of it is not advertising. But if it is advertising—as to the poetry part, wot t'ell?

Every newspaper man should remember that in his news, local, editorial, advertising and all other departments, it is the highest aim and the most success-bringing object and mission of the newspaper to get into the homes, lives and hearts of all the people, to interest, to inform, to entertain, to win and to influence.

NEWSPAPER CRITICISMS

BY O. BYRON COPPER, DE SOTO, WIS.

Address all Communications for this Department to De Soto, Wis.

If we were asked, "What feature is the most important to the success and popularity of a weekly newspaper?" our answer would invariably be, "The establishment and maintenance of a department of local correspondence." Many publishers of weekly newspapers have discovered the importance of this feature, themselves, but have likewise found the retention of a competent corps of local correspondents, who will send in the news of their respective communities punctually and regularly each week, a most difficult matter, so that the subject of maintaining such a department has become a question of considerable speculation.

Undoubtedly the most successful plan, where the credit side of the loss and gain account will admit, is to pay cash for the work at the rate of from twenty-five cents to a dollar the column—according to the wealth of the firm—in addition to furnishing the correspondent with a complimentary position on the mailing list, together with requisite stamps and stationery.

Another plan which has been tried with more or less gratifying results by some of the less prosperous publications, is the offering of first, second and third prizes—dictionaries, or some such articles—to be awarded at the end of the year to the correspondents furnishing the three longest "strings" of news, it being clearly stipulated that the editorial prerogative to curtail, or cast out entirely, any or all undesirable items shall be freely exercised.

In the event of the inauguration of either of these plans, or any other plan, the publisher of a weekly newspaper will find it profitable to print and mail personally to each of his local news-mongers, three or four times a year, at least, some such a circular letter as the following:

EDITORIAL ROOMS
DE SOTO ARGUS

De Soto, Wis., February 20, 1905.

.....

.....

Dear Correspondent.

We take this opportunity of thanking you for the excellent service you are rendering the De Soto *Argus*.

The success of our paper, while perhaps nothing to boast of, yet, under the circumstances has really been phenomenal, considering the fact that there is now over 50 per cent more subscribers on our list than at this time last year.

The paper is freely conceded "the best in the two counties," and we are fully assured that our faithful corps of correspondents have largely contributed to our success by their unexcelled news-letters.

The local news service of the De Soto *Argus* is easily the best of any of the newspapers of Vernon and Crawford, because it is the only paper in its field making a specialty of local news.

You are one of our "news specialists," and we hope you will stay with us, indefinitely, sending in all the news from your locality, regularly, each week, to reach this office not later than Tuesday noon. Write lengthwise upon one side of the paper only, and use great care in the inscription of proper names.

We shall endeavor to make your association with our paper pleasant and profitable. Wishing you success and happiness, we remain, Yours truly,

.....Editor.

This will serve to cheer up the correspondent somewhat, and tend to alleviate the monotony of his irksome task. It will further cause him to have a greater respect for his work, realizing more thoroughly its utter importance, which in turn will cause him to be more punctual with his weekly newsletter.

North Star, New Richland, Minn.—That strikes us as a unique name! But the title line can be greatly improved by the removal of something like half the space between the words, routing out the period at the end and then adding neat little squares at either side containing some of the *Star's* familiar "war words"—all papers have their slogans nowadays. The *Star* is a five-column quarto, with ready-printed interior pages; the presswork is well executed, while the advertisement composition shows genius and many good serviceable faces; an abundance of the paper's space is occupied by displayed matter, and deplorably the biggest half of the front page. Editorial work and contents are commendable.

Herald, Harvard, Ill.—It is seldom this department is favored with publications so nearly correct in every detail as is this twelve-page, six-column weekly. The first page consists exclusively of six columns of straight news matter, and the makeup throughout is strictly all right. The headings are entirely in Gothics and the general typographical styles are quite unimpeachable. That the advertisement patronage is liberal is proved by the following extract from this paper's editorial columns:

"The work of setting advertisements for this week's *Herald* has been unusually large, calling for the setting up complete of 20 columns, or three and one-third pages. This is a volume of labor that can be equalled by few country printing offices, and it was all done without the aid of extra help. The number of columns of advertising in this issue is 40, one-half of which are new or changed ads."

And indeed for such a volumne of work the *Herald's* ad compositors have done well. Generally more attention has been given to effect neatness of design and forcefulness of display than to elaboration, which is commendable. (No. 1.) News service and editorial work are excellent, as is also the impression.

Kansan, Concordia, Kans.—Gomer T. Davies is the publisher of this "Sunflower" representative, and an enterprising publication it is too. Prior to last Christmas, single editions consisted of four quarto and folio sections, aggregating 144 columns, of which it is a safe estimate that over 50 per cent was occupied by the advertisements of Concordia business men and merchants. Stretching across the upper

portion of the front page of each section of this mammoth edition, was this generous statement: "Concordia Stores are Overflowing with Many Good Things for Christmastide—Read Their Messages." It does a publisher good to say nice things like that about his home merchants. These multi-sectioned editions of the *Kansan* gotten out just before

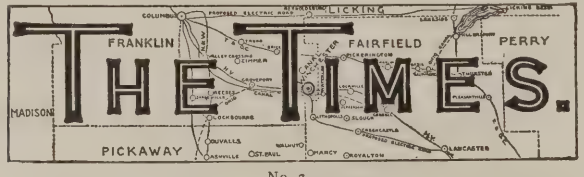
No. 1.

Christmas were well written, well set, well made up and well printed, and the whole a credit to the shop that produced them.

Times, Canal Winchester, Ohio.—This, as a weekly newspaper, is something out of the ordinary. It possesses several commendable features, as well as a few less commendable; but as the former seem to outweigh the latter, we shall begin by pronouncing it good. One of the editions before us



No. 2.

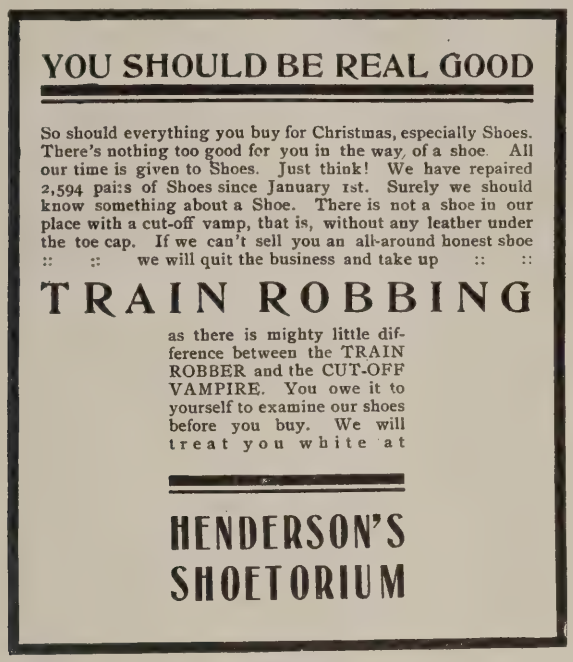
is comprised of twelve, seven-columned pages, while another edition consists of but eight, therefore the size of the editions evidently varies, as is the case with so many of the modern publications. The heading of this sheet is of such a unique design that we are not going to attempt to describe it, but rather will reproduce it (No. 2) so that all may see for themselves. The makeup of this publication is strictly in harmony with our own ideas—the entire front page being entirely free of displayed matter, and that of the other pages being assorted and arranged to the right hand side of the page. Another feature, which we have prefatorily endorsed, is the abundance of local correspondence news appearing in this sheet; but a more modest and less bold letter for the headings of the various localities would be most advisable. Still another admirable feature noticed in the *Times* is an epitomized summary of the special features of each issue neatly arranged in a prominent position on the introductory page, and the *Times* makes special features of such articles as: "Deep Sea Fishing at San Diego," "A Christmas Mother Goose Play," "The Simple Life," "Address on Advertising," "Correct English: How To Use It," "History of Methodism in Pickerington," etc., all of which looks like a new precedent for weekly newspapers. Aside from these special articles there is an abundance of local and personal news, and withal the *Times* is a "whole lot" of reading matter for a dollar a year. The editorial and reportorial labors on this publication are first-class, and all mechanical points are up to good, serviceable standards.

Enterprise, Waxahachie, Texas.—The copy at hand of this "enterprising" publication consists of parts one and two, a six-column quarto comprising each part. In the main this paper is deserving of considerable praise, for there is an abundance of reading matter within its pages, and that it is appreciated by its home town is attested by the volume of advertising accorded it, quarter-page, half-page and full-page ads appearing on every leaf. The makeup generally is correct, but in so large a sheet the appearance of displayed advertisements on the initial page is hardly excusable. The contents of the *Enterprise* merit our approval, especially the plentiful news articles and editorials. The ad man has an ample sufficiency of up-to-date material at his disposal to successfully carry out good, strong advertising effects; but the pressman must exercise more care with his impression, which is decidedly uneven.

Evening Sentinel, Sedalia, Mo.—In point of contents, news service, editorial and reportorial departments, etc., this regulation seven-column quarto daily is quite creditable to a city the size of Sedalia, Mo. It is chiefly defective from an æsthetic point of view. If we were running a daily paper even in one of the smaller cities, we should take as our model and example some such a high grade publication as the Chicago *Tribune.* We would have before us then the most able editorial styles and policies, the best methods of putting the news before the public, and the most pleasing typographical styles of headings and makeup. The advertising patronage accorded the *Sentinel* is liberal and the compositor has lent to the ads a bold, metropolitan effect. The press work is as good as the average, while the makeup is somewhat promiscuous in style, and the lockup, (judging from gapping corners and joints in the rule work,) somewhat careless. Why it is that Gothic Condensed is so universally used as a head letter on both daily and weekly papers is a fact beyond our comprehension. Situated amongst a mass of Roman body matter there is no other face that can produce such a contrasted unsightliness and inharmony to the really artistic eye as can a couple of lines of Bold Gothic Condensed set stair-step style. In almost any type founder's catalogue may be found a thousand specimens of desirable faces for headlines and among that number a thousand more desirable, and quite as serviceable, as the Gothics, which are always included therein.

Messenger, Neponset, Ill.—This six-column quarto weekly began last December issuing entirely from the home office, with home news on every one of its eight pages. Unfortunately, in the copy at our elbow we can find precious little to praise. In the first place, four and a half columns of the initial page are given up to boldly displayed advertisements, leaving only about a column and a half reading matter thereon. Of course, we can readily see that all the other pages are equally well crowded with advertising matter, but where the advertising support is so great that is just the time the publisher can best afford to add an insert to his sheet, to obviate the undesirable necessity of spoiling the face of his paper with a lot of displayed ads. One of these ads—the full page "Szold" ad—is much better than any of the others, although that of Carpenter & Bowen, on the first page, has

its redeeming features. Contents of this issue is not so bad, perhaps; but even that is not complete. Notwithstanding the foregoing strictures, the Neponset *Messenger* has the aspect of prosperity about it, and if the management is making it pay, that is perhaps the most important matter,



YOU SHOULD BE REAL GOOD
So should everything you buy for Christmas, especially Shoes. There's nothing too good for you in the way of a shoe. All our time is given to Shoes. Just think! We have repaired 2,594 pairs of Shoes since January 1st. Surely we should know something about a Shoe. There is not a shoe in our place with a cut-off vamp, that is, without any leather under the toe cap. If we can't sell you an all-around honest shoe :: :: we will quit the business and take up :: ::
TRAIN ROBBING

consequence. Profit by a perusal of this and other trade journals.

Nonpareil, Central City, Neb.—There has been a change in this publication since our review of it, last November, and that change is most gratifying to us inasmuch as that it is right in line with our suggestion in the aforesaid review. The only displayed advertisement now in evidence on the opening page is a three-inch single column dentist's card—not very boldly displayed—which can easily be pardoned. Every other column of the initial page begins with a neat double-deck heading in Howland and Taylor's Gothic. The sub-pyramids in these would appear better if opened with one lead, rather than solid. In our forementioned previous review of this publication we summed up the commendable

features, and we are pleased to note that all of these have been well maintained, including the skillful ad compositor, of whose work reproductions 3 and 4 are specimens. It is a wonder to us, however, how so well established an artist as this display man, can bear to allow the department heading over "Local and Personal News" go in such a dilapidated

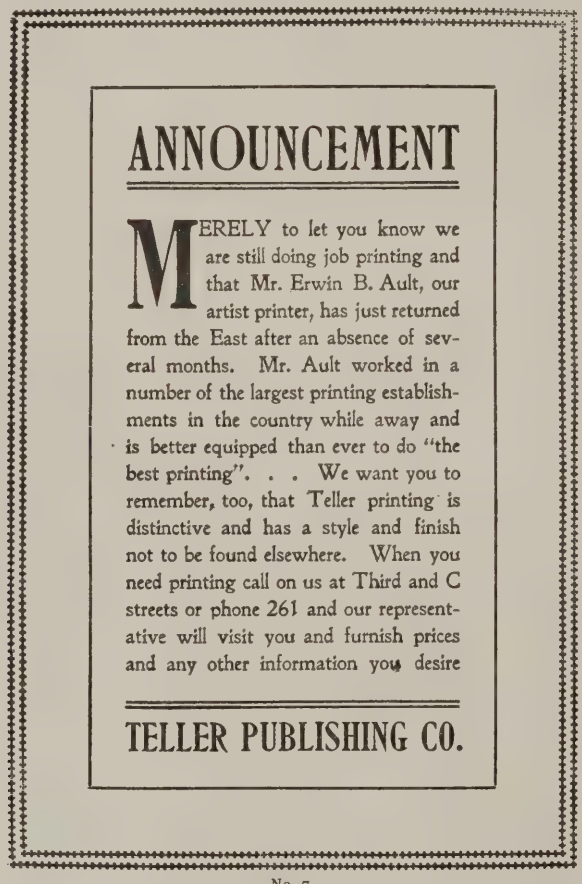
fashion. Editor Taylor still keeps up his bright, entertaining editorial columns, and the makeup likewise persists in putting those brass dashes between local items. The impression on this sheet is just as good as ever, as is also the news features and contents. The business directory is a neat feature.

Frontier, O'Neill, Neb.—This publication is not a stranger to readers of this department, having received review in our December (1903) instalment. All the good features then commended are yet in evidence, and we show a couple of handsome ads taken from its columns. (Nos. 5 and 6.) The former is a neat piece of composition and the latter is remarkable chiefly in its neatness and striking resemblance to the title page of some book of the mediæval time. As remarked in our previous review of this weekly, its advertising patronage is exceptionally liberal, and from the following rate card we note that "advertising pays" in the *Frontier,* a whole lot better than it does in our part of the world.

ADVERTISING RATES.

Display advertisements on pages 4, 5 and 8 are charged for on a basis of 50 cents an inch (one column width) per month; on page 1 the charge is $1 an inch per month. Local advertisements, 5 cents per line each insertion.

Teller, Lewiston, Idaho.—A remembrance of this paper, too, is salted away somewhere in our sub-conscious mind.



ANNOUNCEMENT
MERELY to let you know we are still doing job printing and that Mr. Erwin B. Ault, our artist printer, has just returned from the East after an absence of several months. Mr. Ault worked in a number of the largest printing establishments in the country while away and is better equipped than ever to do "the best printing". . . We want you to remember, too, that Teller printing is distinctive and has a style and finish not to be found elsewhere. When you need printing call on us at Third and C streets or phone 261 and our representative will visit you and furnish prices and any other information you desire
TELLER PUBLISHING CO.

No. 7.

It is an all-around praise-deserving six-column semi-weekly. We were most interested in the displayed announcement shown as reproduction No. 7, which having been set by "our artist printer," Mr. Erwin B. Ault, himself, proves that he is nothing less than what his employers term him—an "artist printer." The *Teller* is a creditable publication, and claims to be "the oldest paper in north Idaho." We were "acquainted with Mr. Ault a few years ago when we were both mixed up in amateur journalism, and we are pleased to note his success as a typographer.

Evening Tribune, Fremont, Neb.—Oh! Here is a daily newspaper from that rich western state, which, by the way, is gaining an enviable reputation for the possession of an up-to-date press, that dares to step beyond precedent and comes out with unorthodox, but nevertheless beautiful and pleasing, styles of its own! This issue on our desk consists of twenty-four seven-column pages, all replete with an abundance of entertaining reading matter and a maximum amount of advertisements. The former is emphasized and decorated with heads paneled and set in Bradford or McFarland O. S. and dotted with fine half-tone cuts. The advertisement composition represents the highest possible achievement in the art of typography. (No. 8.) This was, of course, a special edition—"Improvement Edition"—being the *Tribune's* annual review, or record, of the building improvements made in the city and county during the past year. In speaking editorially of this special effort, the *Tribune's* editor says in part:

"The production of an edition of this sort involves a large amount of expense and labor. To turn it out along with the regular editions of the *Daily Tribune* has required a large and faithful force. A 24-page edition like this is more pretentious than any ever before printed in Fremont. It must be admitted it has in some degree an air of metropolitanism. As usual in such cases, we have had more advertising patronage than could be accommodated. It is this generous recognition of the *Tribune* as an advertising medium and as a creditable exponent of the city and community in which it is published that makes it possible to send out a paper of such quality and quantity."

Well said, Mr. Editor. How truly a newspaper is the reflection of the character of a town's busines men!

Gazette, Stillwater, Minn.—In our department for last October we were called upon to comment on the world's fair edition of this enterprising daily, and now we have a copy evidently of the regular edition. With the exception of the ads on the front page, we can endorse and, moreover, commend everything about this publication. It is a high-grade, clean, dignified sheet, enjoying the best of everything, evidently, that contributes to good newspaper making. During our comment aforementioned we showed therewith a specimen full-width heading from this publication, and with these remarks we present two more heads set full width of the page, which are even more handsome than that formerly reproduced. (Nos. 9 and 10.)

Breeze, Bolivar, N. Y.—This six-column, twelve page weekly by John P. Herrick, purports to be "A Foremost Country Paper." In point of contents the *Breeze* is highly commendable, and by a few minor changes could immediately rise to the "perfect" standard. The introductory page is made up chiefly of headed news-articles; but the mistake here is the commencing of each column with a large sub-headed headline. Let only every other column begin with one of these, allowing the intervening columns to begin with straight matter, or head lines of less prominence, placing the next heavy head line about the middle of the column. The few ads on this front page, too, can easily be eliminated. There is a gratifying abundance of "Vicinity Letters—Interesting news from towns in the *Breeze* Parish"—and an equal ample sufficiency of local and county news. Besides these departments there are the editorial columns—brief in this issue however—plentiful plate matter, and a generous advertising support. Presswork and ad composition are up to the average.

Sunbeam, Wood River, Neb.—Above we just had a little "Breeze" from New York, and now here's a Nebraska "Sunbeam." This is a seven-column quarto weekly, having the appearance of being readyprinted on the interior and exterior,

the two pages four and five evidently being the only product of the local office. These last mentioned two pages, however, are far superior, as to ink and impression, and although there are but two pages, the contents in interest and volume seem to equal that of many quartos. Something over seven columns of these two local pages are devoted to displayed advertisements which are fairly well set and arranged. The initial "F" in the "Rounds & Williams" ad was exceptionally unique. "Little Sunbeams," as the local news items in this publication are headed, are plentiful, and then there are several headed news articles together with some "County News" and a department of "'Personal Mention." We like the makeup of these pages first rate.

Another Superb Design From The Hinsdale, (Ill.) Doings.

Deutsch Amerikan. Farmer, Lincoln, Neb.—We have before us a copy of this important German publication. It claims to be the leading German farm paper in America and it ought to be an excellent advertising medium. Typographically and mechanically the *Farmer* is neat and well executed, "the only one with a paid-in-advance circulation." As such and carries an abundance of advertising matter.

Papers received up to date and which are being held over for our May department are as follows: *Soundview,* Olalla, Wash.; *Register,* Stanton, Neb.; *Argus,* Albion, Neb.; *Enterprise,* Alma, Kans.; *Tribune,* Holton, Kans.; *Sunday Cosmopolitan,* Sherman, Texas; *Republican,* Vermillion, S. D.

THE NATIONAL REPUBLICAN EDITORIAL ASSOCIATION.

The National Republican Editorial Association met in Washington, D. C., indulged in a very excellent program, were received by President Roosevelt, entertained by Vice-President Fairbanks and Senator DePew and elected the following officers for the ensuing year: President, William S. Cappeller, of the *News,* Mansfield, O.; first vice-president, George C. Rankin, of Monmouth, Ill.; second vice-president, Joseph M. Chapple, of Boston, Mass.; third vice-president, Lewis McKinstry, of Fredonia, N. Y.; fourth vice-president, Stuart F. Reed, of Clarksburg, W. Va.; fifth vice-president, E. H. Morris, of North Carolina. A. O. Bunnell, of Dansville, N. Y., was re-elected secretary and treasurer.

There was no boom started for any one for President in 1908. This was a false report that in some way found its way into the Associated Press report. W. S. Capeller, a Past President of the National Editorial Association, will make an excellent President. While he is now always first an editor and publisher, he is also by habit and long practice, a politician. He would no more, than any of the gentlemen associated with him, use a convention of the National Republical Editorial Association to boom the interests of a possible Presidential candidate than they would use the National Editorial Association, which is wholly non-partizan, to advance the interests of any party.

The Coshocton, Ohio, *Daily Age* in commenting on this incident, says:

"It did not take the Mansfield editor long to see the injustice of the canard and he as quickly set the matter aright before the country, incidentally making known his

own preferences and convictions in the plain and straightforward way that has been his life practice. This is one of the characteristics that have endeared W. S. Cappeller to the hearts of all men who prize friendship as a virtue. Loyalty to friend is a part of his creed, and in his friendships, faith is never shaken.

Mr. Cappeller never speaks but what he says something, and there is never ambiguity in what he says nor need of an interpreter. There is no wonder then that his recent utterance in Washington was carried all over the continent by the Associated Press and that it awakened favorable comment everywhere.

Few men in private life are more widely known than W. S. Cappeller, and it is no exaggeration to remark that he is a state and national character who in his active career of public usefulness, although a little past sixty, could not be estopped even by Dr. Osler's most strenuous efforts with his chloroform bottle.

THE PRINTER MAN'S JOY.

We have just received from the American Type Founders Company, a 32-page pamphlet bearing the title, "The Printer Man's Joy," and unquestionably, this is the most thoroughly finished, as well as the most artistic piece of typography which has ever been presented to the printing world either in this country or abroad. For years to come, this will be accepted as a standard by all lovers of good printing and will be treasured as such. It is printed on three grades of Strathmore deckel-edge paper and beautifully illuminated in colors.

Nothing but type has been used throughout these pages, and from cover to cover its stands for the very best in type composition and no attempt has been made to attain this result through the use of half-tone cuts or coated paper. The Chap-Book cuts used in the illustrative examples have been made from original designs drawn by Will Bradley, and these cuts are all cast in regular type moulds, being the largest individual characters cast by any type foundry in the world.

It would not be out of the way to refer to this really, as A Printer's Text-Book, for the reason that all of the examples have been arranged with a view to suggesting this type display for different forms of regular commercial advertising. As a matter of fact these will be used by many printers as copy, with some slight changes, for use in their own printing, or that of some of their customers.

Much of the text in *The Printer Man's Joy* is in reality good literature. We would call attention particularly to the following extract on "The Science of Advertising," which is reprinted from the last page of *The Printer Man's Joy:*

"The Science of Advertising is advancing with rapid strides. Big business houses, appreciating its great value, make of it a distinct department placed in charge of the brightest men obtainable. These men are no longer contented with ordinary type display, but demand special illustrations and embellishments; these the printer must be able to supply or the trade will go to the engraver or designer. The examples in this book show how matter can be written up to an illustration and how much such illustrations attract the eye. If you want to reap a good harvest, and rake in the business that is your due, don't cling to obsolete methods. New types and new decorative material furnish the best whetstone for your scythe."

BUSINESS NOTES

This Department is conducted for the benefit of advertisers, and expresses their claims and views

The Star Engraver's Supply Co., of New York City, have recently established an agency in Chicago, through the Sandberg Manufacturing Co., 327 Dearborn street, for the sale of their "Glossoid" brand—trade-mark registered—of zinc and copper plates. The company also has a similar agency in St. Louis, Robert C. Nelson & Co., 608 Benoist building, to present their goods in that locality. The St. Louis agency has been established for several months.

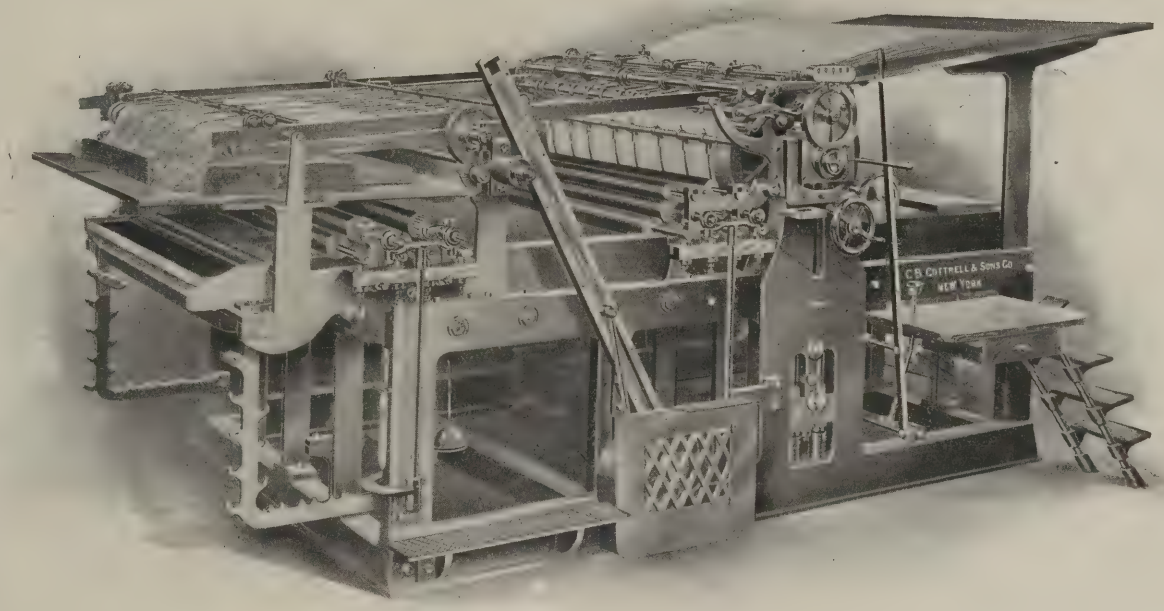
By having agencies in these two cities the company are enabled to make prompt deliveries of their goods in the great central West and Southwest.

THE PIONEER BLOCK HOUSE.

The Pioneer Block House is just now having an inning. The house we refer to is The Challenge Machinery Co., of Grand Haven, Mich., who are pioneers in the introduction of Sectional Blocks to printers and is the house that perfected the Expansion System of Printers' Blocks. It is hardly necessary to offer any argument in favor of the Expansion System, as every printer knows that in all fine register and color work this is the only practical way to handle the work. Of hooks they make a variety of styles, each one especially adapted for its own class of work. Their steel sectional blocks, which are micro-ground have long been considered by printers as a requisite in three color and label work and with these hooks form one of the greatest money-saving appliances that the progressive printer can obtain.

For real success the whole heart, energy and ability of the whole man must go into his work.

The "Cottrell" High Speed Two Revolution Press



Specially designed For the exacting demands of three color printing where perfect register is absolutely necessary. New features have been added for facilitating the production of the finest work.

¶ The press is furnished with our Patent onvertible Sheet Delivery which can be set to deliver the sheets printed side up, or it can be changed to the regular fly delivery in five minutes time. The convertible delivery is operated by a variable speed crank motion which dispenses with the fly spring, thus saving the power required to compress the spring, at the same time making the motion more simple and convenient.

NEW YORK: 41 Park Row
CHICAGO: 279 Dearborn Street

C. B. Cottrell and Sons Company

Wants and For Sale.

Advertisements will be inserted in this column at the rate of 25 cents a line, ten words to the line. Copy must reach this office no later than the 20th of the month preceding date of publication. Cash must accompany order.

HELP WANTED

I AM LOOKING FOR A MAN—to travel and sell type. A clean, active business man with real selling ability, who lacks only a good opportunity to make a good success. Printing experience and newspaper acquaintance would be a help to him. If the right man will prove up I will do the same. I am as good at holding confidence as he is. If interested, don't waste time; tell something, or save postage. Address, A.T.S., care Nat. Printer-Journalist.

SITUATIONS WANTED

EDITOR, Paragrapher and special writer since 1892, whose ideas are conceded to have improved his papers, including two strong county seat publications, and whose personal integrity is equally indorsed, is available for the editorship of progressive daily in city of from 10,000 to 40,000. In return for congenial position, with prospect of permanency for alert, competent worker, very moderate figures will be accepted, or part of salary may remain toward an interest if desired. Address, Daily Editor, care National Printor-Journalist.

FOR SALE—PRINTING MATERIAL

FOR SALE—8 and 11 point Modern Roman Newspaper Type, new, at 25 cents per lb. EMPIRE TYPE FOUNDRY, DELEAVN, N. Y.

Oklahoma and Indian Territory Printing Plants for sale. For Bargain List, write, G. L. Drummond, Clinton, Oklahoma.

FOR SALE—10-point Simplex Machine, newspaper and book work. Used nine months. 1200 lbs. of type, about half 8 point face on a 10 point body. A bargain for immediate sale. Address T.K., care Nat. Printer-Journalist.

FOR SALE—Old established independent weekly in Western Minnesota, 6-column quarto. Only paper in town of 700. Circulation 25 quires, largest in county. Exclusive field and paying property. Prouty press, 9x13 jobber, 2 horse-power electric motor, 66 fonts type. Price $1800—$1100 cash. Good reasons for selling. Address, P.J., care National Printer-Journalist.

MISCELLANEOUS

LIVE STOCK AND POULTRY CUTS—Catalogues free if you write upon your business stationery. Chas. L. Stiles, Columbus, Ohio.

A COLD SIMPLEX STEREOTYPING OUTFIT, $17.00 and up, produces the finest book and job plates, and your type is not in danger of being ruined by heat. Simpler, better, quicker, safer, easier on the type and costs no more than papier-mache. Also two engraving methods costing only $5.00, with materials, by which engraved plates are cast in stereo metal from drawings fmade on cardboard. New stereo half-tone engraving method, no photo work, $or $1. Come and see me if you can; if not, send postage for literature and samples. HENRY KAHRS, 240 East Thirty-third Street, New York.

THE VAN BIBBER ROLLER CO., Sixth and Vine Sts., Cincinnati, will give you *the best rollers* that can be made for any season or press. Our facilities are the best, and we use the latest Gatling Gun and compressed air apparatus. It pays you to have good rollers, and they count more in presswork than anything else. In writing or shipping, "Cincinnati" is sufficient. Everybody knows us.

ANYBODY CAN MAKE CUTS with my simple transferring and etching process. Nice cuts, from prints, drawings or photos, are easily and quickly made by the unskilled on common sheet zinc. Price of process, $1. All material costs, at any drug store, about 75 cents. Circulars and specimens for stamp. THOS. DAY, Box P, Windfall, Ind. My Simplex Mailer only $5, send for circular.

Printer's Account Book

NATIONAL PRINTER-JOURNALIST : CHICAGO, ILL.

The Age *of* Specialists

The Credit Specialist whose field is confined exclusively to the Paper, Book, Stationery, Printing and Publishing Trade, and the only Specialist in this field, is THE TYPO MERCANTILE AGENCY. Its Credit Books, Special Reports, Bulletins, Collection Department, and every feature, are designed to meet the special requirements of those whose customers are in this Trade.

The Typo Credit Book stands in a class by itself; it is more than a Credit Book and much more than a mere Trade Directory. It gives every firm, large and small, in this entire Trade, with ratings for capital and credit, and street addresses in all cities. It reflects the result of constant investigations in the Trade itself, and thus indicates the undesirable customer, no matter what his capital, and points out the safe risk. The business classification is such as to give practically distinct lists of each branch of the Trade, which makes it as indispensable to the salesman as to the credit man. It is issued every January and July.

The Typo Bulletin gives all the changes and happenings in this Trade affecting credits, and in such condensed form that it saves the credit man much valuable time in gaining these facts, essential to his protection. It is issued weekly.

The Typo Special Reports are prepared by specialists who have made the conditions in this Trade their special study. They contain the Typo records, and the facts given and deductions drawn are based upon information gleaned with the greatest care through local, general and trade channels. The special feature which makes them superior to every other report is their exhaustive Trade investigations, which show the past experience of others. They are issued in answer to inquiries.

The Typo Collection Department offers the most effective as well as the most economical method of dealing with delinquent debtors and collecting doubtful accounts. Knowledge of these debtors gives the Department every advantage, and its special position in the Trade forces many a worthless debtor to pay a just account otherwise uncollectable. Many slow accounts may be collected promptly and at nominal cost through the Typo Drafts.

The Typo Service meets every requirement, and the testimony of Subscribers of years' standing is indisputable evidence that the Service is unequaled.

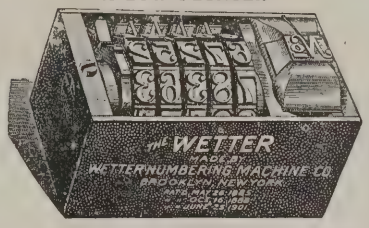
THE ONLY MACHINE WITH A LOW PLUNGER



The WETTER

Is the only TYPE-HIGH numbering machine that can be worked on either a cylinder or platen press.

A TYPE-HIGH Automatic Numbering Machine. Locks up in the form like a slug or cut. No attachments of any kind are necessary to operate it. Automatic from 1 to 100,000. Will number anything. Compact and small enough to lock up with type matter permitting of Printing and Numbering at One Impression.

EVERY TYPEFOUNDER AND DEALER CARRIES IN STOCK AND ENDORSES THE "WETTER"

THE WETTER NUMBERING MACHINE CO., 331-341 Classon Ave., BROOKLYN-NEW YORK, U. S. A.

Cable Address: "WETTER-BROOKLYN." Code used, ABC, Fifth edition.

Inkoleum is a pure colorless liquid and does not affect working properties of inks like paste compounds introducing foreign matter, wax, tallow, etc., which lessens strength of color. **Inkoleum** spreads pigment evenly and gives best results. Try it and note the difference.

Ink Reducer and Dryer

INKOLEUM

THE OLDEST AND STILL THE BEST

PRICE 50 CENTS. NO SAMPLES.

Use Inks of heavy body and reduce with **Inkoleum** as paper requires. Thin inks are reduced with varnish and color weakened. **Inkoleum** will start your presses cold mornings without washup. The only reducer **sold by supply houses** everywhere. That tell's the story.

ST. LOUIS PHOTO ENGRAVING CO.

DESIGNERS AND PROCESS ENGRAVERS HALF-TONE AND ZINC ETCHING

SEND FOR SAMPLES.

ST. LOUIS, MO.

For *solid cut* work on super-calendered, enameled or coated papers

ACME INK REDUCER

is *especially* good, as it immediately prevents "picking of paper" or "filling up" of fine-line cuts or small type.

JUST THE THING FOR JOB PRESSES

When running a quick drying ink, it is not necessary to "wash up" press every night. Just distribute a small portion of Acme Reducer on the rollers and you can start the press in the morning without trouble or difficulty whatever.

Leading Printers all testify to the superior merits of *Acme Ink Reducer.*

TRY IT—SAMPLE FREE—POSTPAID

ACME COMPOUND CO., ELKHART, IND.

Representative. YALE PRINTERS' SUPPLY CO., NEW HAVEN CONN.

¶ Absolute register and perfect distribution can be assured upon a Hoe Stop Cylinder Press. There are some jobs that require double rolling upon a 4 roller two revolution that can be satisfactorily run upon a six roller Hoe Stop.

¶ In a battery of four or more modern presses doing fine printing, a Hoe Stop will more than hold its own as a profit bearing proposition. High grade work cannot be fed to register beyond the capacity of a Hoe Stop.

¶ This press has six form rollers with vibrators and riders, table and cylinder distribution, roller trip, tapeless delivery, four tracks, is thoroughly built from base to feed boards. Will be erected upon your floor at our expense upon sixty days trial for $1500 (cost new $4500) with the understanding that it is to fulfill our guarantee in every particular.

CHICAGO

THE GLOBE ENGRAVING & ELECTROTYPE COMPANY'S
Scale of Prices for Half-Tones, Zinc Etchings, and Electrotypes.
Place the block or plate on the lower left-hand corner of the Scale, follow the curved line above the upper right-hand corner of the block to the columns of figures. On long narrow plates, not indicated on the Scale, the price is determined by the curved line directly above the extreme length of the cut. In estimating the cost of half-tones, add ¼ inch to the length and width for bevel.
HALF-TONE—From Photographs or Wash Drawings furnished. (without alteration or extra work on copy or plate)
square finish, mounted on wood, charged as per first and largest figures on Scale; larger than 8x10, 15c. per sq. in.
Half-Tones, finer than 150 line screen, 25% extra.
Duplicate Half-Tones from original negatives, 25% less.
Retouching, altering or improving copies, or grouping photographs, 75c. per hour.
Vignetting, hand tooling or wood-cut finish, 75c. per hour.
Extra negatives for half-tone groups, ½ Scale price.
Anchoring Half-Tones on blocks, 10c. per anchor extra.
Extra proofs and proofs in colors, 60c. per hour.
ZINC ETCHING—From Black and White Line Drawings or Prints furnished.
(without alteration to copy or plate) mounted on wood, charged as per second figures on Scale; larger than Scale, 5c. per sq. in.
When a number of plates, under minimum size, are reproduced at one operation, the Scale price rules for the plate as etched, with an extra charge of 10c. each for blocking; minimum charge, 25c.
Reproductions from lithograph copy, script and penmanship, and etchings of color plates to register, 50% extra.
Reproductions of book, catalogue or music pages, over 50 plates, 10% less; over 100 plates, 15% less; over 200 plates, 20% less than Scale price.
Metal Base Cored, for either zinc or half-tone, 4c. per square in. extra; minimum, 25c.
Unmounted Plates, ½c. per sq. in. less than Scale.
ELECTROTYPING—From Cuts or Forms furnished.
mounted on wood, charged as per third and smallest figures on Scale; larger than Scale, 2c. per sq. in
Electrotypes from Half-Tones, 25% extra. Nickel-types, 50% extra.
Metal Base Cored, double Scale price.
Solid Metal Base, three times Scale price.
Mortising on Wood, outside, 10c.; inside, 15c.; on Metal, outside, 15c.; inside, 25c.
This Scale subject to revision without notice.

A Letter to Another Pressman.

Niles, Ohio, April 15, 1905

Mr. D. Thomas Pressman,
New York City,

Dear Sir:

We are in receipt of your valued favor of 10th inst., and note that you say: that you are 47, and too old to learn new presses; that the flat-bed press is good enough for you, and our new-fangled machine is only a needless trouble to the pressman who has to make it work to hold his job; that faster presses mean men thrown out of employment; that your "kid brother Peter", to whom we wrote last month, "may take up new fads if he wants to", but if he follows your advice he will stick to the old standbys which experience has found to be good.

Now Mr. D. Thomas Pressman, we are glad you wrote us so frankly and that we get a chance to have a heart to heart talk with you. We hope we may save you from becoming a fit subject for chloroform at sixty.

If you think you are too old to learn, how about old General Oyama. He is old enough to be your father, and yet he has mastered and is daily mastering the newest and most effective things in the complicated art of war, and keeping a war school for the Nations in Manchuria. You mustn't allow yourself to think that you are too old to learn, unless you are ready to take a back seat.

No press ought to be good enough for you Mr. D. Thomas Pressman. Our press is as much of an advance over flat-bed cylinders as they are ahead of the old Adams press, but even the Harris ought not be good enough to keep you from looking for a better. Always want a better. We are all the time studying to make a better press; you ought to be studying to find one, if you are working for your employer's interest and your own. If you are not willing to work to hold your job to the extent of mastering every machine that will profit your employer, why then your "kid brother Peter" or some other kid will and ought to take your job away from you. The rewards of this world are for the fellows who are always willing to take trouble, and Dr. Osler's old-age rules have no significance as to them. Of course a high-speed automatic machine which you never run will at first give you more trouble than the slow-going cylinder to whose many eccentricities and points of worry you have grown accustomed and tolerant, but *it pays to take that trouble.* Isn't it worth while not to be a back-number pressman ?

And as to pressmen being thrown out of employment, if you don't know that the number of pressmen employed has increased just as the presses have increased in efficiency, ask some one who has given the matter attention. The public uses printed matter just in proportion as you make it good and cheap.

Now, Mr. D. Thomas Pressman, you don't have to learn the Harris or be up-to-date in any way. There is another way open. You may, if you choose, buy a hammer and join the knockers. Go out and say that automatic machines are no good; say it over and over and louder and louder; make yourself believe that Harris presses are worthless. But look out that Bogy Osler doesn't catch you even before you are sixty.

Sincerely yours,
The Harris Automatic Press Co.

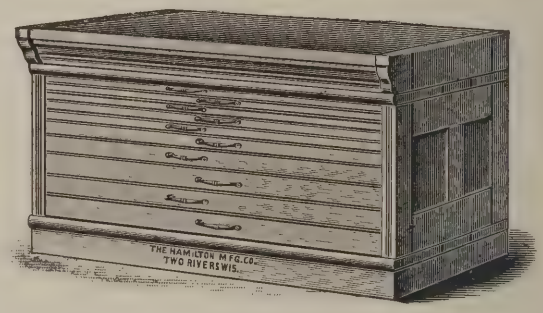
Decrease your Rent=Increase your Profits

IN THIS AGE of high rents and keen competition it is very essential that all available space be used to the best possible advantage. Realizing that these facts confront the printer at all times, especially in large cities, we have recently placed on the market an entirely new idea and a radical departure from the ordinary style of type cabinets, the

Twentieth Century Unit Type Cabinets

These Cabinets are built with the same care and embrace all the *Superior* features of construction and workmanship that has given our line of Modern Printing Office Furniture a

World-wide Reputation



A Single Unit, Style A, with Top and Base.
Occupies floor space 34½ x 20½; height with top and base as shown, 18⅜ inches.

These Cabinets are made with Steel-run construction and built in four styles of Units with choice of two styles of cap pieces. Unit A, as illustrated here, contains 10 cases of various depths. The five shallow cases at the top are made the proper depth to take type of 6, 8 and 10 point fonts, thus saving time wasted "fishing" for small type from deep compartments. The other 5 cases are made the proper depth to accomodate larger type, the lower one is very convenient for large poster fonts. Unit B, contains 8 cases. The top case is shallow, and 7 are standard depth.

These Unit Cabinets can be arranged in various ways and occupy very little space. Three Units Style A, containing a total of 30 type cases, with base and cap piece, stands only 43 inches high, representing a gain of 39 per cent. in case capacity over the best Steel-run construction heretofore made. These Cabinets will be found very convenient for placing in front of or near a window, thus utilizing space and taking advantage of all light.

A full description of these Cabinets is given in our new Illustrated Catalogue No. 13. Send us your name and the book will be sent you by return mail. We are the largest manufacturers of Wood Type in the world. Write us for specimen sheets of our latest faces. Our goods are carried in stock and for sale by first-class dealers everywhere.

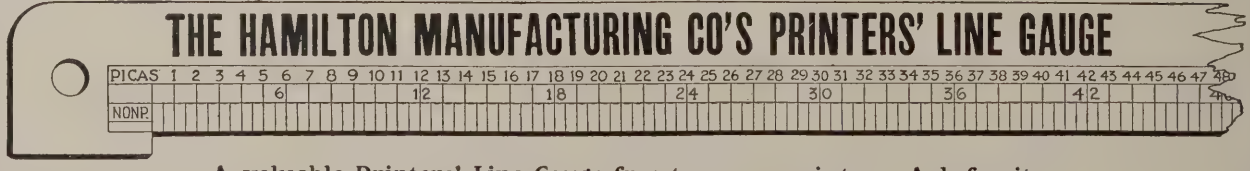
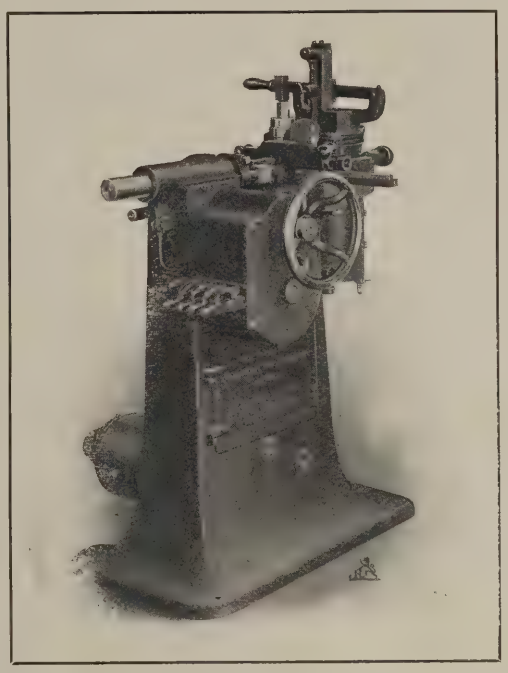
THE HAMILTON MANUFACTURING CO'S PRINTERS' LINE GAUGE



A valuable Printers' Line Gauge free to every printer. Ask for it.

SOMETHING NEW AND GOOD



BE YOUR OWN TYPEFOUNDER

A printer in Richmond had occasion to use type sold by a type foundry for $484.00 less 15 per cent. He made the type on an Automatic Type Machine at a cost of $94.00, saving $317.40. This result was probably better than can usually be expected, as this printer paid the operator $10.00 per week, and procured his metal (old type) at 6 cents per lb., the price allowed by the type foundries. A printer of high standing, personally known to thousands of printers all over the country, is paying a lad $4.50 per week to operate a type machine. The Type Machine is AUTOMATIC, requires no skill, but some intelligence.

However, the GREATER ECONOMIES of the machine are indirect.

It provides unlimited supplies of type for special emergencies at a nominal cost; which when used need not be distributed, saving that cost; it provides "sorts" at a few minutes' notice at a nominal cost, saving delays and losses through "picking"; it provides new type always, saving time in make-ready; it provides type that you can afford to use on long runs, saving electrotyping; it makes it profitable to keep type standing, again saving electrotyping or resetting. In short, if every pound of type made on this machine cost you as much as you now pay the typefoundry, the machine would still be an advantageous and economical acquisition.

There are two prices: one to the printer, and a higher one to those who want to go into the type founding business.

SPARKS ROUND HOLE MACHINE

To supersede punching machines. It cuts holes from 3-32 in. to size of a half dollar in one sheet of tissue or in as many sheets as can be put in a thickness of 1½ inches. It cuts index openings as at 6, in diagram. It occupies 9 square feet space, and can be run with ⅛ h. p. It does not drag or twist the paper. It makes holes in 250 sheets of cardboard. It is usually operated by a girl or lad. Holes can be put in after the work has been padded

or bound. If a hole has been cut too small, it can be enlarged, discharging the off cut in the form of washers. Holes can be made in burlap, cloth, leather, etc. The celerity of operator in putting the work to the gauges is the only limit of production. The work does not need to be clamped. It does not twist or draw the flimsiest paper while cutting in the slightest degree. A firm using five six-gang punching machines can get the same output from one Sparks Round Hole Machine, produce better work and save $100.00 per year.

SPARKS SLOT HOLE MACHINE

This machine slots paper and cardboard as shown at 1, 2, 3, 4 and 6, in diagram, 500 sheets of commercial paper at one operation or a corresponding thickness of cardboard. It reduces cost of production of slots to the absolute minimum, and is a greater economizer in its field than the Round Hole Machine.

The Optimus Driving Mechanism

Holds the only Vital, Living, Basic Principle for Driving a Printing Press Bed

FOR more than half a century the old universal joint had been used by all builders of printing presses. They knew its imperfections, and, with others, made many vain attempts for improvement. These efforts resulted in numerous mechanical monstrosities. Not a single good thing came from hundreds of them. Nothing was found equal to the long used and imperfect movement. Its simplicity was ideal. To preserve this and eliminate the defects was the problem. Overcome its errors without complexity, and it would remain the best, the most natural and the only correct device for driving a reciprocating bed. Men devoted their money and most of their lives to its improvement, or the discovery of a satisfactory substitute. None succeeded.

The need of a driving motion, in every way better than any known, to meet the call for speed, exactness in register and economy in wear of forms, and the almost utter failure of attempts in other directions, forced attention again to the improvement of the old motion, which admittedly offered the greatest possibilities of perfection and efficiency were its faults surmounted.

This effort resulted in the Ball-and-Socket Motion of the Optimus. In it we have maintained the simplicity of the old, and added perfection. Every defect of the universal joint has been eliminated. We have nothing like it in action, nothing like it in appearance. We obtain the flexible shaft from a series of balls and sockets, which unite in one continuous shaft the two pieces of steel with a strength as great or greater than their own. We have, in effect, one unbroken shaft, absolutely unyielding in its rotary motion, that permits the star gear to drive the bed above the rack at one movement and below it at the next. We have THE SIMPLE DIRECTNESS OF A SHORT SHAFT WITH A DRIVING PULLEY AT ONE END AND A GEAR AT THE OTHER. There is nothing more. The impulse given the driving pulley is conveyed to the gear without drag or loss, exactly as received. Herein lay the greatest imperfection of the universal joint, and the one that made reliable register impossible.

In no other way than by our Ball-and-Socket Motion is it possible to make use of the extremely simple bed drive in which years ago the universal joint was incorporated. The crudities of the first steam engines, looms, telegraphs and sewing machines have been eliminated to make their present day perfection, but the principles involved remain the same. This is what we have done for the driving motion of the printing press. We retain the basic principle that, as the simplest and best known, persistently survived through many years. Had this principle been fundamentally wrong, had it not possessed the inherent virtue of the engine, the loom, the sewing machine, it could not have lived a year. It was the dependence of all builders for half a century, and some use it today. Robbed of its imperfections it is the most reliable and valuable.

The invention of the Ball-and-Socket Motion barred all others from the use of this incomparable means, and drove competition to more complex and less direct methods of bed drive. Of these the most boasted are continually changed; and some that were loudly heralded but a year ago have been cast aside as insufficient. These constant changes are potent acknowledgments of weakness. History is repeating itself. In nothing beside the Optimus motion has there been stability, nor is there now assurance of permanence in anything else.

THE OPTIMUS DRIVING MECHANISM POSSESSES THE ONLY VITAL, LIVING, BASIC PRINCIPLE FOR DRIVING A RECIPROCATING BED. For this reason it has not been necessary to change it. Since its adoption more than ten years ago, we have had no user complain of it; we have not had a press out of register between bed and cylinder, nor has it cost any user one cent for repairs. Examined after six or seven years of hard use no Ball-and-Socket Motion has shown the least wear.

Of all the strong points of the Optimus its bed motion is the strongest. It insures register, high speed and smoothness in operation. IT IS MECHANICALLY CORRECT, and has proved through years to be the best, the most natural, the only correct, and the only lasting and satisfactory device for driving a printing-press bed.

SIMPLEX ONE-MAN TYPE SETTER

Five Years Old, and "Running Splendidly"

46,500 EMS IN SEVEN HOURS AND FORTY MINUTES

The Capacity of the Simplex is beyond any human possibility — the swiftest operators can not find its limit. And some of them are pretty handy, pretty handy. See what these capable people are doing, for instance:

THE DAILY REPUBLICAN

Belvidere, Ill., March 2, 1905.

THE UNITYPE COMPANY, Brooklyn, N. Y.:

Dear Sirs,— On Saturday, February 25, our operators, Mr. M. F. Landers and Mrs. C. C. Pepper, set thirty-one full galleys or a total of 46,500 ems composition in exactly seven hours and forty minutes. We had an unusual run of copy for that day, and while they worked at a right merry clip, they said afterwards they might have exceeded the record if they had anticipated in the morning that such a mark could be reached. Our machine is nearly five years old, has been in constant daily use since first installed and is running splendidly to-day. Mr. Landers and Mrs. Pepper had no help of any kind in looking after the machine on the date in question. They look after the loader, fill their own galleys, etc. Mr. Landers is an old operator, Mrs. Pepper is a young woman, who learned the machine in this office about three years ago. If you will examine your books you will notice that I have bought very few items in the way of repairs during the year ending March 1. In fact, I can not remember of having bought much of anything. You are at liberty to use any part of this letter.

Very respectfully,

FRANK L. MORAN, Publisher.

That is, they set up more type than eight or nine hand comps. could have set in the same time. Money in that for any publisher, isn't there?

Nota Bene: Our terms of sale or lease bring the Simplex easily within the reach of every publisher who has work enough to use one.

MEGILL'S NEW PATENT

STEEL FINGERS

INSTANTLY attachable immovably anywhere on any job press gripper. Greatest resistance to sheet pulling yet attained, with close lay to the type on all margins and between lines. Stands full strain of screw and reinforces finger where strength is most needed.

MEGILL'S NEW . . . **DOUBLE-GRIP GAUGE**

Is displacing the glue pot and preserving platen paper.

Sold by Type Founders
E. L. MEGILL, Mfr., 60 Duane St., New York

ANNOUNCEMENT

ALL job type on our lining system and scripts and borders cast by us, will hereafter be billed exclusively at the pound rate. This extends to job type—the more equitable rule by which we have always billed body type. It is

Pound versus Package.

The pound method is the correct method. Packages may vary in weight, but "a pound is a pound the world round." Buying by the pound you

Pay for what you get.

You pay for nothing more and you get nothing less. The various classifications of job type are indicated by the national colors,

Red, White and Blue.

Circulars will be sent upon application containing full explanation, tables, weights of fonts, and other details.

Many friends have written us their approval of this system. Not one has objected. Its the FAIR way. The "American Press" says:

> "Barnhart Bros. & Spindler, the well known type-founders, are out with a new plan of billing job type that secures for purchasers an adequate value for their money. Hereafter the firm will sell all their lining system cast faces, scripts and borders by weight instead of the old hit and miss "font" plan. This marks a new and welcome departure. Barnhart Bros. & Spindler realize it is the fair system of selling goods. There is no chance for confusion. The fonts will be schemed and put up in the same size packages as heretofore, but there will be no more guesswork at the expense of the customer."

A Wisconsin customer says: "We have been waiting a long time for just such announcement."

The printer world in the United States are apparently of the same mind.

CLASSIFICATION OF JOB TYPE AND WEIGHT FONTS

BARNHART'S POUND SELLING SYSTEM

FIRST CLASS

BODY LETTER FONTS:

All Roman and Old Style, advertised as body letter faces, 18 point and smaller, also the following special faces in the same bodies: Mission. Paragon. Gaslon Old Roman. French Old Style No. 3.

SPACES AND QUADS:

Spaces and Quads, all bodies.
Quads in quantities, special rates.

SECOND CLASS

JOB FONTS—Red Label:

All faces in bodies 72 point and larger, enumerated in Lists "A," "B" and "D"

JOB WEIGHT FONTS—Red Label:

All faces, smallest to largest bodies, enumerated in List "A."
All faces in bodies 72 point and larger, enumerated in Lists "B" and "D."

BORDERS—Red Label:

All Running Borders, all bodies.

SECOND CLASS—SPECIAL

JOB FONTS—White Label:

All faces in bodies 66 point and smaller, enumerated in Lists "A," "B" and "D."
All faces in bodies 72 point and larger, enumerated in Lists "C," "E" and "F."
All faces in cored bodies 72 point and larger, enumerated in Lists "A," "B" and "D."

JOB WEIGHT FONTS—White Label:

All faces in bodies 66 point and smaller, enumerated in Lists "B," "C," "D" and "F."
All faces in bodies 72 point and larger, enumerated in Lists "C," "E" and "F."
All faces in cored bodies 72 point and larger, enumerated in Lists "A," "B" and "D."
All Italics for Roman and Old Style body fonts.
Fonts of Job Fractions and Calendar Figures.

EXTRA CONDENSED

JOB FONTS—Red, White and Blue Label:

All faces in bodies 66 point and smaller, enumerated in Lists "C" and "F."

THIRD CLASS

JOB FONTS—Blue Label:

All faces 66 point and smaller, enumerated in List "E."
All faces in cored bodies 72 point and larger, enumerated in Lists "C," "E" and "F."

WHY THE NEWSPAPERS ENDORSE THE POST CHECK

By HENRY A. CASTLE

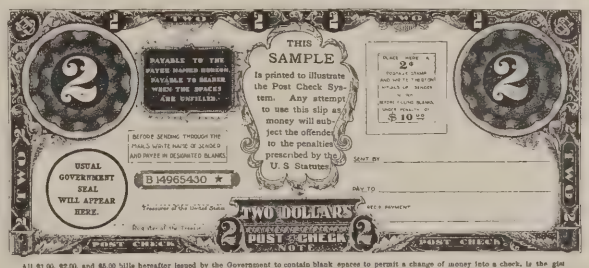
With singular unanimity the newspapers of the United States, without distinction of party, have endorsed the post check proposition for a more convenient means of making small remittances by mail than the present clumsy and costly money-order system.

The reason is not far to seek. Not only are the newspapers always alert and intelligent in supporting every practical scheme of public utility, but they have a special business interest in this item of postal reform. No class suffers so much as the publishers, from the lack of such a convenience. Many thousands of people fail to make or renew subscriptions who would promptly do so could they take from their own pockets a bill so printed as to be easily transformed into a simple and safe money order.

More than 25,000,000 postal money orders are now issued every year in this country, in denominations of less than $2.50 each; many are for less than one dollar. Assuming that the purchasers of these small postal orders have spent an average of half an hour in going to the postoffice, writing the applications, waiting while the money-orders are filled out, signed and paid for, and then returning to their starting point; and assuming that ten hours a day for three hundred days per annum constitutes the full working day of an individual, the time consumed equals the labor of five thousand men for one year.

Here is an absolute waste of the productive energies of five thousand people per annum, squandered in the unproductive, unnecessary effort required to merely get possession of a piece of paper available for making safe remittance of a small sum through the mail. No wonder that millions of others are deterred from making remittances at all. All this useless expenditure of time would be saved if each of these persons could have drawn from his pocket a post-check bill ready to be filled up with the name of the payee, made valid by affixing a two-cent postage stamp and canceling the same, and then safely entrusted to the prompt and careful hands of the employees of the postal service.

A bill which would provide this simple remedy was favorably reported by the House Postoffice Committee two years ago. It provides that the one, two and five dollar silver certificates issued by the government and used as money by the people shall be printed "payable to ——— or order," instead of, as at present to "bearer," so that by a stroke of the pen they may be converted into money orders, and that without recourse to the postoffice.



PAYABLE TO THE PAYEE NAMED HEREON. PAYABLE TO BEARER WHEN THE SPACES ARE UNFILLED.
THIS SAMPLE
Is printed to illustrate the Post Check System. Any attempt to use this slip as money will subject the offender to the penalties prescribed by the U. S. Statutes.
USUAL GOVERNMENT SEAL WILL APPEAR HERE.
B 14965430 ★
TWO DOLLARS
POST CHECK
POST CHECK
POST CHECK
All $1.00, $2.00, and $5.00 bills hereafter issued by the Government to contain blank spaces to permit a change of money into a check, is the gist of the Gardner Post Check Bill now before Congress. This rude sketch serves to convey the idea.

Fac-simile of Post Check.

In other words, John Doe of Chicago, wishing to remit to Richard Roe of New York, one, two, or five dollars, has but to take from his pocket a bill of the required denomination, affix an ordinary two-cent postage stamp thereon, cancelling the same with his initials, write in a blank space on the face the name and postoffice of Richard Roe, clap it into an envelope properly addressed and prepaid and mail it. The bill, which was current money a moment before, suddenly becomes a money-order, payable to Richard Roe only. In Roe's hands it may be presented to the postoffice for payment or deposited to the credit of his bank account, as may be the money order of today. In the hands of the post-

master it is so much cash, forming a part of the public funds to be transmitted through the banks to Washington where a new bill is issued in its place, and after a lapse of three or four months it is destroyed by the Treasury officials as defaced and mutilated currency now is.

Notwithstanding the favorable report of the House Committee, the emphatic endorsement by the National Association of Postmasters, the approval by numerous and influential commercial bodies and the urgent advocacy by more than 4,000 newspapers and periodicals, this bill still hangs fire. Objections were made to its passage by the late United States Treasurer, on the ground that it would make increased work for this department. The Senate Committee on Postoffices was restrained from making the favorable report it had agreed upon by the personal request of Senator Platt of New York, in the interest of his express company, which is in the profitable business of selling money orders. These were the insurmountable obstacles that withheld this great convenience from the public.

As to the objection of the Treasurer, it may be said that the people of the United States do not exist for the convenience of his office, but that his office exists for the convenience of the people of the United States. But it has been shown by official reports that the increased work in the Treasurer's office will be more than offset by reduced work in auditing small money orders in another bureau of the Treasury. Official estimates show that including the expense of this audit, the small orders cause a net loss to the postal revenues of nearly $3,000,000 a year.

And concerning the concession to "Senatorial Courtesy" which restrained the Senate from making its report, it may be observed that as a measure of relief the law has become a public necessity, against which even a time-honored tradition of the Senate must not be permitted to stand.

A practicable post-check system would be a great benefit to farmers, business men and publishers; women would appreciate its convenience. Business houses now receive large quantities of postage stamps through the mails. One Chicago publisher reports the receipt of $350,000 in stamps in one year, nearly $1,000 a day. Others have the same experience on a smaller scale. With post-check money this nuisance is avoided; a convenient, safe and instantly available form of money is supplied with which the public can safely transact mail business which is now said to aggregate in small sums $2,000,000,000 a year. The revenue from postage stamps affixed would pay all expenses of the system.

The boon of a cleaner paper currency of the smaller denominations is one of the incidental advantages which the people, especially in the West, would have reason to hope from the adoption of the Post Check plan. The constant flow of canceled bills to the Treasury and their redemption with new, clean currency would insure a much better average condition of the circulating medium.

To checkmate the microbe has been the diligent endeavor of modern medicine and surgery; to promote that virtue which is justly extolled as next in rank to Godliness has been accepted as an unmistakable tribute to advancing civilization.

It is a self-evident satire on this condition of things that our government permits the people throughout seven-eighths of the entire republic to handle paper currency in small denominations that is disreputable in its dirt and recognized as a menace to the public health as well as a disgrace to the nation whose seal of verification it bears.

While the Post Check would furnish an ideal medium for small remittances, and for that reason alone is worthy of adoption, a larger aspect of the case, and perhaps an even greater benefit is found in this incidental function of constant renewal of the small bills and clean money kept in circulation throughout the country. Undoubtedly disease lurks in dirty bills, where tempting nests for microbes are found. A medical journal tells us that the sponge used in a bank was analyzed and found to be swarming with microbes of various deadly diseases. Few of our bundles of bank notes would pass muster at quarantine.

All classes are affected. The surgeon who carefully sterilizes his lancet and uses all manner of antiseptic precautions in performing an operation, takes his pay in filthy paper, which affords an excellent "culture" for deadly germs. The most refined woman, who has carried personal cleanliness to the extreme limit, fumbles loathsome bills in her dainty hand—even holds them in her teeth!

Thus health and decency combine to denounce the filth our currency carries. The difference between a crumpled, greasy, dirty bill and a fresh, clean one, is precisely the difference between soiled and fresh linen. If there were no other reason for the Post Check, this would suffice, but there are many more. Clean money will be an incidental, but most grateful boon. It cannot come too soon to suit a people whose instinct for cleanliness cries out vehemently for this needed reform.

The inventor of this system of money transfer is Mr. C. W. Post, a gentleman whose wide and protracted experience in business has made him able and practical in his suggestions. He seeks no profit from his invention, but has assigned it to the government, *pro bono publico*. He has not only done that, but has, it is said, expended upwards of $25,000 out of his own private means in a campaign of education, not only of the people, but of Congress.

It is not pleasant to acknowledge the fact, which must, however, be admitted, that if Mr. Post had used his $25,000 to employ a lobby about Congress, had held on to his invention and promised a contingent interest in the future profits to lobbyists, the plan would doubtless have been adopted and in successful operation today. It lies with the business community, the newspapers and the people to bring such influence to bear on Congress at the next session, as shall insure the early adoption of the Post Check Bill. The advantages it will secure are imperatively demanded in the interest of the public policy.

"FLOWERS FOR THE LIVING"

UNDER the above caption, our old and much-esteemed friend, A. E. Pierce, of Denver, Colo., and former Vice-President of the National Editorial Association, has the following in a recent issue of his paper, the *Record*, that will be appreciated by all newspaper workers and printers, for they know how it is themselves and get none too much praise for the hard and useful work that they perform:

Some day—yes, "some day—there will be a funeral," and "we'll be in it." No doubt there will be flowers; flowers

from the conservatory and flowers of rhetoric. Possibly some very nice things may be said of us, and our faults and shortcomings will not be mentioned. This will be very considerate, and, by the living, will be duly and properly appreciated. But we desire to say right here and now, on behalf of the "remains" that a boquet like the following, from the pen of P. G. M. W. A. C. Howe, the big-hearted editor of the Empire State Workman, is more greatly appreciated by us while living than all that may then be said, or done, possibly can be by the cold clay in the casket:

A VETERAN A. O. U. W. EDITOR.

"Past Grand Master Workman A. E. Pierce, of Denver, has just rounded out eighteen years of continuous service in the Order as editor of the Colorado *A. O. U. W. Record*, one of the brightest, spiciest and most readable fraternal papers in the country. There is no standard by which the good accomplished by Brother Pierce's writings can be measured. His articles have been reprinted in nearly every fraternal publication of note, and his reputation is world-wide. We hope that the good Lord will spare him to us for many years to come, for the Order needs his sound advice, his fables, his humor and his pleasant smile."

The newspaper man has, above all others, the opportunity for publicly commending the deserving. It is an opportunity that carries with it the duty that should never be slighted nor neglected. Just praise is comely and wise. It helps to smooth the rugged paths of life and encourages to greater and nobler endeavor.

On the next page to this article Mr. Pierce has a very practical sermon in his paper on a text taken from the cry of a long time street vender of Denver: "All kinds of shoe strings." While Mr. Pierce applies his preaching to providing the kind of "shoe strings" that will be sure to keep the shoes on your widow's and fatherless children's feet, after you are gone," it occurred to us that "all kinds of shoe strings" might easily be applied to the mixed demands made on the newspaper man.

THE HOME PAPER

Here are a few thoughts from the Portland *Oregonian*, one of the ideally-excellent papers of this country, that deserve reproduction in whole or in substance —with credit for modesty's sake—in all the "home papers" of the land:

"Your home paper never loses interest in you." To this, possibly, you have not given a passing thought.

No matter if you like the newspaper man or if he likes you, if he is true to his profession and publishes a paper for the people he allows no personal matters or petty spites to interfere with his news gathering.

He may meet you as a stranger, yet along with his best friends, chronicles your success and sorrows wherever you may be, and those who would otherwise forget you are ever and anon reminded of your existence by an item in your home paper. Others may deceive and defraud you, but your home paper never forgets you.

Possibly you do not deserve decent treatment by the paper, but you get it just the same, and if it should at any time say things to cause your fur to turn the wrong way, study a moment and see if it has not at various times said many nice things for which you fail to give it credit.

TO IMPROVE CONSULAR SERVICE

How to make our U. S. consular service more efficient is a question that ought to interest the newspaper press not alone because some editors desire, at some time, to be U. S. consuls, but because an efficient consular service is of benefit to all parts of the country and to all producers, or manufacturers. Much benefit has been, and much more can be, derived from information gathered in regard to methods, as to grasses, grains, fruits, stock and various products that it is, or could be made, profitable to introduce into this country for improvement or increase of production. A direct benefit can also be derived from bringing producers and foreign buyers into direct communication one with the other. Our attention has been called to this subject by a circular letter and an outline of an effective plan for co-operation *gratia propatria*, from Urbain J. Lous, American Consul at Prague, Bohemia, Austria. All that is required is to send, to the consul, commercial literature, catalogues, prices, discount sheets, circulars, photographs showing nature of products for sale or names of articles wanted for import; in short, all facts necessary for immediate sale or purchase, including, of course, name and address of firm both city and cable, rating, etc.

The commercial information is entered on Little Drummer record cards, alpabetically indexed, and divided in two sections: Merchants and Merchandises. The catalogues, circulars, etc., are filed in folders, numerically indexed. The firm's folder number is permanent and corresponds to that registered on the record cards.

HONORING A NEWSPAPER

The Winfield, Okla., *Courier* has the following pleasing incident as to honors paid to the Guthrie *State Capital*, published by Mr. Frank H. Greer, that goes to show that an acceptably, usefully conducted newspaper is not without honor in its own home, however it may be with prophets (we hope that the profits of the *State Capital* are equal to its popularity):

The "Excelsior Club" of Guthrie celebrated the founding of the Guthrie *State Capital*, by making its meeting of March 27th, "State Capital Day." The responses to roll call were quotations from the files of the *State Capital*. An address was delivered by Editor Frank H. Greer on "The Influence of Woman's Clubs on Our Modern Life." The meeting was concluded by planting a climbing perennial rose in front of the Carnegie library, which was christened "The State Capital" rose. Commenting on this unusual recognition by a ladies' club of the community value of a newspaper, the *State Capital* says:

"The *State Capital* feels much gratification over this distinction by this association of noble women. For a newspaper to have such recognition by a club of this character is a distinction indeed. If this paper has succeeded in pleasing such accomplished and practical women, then it has achieved something for the women who composed the clubs of Guthrie and those throughout the territory are the most intellectual and progressive of our women. Their judgment of a newspaper is usually correct. Popularity for the *State Capital* with them indicates popularity with everybody.

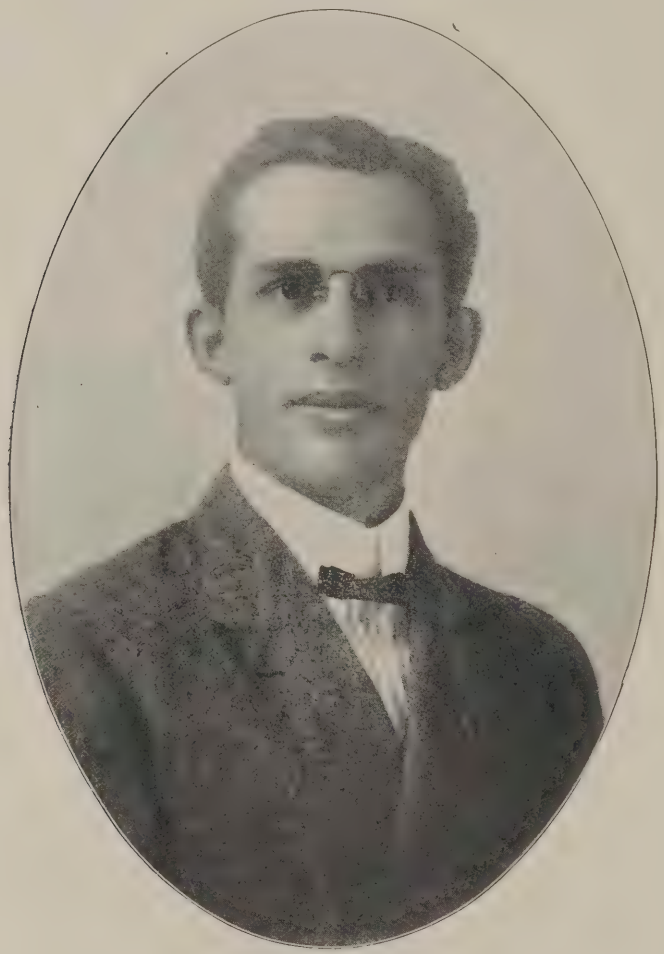
"The *State Capital* has not greater glory in the part it has taken in pioneer Oklahoma than in the substantial place it holds in the homes of the people. The home is the unit of the State and the State is the unit of the Nation. Woman is the queen of the home. No newspaper can succeed unless it is popular in the home. Women are the greatest readers of a newspaper and the best newspapers in the country are giving more space than ever to news matter and literature for women.

"The women's clubs have enlarged the mental life of the women. These clubs bring them together, as the various societies do the men. They take up in a methodical way current events and general literature and this means a steady advance in art and culture. Guthrie has no greater stimulus for widened intellectual life and betterment of home, than the literary clubs. That every town in the territory has a number of these clubs is evidence of the exalted civilization of our territory."

The *State Capital* was founded by Frank H. Greer on March 30, 1899—three weeks before the opening of Oklahoma to settlement. From an humble beginning it has grown into one of the most powerful of Western newspapers. It has been clean, able, honest and fearless—a fit type of the best ideals of the wonderful people who have in sixteen years made the prairie a garden, dotted with cities whose culture and refinement vie with the century of Eastern civilization.

THE MISSISSIPPI VALLEY EDITOR-POET

Lansing, Iowa, boasts of having the youngest editor, engaged in actual newspaper work in that State, Mr. H. J. Metcalf. At the age of twenty-three years, he became editor of the Lansing *Mirror,* one of the oldest and most influential weekly papers of Iowa, established in 1852, and is successfully conducting that publication. He was honored with an election to the Vice Presidency of the North Eastern Iowa Editorial Association, at the recent convention held in Waterloo. He was editor of the New Albia, Iowa, *Globe,* when seventeen years of age.



Mr. H. J. Metcalf.

Mr. Metcalf succeeded his father in the conducting of the *Mirror.* He was to the manner born and has proved himself worthy as a newspaper writer and publisher. Like all true editors he is a lover of nature with active sympathies for all her beauties and moods, as well as for all who live. What is not so frequent among members of this calling, he is both a poet and a musician, a cornetist using a $135 instrument of finest make.

As a poet he has written two books, "The True Garden of Eden" and "Riverside Echoes."

A brief review of the last named volume has already been published in this journal. His first volume was issued some three years ago when he was only twenty-one years of age and, at once, attracted favorable attention and comment. His more recent work has received still wider notice, and that able paper, the Nashville, Tenn., *American* recently said of him and his work:

"The author was born and reared upon the banks of the upper Mississippi, and is familiar with the beautiful scenery along that stream from Dubuque to St. Paul. A country editor possessed of excellent descriptive powers, he sees Nature as it is. His writings are somewhat on the order of those of Whitcomb Riley, and just as Riley's "Seein' Things at Night" carries every man back to his boyhood days, so Mr. Metcalf's "In the Good Old Summer Time" or "The Dearest Spot on Earth to Me" makes one remember things long since forgotten. After reading these little word paintings of every-day life, one lays the book aside with a regret that there is not more of it."

Mr. Metcalf does his writing during leisure hours at his beautiful home on the banks of the Mississippi and here, beneath the shadow of Mt. Hosmer, the highest point on the river, between the two saintly cities, St. Paul and St. Louis, he imbibes the inspiration which guides a pen of rare ability.

We understand that he is now at work on a third volume of poems. We had the pleasure of meeting Mr. Metcalf at the convention of the Northeastern Iowa Editorial Association and found him to be a modest, progressive young man in close touch with the members of the calling and a warm friend and admirer of our Mr. Copper, who has charge of our Newspaper Review Department and who conducts a newspaper just across the Mississippi river from Lansing, in the State of Wisconsin.

They are both enthusiastic young newspaper men. Mr. Copper has consented to tell the story of his preparation for the work which commenced in his childhood days. His experience has been peculiar, beginning with patiently laying out, drawing up, arranging, illustrating and printing a little newspaper for two or three years with a pen. This practice evidently led him to view a newspaper on the mechanical side, somewhat from the standpoint of an artist in drawing and filling in a picture. It certainly proved a good kind of drill. To get a satisfactory effect in an advertisement, it is a good idea first to drawn a design. To get the best effect in the appearance of a newspaper, the same principle holds.

Mr. Metcalf has approached his work more directly from the literary side, but each realizes the importance of both literary ability and mechanical excellence in an up-to-date newspaper.

ABOUT THE SPRINGFIELD, OHIO, PRESS-REPUBLIC

The Springfield, Ohio, *Press Republic,* with a circulation of nearly eleven thousand copies, prints the daily figures of its issues at the top of its first page. With such a circulation in a city the size of Springfield, the paper has just cause for pride and that the merchants of the city appreciate the opportunity of reaching the people through the paper is evidenced by the advertising columns. One enterprising merchant recently took four pages in one issue. The reasons for the success of this store, that is able to take four pages at one time, in the local daily paper, as given by the business manager, are worthy of study by newspaper makers and job printers. They are in brief, 1st, Positive adherence to the policy of absolute integrity, and the accommodation and satisfaction of patrons; 2d, unequaled buying facilities. "Goods well bought are half sold," is the old saying as to merchandise. The same principle, applied to newspaper making or job printing, might be extended to include equipment in all departments to secure true economy. Then there must be system and economical, not niggardly, management in every step of the production; 3d, modern and thorough system. "No half heartedness." Whatever is undertaken is pushed with energy and painstaking effort to a successful conclusion. No three other things are more important in a newspaper or in a job printing office than are system, energy, push and painstaking effort. There is scarcely any end to the details but there is not one detail that should be neglected or that should not receive "painstaking effort."

NEWSPAPER CRITICISMS

BY O. BYRON COPPER, DE SOTO, WIS.

Address all Communications for this Department to De Soto, Wis.

THERE is a great similarity between the editor and the preacher. Both by virtue of their positions should be devout men, and by devout is meant not the solemn, sanctimonious, long-faced friend of the past, but the genial, sociable, democratic, broad-minded product of the illumined present. Industriousness, enthusiasm, congeniality, sobriety, integrity, sincerity, liberality, chastity, faith, hope and charity should be the morals of both, and their chief object the enlightenment of the race, from a just and unprejudiced viewpoint—unfettered by the dictates of party boss or prelate. By virtue of his obligation to the forms and customs of his creed. There is a tendency to narrowness in the ministerial life, which cannot overtake the newspaper man, whose very duties must tend to broaden his mind and views. Both should aim to preach—the minister from the pulpit and the editor through the columns of his paper—the matters of life and salvation, *as they see them,* rather than as some predecessor has seen them, for this is a day of independence—a day of originality wherein the individual has begun to think for himself—a day, in fact, wherein there is a growing demand for independent editors and preachers, as well as for independent newspapers.

It seems strange, indeed, that just after having given vent to the foregoing brilliant (?) "splurge" the first publication we should pick up should be one of marked originality and independence, whose editors are practically preachers, preaching the Truth as it is revealed unto them. This publication is *"Soundview,"* "a magazine devoted to the obstetrics (get on to that, will you!) of thought and the philosophy of existence," published on Puget Sound, at Olalla, Washington, by "We," that is L. E. Rader and Frank T. Reid. The size of the pages is about 4¾x6¼ inches. There are about forty of these printed on an antique laid paper and bound in pale green covers. As may be surmised by that already said, the *Soundview* is an exponent of the advanced thought, although it lays no claim to affiliation with any creed or cult save the "Society of Evergreens"—whatever that may be. There was a time—and it is not so remote that any of us have forfotten it—when to be a devotee of the New Thought movement was a disgrace in the eyes of the multitudes; but, figuratively speaking, this was in the day when only the lowly fishermen, such as Peter, Andrew, James and John, had had the truth revealed unto them, as it were, but today such able Pharisees as Paul of Tarsus have been engulfed in "a bright light from heaven," and have espoused the cause of Truth, so that it can no longer be considered disgraceful. And foremost among this New Thought movement today we find so many of the country's most able editors, especially the editors of our great, (heretofore "orthodox,") magazines. The magazine let under discussion was accompanied by the following letter, which takes us into a somewhat different line of thought:

OLALLA, WASH., Feb. 27, 1905.

Dear Mr. Copper.

As one of the "Evergreens" who now and then peers between the covers of the NATIONAL PRINTER-JOURNALIST, I am much interested in your comments on the *products* of the *press.* Thinking you might like to see our contribution to the uplift of mankind, and enjoy it, at least from an artstic standpoint, I enclose under separate wrapper a recent copy of *"Soundview."* It might further interest you to know that the "artist" under whose direction it is issued has just turned 16, and the number sent is the third he has produced after but *six days' tuition*—never having seen a type at close range before. I feel proud of his work and would like your comment and criticism of the same. He is *eternally* delving and studying and never overlooks anything or forgets. His accuracy is something marvelous. With best wishes, I am,

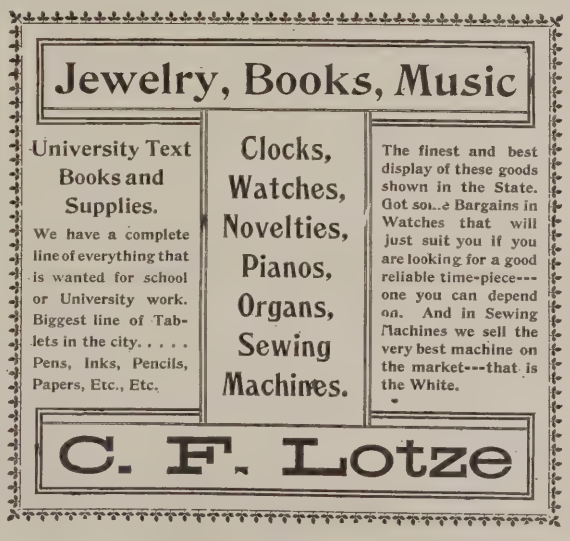
Very cordially yours,

L. E. RADER, JR.,
Pub. *"Soundview."*

His name is L. E. Rader, Jr., and the above are the exact facts.

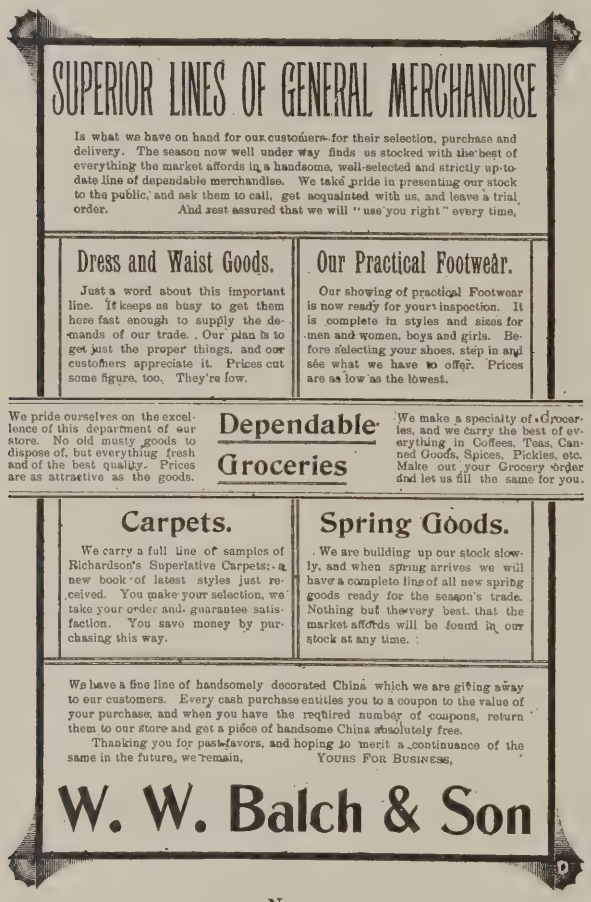
From an artistic point of view, from a lad who "has just turned sixteen," *Soundview* is a most creditable product. There is a high degree of originality about the typography, and all the designs are strictly unhackneyed. Good taste and carefulness are displayed in the general styles and makeup of every page. Imperfect register is the most prominent defect, and the impression is a trifle too heavy "in spots." Mr. Rader is certainly justified in being proud of his prodigious son, who is extended the congratulations of this department.

Dakota Republican, Vermillion, S. D.—We have had this excellent publication on our desk before, and we are inclined to believe that it has improved—not that we recall any improvements needed or suggested—but it looks just like a paper that would improve. Everything now—news service, editorial work, composition, makeup and press work—measures up to commendable standards. The *Republican* is a seven-column quarto; supplemented with a six-column insert printed on both sides. The advertising patronage is most liberal and the ad compositor is a remarkably clever printer.



Jewelry, Books, Music
University Text Books and Supplies.
We have a complete line of everything that is wanted for school or University work. Biggest line of Tablets in the city. . . . . Pens, Inks, Pencils, Papers, Etc., Etc.
Clocks, Watches, Novelties, Pianos, Organs, Sewing Machines.
The finest and best display of these goods shown in the State. Got some Bargains in Watches that will just suit you if you are looking for a good reliable time-piece---one you can depend on. And in Sewing Machines we sell the very best machine on the market---that is the White.
C. F. Lotze
No. 1.

He has, of course, an abundance of good material, and is using it quite creditably. The two reproductions (Nos. 1 and 2) are perhaps not his best ads, but are shown for a purpose. Both are chiefly remarkable for their originality. Our corrections in specimen No. 1 would be: Omit all commas after the words in the central panel, which should have been closed at top and bottom by the same border as that employed on the sides, dispensing with the light parallel lines which extend the full length of the upper and lower panels. In specimen No. 2, much the same mistakes have



SUPERIOR LINES OF GENERAL MERCHANDISE
Is what we have on hand for our customers for their selection, purchase and delivery. The season now well under way finds us stocked with the best of everything the market affords in a handsome, well-selected and strictly up-to-date line of dependable merchandise. We take pride in presenting our stock to the public, and ask them to call, get acquainted with us, and leave a trial order. And rest assured that we will "use you right" every time.
Dress and Waist Goods.
Just a word about this important line. It keeps us busy to get them here fast enough to supply the demands of our trade. Our plan is to get just the proper things, and our customers appreciate it. Prices cut some figure, too. They're low.
Our Practical Footwear.
Our showing of practical Footwear is now ready for your inspection. It is complete in styles and sizes for men and women, boys and girls. Before selecting your shoes, step in and see what we have to offer. Prices are as low as the lowest.
We pride ourselves on the excellence of this department of our store. No old musty goods to dispose of, but everything fresh and of the best quality. Prices are as attractive as the goods.
Dependable Groceries
We make a specialty of Groceries, and we carry the best of everything in Coffees, Teas, Canned Goods, Spices, Pickles, etc. Make out your Grocery order and let us fill the same for you.
Carpets.
We carry a full line of samples of Richardson's Superlative Carpets; a new book of latest styles just received. You make your selection, we take your order and guarantee satisfaction. You save money by purchasing this way.
Spring Goods.
We are building up our stock slowly, and when spring arrives we will have a complete line of all new spring goods ready for the season's trade. Nothing but the very best that the market affords will be found in our stock at any time.
We have a fine line of handsomely decorated China which we are giving away to our customers. Every cash purchase entitles you to a coupon to the value of your purchase, and when you have the required number of coupons, return them to our store and get a piece of handsome China absolutely free.
Thanking you for past favors, and hoping to merit a continuance of the same in the future, we remain, Yours For Business,
W. W. Balch & Son

No. 2.

been made. In the first place in the displayed headings several periods have been used, for which there was practically no use. If the underscoring of "Dependable Groceries" were omitted and the two lines closed up nearer together, with "Groceries" centered, they would be found twice as forceful. The omission of the lighter lines of border at the two extreme sides would lend greater white margins to these four corresponding squibs, which is all they lack. For so great an amount of matter this specimen is creditably designed.

Albion, Neb., Feb. 20, 1905.

Mr. O. Bryon Copper, De Sota, Wis.

Dear Sir:—I am sending you under separate cover a copy of the *Argus* of the 18th containing a page ad for criticism. We have heretofore noticed your attitude toward ads run on the first page, but in this case it could not be helped, so please overlook this defect and we will try and not let it happen again. Yours truly,

O. H. Walters.

We are pleased to note from the many letters that come to us, like the one just quoted, that our oft repeated condemnation of "ads on the first page" is beginning to be universally recognized by the readers of this department. The Albion *Argus* is a seven-column folio, all home-print, with fourteen columns of displayed advertising matter, seven columns of which goes to comprise the full page ad alluded to in the foregoing letter. The *Argus* also carries at least five or six columns of cards and legal advertisements. The news features are good, there being maintained quite a staff of local correspondents, and the home locality is fairly well attended to. The advertisement composition is a trifle hackneyed, but generally neat and legible. The practice of employing heavy double advertising rules between ads is a thing we cannot commend—a single lightface rule is preferable. The use of dashes between local items is not to be encouraged, either, as they are neither useful nor ornamental in this instance. Presswork is good. D. J. Poynter is the editor and proprietor of this sheet.

Almost every editor will be fully able to appreciate what we are about to say. They will be able to appreciate it because the situation which we are about to describe so nearly resembles that experienced sometime in the career of almost every editor. We refer to the rejection of manuscript personally submitted to the editor's consideration for publication by someone of his good patrons, whom to offend is most painful to him. These extremely unpleasant tasks, as we have said, must confront almost every editor sometime in his life, and just so do we feel when we are compelled by honesty to condemn the product of some sincere patron of this department of the National Printer-Journalist. But it would be sheer folly to offer felicitation where it was unmerited—most unwise to praise or pass silently over condemnable features—in either of which cases the primary object of this department would be lost. We never pass adverse judgment on any of the publications reviewed without most vividly standing for the time in the "other fellow's" place, hence the pain which our conscientious comment may produce is not entirely one-sided. We are sorry, therefore, that we cannot praise the product of so earnest a contributor as he who pens the following missive:

Selden, Kans., March 10, 1905.

National Printer-Journalist, Chicago, Ill.

Gentlemen:—I enclose you under separate wrapper a copy of our paper which is printed on a 14½x22 Peerless job press, by gasoline engine power, in a town of 300 inhabitants in what is called the short grass country in Kansas. It is not a county seat town, either. We have been here about two years and a half, and the paper is now located in a new office building with residence attached. My wife and I constitute the firm and we do all our own work with the assistance of a "devil," who has been with us about two months. We are new subscribers of *the* National Printer-Journalist and find many things inside its cover pages that help the printer. We will also enclose you a copy of the *Independent* as it was when we took charge of it. We think we have made some improvement in it and hope to still make it better as time and means will permit. We now print six pages of home matter each week and as fast as our advertisers encroach upon our space we will add extra pages, as we aim to give our readers as much local news as we can, and at the same time furnish a good display space for our advertisers, which under the present form of our paper we are able to do by adding extra pages when the occasion demands them. Our town is growing and we hope to keep our paper just a little in advance of the town all the while.

Wishing the National Printer-Journalist success, I am,

Yours truly,

W. T. Logan.

The copy of the *Independent* "as it was when Mr. and Mrs. Logan first took charge of it" is a most sickly-looking five-column quarto, destitute of any praiseworthy features, and will not bear a comparison with the present four-column, ten-page paper which Mr. and Mrs. Logan have made of it. Editor Logan's reference to the size of his home town is quite correct and relevant, and with respect to contents the *Independent* is fairly creditable as the local organ of so small a community; but the size of the town in which a paper is published cannot, as so many publishers seem to think it does, account for, nor excuse, limited news service and "blacksmithing" typography. According to conditions above explained, it would not seem to us that the getting out of a newspaper the size of this one would be much of a task

for a man and a woman (both practical printers, we take it) and a "devil." The pages are of a size most easily made up and justified, and judging from appearances the office is well supplied with fairly good material. The power alluded to makes pressing easy, and with the advantage of a Peerless jobber, the impression secured in some instances is disgraceful. Take, for instance, the first page: One end of the form —and especially one corner—shows up extremely black, while the remainder of the form is dim, fading off into absolute illegibility at the edges. Some of the six-point rule composing the border of this initial page (which is a displayed ad) has slipped out of place, become disjointed and presents a most slovenly aspect, showing downright carelessness in locking-up. The one who sets the ads on this publication might—in fact, would—with a little more care and attention, become an artist, and even now in several instances he is producing commendable designs, which are defective only as regards attention to detail. This little paper might be improved a hundred per cent by making up the first page with local news, exclusively, allowing no advertiser to "encroach" upon it. The first page is the cream of the newspaper, and if there is to be a fight over it, why not award the prize to the majority—the readers—rather than to the minority—the advertisers? It would require more space than we can afford to devote to a single publication to tell Mr. and Mrs. Logan just how they might perfect their publication in all departments, but our advice, in brief, would be this: Pay more attention to details in everything, always bearing in mind that "that which is worth doing at all is worth doing well." Also, study the trade journals with a purpose. The fact that these publishers of the *Independent* have erected a new office and dwelling within two and a half years at the present stand is cogent evidence that they are progressive and successful people, and are not needing any advice as to the "business end" of their business. We wish them continued prosperity and an improved publication. Their resolution to always keep "just a little ahead of their town in progress" is a model worthy of universal adoption.

In this department of last August we had occasion to compliment B. Ray Franklin, an ad-writer and compositor with the Fulton (Mo.) *Sun*. Some time ago we received a most gratifying leter from Mr. Franklin, which we quote in part as follows:

FULTON, Mo., March 13, 1905.

O. Byron Copper, De Soto, Wis.

DEAR SIR:—I feel as though an apology were due you for my not having responded to your criticism of my ads in the August number of the NATIONAL PRINTER-JOURNALIST. I fully appreciated your criticism and would gladly have extended thanks to you for same, but I was changed from the advertising department to foreman of the job department, and consequently it slipped my mind. I am sending you a clipping from our paper, dated August 5, 1904, which will show you, though we did not thank you by our pen, that your criticism was also appreciated by the editor of our paper, as well as by myself. * * * I am also showing my appreciation for what you have done for me by sending $2.00 for regular subscription to the NATIONAL PRINTER-JOURNALIST. * * * Again thanking you, I remain,

Ever your friend,

B. RAY FRANKLIN.

We quote the foregoing letter merely that some other brother "seeing, may take heart again" and contribute to this department, which is the only way in which it can be successfully continued, for we consider that this department is not successful unless someone is receiving benefit from it. To be sure contributions now are numerous; but there's always room for others. In speaking of this matter Mr. Franklin's paper, under a double-deck heading, says in part:

"It has ever been the object of the *Sun* to give its advertisers the best results that could be obtained through the medium of a country newspaper. The first object attained in this direction was the largest circulation of any newspaper in the county and the second the form in which these advertisements were presented to the public through the columns of the *Sun*.

"As a proof of the *Sun's* efforts in the latter case the following tribute to the excellent work of the *Sun's* advertising man, Mr. B. Ray Franklin, which appears in the current issue of the NATIONAL PRINTER-JOURNALIST, is most gratifying.

"Six advertisements which appeared in the columns of the *Sun* are reproduced with the following criticism:

"The value of this criticism and courtesy will be appreciated when it is understood that the NATIONAL PRINTER-JOURNALIST is the recognized authority on everything pertaining to the printing business throughout the United States.

"The advertisements which are reproduced were written, designed and set by Mr. Franklin for the *Sun* and that notice is taken of the work is proof of the efforts of management of this paper to give its advertisers the best results in every way to make the advertisements valuable, not only to the purchasers of the space in the columns of the *Sun* but to the public and also this paper. The *Sun* believes in advertising. It pays."

We are pleased to note that the mind of the *Sun's* editor was big enough and broad enough to recognize in his employee's good fortunes an excellent chance to advertise himself.

Leon E. Derr, foreman of the Anna (Ill.) *Democrat*, sends us a number of ads for criticism, with the following testimonial, which is gratifying indeed to all those who are endeavoring to make this magazine one of the best of its kind in the world:

ANNA, ILL., March 14, 1905.

O. Byron Copper, De Soto, Wis.

DEAR SIR:—I find the N. P.-J. a very great help to me in gaining ideas in ad composition, and believe that it has been instrumental in advancing the quality of my work to a very marked extent.

Yours respectfully,

LEON E. DERR.

In example No. 3 we are showing one of Foreman Derr's advertisements. This is a very neat specimen, showing com-

No. 3.

mendable care in its construction. The matter is well adapted to the space and good balance is attained. In so large an ad we would prefer a heavier border—a larger one, say pica or eighteen-point,—else a plain black six-point rule, and the interior panels would have been better composed of rule with a two-point face. The upper portion of this ad—the heading and the two box panels at either side—is faultless, (with the exception of the light rule employed in the panels, as stated) but the displayed heads in the matter at either side of the large central panel would have appeared much better centered. This same criticism would apply to the matter within the central panel, too. Here, also, an improvement

would have been effected by centering "What Better Christmas Gift than" over "A Pair of Queen Quality Shoes," making the latter a full line, which could probably have been more desirably executed by employing upper and lower of a size larger type. On the whole, however, this is a creditable newspaper ad, the illustrations in which are well situated. We shall hope to hear from Mr. Derr again.

H. C. Martin, editor and proprietor of the Weekly *News*, published at Lenoir, N. C., says, "I enjoy reading your criticisms," and while there are about his paper, as there are possibly about all papers, several things to criticise adversely, yet in glancing it over we are moved to the belief that Mr. Martin also takes an interest in endeavoring to keep his paper up to eminent standards. Somehow or other we get a hint or two from a study of this paper that says plainly that its editor is a "devout man." At least the contents are strictly pure and high-grade in character, devoid of any of that sensational or coarse sentiment that sometimes creeps out of an editor's life into his newspaer. The *News* is not only clean as to contents, but it is also clean in print and appearance. It is a seven-column folio, all home-print, evidently, with plate employed on the first and last pages. A fairly good advertising patronage is enjoyed, all of which is set after plain and somewhat out-of-date fashion. The local and personal mention is quite complete and the editorial department outspoken and patriotic. The title might be improved by allowing less space between the three words comprising it.

AUBURN, NEB., March 17, 1905.

O. Byron Copper, De Soto, Wis.

DEAR SIR:—Under separate cover I send you a sample of a two-page ad for criticism. It was gotten out in a very short space of time. We were compelled to issue a sixteen-page home print paper, in which there was over 1,000 inches of display advertising which had to be "thrown together" during the week. The ad force consists of myself and an apprentice. One of the proprietors assisted on the press work, which was done on a Babcock drum cylinder. The paper has a circulation in excess of 2,800, printed in a town of 4,000 and a county of 15,000 population. Ninety per cent of the families of the county take our paper. During the entire session we never "pulled a sort." I am an appreciative admirer of your work and have profited greatly by your suggestions in the past. Very respectfully yours,

J. C. VOLINE.

P. S.—Also find a number of samples from the general run of work.

The ad referred to in the above quoted letter is that shown in reproduction No. 4, and without a single exception it represents the finest, best, most attractive and most unique newspaper advertisement ever reproduced in these columns. From the standpoint of the ad-writer and the ad-setter it is a model of excellence, representing an abundance of labor, every detail of which has been carefully attended to. The name of the Nemaha County *Herald*, the publication in which this excellent advertisement appeared, is not unfamiliar to the regular readers of this department, it having been thoroughly reviewed in one of the past numbers. The *Herald* is one of those grand, big, almost perfect papers, which is, strictly speaking, a modern product, containing a thousand times more reading matter, and a thousand times more advertising matter than any daily paper could have turned out four score

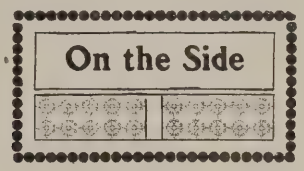
years ago. With an inexhaustible equipment, peerless editorial and reportorial service, the best up-to-date typographical styles, and skilful workmen in all departments, together with that greatest blessing of all—a community full of modern push and progress, the Nemaha County *Herald* is easily and eminently one of the best weekly newspapers in the United States of America. And last, but not by any means least, the *Herald* is blessed with the services of one of the most capable ad-compositors who have ever favored this depart-



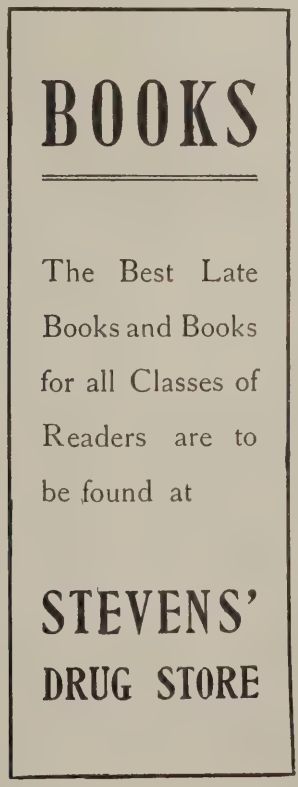
No. 7.

ment with contributions, and this, we take it, is Mr. J. C. Voline, whose fine specimens of typography render the scrutiny of the *Herald's* pages a delightful pleasure to any printer. We also show herewith a few of the unique headings from this paper. (Nos. 5, 6, 7.) It is not possible to exaggerate the excellence of this publication, even though we had columns of space at our disposal for this one review, which, however, we have not, and are therefore compelled to pass on to the next.

HIAWATHA, KANS., March 18, 1905.

O. Byron Copper, De Soto, Wis.

DEAR SIR:—By this mail I am sending you several late copies of The Brown County *World,* published at Hiawatha, Kans., by Ewing



No. 8.

Herbert, for inspection and criticism in your department of the NATIONAL PRINTER-JOURNALIST. Though the *World* is published in a town of about 4,000 inhabitants and only tries to cover Brown county alone, it has a circulation of over 3,100. We call the *World* a 16-page paper, but nearly every week a 24-page paper is printed and very frequently it is necessary to print 32 pages. In the last three months it is doubtful if more than two 24-page papers have been issued—all the others have been 32-pages. The small size newspaper means considerable more work in a mechanical way to get it out, but after several years' trial we still like the style. I will send you at the same time several samples of job work from our office.

Yours very respectfully,

THE BROWN COUNTY WORLD,
CHAS. H. BROWNE, Mgr.

The Brown County *World* is a four-column weekly publication, fluctuating, according to the foregoing statement, between sixteen and double that number of pages, each about 10½x15 inches in size, all cut and stapled in substantial magazine form. To be sure, as Manager Browne suggests, this size paper may have its drawbacks in the way of mechanical

The Brown County World
Forty-Second Year
Hiawatha, Kansas, Friday, February 3, 1905
Number Five
ALWAYS SOMETHING IN IT
EVERY week there is something of value in THE WORLD to every reading person in Brown county—to the farmer, the town resident, the merchant, the man who buys. All the news is found in THE WORLD, all the bargains worth hunting for. THE WORLD'S sworn average weekly circulation was
3157 IN 1904
More than 2500 copies read weekly by Brown county subscribers. The newspaper that pays both advertisers and readers—THE BROWN COUNTY WORLD.
THE PAPER WITH THE BIG CIRCULATION

No. 9.

labor, but it certainly possesses remarkable advantages also, some of which might be summed up as neatness of appearance, convenience of handling, etc. We have during our three years' connection with this magazine seen only a few newspapers of the size and style of the Brown County *World,* and although there is practically nothing in the present trend of newspaper events to warrant the prognostication, yet we are inclined to believe that this is to be the style of the weekly newspaper of the future, if for no other reason than that the public will demand something more handily read. The *World* is an excellent publication, both in point of contents and mechanical makeup. Editorial work and news service are unimpeachable in their extent and excellence; advertising patronage is extremely liberal and the bulk of these ads are handled in a modern, neat and tasteful fashion by the compositor. The wording of these advertisements, too, their scheme and design, is original, and replete with that element that goes out and gets the business. As intimated, the

World is practically a magazine, and the ads within its columns take on a "magazinish" aspect, too, unconsciously, as it were (No. 8), being set, in the main as simply and neatly as

Forty-Second Year | Hiawatha, Kansas, Friday, February 17, 1905 | Number Seven

For To-Day

ABOVE all, that I may not be a coward: That I may have courage—courage to be unmoved by the uncertainties of life, and without dread of loss, whether of friends, of health, or of fortune: That I may come with a firm and tranquil mind to the work of this day, fearing nothing—ready to meet bravely failure or deprivation: That I may bring to the day's efforts, good humor and a cheerful regard for all with whom I may come in contact: That I may not judge others hastily or with bitterness: That I may not be grasping, but content with a fair share of this world's goods, willing to let others have theirs: That I may be diligent in the performance of duties and cheerful in manner: That I may stand with open mind ready to receive the Truth in small affairs and in large—whether in learning new and better methods, or in receiving that philosophy necessary to a brave, tranquil, well-poised, well harmonized life.—John Brisben Walker.

No. 10.

good type and skilful hands can make them. Each week the cover design receives some material change, typographically, as illustrated in reproductions 9 and 10.

ARCADIA, FLA., March 20, 1905.

O. Byron Copper, De Soto, Wis.

DEAR SIR:—I have been intending for some time to send you a late copy of the *Champion* just to let you see how we were getting along, but your reference to me in the March N. P.-J. about borderless ads, perhaps accomplished the result quicker than anything else. I am sending today under separate cover latest copy of the *Champion*. In it you will find several samples of advertisements set without border, which in my opinion are GOOD advertisements. However, the one I would particularly like your opinion on is the large advertisement of Gore & Scott on page 3. The type was originally set and used for a small hand bill, and the order was to use same in regular advertising space. I put it in the corner to attract attention, and the customer was awfully mad because it was not in the center of the space. Which, in your opinion, would have been the most effective?

If you and the N. P.-J. have another ad-setting contest you may expect me to take part, and with a borderless ad, too.

Yours truly,

ROYAL B. CHILD.

P. S.—We couldn't run our office without the N. P.-J. and though we study it from cover to cover, advertisements and all, I think that perhaps your department is the most useful of all to us. R. B. C.

We are more than pleased to again be privileged to inspect the *Champion,* of Arcadia, Florida, and to note that its initial page is entirely free from displayed matter, and made up strictly in accordance with the rules laid down from time to time in this department. After having admired the first page thoroughly we turned promptly to page three and the Gore & Scott ad (No. 11) and our immediate conclusion was that we did not in the least blame "the customer" for "cussing some" because it had not been set to the center of the space, or differently, some way or other. We cannot help admiring Compositor Child for his "daring to do things which he must certainly be afraid to do," in a typographic way, but in this instance he has surely been a trifle too "fearlessly original." Now, we do not know as we should positively advise this, but, provided the ad were ordered set to one side of the space, it would have been preferable to have allowed an equal margin of white space at the

top and bottom and left-hand side, while to the right, for instance three two- or three-point rules could have been extended up from the bottom border-rule, (or suspended down from the top border-rule, according to the taste of the compositor) with some kind of little "ding-batts" or other stuck onto the ends thereof. This would have relieved this portion of the ad of its present empty, useless appearance. Typographically this is not a good advertisement; there are too

No. 12.

many discordant faces, the rules employed are too light, and the general design is somewhat "stiff and ragged." To emphasize that which we have intimated with regard to Friend Child's "fearless originality," we beg to call the reader's at-

tention to that diminutive "s" in the word "goods" in the first line of specimen No. 11, and also to the "ew" in the word "New" in the second line. Now, in regard to the small "s," this is perhaps allowable, provided the customer does not object, inasmuch as it is evidently a reinauguration of an ancient typographical practice; but the "s" should have been a trifle larger and inserted at the top of the preceding letter, instead of at the bottom, as should also the "ew" in the second line; and in this latter instance two or three underscores would have been a material improvement. In order to have avoided the use of the small "s" in the first case, a couple of smaller "s's" could have been inserted in the word "goods," with underscores, as suggested in the second instance; but in

both cases invariably these smaller letters should have been of the same series of type as that of the larger letters. The other two specimens (Nos. 12, 13) which we clip from this publication are samples of Mr. Child's borderless creations, of which he is so stanch a devotee. Like ourselves, this compositor believes in setting every line flush, but he does not appreciate the value of rules in connection with this scheme, nor thoroughly understand the correct distribution of space. This correct distribution of space is a matter upon which Will Bradley recently gave some valuable suggestions through the American Type Founders' Chap Book. For instance, let us take specimen No. 12. Suppose below the line, "Smashed," we insert a couple of two-point rules with a two-point lead intervening between the two, and repeat the dose above and below the two lines in Inclined Gothic. Again, suppose we remove a few leads from between the second, third and fourth lines, and also from between the two displayed lines following, and put them above and below our rules, don't you think the result would be worth the while? Try it, and see!

We had hoped with this instalment to get everything on hand cleared up, but an urgent call from headquarters, asking for "copy," breaks in upon us at this stage of the game, therefore we will conclude with the review of several ad specimens from Rex H. Lampman, of Neche, N. D., accompanied by the following letter, which we quote for an obvious purpose:

NECHE, N. D., March 29, 1905.

Mr. O. Bryon Copper, De Sota, Wis.

DEAR SIR:—I write to thank you for what you said of my work in the last issue of the NATIONAL PRINTER-JOURNALIST. The criticisms which you make are so eminently just and sensible that it now seems passing strange to me that I did not myself see the defects which you have pointed out, and I am sure that I shall not again make the same mistakes.

As to the metrical defect referred to in the poem—it occurs in the third line of the third verse. It was first written as you see in the clipping herewith enclosed, but when I set it up for the *Chronotype* I changed the line mentioned to read "As a little babe to Bethlehem," with the intention of having Bethlehem pronounced Bethl'em, which, you see, puts the metre "on its feet" again, as it were. But I neglected to drop the letters "he" and use an apostrophe.

I enclose a few ads from recent issues of the *Chronotype*, to one of which, at least, your recent criticisms are applicable—Moir & Walker's.

Again thanking you, on behalf of the *Chronotype* and myself, for your kindly comment, I remain, Yours truly,

REX H. LAMPMAN.

We are glad that Brother Lampman had the breadth of mind and sincerity of purpose to appreciate the few small words we were able to accord his recent contributions—even those which savored of adversity. With regard to our late reference to the defect in the poem, we beg to call Mr. Lampman's attention to the third line of the second verse, which consists of four and a half Iambic feet, while the coresponding lines of the other verses (with the single exception, to which the author himself refers, viz: The third line of the third verse) are composed of exactly four well measured Trochaic feet. The third line of the third verse is defective, too, either in the corrected or uncorrected state. According to the metrical scheme of this poem as outlined in the initial verse, and well maintained in all the other verses, save the two mentioned, is alternately four, and three and a half, Trochaic feet. We find therefore to read the line "A little babe to Bethlehem," we have four feet Iambic meter; while to read it, "As a little babe to Bethlehem," we have four

The Ocean Wave

A LIFE ON THE OCEAN WAVE" is a very happy existence indeed, according to the poet. We are not prepared to vouch for the truth of this assertion, but we feel safe in saying that the "Ocean Wave" is the most popular washing machine on the market today. Why? Because it is simple, durable, thorough in its work and easy to operate, and life with the "Ocean Wave" as part of the household equipment is almost sure to be happy—at least on wash days.

Call at our store and let us show you the many improvement on this year's model.

Chas. E. Fee & Company

No. 14.

feet Trochaic meter, and one superfluous, unaccented half-foot; or, more properly speaking, the latter construction gives us three Trochaic feet, ("As a little babe to") and one Dactylic foot ("Bethlehem") for "Bethlehem" is a dactyl. To omit the "he," as the author suggests, makes a trochee of the dactyl, giving exactly four Trochaic feet, while in order to correspond with the other lines this line should consist

of four Trochaic feet and an accented half. But, while this discussion is hardly out of place in a department of this kind, we must dismiss it now and pass on to the ads, which

are all just as neat and clever and original as those shown in our March instalment. We reproduce two of them (Nos. 14 and 15) which are sure to please some of our readers.

As intimated we had hoped to get all publications received up to date reviewed in this instalment, but this we are unable to do, therefore, we are holding over these publications: *Missionary Enterprise,* Hector, Minn.; *Enterprise,* Alvia, Kans.; *Sunday Cosmopolitan,* Sherman, Tex.; *Advertiser,* Holly, Mich.; *Register,* Stanton, Neb.; *Tribune,* Holton, Kans.; *Advocate,* Laurel, Neb.; *Enterprise,* Kellogg, Minn.; *Forum,* Fairfax, Mo. No one should feel alarmed, because all of these papers will "keep" all right, and will be examined at our earliest convenience, so that nothing shall be lost. If your paper is not included in the above list, send in another copy direct to the conductor of this department, at DeSoto, Wisconsin.

A PROMINENT NORTH CAROLINA EDITOR

HENRY BRONSON VARNER, DISPATCH, LEXINGTON.

Mr. H. B. Varner, whose portrait is presented herewith, and who now occupies the position of Third Vice-President of the National Editorial Association, and has been mentioned for election to the office of First Vice-President of the Association at the approaching convention in Guthrie, Oklahoma, is pretty well known to the editors and printers of the United States. On account of that general knowledge of him, as a successful hustling editor, and a genial, companionable, whole-souled man, the following article that appeared in the *Southern Printer* of Washington, D. C., will prove of interest as well as of value to the readers of the NATIONAL PRINTER-JOURNALIST:

"He was born near the village of Denton, in Davidson County, North Carolina, on April 12, 1870. He spent his boyhood days in the country and grew to that sturdy manhood so often attained by the "horny handed sons of toil." The country schools were his only means of obtaining an education, and a longing desire for collegiate advantages have not been realized. Yet, undaunted by disappointments and handicapped by environments, Mr. Varner is prominent today in the social, business and political circles of his great state. At the age of twenty Mr. Varner entered the employ of a nursery company of Greensboro, N. C., with whom he held the position of traveling representative for five years. On May 4, 1896, he assumed charge of the Lexington *Dispatch,* the circulation of which has increased, under his management, from 600 to 8,000, and is one of the most prosperous weekly newspapers in the state. On January 1, 1904, Mr. Varner began the publication of the Salisbury *Weekly Globe,* and recently became the principal in the organization of a joint stock company which is now publishing the Salisbury *Daily Sun* and *Weekly Globe,* being president of the company. The style of the corporation is the Globe Publishing Company.

There is not a more popular newspaper advocate in North Carolina than Henry B. Varner. He has been twice in succession elected president of the North Carolina Press Association, which position he now

Mr. H. B. Varner.

holds. He has attended many sessions of the National Editorial Association, and was chosen third vice-president of that organization at its last annual meeting held in St. Louis, Mo.

In politics Mr. Varner is a Democrat and stands high in the councils of his party. He was nominated for Commissioner of Labor and Printing by the Democratic Convention of his state on April 12, 1900, and subsequently elected by 60,013 majority. Was renominated on June 24, 1904, and again elected for a second term of four years. He also holds the honored position of first vice-president of the Convention of Labor Bureaus of America, having been elected at the meeting held in Concord, N. H., last July. He has been five times elected chairman of the Democratic Executive Committee of his county, beginning this service on September 1, 1897.

Mr. Varner is an honored member of Lexington Lodge, No. 473, A. F. and A. M., and of Salisbury Chapter, No. 20. He served as worshipful master of the former for two years. He has also been complimented with the office of chancellor commander in the Knights of Pythias and recording secretary of Junior Order United American Mechanics of his town.

He was married to Miss Florence Comstock, Dec. 20, 1900.

"DEAD MEN MAKE NO SALES"

"Dead men make no sales," and there are those who have a name to live and yet are dead—dead to every aspiration for solid attainment, to all earnest, well directed, untiring effort for substantial improvement, worthiness, usefulness or success.

REVIEW OF JOB WORK

BY A. V. FITZGERALD, MILWAUKEE, WIS.

Address all Communications for this Department to
1319 W. Ravenswood Park, Chicago, Ill.

The following quotation from a letter received recently from Mr. Brent Williams, Fulton, Mo., brings up for discussion a very important subject, upon which there is, perhaps, more differences of opinion than on any other detail of the printer's art—the tastefulness and appropriateness of ornamentation: "Your criticism of the ornamentation comes rather as a shock, for in looking over the work of such good artists as * * * we find ornaments galore. We take your criticism in a kindly spirit and value it very highly, but really, in some cases, don't you think criticism is merely a difference of opinion? I mean by that, that something you might criticise would be passed on as artistic by some one with different ideas." Certainly, Bro. Williams, it is true as you have stated it. But let us see the arguments pro and con. Eighteen or twenty years ago the "ornamental" was in vogue. A letterhead contained a stickful of ornaments, a curve or two, a line of "fancy" type, and a few words in a legible type face. It took from two to four hours to set it, and the result was artistic—according to the opinion of the great majority of printers at that time. Today nine-tenths of the letterhead composition in the high-class printing offices of this country is severely plain—the compositor consuming one to two hours and using Gothics, Blair, Engravers' Roman, Engravers' Bold, etc., with now and then a line of legible text such as Cloister Black. It has taken nearly twenty years to convince the printers of the country that this style is to be preferred to the fussy, over-burdened stuff before mentioned. And the forces that have brought this change about are active today. The American loves directness and strength. He may admire the ornamental but never beyond the point where it clashes with the greatest strength and efficiency. Note the successful type faces of the past few years. Are there any fancy designs? Even the more popular borders and ornaments are of strong and simple design, and it is to be hoped that the work of no one man (though he be of preëminent ability) can cause a general stampede of printers back to the jungle from whence they have barely emerged. It may be that we are on the eve of another "crazy" period during which artistic job work shall be "built" instead of being "set." If so, I shall then expect to see the American business man, in his overwhelming desire for "something different," demand that his tailor fit him out in the fantastic toggery of the Middle Ages.

Yes, it is all a "mere difference of opinion, but I believe that the *simple and direct* appeal is a little too strong to be overcome by the *fantastic* and *involved*. The compositors to whom Mr. Williams refers as "using ornaments galore" are certainly among the progressives, but quite frequently they permit their desire for "something different" to give the "eternal fitness of things" a black eye. However, while in the reproduction of their work in the journals preference is generally given to the *unique* effects, the great bulk of their product is along more conventional lines. It may be just the thing to plant a few flower pots on a dressmaker's billhead—I am open to conviction, but I am not convinced.

The ornament objected to in criticism referred to by Mr. Williams, would pass on advertising literature but is not consistent with that chaste style so desirable in stationery composition.

W. A. Hill, Franklinville, N. Y.—A lot of stationery samples, chiefly panel designs. The compositor's work throughout is very fair in the matter of type selection and display, but the rules are not perfectly joined, and the press-work leaves a great deal to be desired. In the Empire Electric Company billhead there is too much space between the words of the title line, which is also too high in the panel. The words "incorporated 1902" should be as small as the officers' names.

Hackney & Maale Co., Asheville, N. C.—Cover composition is very good and so are your ads. The title line in Thoma & Smith Company letterhead is too widely spaced. A line of condensed type should not be wide spaced.

Ward, The Printer, Newport, R. I.—Samples show a judicious selection of type faces, fairly well handled. As a whole they are above the average.

Rex H. Lampman, Neche, N. D.—The criticism you make on your own letterhead is approved. In the event of your resetting it, make the title panel a pica longer and a pica wider, giving more space all around the principal line. Your panel work is well done and I am pleased to see that you have not fallen into the error of putting every job in a panel. The stationery work not in panels shows good clean cut composition. Your type is well selected.

S. P. Willard, Corsicana, Texas.—Corsicana is to be congratulated. The printeries of this town are executing work that would attract attention in any town in the United States. The samples sent in by Mr. Willard all bear the impress of the "modern idea." They possess style. They are not so "original" as some of the nightmare creations we receive, but are well printed, colors well chosen, type artistically but not fantastically arranged and the whole lot giving evidence of thoughtful and capable workmanship. It is noted that the style adopted for a firm's billhead or letterhead is maintained throughout the stationery of that firm. This is as it should be. It gives a character and individuality to each customer's printed matter. The heading of the Houston statement should have been cut down three or four picas—there is too much space between the word "dentist" and the head-rule.

Geo. H. Ellis Co., Boston, sends a calendar—a neat reminder—a sketchy March Girl tipped on first page, and a brief, comprehensive ad on the back of the card.

B. Ray Franklin, Fulton, Mo.—A large assortment of samples which will be reviewed in the next issue.

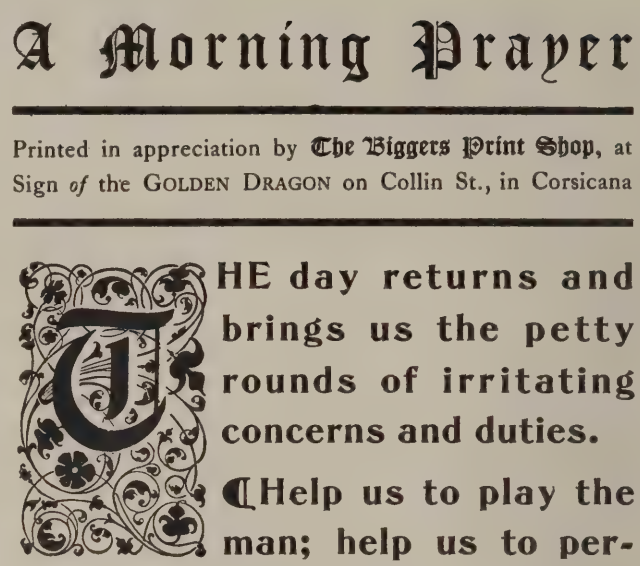
MICHAEL EDMEYER, Canon Falls, Minn.—Your program shows that you are starting out in the right way—the style and type are appropriate.

J. FRED PETIT, Butte, Mont.—The composition of the Lutey Bros.' Price List, as a whole, is commendable. The first, second and third pages of the cover are tasteful, although the use of Post Old-Style and Condensed Gothic in the same page is open to criticism. The first inside page should have been set in type of a lighter face, and it would add to the style and clearness of the page had the paragraph

No. 1.

ending with the word "greeting" been given distinction by setting in caps or italic, as it is merely prefatory to the story the page has to tell. The uneven color of the inside pages indicates poor presswork, or that several of the pages had been run for more impressions than the others. The cover is reproduced (Fig. 1) with the suggested improvement of omitting the underscore and using the space gained thereby to further divide "Price List" from the main line. But these are merely fine points—it is a good job typographically. This cover is printed on green cover stock, in black with a yellowish tint in the "drop" panel.

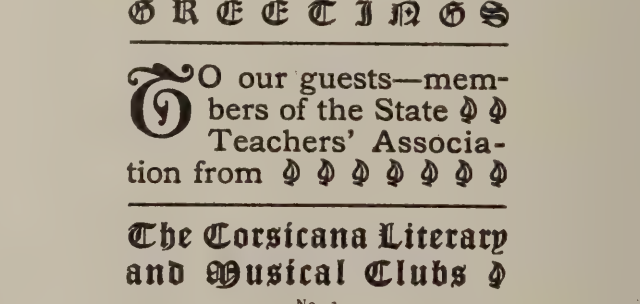
BIGGER'S PRINT-SHOP, Corsicana, Texas. — Perhaps the finest assortment of small commercial work received this month comes from the Bigger's Print-Shop—good composition, good presswork, and a judicious selection of stock are in evidence in almost every sample. The composition shows an endeavor to get away from the ordinary—and with considerable success—yet there is no freakishness. "A Morning Prayer" leaflet, however, does not show that regard for "the eternal fitness of things" manifested in the remainder of the specimens. By long association we have come to regard certain styles of type as appropriate, or inappropriate, to this class of work, and the impression given by the body



A Morning Prayer
Printed in appreciation by The Biggers Print Shop, at Sign of the GOLDEN DRAGON on Collin St., in Corsicana
THE day returns and brings us the petty rounds of irritating concerns and duties.
¶Help us to play the man; help us to perform them with laughter and kind faces; let cheerfulness abound with industry.
¶Give us to go blithely on our business all this day; bring us to our resting beds weary and content and undishonored, and grant us in the end the gift of sleep.
ROBERT LOUIS STEVENSON

No. 2.

type of this leaflet (Fig. 2) leads one to expect "marked down to 49c.," at the end of it, rather than an "Amen." A plain roman letter would be an improvement—Old-Style Antique, Caslon, etc. And now for the only really *bad* piece of composition in the lot—the first page of the Literary Club program. Text caps are to be used *with text lower case* only—their use for the entire word cannot be defended—might as well



No. 3.

attempt to justify the use of script caps, exclusively, in the composition of a line. The second fault lies in the selection of a form, or pattern, to which the matter does not lend itself, and the attempt to *force* it into the chosen shape led to other faults—too many word divisions—the insertion of ornaments between words having the closest possible relation—and as we read the sentence we are compelled to "jump" a few more ornaments and a cut-off rule to complete the sense, a fault which it is not necessary to dwell upon. (Fig. 3).

White River Journal, Kent, Washington.—A blotter, advertising the *Journal* printery, the criticism of which rather falls within Mr. Woodward's province. The ornament used is an empty spider-web with the spider in waiting, which I hope is not quite appropriate. It certainly suggests that a horrible fate awaits the customers beguiled to accept the invitation contained in the ad.

Wm. H. Wagg, Uxbridge, Ont.—Your letter received, but no specimens. Kindly send in duplicate lot.

"You never can expect anything from the *dinky, dinky* ones who don't care." So says an attractive two-color envelope slip—or maybe I don't interpret *correctly* the two

YOU never can expect anything from the ones who don't care

No. 4.

what-you-may-call-'ems,—may be it is an ornamental way of presenting our old friend "dashed dash,"—or, maybe they should not be used at all in this manner,—maybe. (Fig. 4.)

Desbarts & Co., Montreal, Que.—The samples received bearing this firm's imprint are all high-grade, and several equal in design and execution the best work of the foremost American printeries. The booklet entitled "Montreal" is especially deserving of the foreging comment.

W. H. Harkie, Oakland, Cal.—Samples to hand are not very satisfactory. Your panel work is very poorly executed. This style of composition should be used very seldom in *one-color* stationery work, and should be perfect—so far, at least, as having the rules fit snugly. You will find it more profitable to confine your study and work to securing simple and stylish results in your type display, without panels.

L. G. Patterson, Ft. Pierre, S. D.—Your brass rule is evidently in bad condition. The Keyser & Robertson letterhead is well displayed. The underscore should be omitted and the smaller panels brought about four points closer to the center panel. Also omit dashes either side of "Office of." It would improve the design were the outer rule run in a light tint, or a single rule used if printed in black. Better, in the latter case, leave out the four black ornaments.

No. 6.

Greenberg & Stutes, Spokane, Wash.—Some out-of-the ordinary printing, characteristics of Mr. Stutes. As most of it is "tooting their own horn," I can't criticise in detail without invading Brother Woodworth's "sphere of influence." Pass.

The Matthews-Northrup Works, Buffalo.—The specimens bearing the imprint to this well-known firm show such originality in design and skill and carefulness in execution that criticism in this department would be superfluous.

The Beaver Hall Press, Montreal, Que.—Work distinguished by unique and stylish composition—mostly advertising folders, showing many novel folds. Two pages, one of them is reproduced to show the general character of the work. They were printed in red and black, on buff antique stock. To the critic there are obviously a few defects in spacing. (Fig. 6.)

HELPING PATRONS.

We have received from the new newspaper and job office of the Joliet, Ill., *Herald,* a very unique booklet, the review of which properly belongs to either our "Review of Jobwork" or "More Work Through Publicity" departments, but there are features that will not make "notes and points," in regard thereto, inappropriate here. The booklet is accompanied by the following note to the editor, by F. H. Hall, the general manager of the combined newspaper and job office plant; "The drug man said he was going to open a bigger store, with a birthday party, and wanted a nice souvenir. He left it all to the Joliet *Herald,* and we think he got something original, nice and hard to beat." We coincide with the *Herald's* view and right here stop to make our first point. It is the highest of business wisdom in this day of progressive printing, for every office that expects to keep up with the times and win worthy success, to be prepared on a suggestion from a customer, to design, and get out "something original, nice and hard to beat," that will please and do execution. There is no better way of winning confidence, esteem and business. A printing office should never admit that there is anything needed by its natural and legitimate local customers, that it cannot furnish. The design of the first page of the "Birthday Souvenir" is a happy one. The drug store was only thirteen years old and the idea was suggested of a little girl's birthday party. The little guests are pictured as arriving with their bonquets and dolls, while the hostess is motioning them to seats in her parlor. The inside pages are devoted first to a talk about the birthday, an invitation to be present and a brief history of the store's growth and the necessary enlargement to double the former size. Then follow interior views and descriptions of the different departments and the goods handled therein and the conveniences offered to customers. The prescription department, cigars and stationary; the soda fountain, chamois and sponge departments and the truss and rubber goods rooms, and a mammoth horseshoe show case (in shape) each have an illustration accompanied by an interesting talk about the same and the goods contained therein, and then the manufacturing department, with a list of the remedies put up therein, has a separate page. A fine quality of white stock is used and the cover is printed in colors. The title page consists just of the name and on the opposite page, in a neat circular-saw-shaped design, is the trade mark containing the words "Stillman, up-to-date Pharmacy." Initial letters are used, but further than this, the inside pages are without ornament. The book is neat, tasty and appropriate to a drug store.

SKETCH OF MY CAREER AS A NEWSPAPER-MAKER.

BY O. BYRON COPPER.

HOW frequently we hear the expression, "a natural-born poet, artist or story-teller," but "a natural-born printer" is not of such common occurrence, due to the fact, no doubt, that, according to popular belief, the "art preservative of all arts" is much more easily acquired than inborn or bred. In my last March instalment of "Newspaper Criticisms" I rather rashly promised my readers a "bit of personality," and in the fulfillment of that promise I do not wish to "throw any bouquets at myself," much less make any immodest statements; nevertheless, in seeming contradicition, even prefatorily, I was about to bestow upon myself the compliment of being a natural-born newspaper-maker.

One cannot write autobiographically without at least a seeming egotism, perhaps, but I assure my readers that the desire to put these few personal facts before them is not wholly egotistical or self-conceited. In the first place, I am quite well aware that my appearance in the "typographical firmament" has appeared to several as somewhat "mush-roomish," and for the benefit of these, I desire to show up, if possible, that my experience in newspaper making dates back even to the time when I first learned to form crude characters with a pencil. But before entering upon a narration of my career as a newspaper-maker, it might not be entirely out of place, and certainly quite conventional, to dwell a moment upon my birth, parentage, family traditions, etc.

The only fact of my life in which I might be encouraged in its resemblance to that of great Americans is that I, too, was born in a little log cabin. This little log house was situated on Sugar Creek, Crawford county, Wisconsin, and here I first saw the light of day, May 13, 1878—a most unlucky date, the superstitious reader will concede. O. B. Copper (eldest son of Ralph Copper, "the pioneer poet of Crawford county") was my father, and Viola Montez Wilcox, his wife, my mother. On my father's side were the Coppers, of pure English descent, and the Williamses, Protestant Irish; while on my mother's side of the house was English and Swiss blood.

There is a bit of family tradition which says that my great great great grandfather settled originally on the present site of the city of Baltimore, Maryland. His eldest son returned to England, where he met, wooed and married a niece of the illustrious English orator, Charles James Fox. On returning to this country with his bride, this ancestor of mine found that his father had in the meantime died, his widow (a second wife) and her eldest son having stepped into possession of his vast estates, contrary to the English laws then governing the Colonies, by which the eldest son (which in this case was my great great grandfather) was sole legal heir to all his father's goods and chattels. Thereupon my great great grandsire entered litigation for the recovery of his birthright, but there were "nine points of law" against him, and at length, his own fortune swallowed up in the Colonial courts, he packed the residue of his earthly goods together and, with his wife passed up over the mountains into Pennsylvania. Here he begat a large family of sons and daughters, one of the former being my great grandsire.

My father, like his ancestors, was a tiller of the soil, and, therefore, my early life was spent upon a farm. We dwelt within a neighborhood of Scandinavians, exclusively, hence my childhood, as I remember it, was one of solitude. I had no brothers, and but one sister, two years older than myself, who, in those earlier days stayed almost exclusively with her grandmother. Thus alone, and cast entirely upon my own resources for amusement, my imagination was brought into constant play.

When I was scarcely four years old my mother died, and a sister of my father's came to keep house for us. Although at that time I was too young to take cognizance of such things, as I now look back upon it, the loss of my mother must have had a tendency to deepen my childish sense of loneliness. Father was a kind-hearted man, however, and despite obstacles my child-life was a veritable heaven. All day long I roamed the daisy-dotted fields or sought the deep fastnesses of the bird-inhabited wood, dwelling within a world of my own and chatting incessantly with companions of my own imagination. Thus the happy years rolled their ceaseless course, until the eleventh spring of my life, when, through an accidental injury to my right hip I became a cripple for life.

I had never taken much to books nor school, especially detesting, and being exceptionally dull in, mathematics; but at a very early age I had manifested remarkable skill with a pencil and spent much of my time drawing pictures and creating for my own amusement many pictorial paper toys. A slate and pencil was my daily companion, especially during the long, cold winters, and finally my sister and I conceived the idea of editing newspapers on our slates. At first this was somewhat laborious work, but by practice the task grew easier and these "slate editions" became as numerous daily as those of the Chicago *Tribune*. These "papers" were written on both sides of the slate, two or three columns wide, with an elaborate heading and grotesque illustrations. "Aunt Allie" was my sole "subscription list" and most ardently did my childish mind and chubby fingers strive to produce a sheet worthy of her approbation. The contents consisted chiefly of badly butchered, but original, verse, and wholly as bad rhetoric and grammar in original puns and jokes, intermingled with ludicrous bits of fiction and imaginary news items.

This sort of thing continued for several years, when at last my sister and I conceived the idea of issuing a real paper. Our few pennies were collected and a couple of rubber stamping outfits were invested in. And then we issued our first edition of the "Midget," a two-column folio, on tablet stock, notehead size, laboriously stamped line for line, with a cardboard stenciled heading. This was made up chiefly of news items clipped from "exchanges," with an original poem or two from sister's more talented pen. The initial edition consisted of one copy, and during the second edition the "typo's" patience became exhausted and the "Midget" ceased to exist as suddenly as it had sprung into existence.

Mr. and Mrs. O. Byron Copper.

Reaction immediately set in, and for some time no other newspaper ventures were perpetrated. However, the following autumn I printed "The Magnet," "an advertiser," on approximately 9x12 manila stock, the contents of which were exclusively advertisements copied with a lead pencil from the magazines and newspapers with which my grandfather's library was always abundantly stocked. The ads contained in this publication were all of the most profusely illustrated designs, such as those of the Cuticura remedies then running in *The Youth's Companion*, each of which contained an outlined human face, and so closely were they duplicated that a guest at the time mistook the home-made sheet for a regularly impressed copy. "The Magnet" represented a fine example of patience and perseverance, and was the triumph of many days' labor. It is now, I believe, in the possession of a friend of mine (who was later associated with me in the "newspaper business") now at Madison, South Dakota.

My schooling was desultory, due to intermittent illness, I having been unable to complete the common school course until past eighteen years of age. We were poor—very poor—father being a renter and for many years in the midst of adverse circumstances and "unmerciful disasters." Blank paper of any description was a scarce article about the household, and of course we had no money to spend on such luxuries. Therefore, every paper bag, every scrap of manila wrapping paper, all old envelopes and even the unprinted margins of the newspapers about the house were utilized by me in my unceasing printing and drawing.

As previously intimated, I lived within a beautiful world of my own imagination, in those days, and loved and hated, associated and conversed with the people in it. I drew maps of my "Garden of Eden," and, like Adam of old, gave names unto the towns, cities and villages and unto the railroads, rivers and mountains as well. At length I bethought me of the desirability of having likenesses of all those associates of my own creation. In this world of ours—I say our world because my sister shared alike with myself in all the good things of that Eden—we had a secret order, known as the Charity Boys' Lodge, which was made up of a multitude of youths, each of whom were as much of a reality to me then as are any of my fellow-beings today.

Therefore, equipped with a lead-pencil and a manila paper sack clipped into folio shape, I began the publication of an official organ of the "C. B. L.," entitled the "Charity Boys' Blade." The initial number, with pages perhaps about 9x12 inches in size, consisted exclusively of portraits of the imaginary members of the imaginary lodge, including ourselves, my sister Mollie, and I, always posing as twin brothers in Eden. The following issues, however, contained miscellaneous matter written by my sister and self—poetry, stories, puns, fictitious news articles and country correspondence. "The Charity Boys' Blade" was a weekly publication, five issues appearing without halt or hesitancy, when it suddenly became extinct, whereupon the publication of "The Cronville Clipper," "The Nugget-Globe," "The Oak Center Nugget," "The Weekly Nugget," and other papers followed, making an interesting series. All were printed with a lead-pencil on manila stock, profusely illustrated and each containing several inches of displayed advertising matter.

Each week, regularly for many months, one paper was published, although many of them were short-lived. These papers were said to be specimens of real art, and many of them were printed while their creator lay flat upon his back, sick and racked alternately with excruciating pain; because, for six long years—between the ages of eleven and seventeen—I was for the most of the time an invalid.

At length it was found necessary to have a surgical operation performed on my hip, in order to prolong my life. I passed through this ordeal successfully and during the painful period of convalescence I produced the initial copy of "The Little Hobo," my first really serious effort at newspaper-making in the natural world. I was then living in the little village of Ferryville, and "The Little Hobo" was an exponent of its best interests and a disseminator of its local news. Stephen A. Olsen, a schoolmate and chum, became local reporter, while my sister, who still resided on the farm, condescended to act as "country correspondent."

"The Hobo" was a three-column folio, with 9x12 pages, the first of which consisted of a short poem, country correspondence, an illustrated double-column news article, and local briefs; the second page contained an elaborate subhead, a column or two of editorials and another illustrated double-column news article; the third page was made up of the first installment of a serial story, jokes, cartoons, verses and ads, while the last page held a secondary subhead, Ferryville markets, two columns of locals, and a column of gratuitous, displayed business cards. When, through my co-partner, the good people of Ferryville first became introduced to "The Little Hobo," the demand for it became great, and each week the little paper passed from hand to hand until nearly every household within the village, and even beyond the village, had devoured its contents and admired its handiwork. In time the application of several persons became so urgent that I finally agreed to accept subscriptions from a limited number at five cents the copy, and then the tedious task of issuing from five to six papers weekly was begun and kept up for approximately two years. The little sheet grew in popularity and, despite its limited editions, was more widely circulated than many professional publications.

As I have previously stated, we were extremely poor, the people of Ferryville and vicinity having contributed generously toward the payment of my doctor's bills, and then they talked of buying me a real printing press and type—but they, dear souls, were not rich, either! A real press and real type was the height of my youthful ambition and heart's desire; and, although through poverty I was compelled to go without such luxuries, even that calamity could not crush nor exterminate the innate desire which I had for making newspapers, notwithstanding my sole equipment was a ruler and a penny pencil.

However, in the spring of 1897, when I was all but nineteen years of age, through the instrumentality of my school teacher, I got what I had so long anticipated—a position in a printing office. Only once before in my life had I surveyed the interior of a print shop, and great was my joy and interest on being installed as a fullfledged "devil" in the sanctum of *The Kickapoo Chief,* at Wauzeka, Wis., where the winding Kickapoo river, at last apparently wearied of its meandering course, empties itself into the raging Wisconsin.

Having so oft imagined myself in such a position, the printing office seemed quite the natural thing for me, and within a very short time I had mastered the "case" and learned how to hold my stick and set type with the rest of them. My apprenticeship was exceptionally fortunate, inasmuch as that my instructors were skilled men. Riley Thomson, now a traveling salesman for Rider-Wallis Co., of Dubuque, Iowa, was then editor and publisher of the *Chief,* with Clare Cole, an "old-time Chicago print," since deceased, as partner and chief typographer. From the latter and the foreman, Wallace E. Martner, who is now one of the publishers of the Crawford County *Press,* of Prairie du Chien, Wisconsin, I got the primary rudiments of the printing business.

Within a year and a half, or such a matter, after my entrance of the employ of Mr. Thomson (who was, and is yet, one of the finest types of noble manhood I have ever met) by the natural trend of circumstances, I passed on up through the various stages of the "embryonic" printer, and was at last handed the key to the front door, and informed that I was "foreman of the shop." Here I remained until Bellows & Thomson (the latter gentleman having taken in a partner) sold their plant to Jerry O'Neil, the present owner. Then I resigned and going to the historical city of Prairie du Chien, secured work as job and ad compositor on the *Union.*

My stay at Prairie du Chien was brief, lasting merely from the autumn of 1899 to the following spring, when I passed on to a better position as editor and chief compositor on the *North Iowa Times,* at McGregor, Iowa. This was up to that time the most pleasant position I had secured, as Publisher Huebach is one of the finest men to work for in the world; but it was evidently too good to last, for shortly after my arrival there the proprietor sold a half interest in the plant to Wallis & Son, which relieved me of the editorial work, and eventually my entire job. A new paper, however, *The McGregor Republican,* by Woods & Foster, was launched upon the journalistic seas at this critical juncture, and I was fortunate enough to secure the foremanship of that office. My stay here was pleasant, but the field at McGregor was inadequate for the support of three publications, hence along in May, 1900, the death of the *Republican* became inevitable, therefore I cast my weather eye about in search of a new berth, and through an ad in the *Inland Printer,* secured a position as job and ad compositor with P. C. Darrow, typographer, then at 342 Dearborn St., Chicago.

Although I had held the highest places in country offices, and notwithstanding that I faced the city with a resolute heart, it was not without multifarious fears and tremblings that, on a cold, drizzly, dark, raw Chicago Saturday in the spring of 1900, a green country printer on crutches wended his way up from the Union depot over on to Dearborn St., to get a square look at his future place of labor.

On the following Monday morning I reported for duty and was set to work, "throwing in." Just think of it! talent like mine—talent which had been the pride of many a country print-shop!—wasted over the distribution of the contents of a dead galley! I swallowed the big persistent lump which somehow or other kept rising in my throat, and "dug in" with a will. At last during a rush one day I caught a small job or two—just plain, simple letterheads, or something of that nature—and imagine my discomfiture, if you can, when the foreman, a lad of about my own age, examined my proof and then "ripped it up the back proper," necessitating almost an entire resetting. When I had recovered from this shock sufficiently to think, I saw that the foreman was right, and

that my greatest mistake in city composition was sacrificing accuracy for speed, simply because one envious country printer had once told me that I was not "swift enough to hold down a job in a city office." I resolved then and there to overcome the fault.

I soon discovered that I was employed in an office doing only the highest grades of work known to the craft, and I was therefore fortunately associated with some of the best typographers in that great typographical city. I was careful to note their work, and carried proofs of it to my boarding house, where I pondered and studied them from all points of view. At last my golden opportunity came. Miles, the "head compositor," "laid off" one day on the pretense of illness—but I have half believed since that it was merely to give me a show—and as a consequence of his absence I caught a high-grade circular. My cheeks fairly burned as I caught the inspiration and began to slash rule in real professional style—panelling then being at its zenith. When I had my job completed I was not surprised that the foreman's eyes dilated a trifle when he read the proof, for the artistic effect surprised even myself. With a few finishing touches, then, from the foreman's skillful tweezers, the corrected proof was sent down to the "old man," who immediately consulted the job ticket and then had a word with the foreman. That Saturday night my pay envelope was somewhat fatter and my heart a great deal lighter, by virtue of a few complimentary words from my employer, for whatever Darrow's faults might have been, he evidently believed in encouraging his workmen by giving abundant praise where praise was due.

Cottage Home of O. Byron Copper, De Soto, Wis.

At this place, too, I was again fortunate in having as instructor and coacher two of the most original and skillful type-artists then in the city of Chicago. George S. Murphy, who is now manager of the Kelmscott *Press,* at Downers Grove, Ill., was without a single exception the best printer I ever met, his knowledge of all branches of the work being practically inexhaustible, and his taste and ability to create neat, simple type effects surpassed by no one I have seen before or since. R. Hubert Miles, head compositor, now in business for himself somewhere in Iowa, was more grotesque in his creations, but also a trifle more original than Murphy, and their many talks with me anent the art, as well as numberless demonstrations, taught me more about correct typography than I can safely estimate.

I spent two and a half years in the "Windy City," and nearly the whole of that period was employed at Darrow's, although during "dull spells" I found work in other offices, and in the interim my literary work had not suffered from neglect, for ever since I was a mere youth half my nights and Sabbaths have been spent before a desk or table with ink-pot, pen and paper before me. Up to this time I had contributed an available poem or two to standard magazines, and had had the pleasure of seeing my scribblings published in nearly every amateur magazine connected with the United Amateur Press Association, of which I was an active member, from 1900 until 1903, at one time holding the poet laureateship.

It was while in Chicago that I sold my first short-story manuscript, as it was also here that I begun publishing "Copper's Critique," "a periodical of Amateuria," gotten out on professional lines. The "Critique" was a seven-by-ten, eight-pages-and-cover monthly, which first appeared in February, 1902, and ceased to exist after the July issue of the same year, having been sold and consolidated with the Chicago *Esteran,* another amateur publication, edited and published by Walter H. Price, a member of the Federation of Chicago Amateurs, a mushroom literary association of which I was for a short time reluctantly president.

It was, furthermore, about this time that my introduction to the National Printer-Journalist company took place, which came about in this manner: There was a persistent slackness in business at Darrow's—one of those spasmodic seasons of dullness with which all Chicago printing houses are more or less familiar, and Darrow at length concluded that he must diminish his force of compositors. It fell to me to go. Taking my letter of introduction and recommendation from Philo. C. Darrow, addressed to the National Printer-Journalist, I proceeded to Room 400 Caxton Building and made application for a job. Unfortunately there was one application in ahead of mine, but Editor B. B. Herbert, whom I found that day at his desk, assured me that in case the "other fellow" proved unsatisfactory I should be given a trial. Then, as an afterthought, I was asked that if I were employed, could I handle the department of "Newspaper Criticisms?" I replied in the affirmative, explaining that newspaper-making and the kindred literary work had been my life's study, and so I got the job of writing the department, although "the other fellow" was employed satisfactorily to do the mechanical work on the magazine.

In the fall of 1902 I left Chicago and was wedded to Miss Bernice Rosencrans, of Wauzeka, Wisconsin, thereupon entering business for myself at DeSoto, Wisconsin, a village located on the Burlington road and the banks of the Mississippi midway between the cities of La Crosse and Prairie du Chien, exactly on the line dividing Vernon and Crawford counties.

Philosophy teaches us that there is always a reason for everything, and paramount among the reasons that brought me to this particular spot was that De Soto was near my boyhood home and aged father, and as well near the home of my wife's aged parents. On one side of the evidence, this village was an ideal location for a newspaper man, having up and down the river sixty miles of territory before a competitor was met with, and on the east and other points of the compass the nearest rival was twenty-five miles away. To be sure, just across the river at Lansing, Iowa, two papers existed, but as these are in a different state, without bridge connections between the two towns, they could hardly be considered competitors. Only a few miles north of De Soto is the site of the famous Chief Black Hawk's last stand, known as Battle Island, where the Battle Island Assembly holds its annual meetings; and the country adjacent to the village is one of the richest and most fertile farming districts in this section of the State. These were some of the arguments in favor of my location in De Soto, but the argument against, was that as many as a dozen editors had, in years gone by, attempted the publication of a paper here, and all eventually giving it up as a bad job.

As the reader already knows, *The De Soto Argus* was started with State Senator Oliver G. Munson's *Vernon County Censer* as its only real competitor, in December, 1902. It was put up along the lines exploited from time to time in the department of "Newspaper Criticisms," and today, although the paper is yet in its infancy, it enjoys a healthy circulation, and a steadily increasing popularity, being generally conceded "the best paper in the two counties."

De Soto is noted for its scenic beauty and is in reality an ideal summer resort.

Within a few months after the paper was started, the volume of work became so great, that seeing the desirability of a business-partner, I disposed of a half-interest in the plant to my brother-in-law, F. J. Perrin, of Wauzeka, Wisconsin, who has since looked after the business affairs, while I myself have attended to the editorial and inside work.

In September, 1903, my wife and I were blessed with a little son—Ralph Donovan, we called him—who died of pneumonia on the twenty-eighth of last December. This incident, coupled with my own failing health, has caused me to wish to migrate to a warmer climate, and, therefore, the De Soto *Argus* is now for sale, the business being sufficiently well established to insure the success of our possible successors.

I have at times, like all printers, perhaps, wished that I might wash the stains of the print-shop from my hands forever; but, according to the proverb, once one's hands have become besmeared with printer's ink, one can never thoroughly cleanse them, so I presume I am doomed to live and die as I was born—a printer.

O. Byron Copper.

QUESTION BOX

All Questions from Printers will be answered in this Department
Address CHARLES A. KING, Beverly, Mass.

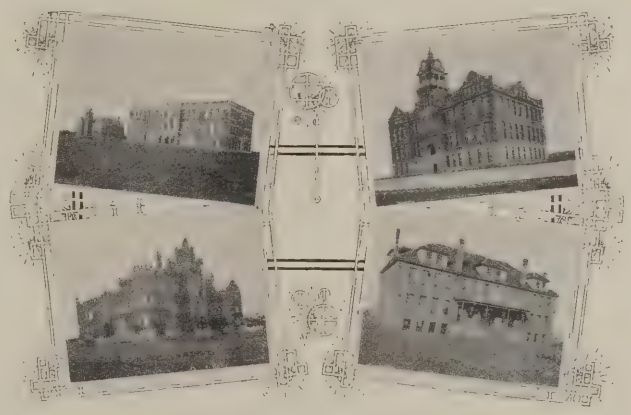
O. T., Indiana. Could the editor of the Question Box give us some idea of how to make money in the printing business; or rather some means of increasing our work? It is well known that many printers are doing something more than keep out of the poorhouse, and if the editor can give the readers some hints they may prove as valuable as answers to those who are in trouble about work problems. A good many job printers have spare time and would like to find some method of making it profitable.

This may be a little out of our line, but perhaps if some of the readers will explain their method of catching the wary penny they will not lose hold of it and some one else may also find a stray coin. It seems to me that the very worst thing a printer can do is to cut prices just to keep his shop going in dull times. It is almost an invariable rule that the customer who gets a cut price today will come back with it in a busy season and act provoked if it is not duplicated at the same price; this is also true of using a job lot on work which will probably be duplicated. Just because you are lucky to pick up a bargain in stock today there is no surety that you can do so a few months later, and a good many printers have a careless way of saying they will make the price the same as the last, without stopping to consider whether it was done in a slack time on a special job lot of stock, which may be impossible to duplicate. Then again there is a vast difference in the kind of help employed on a job. A $25 man may not be able to set as much straight matter as a $10 a week girl. The girl of course cannot do his work, but she can set straight type for less than half what he can, and the same is true in many departments. It is a fact that in every kind of manufacture, and a printing office is no exception, that certain kinds of work must be done by low priced labor, or there is no money in it. It is all right to tell about the better the man, the more work he will do, but the high priced man cannot stitch as many pamphlets as the low priced girl, and in many other places he can not do as much work, although paid two or three times as much. This is quite a factor when figuring on work.

As to making money in the printing business, it is a good deal like everything else. If you have no field for an office better get out and try some other locality, but there may be reasons why you are obliged to remain. Do not look for outside work until you have worked the local field thoroughly, and you will be surprised to find if you make a canvass how much of the work in your own town goes elsewhere. I know of one city which has several printers who claim most of their work is done for out of town parties, and yet in this place there is a lot of printing done in other places, and so it goes. About the only profitable work you can get from out of town is special work, for every place of any size has printers who can do work almost as good and just as cheap as you can, and it is doubtful if you can compete with them and pay express charges.

If you have an office fitted up for a special kind of work and have improved facilities for doing this work you can probably, by advertising, get this work to do, and if your price is low enough get a lot of it. Otherwise there is little hope for you in the mail order printing. I know of one printer who has been a schemer for years and admits that he never made any real money outside of his regular business. He has been able to keep a lot of help busy and has acquired the reputation of doing a great business, but he assures me that the profits have not been visible. Stick to your business and work the local territory for all there is in it. Do not be afraid to send out samples of work and show the business men that there is nothing like printer's ink. If you can encourage the young business man to advertise in a profitable way, you will soon solve the problem of how to make money in the printing business, but if you wish to get rich that is another story. Perhaps some of the rich printers will tell how they accomplished it.

B. F. R., Missouri. Enclosed find two samples of leaf tobacco cuts which a local merchant thinks I should make print equal to the enclosed lithograph label. I doubt if a country printer, with my facilities, can do it and write to ask you if it can be done? Is it worth while for a country printer to attempt this work just to try and please a good customer? I printed the tint or background in yellow, and the leaf in brown with a little red mixed in.



Oklahoma School Buildings.

Central State Normal, Edmond. Southwestern Normal, Weatherford.
Northwestern Normal, Alva. Agricultural and Normal University, Langston.

I see no reason why a fair imitation of the lithograph could not be produced and about the only question for the local printer to settle is: can he get a price sufficient to compete with the label houses? On small orders he can give a lower price than the lithograph work could be produced for; but in large quantities the lithograph would be the cheaper. The sample sent is printed on colored paper and the lithograph on white; it would seem preferable to use white paper and print the tint in light yellow; probably an ink maker could match the sample. The second printing is black not brown. If you will take a magnifying glass you will find that on the lithograph the shaded lines are much farther apart in some places than on the wood cut; this gives a better effect. Of course the lithograph has a softer effect than you can make, but the wood cut properly worked should look all right.

M. O. B., Maine. I have been bothered considerably with the process of punching holes, and wish to punch as I print, if possible, but exerience considerable trouble with the punches which are locked with the form: if we do not put on squeeze sufficiently to punch clear through, the paper will not come out clean but make a ragged hole; if punched hard enough to be ejected it invariably falls upon the rollers and we have to stop and clean off the little round pieces frequently. We do not seem to get any help from the makers.

There is more or less trouble with these punches, but if you will put on impression sufficient to cut out the hole clean and then file a little place in brass rule which the punch works against, so the paper is held by a mere thread we think the paper will remain intact until taken from the press; and then the holes can be punched out with a pencil or skewer in lots of 50 or more. It will be easier to file a little slot in the brass before attaching to the tympan, and it need not be very deep. You will be surprised at the result.

Daily Paper, Mass. If you can explain how some publishers make their papers pay you will "prove the limit." I find that some of the daily papers in this state, and also some of the weeklies, are running department store advertising for six and seven cents per inch and resetting the advertisement every other issue. Some years ago I received fifteen cents per inch for this sort of advertising, but it gradually was pushed down to eight cents; then I quit, although I was assured by the manager of the big store that I ought to have his advertising, even if taken for nothing, for reputation's sake. Then these big stores have a rule that if an error is made they refuse to pay for the entire advertisement, and we have to wait the press while they read and O. K. the proof; they send in their copy late and seem to own the paper. I wish you would interview some of the publishers through the paper and see if they have any similar experience.

I have mentioned this matter to one or two publishers and find that there is much cause for complaint against the big stores. In some of the large cities the big stores hold their copy back for various reasons, and one is that they are afraid some competitor will discover their bargains. This makes it rather expensive and the liability to error is greater. The writer knows of a case in the state mentioned where a daily paper, at the time of its decease, was running a big advertisement for three cents per inch per day, and sometimes there was a lot of 6-point in it at that. It was changed daily. When the contract was made a stereotype was to be furnished, but the paper which was expected to furnish this plate refused and the matter had to be reset. A short time ago a paper, a few miles from Boston, was running a half page a day for the big store on the first page, resetting the matter every other day, and sometimes in fine type with prices in bold face (which really ought to have been double price matter) for three cents per inch. Another prosperous paper in the same state, the best of the two dailies, with a fair circulation for a city of 20,000, was running big advertisements for five cents per inch. But at the some time this paper had a lot of good paying advertising, many legals which paid ten or twenty times these prices. The question is: Is it fair for the big advertisers to get rates which will not pay for composition? Is the advertising of the big stores regarded as news, as some claim? Will it hurt a paper not to have the advertising of the big stores? These are points to determine. And it may be said in passing that it is claimed that even in New York city, there are daily newspapers which are losing money on the department store advertising, but they do so because they believe it gives them a prestige, and without it they cannot get the little fellows.

FOR THE DULL SUMMER DAYS.

E. S. H.

Even though the print-shop may still be in its busy and prosperous season, many a far-seeing publisher is beginning to plan for the dull days of summer—those days when the compositors have nothing to do, when there is nothing to write about, when even the most enterprising merchant cuts his advertising space in two, and when there are vast areas of white paper to be covered with "boiler plate," and little money to buy the plate.

To the man who wants to be in a state of preparedness for this inevitable dull season, I want to relate a little chapter of my own experience.

It happened while I was at the helm on a weekly in a town of about 4,000. The paper was an eight-column sheet, four pages of which we printed at home. And when the lull struck us—when schools were out, and society off on its vacation, and business at a standstill—what a disheartening expanse those broadsides presented, and what a little way toward filling them went the meager notes of local news which we were able to get together. At this time I bethought me of the advice which a bright, enterprising newspaper man had given me some time before, to the effect that the public wants to read about *people*. "It's names we want to get into the paper," he has told me time and again, "names! names! I have thought at times I should take and run whole pages of the city directory, just to get people's names into the paper."

And so I set about the publication of a directory of our own little city. The compilation in this case was made by a student on his summer vacation, though it could be done by one of your compositors if required by the economy of the office. When the list was completed it was put in type, book width, and each week for several weeks an instalment of this directory was run in the paper, double column. The announcement was made that the directory was to be published in book form, and that subscribers would confer a favor by reporting to us any errors found in the list. This they took considerable interest in doing, showing that this matter was at least as interesting to our readers as plate miscellany.

At the close of its publication in the paper, the matter was printed in book form, with more than enough advertising to pay for its cost, and a goodly number of the books sold.

Try it, if your town is ripe for such an enterprise. It will give your force something to do, will keep up interest in the paper, and may net a little profit, after all the expenses are paid.

CRITICISM OF PUBLIC OFFICIALS

Governor Frank W. Higgins of New York, said some very truthful and instructive things in a recent speech at a banquet of the Legislative Correspondents in Albany. These truths may not be new but they can not be too often recalled to mind. He said:

Criticism of public officials will never be regarded as petit treason in this country. With power comes responsibility. If you, gentlemen of the press, allow the commercial interests of your paper to control your pens, if you present any person before the bar of public opinion from envy, hatred or malice, or leave anyone unpresented through fear, favor, affection, or reward or hope thereof, you degrade an honorable calling and justify those who say that the press has lost its power. But if you present all public matters truly as they come to your knowledge to the best of your understanding, you wield a superlative power and perform a patriotic service.

INITIAL NO. 3106-A. EACH COLOR, 75 CTS.

The manner of the page in all bookmaking indicates to a great degree the value in which the subject matter is held, and the purpose of the edition. ¶ A good many of the early printed books were rubricated after the fashion of ancient illuminated manuscripts. ¶ Books relating to fine art subjects, and English classics have often had initials and headings tastefully displayed in color, constituting beautiful examples of bookmaking art. ¶ The newly aroused interest in early types and adoption of antique papers have made similar harmonious results possible. ¶ In fine library editions of the present day the coloring of initials and headings is becoming conspicuous, adding tone and beauty to the work.

George Washington, the first President of the United States, was born on February 22, 1732, in a low-roofed, comfortable Virginia farmhouse that was on a hill sloping down to the Potomac River, and was surrounded by great forests and farm lands. He grew up to be a strong, manly boy with a never-say-die spirit, and could not bear to have anything master him. When he was sixteen years of age he left school, and was sent by Lord Fairfax to make surveys on his lands in Virginia, which kept him occupied for three years

A beautiful series made in fourteen sizes of Nickel-Alloy Metal on Universal Line, Point Set, and is a forerunner of a handsome booklet now printing

INITIAL NO. 3127
$1.50 EACH COL.

Modern Typographers are aware of the fact that the most profitable and effective printing is the simplest in design. ¶ An initial, a border, ornament or illustration, with a little color judiciously used enhances the value of a printed page without injuring the simplicity of its design, but twisted rules, masses of borders and ornaments, in the majority of cases placed indiscriminately, not only increase the cost of composition but tend to detract, rather than beautify and enforce the salient features of the work. ¶ This Series was designed with the above points in mind, and the examples on these pages show to what extent we have succeeded in producing an original, artistic and legible type, and one that is adapted to the most beautiful forms of typographic display

DURABILITY is one of the many features that has made Standard Line Type the leading make. There is as much difference in type metal as in ink or paper, and when the printer buys he wants type that combines wearing qualities with style. If you are not fully convinced that Inland type is the most durable we could demonstrate it to your complete satisfaction if given the opportunity. Set in McClure Series

American Type Founders Company

A Type Without Hairlines

Century Expanded

Best to Wear Easiest to Read

Sold at Body Type prices in 25 pound fonts and multiples

6 Point

ABSENCE of hairlines is a chief point of merit in Century Expanded. This insures to the buyer good service and long wear from his type, *without extra cost.* He, in turn, gives his readers the very substantial benefit of freedom from eye-weariness. Many other good qualities are strongly apparent in Century Expanded. The counters are deep, the serifs are strong, the design is well proportioned, the metal is hard, and in every character in every font will always be found the expert type founding methods that are embodied in all products of the American Type Founders Company. The face of Century Expanded is very plain and legible, more so than any other body letter.

6 Point Century Expanded 64c lb in 25-lb fonts and multiples

8 Point

CENTURY EXPANDED is the successful body type of the times. It has no hairlines nor any freaky characters. Each letter is plain and clear, making words stand out distinctly. The news story, the book of fact or fiction, the trade message in a booklet, catalogue or newspaper advertisement, will be more easily absorbed by the reader when related in Century Expanded—*the peer of all body letters,* the original and the best by every test.

ALL PUBLISHERS who buy Century Expanded for body type may be sure their readers will derive far greater pleasure from and maintain greater interest in newspapers printed from this type. The Daily Spokesman Review, Spokane, Wash., writes us that "this series combines all those good points of *a clear-cut legible type.* Our order for several hundred pounds substantially backs this statement."

9 Point Century Expanded 48c lb in 25-lb fonts and multiples

10 Point

"CENTURY EXPANDED was the type selected for body work in the *International Printer* because of its legible and well proportioned qualities, adapting it especially to good magazine work. It is indeed gratifying to us to know that in selecting Century Expanded for this magazine we have met the approbation of its readers."

10 Point Century Expanded 46c lb in 25-lb fonts and multiples

11 Point

CENTURY EXPANDED merits are gladly explained by our salesmen. Substantial orders for this peerless body type usually follow their intelligent efforts. Hairlines omitted. Not fancy or too plain. Face just a shade heavier than ordinary body faces, deep counters, well proportioned grade, no hanging letters, strong, legible, long life and *no extra cost* to the buyer. The Cleveland Plain Dealer says Century Expanded gives excellent satisfaction.

11 Point Century Expanded 44c lb in 25-lb fonts and multiples

12 Point

CENTURY EXPANDED was designed and completed by the American Type Founders Company with two objects paramount: to produce a face strong and graceful in all its lines, thereby giving it character, and at the same time making it mechanically strong so it would wear well. This type face without hairlines will give the buyer *long wear* and good service.

12 Point Century Expanded 42c lb in 25-lb fonts and multiples

14 Point

Many newspaper advertisements call for a plain legible body letter to tell the merchant's story of bargain merit. What more useful type for the purpose than 14 point Century Expanded, the type you are reading now. Better put the series in *your* cases. It has many useful purposes in every newspaper and job office.

14 Point Century Expanded 40c lb in 25-lb fonts and multiples

18 Point

Century Expanded in the office of The Philadelphia Record "has proven very satisfactory in every respect. We find also that *it stands stereotyping well,* as there are no hairlines or hanging letters to break off."

18 Point Century Expanded 40c lb in 25-lb fonts and multiples

These prices are subject to our usual discounts. Special prices on fonts of 500, 1000, 2000, 3000, 4000 or 5000 pounds, ordered at one time

HORSE CHIEF EAGLE.

BLISS, OKLA., April 4, 1905.

Mr. B. B. Herbert, Editor National-Printer-Journalist, Chicago, Ill.

DEAR SIR:—Your letter of the 6th addressed to J. C. Miller is received, in reply I will say that I have sent you under separate cover a photograph of Horse Chief Eagle of the Ponca Tribe, who will have charge as Master of Ceremonies of the Big Buffalo Hunt at the 101 Ranch, June 11th. I hereby give a short sketch of him as follows:

"Horse Chief Eagle, the subject of this sketch, and head of Chief of the Ponca Tribe of Indians in Oklahoma, is a typical representative of the native Red Man of America. White Eagle, who abdicated the Chieftanship of the Ponca Tribe of Indians, in favor of Horse Chief, his eldest son, held the proud position for forty years, and gave way to his son by reason of infirmities due to advancing age. Horse Chief is now forty years of age, tall and well built with prepossessing features. He is active and intelligent and withal a pleas-

ing Indian personality. During the last great Sun Dance that transpired among the Poncas at the Famous 101 Ranch, June 25, 1903, Horse Chief was first inducted into office. He is a remarkable Indian in many ways and held in high esteem by the members of his tribe, old and young, and who now number considerably more than 600 souls. It is customary when inaugurating a Chief of the Ponca Tribe of Indians to attend the same with much pomp and ceremony. So closely interwoven are the interests of 101 Ranch and the Ponca Tribe of Indians from whom the Miller Bros., have leased and purchased inherited Indian land of upwards of 40,000 acres, that it was quite becoming that the management of the 101 Ranch should play a leading part in the arrangement of the special feature of the Great Buffalo Hunt, the principal event in days gone by attending the inauguration of the head Chief of the tribe. Horse Chief Eagle was formally and finally inaugurated as the head Chief of the Ponca Tribe Indians May 8, 1904, amid a whirlwind of gayety and festivity.

Large delegations of visiting Indians assisted materially to enlarge and enliven one of the most spectacular events ever carried out in the great and growing and progressing Southwest.

Within the last year the surplus tribal land of the Ponca Tribe of Indians yet remaining unalloted are being parcelled out to the Indians in severalty, and when this work is completed the tribal relations of the Ponca Tribe of Indians will have become a reminiscence, the large pastures over which principally ranged vast herds of buffalo and which have for the past thirty years been the haunts of vast herds of grazing cattle and picturesque cowboy outfits, will soon smile with waving fields of ripening grain and where wildness was once the supreme element now staid civilization will reign supreme. More and more the Indian is taking up the White Man's way and soon will all the picturesque features of Indian life be absorbed into the great body politic. It will not be long before the typical Indian as we have been familiar to see him in song and story, will fade into the oblivion of the past. That interesting element of Western American life that now proudly claims, as one of its own, no less a personage than the dauntless-Roosevelt, President of the United States, will soon pass from the elemental perspective of Oklahoma. It is to fittingly observe the passing of these interesting features of Indian life, the dissolution forevermore of Indian Tribal relations and the passing cowboy, that a great celebration is now being prepared upon a larger scale than ever heretofore attempted, and the central figure, the great luminary about which all the lesser Satellites must revolve upon this occasion, is no less a person than Horse Chief Eagle, now the head Chief of the Ponca Tribe of Indians. That Horse Chief Eagle will acquit himself with becoming mien is an assured fact as he is capable of giving a good account of himself and bringing out the best there is in his people. The occasion is well worth any amount of expense and effort to be seen in its entirety, for perhaps never again will an event of similar magnitude and enchanting attraction be offered to the public at large. June 11, 1905, has been agreed upon as the date and the 101 Ranch is managing the event. That in itself is an assurance of success positive."

I also send you a copy of the program of the entertainment in honor of the National Editors at the 101 Ranch, June 11th, which is enclosed.

Very truly yours,

FRANK G. PROUTY.

Ex-Com. Oklahoma Press Association.

THE GUTHRIE DAILY LEADER.

Recently the PRINTER-JOURNALIST published an article relative to a morning paper at Guthrie, the place of the forthcoming meeting of the N. E. A. This month it gives us pleasure to give our readers a few words about the other big and enterprising daily paper at Guthrie—The Guthrie Daily *Leader*. The *Capital* is the morning paper and the *Leader* is the evening paper. Both papers cover their respective fields fully. The *Leader* is owned and edited by Senator Leslie Gordon Niblack, who also operates in connection with his paper a blank book manufacturing establishment. The *Leader* is a Democratic paper and was established in 1893, fifteen years ago, after six attempts had been made by different men to run Democratic papers in the capital of Oklahoma. The *Leader* was owned by a stock company composed of Democratic federal officials of Oklahoma for four years. Gradually these men released their holdings. In 1898 the entire stock of the *Leader* newspaper and plant passed into the control of Mr. Niblack. Mr. Niblack became associated with the *Leader* while yet a very young man. Two months after going with the paper he was made managing editor and for twelve years has directed the policy of the paper, editorially and in the business office. The *Leader* has a plant worth $80,000. It is recognized as the leading Democratic paper of Oklahoma. The *Leader* has grown and developed with each succeeding year until its circulation extends over the whole southwest and the products of its job and book plant are used in every county of Oklahoma and in the different judicial districts of the Indian Territory. The Daily *Leader* is a seven column, eight page paper, member of the Associated Press and maintains correspondents throughout the territory. Its plant is modern and up-to-date. It is equipped with three linotype machines, one of which is the latest style double-magazine machine. The *Leader* occupies its own building at 107 Harrison avenue. Although occupying two floors, 150 feet deep, the space is not adequate with

the growing business and Mr. Niblack is having plans drawn for a modern newspaper office building.

Senator Niblack is closely and actively identified with the interests of Guthrie and the territory of Oklahoma. The paper carries on its pay roll forty-three people. That the *Leader,* under the management of Mr. Niblack is fearless and influential is attested by the fact that the paper is given all the credit for the winning of three successive campaigns in the very heart of Republicanism. Guthrie has a Republican majority of 800, yet in the face of this majority, the *Leader* in March last sprung a Democratic-Citizens' Municipal ticket, drew up its own platform, and the result was a clean sweep for the *Leader's* ticket. The Third senatorial district of Oklahoma is composed of three populous counties which in the past have given Republican majorities aggregating 4,000. Early last year Mr. Niblack began waging war on the Republicans and the fight was intense. When the fall campaign came on, Niblack was petitioned by the Democrats of the Third senatorial district to become a candidate for senator. He refused. A convention of 2,000 Democrats declined to consider this refusal, and Niblack was nominated

L. G. NIBLACK,
Editor and Owner Guthrie Daily Leader.

by acclamation for an office which no Democrat had ever filled. Niblack contended that a newspaper man should not be a candidate for office, but the confidence reposed in him by the Democrats caused him to revise his doctrine. He pulled off his coat and entered the campaign. He opened the columns of the *Leader,* issued thousands of extra copies and put up a strenuous campaign. Every paper in the district opposed the *Leader* and Mr. Niblack's candidacy. Niblack dictated editorials at night and took to the stump in the day time. He made speeches all over the district, backing up personally all that was said in the paper. Niblack was elected by a majority of 643 in a district which defeated the Democratic nominee for the same office two years before by 2,189 majority. Moreover, Niblack pulled with him all the important offices in Logan county, of which Guthrie is the county seat, and the *Leader* is now the official paper of this county. The last Oklahoma legislature was Republican. When the legislature was organized Mr. Niblack was unanimously chosen by the Democrats as the minority leader of the senate, and judging from all reports he made good. Mr. Niblack is little past thirty. He is a thirty-second degree Scottish Rite Mason and has charge of the exemplification of the thirty-first degree in the Masonic Temple in Guthrie. He is a past chancellor commander of the Knights of Pythias lodge. He served two terms as Exalted Ruler of the Elks. Before he became a senator Mr. Niblack responded to the title of "Major," having received this title by virtue of serving six years under the administrations of Governor Renfrow and Governor Barnes as paymaster general of the Oklahoma National Guard. He was president of the Oklahoma Press Association two terms and has been a director of the Oklahoma Historical Society for several years. In 1896 he was national Democratic committeeman for Oklahoma and it was through his efforts, before the national committee, that Oklahoma's representation in National Democratic conventions was increased from two to six delegates. He was chairman of the Bryan notification committee from Oklahoma that year. He has served his party as chairman and member of committees a large number of times but has been a candidate for office but once, although he came near (through the efforts of friends) being the Democratic nominee for congress last fall. Niblack is recognized as one of the foremost newspaper men of Oklahoma, and is a sterling example of what it is possible for a young man of energy and determination to accomplish in a new country.

We draw additional evidence relative to the standing of Mr. Niblack and the Daily *Leader* from the Guthrie *Capital,* the *Leader's* morning contemporary, which in writing up the members of the legislature, spoke of Senator Niblack as follows in its issue of January 12, last:

The third council district is represented by Leslie Gordon Niblack, a democrat of Guthrie. Mr. Niblack was the democratic nominee for president of the council. He is one of the best known and most popular of the democratic leaders of the territory.

Leslie Gordon Niblack, editor of the Guthrie *Leader,* is one of the most noticeable men in Oklahoma. And he is one of the brightest newspaper writers of the southwest. The *Leader* is Guthrie's evening paper. It has been running almost as long as Oklahoma has been settled. And it has been under the management of Mr. Niblack ever since it started. And yet Mr. Niblack is not old. In fact, when he has been mentioned in connection with the democratic nomination for congress the objection has been tentatively suggested that he is too young. But Mr. Niblack is not a politician in the sense of seeking for office. It is true he is the democratic member of the territorial senate from the Guthrie district. But the nomination came to him by the unanimous impulse of the entire party in the district.

The bright feature of the Guthrie *Leader* is the editorial paragraphing of Mr. Niblack. That is where he is particularly fortunate. He writes editorial paragraphs with that celerity which marks the man who thinks in epigrams. And his paragraphs hit home. There are few republican politicians in Oklahoma who have not felt the sting of his squibs. And they are resilient as truth. They always smite the man who attempts to come back.

Mr. Niblack is a vitriolic writer. He has a touch that is peculiarly his own. In this he is unfortunate. For his readers all know his work and demand it. Like the great editors in the old days his personality is in his paper. And he has the vulpine instinct sufficiently developed to know that the money comes from the counting-room and that his efforts there are best productive of results. But the readers demand that his stuff be in the editorial page. It follows that he is often at work in his office when "thirty" is heard in the city room of his morning contemporary.

Mr. Niblack is the handsomest editor in Oklahoma. Add to that the fact that he is a bachelor of the alleged confirmed sort and the uniqueness of his position is known. He is the most sought man in social circles and in political campaigns. And with all that he is able to build up from year to year a constantly-increasing business in the complete manufacturing department of his plant as well as to make betterments to meet the needs of his ever-growing list of readers.

while warmly commending the way Mr. Child used his newspaper space to advertise his job office, expressed surprise that he did not use his job office to advertise his newspaper—and likewise to advertise the print-shop. And I strongly advised him to do so. He's been so long a while acting in accordance with my advice, though, that I am in doubt as to whether he *used* it—or whether, after forgetting it altogether, he evolved the idea "all by his lonesome." He won't be lonesome if he keeps it up—and this remark applies to De Soto County, Fla., as well as to anywhere else. Now my ideas as to display lines have frequently been given in these columns. But I probably never told them all at one time. In some advertisements, I like to see the display lines give an idea of the whole story. Why? Because some busy folk might otherwise pass over the ad without realizing it contained anything of interest to them. But if you use, exclusively for the purpose of attracting attention, a headline that is of human interest enough to induce all people who see it to read the whole advertisement, there's nothing the matter with the display. And I certainly think that any other display on this side of the card, other than the mild form furnished by the short lines and the name of the paper, would be too much Johnson. For the words in the heavy Doric have charm. This and similar forms of words seem to have always had a peculiar fascination for readers, and consequently for authors. I remember how a column in a daily paper I was on, written by a fellow-editor, dear old Hiram Ladd Spencer, and entitled, "The Man from Jemseg," leapt at once into great popularity. It was the name that did it, for my friend had written just as good stuff day after day without such appreciation. And the old man (he was, I believe, the first person to hold a position anything like that of "advertising manager" today) claimed that he had originated the form of title many years ago, and that Conan Doyle with his "The Man from Archangel" and the writers of "The Man from Nowhere," "A Man from the Sierras," "That Girl from Maxim's," etc., etc., were simply following his lead. As to the form employed by Mr. Child, it made a sensation in Nova Scotia journalism once. That was when a party of students and professors from Acadia College, Wolfville, N. S., and their boatman were drowned off Blomidon, (the cape immortalized in Longfellow's "Evangeline") whereupon the *Christian Visitor* of Halifax, without, of course, meaning to be humorous, announced the loss of "six precious souls and a man from Gaspereau." But I digress. On the other side of Mr. Child's card this wording appears in red and black, and makes a prettier job than the other:

The Man From
Punta Gorda

Evidently was not acquainted with the High Grade Printing done in our Job Department else he surely would have left his order with us for Business Cards, Stationery, Folders, Hand Bills, Shipping Tags, Etc., so necessary to the business man of today.

THE CHAMPION, ARCADIA, FLA.
ARTISTICALLY NEAT PRINTING.
(*Over.*)

I'd have put "over" on the other side too. On this side the word "Man" is in red. At first, I didn't see any reason therefor, but I am inclined to think there is some subtle justification for this additional display of the kind that is made by the use of another color.

The question some might be inclined to ask is, "Why didn't you make The Man from Punta Gorda acquainted with the High Grade Printing? You weren't ashamed of it, were you, and you had him in the office." But you see, Mr. Child has not laid claim to being an advertising man as yet, and he evidently missed this very direct means of advertising, and doesn't care whether the public knows it or not. But he's on the right road, and in the days so very near, when the public will expect their job printer and their newspaper publisher to be their advertising man as well, Mr. Child and his *Champion* will be all there, and will deliver all the goods.

On March 15 this letter was written:

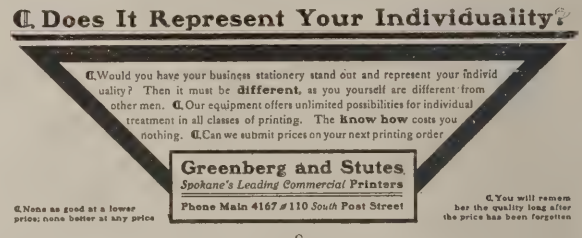
SPOKANE, WASH.

Harry A. Woodworth, Toronto, Canada.

FRIEND HARRY:—We wish to thank you for the notice given our every-day work in last month's issue of the NATIONAL PRINTER-JOURNALIST. We believe such advertising pays; if it does not then it is hard indeed to make something different pay. A firm's best ad is the quality of their product—not by spurts, but every-day productions. We are enclosing you some of our late envelope slips. These are made from scrap stock accumulated at divers times from other jobs. While there is no end to scrap in a printing office, there is no end to the uses of scrap. We are, yours truly,

GREENBURG & STUTES,
Per EDWARD W. STUTES.

The opinion of this firm in regard to "scrap" is in line with recent remarks I lately made concerning a "waste-pile" in a job office from which the foreman evolved a twelve-page booklet for himself. Mr. Stutes should certainly be in a position to know whether such advertising as he mentions pays, for he has been a constant and voluminous user of slips for years past. The slips Mr. Stutes sends this time are unreproducible, but here is a late blotter in two color-schemes, which is a novelty in rule work (No. 9). It shows the strong



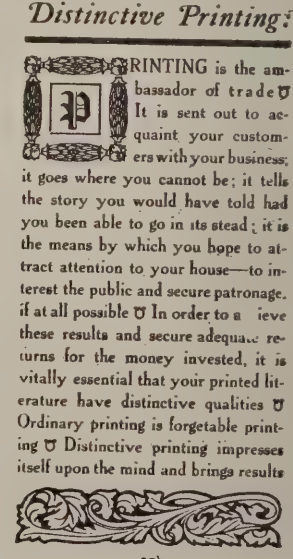
¶ Does It Represent Your Individuality?
¶ Would you have your business stationery stand out and represent your individuality? Then it must be different, as you yourself are different from other men. ¶ Our equipment offers unlimited possibilities for individual treatment in all classes of printing. The know how costs you nothing. ¶ Can we submit prices on your next printing order
Greenberg and Stutes
Spokane's Leading Commercial Printers
Phone Main 4167 ✓ 110 South Post Street
¶ None as good at a lower price; none better at any price
¶ You will remember the quality long after the price has been forgotten

9

Stutes originality in a new form. It is on pale blue stock, and the other rules are all red on one sample, and in another all yellow, with the exception of the top under-scoring rule, which is red.

While writing the above another package addressed in Mr. Stutes' familiar hand was laid upon my desk. The specimens enclosed show that Greenberg and Stutes are succeeded by the Stutes Printing Company. At least that is the name of the firm on two of the samples, though on one of these the last word is abbreviated to "Co." On yet another the name is given, "Edward W. Stutes Printing Co." And these jobs were probably done within a week of one another. Is such a variation of a firm name good advertising?

10a



Distinctive Printing

10b

The printed pages of a four-page Strathmore Bond folder, which has a wide margin at the bottom, are reproduced as Nos. 10a and b. It does not appear to me that this combination of the modern style of intricate panelling and modern ornaments is particularly happy. Such work as that which makes the top of the design is often very effective when tint-blocks are employed, but when they are not, there is an optical confusion which robs the design of what painters term "values." The two styles of ornaments do not suit one another, and they do not sympathize with the rest of the design. The cover ornaments are presumably meant to give an impression of pendency. The pendant is a splendid force in ornamentation when it is properly handled. But here the pendants do not depend, as there is a considerable space between them and their supposed support. And that very support has somewhat more the effect of a washboard made from narrow scantling than anything from which anything hangs. Neither do the three young women, who always reminded me of the three undead lady vampires in the horrible tale of "Dracula," seem to be properly pendant, as the breaks between the ornament and the rule are apparent. And they are likewise uneven. It isn't often that Mr. Stutes gets an adverse criticism, but Homer drowsed occasionally. And I don't think there would be much fault found by the most captious critic with the second page of the folder (No. 10b) with its charming original touches in straight matter, and the "values" expressed by the ornaments. And what a wonderful little production is the card shown as No. 11! Red

HAVE you seen the red booklet recently issued by The Old National Bank? If you have not, it will be time well spent to call at the bank and receive a copy It's different from the ordinary, but it will bring returns. Of course we printed it; that's just why we want you to see it

Stutes Printing Company
Successor to Greenberg and Stutes
110 South Post Street
Telephone Main 4167

11

as to the H of the initial and as to the rules, black otherwise. It is good in all typographical ways—whiting-out, contrast, indention, everything. And more than that, the idea of the text is excellent. It should surely please the Old National Bank to see how much interest the printer has in advertising their job after it has left the shop and is (presumably) paid for. And if the bank gets requests for the red book (and it will get them; I've tried a like plan myself), why, they'll think somethin' is doin' with the new firm. Moreover, a bank's friendship—or that of any other business—is not to be despised in business. And a bank often manages to give publicity of the right kind to those who treat it right. This is a specimen of mutual publicity. I've often spoken of it in respect to the wholesaler and the retailer—here it is between two local firms. It's likely to be good wherever you find it.

STERLING, KAN.

Harry A. Woodworth, Toronto, Canada.

MY DEAR SIR:—I am sending you a lot of samples on which I wish you to pass you impartial criticism.

But, however, I do not wish for comment as to presswork, for while this is only an ordinary country office, and has no special pressman, I do not pretend to be all that a pressman should be.

But my inability as a pressman, of course, does not excuse me in any other department. * * * The specimens are not, of course, the best, but I claim for them something "just a little bit different" from Bro. So-and-So's work.

The *Cooper Courier* cover pages are something that I get out in a hurry each month, as there is not a great deal of money in the job. But the students like them, and that is the main thing here,

Our office, being a country one, is, of course, somewhat limited as to nicely graded sizes of types, and also our rules are in very bad shape, the ones I use in the *Bulletin* envelope, mating the letterhead, having been used as borders for over three years. I turned them upside down. * * * Assuring you that your comments will be thankfully received, I am, Your ardent reader,

ALEXANDER C. CROSSAN.

Taking the jobs upon which Mr. Crossan especially desires comment, here is the letterhead (Nos. 12 a and b). It is printed on a light blue parchment in blue and yellow, the heavy rule being in the shining yellow, and bordered at top and bottom with thin blue rules. No. 12a is in the center of the letterhead, being sunk an inch and a half from the top. The French Old Style is admirably adapted to the old style "U's" which are our modern "V's." The job shows how colors may be artistically employed in making lines of

STERLING KANSAS BVLLETIN

OLDEST PAPER IN RICE COVNTY : A GVARANTEED CIR CVLATION : COMPLETELY COVERS ITS FIELD : ENTI : TLED TO ROWELL'S ROLL OF HONOR RATING :

12a

equal length. This use is rather preferable, in fact, being more out of the rut than if the words went evenly into three full-lettered lines. At the right hand side of the lower part of the letterhead is Design No. 12b—the Missionary of the Mission Toys being in yellow, the wording in blue. Is the stick a shooting-stick? I like this letterhead. There's plenty of breathing space—plenty of room to write, plenty of room for margins. And the ornamented corner gives just the right finishing touch.

Alexander C. Crofsan
Foreman

12b

MAILED FROM THE OFFICE OF
THE STERLING KANSAS
B U L L E T I N
WHICH PLEASE RETURN IF UNCALLED FOR

12c

The envelope, in Bradley and Post Old Style, with aluminum rule-work, is a good job that is not out-of-the-ordinary unless it be that the cross-rules extend about a half-inch from the panel, and one is a little longer than the other, which irregularity does not displease me. I may say that I cannot find any reason for Mr. Crossan's apologies as to presswork, except in this envelope corner, where the rules are unevenly impressed.

Here, however, is an envelope on which criticism was not particularly asked (No. 12), but which is more of a match for the letterhead, and is, moreover, essentially modern. It will probably be looked upon as the most interesting of Mr. Crossan's specimens reproduced this time. "which please return if uncalled for"—what, the office? "Where" would be better.

The blotter (No. 13a) is on yellow, in brown and green. The rules, initial "W" and the idol, all but its grin, are in green. The arrangement is somewhat "different" but there seems to be, from an advertising standpoint,—from the standpoint of *meaning* in typography, in fact—too much division between interdependent parts of the composition. The plan of beginning the ending of a sentence with initialed capitals has been sanctioned, in some job advertising, because of artistic reasons, and because it was a little out-of-the-ordinary. This division is, however, a little too far out-of-the-ordinary.

H. D. BROWN, DECEASED.

ST. PAUL, April 18, 1905.

National Printer-Journalist, 1319 West Ravenswood Park, Chicago, Illinois.

GENTLEMEN:—We enclose herewith a copy of resolution passed at a meeting held yesterday to take action on the death of Hiram D. Brown, of this city:

A special meeting of St. Paul Typothetæ was held Monday, April 17, 1905, at the Typothetæ Rooms, 109 National German Amer. Bank Bldg., at 4 p. m., to take action on the death of our fellow member, Hiram D. Brown.

After eulogistic remarks by Messrs. Fred P. Wright, David Ramaley. Sr., W. T, Rich, Conde Hamlin, H. A. Bigelow, Fred Leslie, F. H. Warwick, W. F. Repke, Sr., Frank Shoop, F. R. McDonald and Howard Collins, the following resolution was unanimously adopted:

WHEREAS, Our fellow member, Hiram D. Brown, was, on April 16, 1905, called to lay aside the duties and privileges of this life, we, the members of St. Paul Typothetæ, desire to place on record this expression of our esteem and appreciation of him and his work. We express heartfelt regret that we shall no longer be permitted to enjoy his fellowship in the social and business intercourse of this life; and we deeply sympathize with his wife and children in the loss of a kind and loving parent and his business associates in their loss of his ever valuable advice and coöperation.

We bear testimony to his valued services to our craft and rejoice in the success that has crowned his efforts and regret that he was not permitted to longer enjoy its fruits.

Resolved, That a copy of this resolution be sent to the members of his family and that it also be incorporated in the records of this Typothetæ.

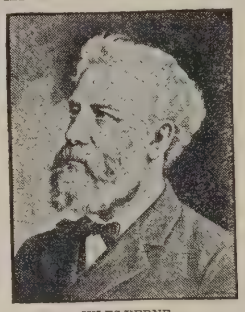
Hiram D. Brown was born in Loraine, Jefferson County, New York, on November 10, 1848, served his apprenticeship at the printing trade in Lake City and Red Wing, Minn., was publisher of the Lake City *Sentinel* for twelve years. Coming to St. Paul in 1881, entering into partnership with B. B. Herbert, of Red Wing, under the name of Brown & Herbert—which was in 1883 changed to Brown & Treacy, by the withdrawal of Mr. Herbert and the association of the late Michael Treacy, which in 1901 was incorporated under the name of Brown, Treacy & Sperry Co. Mr. Brown was also an active partner in the firm of Brown & Bigelow, and Director of the Security Trust Company.

His services for the benefit of the printing interests at home and abroad have been active and valuable. He was one of the founders of this Typothetæ and served as its first president in 1886 and again in 1902, chairman of its Executive Committee in 1890 and member of the Committee from 1887 to 1892, and from 1894 to 1900, Vice-President of the United Typothetæ of America 1895-96 and member of the Executive Committee 1896 to 1898.

We had hoped to have been able to have sent you a photograph with this letter, but are unable to do so. We trust we will be able to send it tomorrow in time for your next issue. We remain, Very truly yours,

TWIN CITY MASTER PRINTERS' ASS'N.,
Per C. E. Haight.

Verne was born at Nantes in 1828. Like many other famous authors, he began his career by studying law, but he found this profession not congenial and began to gratify his taste for writing. At that time the stage offered the best inducements to a young author, and he wrote plays and librettos, and for a time was secretary of the Theater Lyrique. In 1863 he published his "Five Weeks in a Balloon," and this decided his future. He had



JULES VERNE.

discovered his power to combine in the form of a story daring flights of the imagination with the operation of the laws of nature.

He rewrote his stories many times, having made ten copies of the manu-

A RESEMBLANCE BRINGS KIND WORDS.

MARSEILLES, Ill., March 27, 1905.

Mr. B. B. Herbert, Chicago, Ill.

FRIEND HERBERT:—Can you explain to me why you loaned a cut of yourself to the plate firms to be passed off as the portrait of Jules Verne? Or, do my eyes deceive me and have you only been posing as one B. B. Herbert? No wonder so many able editorials appear in the PRINTER-JOURNALIST when the resemblance to the author of world-wide fame is so great. To your friends you have the advantage of having not yet passed on, and to those who know you best, personally or through your articles, it is no light one.

With regards,
TERRY SIMMONS.

PHILADELPHIA, April 14, 1904.

Benjamin B. Herbert, Editor National Printer-Journalist,

DEAR SIR:—Permit me to thank you for the reproduction of our illustrated phrase, "In Philadelphia Nearly Everybody Reads The *Bulletin*," and your comment on same in the April number.

I am glad to be able to tell you that The *Bulletin* is making excellent progress in its circulation and we are now able to show a net daily average circulation of 225,278 copies per day, and this after omitting all damaged, unsold and returned copies. The *Bulletin* has not only the largest circulation in the city of Philadelphia, but the State of Pennsylvania as well, and goes each evening into a majority of Philadelphia homes.

Yours very truly,
WM. SIMPSON,
Advertising Manager.

NEPONSET, ILL., April 13, 1905.

National Printer-Journalist, Chicago, Ill.

DEAR SIRS:—We kindly note your criticism on our all-home-print edition, and wish to say that we did not present that copy of the Neponset *Messenger* for typographical exactness nor for the purpose of exhibiting its news columns in the best light. As an explanation we wish to say that this eight-page all-home print copy was the only one printed from this office and was done as an emergency act on account of a heavy run of advertising that week. The *Messenger* was issued on the regular publication day in an office where the editor is the whole thing from devil to editor and no extra help was used on that edition. We use linotype composition and hence was able to get out this paper under the circumstances that required more advertising space. Certain advertisements were received too late to be inserted on the first run and hence they were obliged to be placed on pages where otherwise they would not have appeared.

We simply desire to call your attention to this fact that the *Messenger* is published in a town of 500 people and the writer is the printer-journalist et al. We have a cylinder press and the editor's wife assists him on press days.

Thanking you for your kindness in commenting upon our efforts and hoping you will understand the condition under which this paper is issued, we are,

Very truly yours,
THE NEPONSET MESSENGER.
A. E. STETSON, Editor.

MORE WORK THROUGH PUBLICITY

BY HARRY A. WOODWORTH

Address all Communications for this Department to
349 Jarvis Street, Toronto, Canada

SEVERAL sheets from the Tubbs Mfg. Co., Ludington, Mich., show that they are unquestionably artists in the manufacture of wood type. Their Cheltenham series will be warmly welcomed—and this style of type in large sizes is sure to become popular. Here is a Cheltenham paragraph mark two and a half inches high! One feels like a Gulliver, traveling in a Brobdignagian type-land.

A booklet which shows the possibilities of the Cosmopolitan face, "an Inland product with a record," is abundantly suggestive to the printer. Type-foundries seem to have hitherto confined their advertising largely to new faces, so that no letter really got the continuous advertising any good product should have. The Cosmopolitan will continue to be a beautiful face which age does not wither, nor custom stale. It makes a pleasingly distinctive type for store advertisements.

A booklet with a handsome cover, issued by the Gugler Lithographic Co., Milwaukee, is entitled, "How a Beer Bottle Label is Made." It is reprinted from Hantke's "Letters on Brewing," and the author is O. B. Gugler. On tinted stock with rubrical margins, the publication is a notable contribution to bookmaking. Now the N. P.-J. is a publication wherein, if it is simply written of a book, "It is beautifully designed and tastefully printed," the writer has "no kick coming." But I think Mr. Gugler should have more praise than that. For the article (which was evidently originally intended for brewers, but which should be of interest to men of all trades) is a most careful and comprehensive treatment of the art of lithography and the making of labels. I don't think there are many advertising experts abroad in the land who would not find that a perusal of this book would increase their store of knowledge. The brochure—a valuable addition to any technical library—is illustrated by a sheet showing the nine printings which go to make up a label.

With a very pleasant letter from A. L. Duhig, Thermopolis, Wyo., comes a novel blotter, on which two half-tones of the district are well printed. The wording is as follows: "The Big Horn Hot Springs are noted for the manner in which they cure all forms of disease when given a trial." "The Thermopolis *Record* is noted for the manner in which it gives all the news of our Springs and the Big Horn Basin." "Kindly remember, in criticising this sample," writes Mr. Duhig, "that we have only a very primitive outfit here in the sagebrush." The photos and text are embellished with bronze green rules, which furnish good color-complement to the rest of the job. The design of the rule work is good, but the appearance of the rules suffers from a lack of a more up-to-date plant. There's enough rule work in the bronze without the underlining of words in the photo ink. The little ornaments do not improve the job, and do not look well on a job containing fine halftones. That the Messrs. Duhig have done wonders with a "primitive outfit" is, however, very evident, for their presswork is good, and their ideas of color excellent. As to the letterhead in green and gold, the contrast would be "completer" were the gold rule under the name of the paper omitted. The heavy surrounding rules, with the tasteful design, furnish enough gold. And the green might be made rather more compact as to space between words. A budding artist did the work, and the full flower will come when modern appliances, which cost little, are introduced into the *Record* office. A camel's hair brush costs little more than a toothpick, but an artist is not so much handicapped if he has a brush. There's a good catchline to the letterhead: "The newsiest place in town." There'll be more anon, I hope, Mr. Duhig.

"The Printer Man's Joy," lately issued by the American Type Founders Co., is a large booklet showing the possibilities of chap-book cuts and types. It's an expensive advertisement, but it should do much to popularize the chap-book style. The chap-book cuts are not electros, but are cast on solid and accurate type-body.

A most flattering letter from B. F. Harb, of Anderson, Ind., dated Dec. 22, enclosed two very original and pleasing cards with holiday wishes, and promised other specimens of his work "next week." But the specimens must have been lost in the mail. A very neatly-graded letterhead, Mr. Harb. I am saving your holiday reminders till another Christmastime approaches.

A neat note-paper announcement tells of the admission of Mr. Robert M. Eastman, Mr. Edwin M. Colvin and Mr. Reubin T. Thornton as officers of the W. F. Hall Printing Company, Chicago.

Very tastefully printed in XV. Century, is the "Notice of Removal" of the F. Wesel Mfg. Co., from Manhattan to Brooklyn, "just across the Ferry." The vignette of the main office, factory and warerooms is given a unique pencilled appearance by being printed on a stamped portion of the soft antique-wove stock.

I have not received the March blotter promised me by Jack Evans, of Portage, Wis., but I see the Portage *Democrat* gives considerable space to an account of the N. P.-J.'s complimentary criticism of Mr. Evans' work, with various commendatory remarks of its own. But I should think the *Democrat* would not care to quote a trade journal's remarks concerning its "lack of material" to its customers, and would rather seek to help its talented foreman out by supplying any deficiency. It's a pretty good looking paper, though.

The S. J. Kelley Co., Binghamton, N. Y., sends a mailing card with a desert scene, the background of which is marvelously well tooled. Part of the wording is: "An Oasis in the dreary desert of printer's ink. That's what your printed matter will be if we furnish the plates."

"Reciprocity with the Printer" is a folder whose thought is right in line with ideas expressed in these columns many and many a time. It is issued by the Hampshire Paper Co. "No mill," it says, "has ever advertised so freely in the printer's name." The inner space of the folder is devoted entirely to specimens of the letterheads of printers who use Old Hampshire Bond for their stationary. Below, the color-schemes of ink and stock are given. Some of these examples have been already shown in this department. The American Type Founders Company has likewise paid much attention of late to printing-advertising.

A very handsome book is "Talk," with its plate paper, and its elaborate but tasteful tint-borders to each page. It comes from the W. P. Dunn Co., Chicago. It is a regular talkfest about talk. It shows that type talks, though it does not say so in so many words. It is well written and exceedingly well printed. But our engravers were unable to reproduce that same tint a while ago.

From Gutmann & Gutmann, commercial illustrators and designers, two old New York friends, comes one of the daintiest booklets that ever commercial designers produced in order to bring trade to themselves. The cover-page, "Did You Notice?" is one which catches the attention at once, with its buff-tint block and the white feather and neckerchief of milady. Mr. Bernhard Gutmann and myself used to work in a suite of offices in the World building—but beautiful as they were, they were not so artistic as the rooms shown in two halftones which are brightened by means of tint blocks. The samples of designs made for leading advertisers contain many with which we are all familiar, and are all instinct with individuality. The advertising idea is not made subjective to art—but the art is there.

"Boons" is an attractive folder-booklet from the A. D. Farmer & Son Type Foundry Co., New York and Chicago. Its study should tend to make locking up one grand, sweet song and a short one.

The American Type Founders Company recently issued a number of a magazine entitled, I think, the *Cheltenham,* set entirely in the face of that name. Its real object was, of course, to show what a universal letter Cheltenham was for periodical and magazine use. It was a good advertisement; but I'll tell them a better, without charge to anybody. Buy a large number of any issue of the *Briarcliff Outlook,* published at Briarcliff Manor, N. Y., and send it to printers "Everywhere." For it is a magazine set entirely in Cheltenham and Cheltenham Italic, with the exception of the type with which an electro of one of the ads was made. The advertisements are so varied as to display, indention, etc., that there is a certain individuality to each. The magazine as a whole is a beautiful production that would surely delight the soul of Friend O. Bryon Copper. But then, can you expect anything different when you know that the man in charge of the typography of the Briarcliff Print Shop is our old friend Charles Lester Powers? The Briarcliff Print Shop, like the Wright and Joys Co., is impelled to use fishing as a metaphor while writing and illustrating its advertising. "How about your Bait?" is the question asked by a well-written, pretty little folder. There used to be a publication issued by a newspaper office and print-shop—the *Sun* and *Star* office and the Sun Printing Co., St. John, N. B.—entitled *Bait.* But I fear it's off the hook now—haven't seen it for a long time.

In accordance with the request on the brown and golden slip reproduced as No. 1a, I hereby acknowledge the receipt of a booklet which is enclosed in an envelope showing fishers

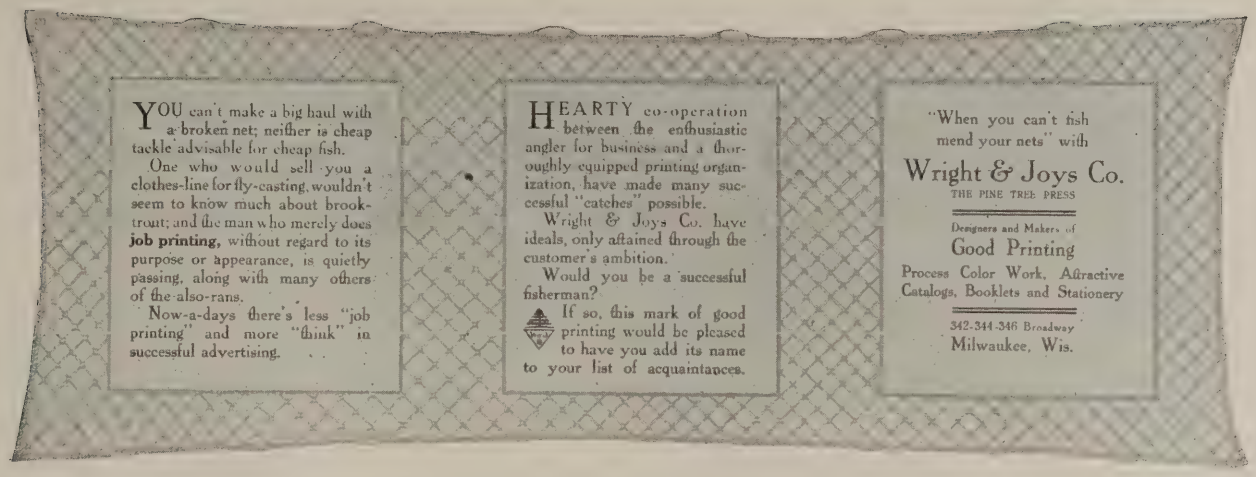
1a

with rods and lines, and the words, "A Few Lines from Wright & Joys Co., Milwaukee." For the booklet has pleased me. It is 4½x8½ inches, and the heavy brown cover has an attractive halftone with buff and green tint-plates and a deep brown frame. The picture is of canoes with fishing materials laid up by a river. There is no wording on the cover, but the title-page contains, besides a large picture of net-mending, this title: "When You Can't Fish, Mend Your Nets. A little talk on the strenuous art of angling for the elusive dollar." I have no dictionary at hand, so don't know "for sure" whether "angling" can be used for fishing in general, but am inclined to think it simply means fishing with hook

1b

Copyright 1905, by C. B. Swain.

and line. But even this sport sometimes requires the assistance of a landing-net. Another thing that adds to the beauty of the second page is the large knot of a brown silk cord, which is not passed through the front cover page, but holds the cover by the back page. The cover, I said, had no title; but I have since found one embossed on the flap. The flap idea is, in fact, carried out throughout the brochure. The outside of the flaps show fishing scenes such as No. 1b, which is brown with a light-green border. No. 1c is a page as it looks with the flap extended. The net is a light green, and the text is in brown with the exception of the red initials and rules. The way in which the work-mark is used in connection with the text is noteworthy. Two pages of well-toned halftones show "Some catchy bait used by successful fishermen"—which, as will be guessed, are specimens in miniature of some of the work this clever firm have done for others. May they continue to flourish as a green spruce tree! And may the casting of the booklet on the waters of publicity bring net results! In the envelope with the booklet is a small private post-card (No. 1d). Not a very good place for it; it's liable to be lost in such a wilderness of an envelope. It is a "follow-up" card of the immediate follow-up kind—one that strikes the prospective customer just after



YOU can't make a big haul with a broken net; neither is cheap tackle advisable for cheap fish.
One who would sell you a clothes-line for fly-casting, wouldn't seem to know much about brook-trout; and the man who merely does job printing, without regard to its purpose or appearance, is quietly passing, along with many others of the also-rans.
Now-a-days there's less "job printing" and more "think" in successful advertising.
HEARTY co-operation between the enthusiastic angler for business and a thoroughly equipped printing organization, have made many successful "catches" possible.
Wright & Joys Co. have ideals, only attained through the customer's ambition.
Would you be a successful fisherman?
If so, this mark of good printing would be pleased to have you add its name to your list of acquaintances.

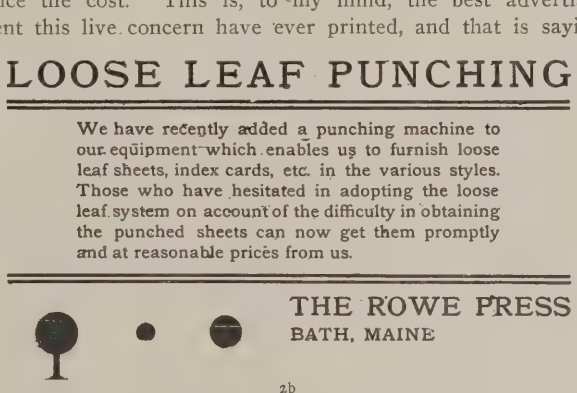
And this slip (No. 2b) seems to me to be a mightily practical, and hence a clever, ad. The punches are made right through the paper. This demonstration will bring business—and that's what advertising is for. In this connection, I wish to felicitate the J. W. Butler Paper Co. on their advertisement in the February number of the NATIONAL PRINTER-JOURNALIST—the one which, by means of text and illustration, shows that "By the Calipers or the Press you may prove" that their magazine super "is of *even thickness throughout the sheet,* a feature only looked for in enameled papers at twice the cost." This is, to my mind, the best advertisement this live concern have ever printed, and that is saying



LOOSE LEAF PUNCHING
We have recently added a punching machine to our equipment which enables us to furnish loose leaf sheets, index cards, etc. in the various styles. Those who have hesitated in adopting the loose leaf system on account of the difficulty in obtaining the punched sheets can now get them promptly and at reasonable prices from us.
THE ROWE PRESS

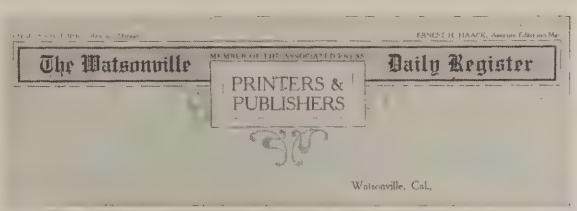
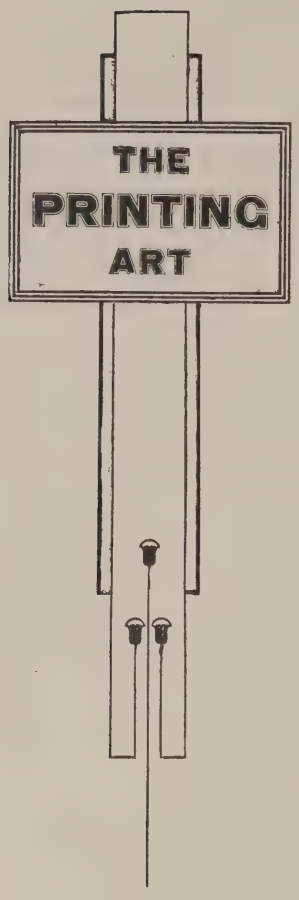
2b

a whole lot. For I do not intend by any means to deprecate the fanciful and poetic designs which we find on the front body-page month after month. They are good advertisements; and the more practical kind would probably not be so forceful were it not for the variety their use produces. The best advertising is, perhaps, after all, a proper combining of poetry and publicity. And when I say poetry, I am not necessarily speaking of verse. I am thinking of the spirit of poetry that pervades or should pervade everything that is good. We are all poets, more or less, and the application of this fact to advertising means proper publicity.

Here's a letter brimful of good words, saying that Thomas E. Abbott, foreman of the Watsonville (Cal.) *Register,* has frequently meant to send specimens to this department, but has put the matter off from time to time. However, he has arrived, and already occupies a very high place among the con-



3



4a

tributors to the NATIONAL PRINTER-JOURNALIST. Here is the *Register* letterhead (No. 3) on blue Scotia parchment. The panel on which the name of the paper (in red) appears is, like the ornaments, of a gray tint, and is enclosed by gold rules. The rest of the job is blue. With stock like this, such an ink-scheme is particularly pleasing. Several wonderfully good, but practically unreproducible, cards on dark cover stock are especially fine. But from an advertising viewpoint, the gem of the collection is the booklet, "The Printing Art." The first cover page (No. 4a) is in a style of printing of which but few specimens have ever been given in this department. But the style is one of many possibilities in the hands of a genuine artist—such an artist, for instance, as would have made a good job at the out-of-style rule-twisting. The cover-stock is light blue with a linen finish. The "distant" panel and the nearest one, have green tints, and the center panel is white. The lettering on the nearest panel is red, and the rest of the job is dark blue. Stamped surrounding rules set the job off nicely. The cover contains twelve pages somewhat smaller than the cover pages. The first, second, eleventh and twelfth are on Strathmore stock with a rough finish and a deckle edge. The other pages have a dull surface. The deckle-edge stock is folded over the second and eleventh pages, making flaps. On both sides of the flaps is the graceful ornamentation, over which are crisp little sayings and maxims. Now I'll untie the blue silk cord that binds the booklet, open the flaps and reproduce one side of each of them, with pages 2 and 11 (No. 4b). The initials are red, with a dark blue background. The rules and ornamentation are light blue. How well Avil, though it has an extended appearance, looks in this narrow measure! There is no need to praise the booklet, either as to typography or reading matter, when so much of it is shown. It speaks for itself, the *Daily Register* and Mr. Abbott.

Pope says: "Be not the first by whom the new are tried, nor yet the last to lay the old aside."

Daily Register

Modern vs. Ancient

THE ancient printers were handicapped in that they had to create material and originate methods for its use. The energies that should have been concentrated in the art of printing were divided with the art *of* making type. No man ever has, or ever will, become the leader in his generation *of* two distinctive arts or professions. It is possible for one to become leading maker of certain implements, *and* it is possible for another to become expert in the handling *of* them. Our plant is equipped with the latest productions *of* the leading type makers, *and* our energies are centered in becoming expert users *of* them.

It's quality that counts in printing, *and* when you consider the completeness *of* our plant, manned by workmen who pride themselves on the excellent results *of* their efforts, you can realize that the quality must be there.

Our customers speak for our printing. Get their opinions—not ours. We may be prejudiced.

Daily Register

Pertinent Pointers

THE Register has men *of* taste who will give you advice in deciding upon those details *of* design, type faces, paper *and* general make-up that gives distinction.

Excuse any enthusiasm you may notice in this booklet—*The* Register's work calls for it.

The man who uses *The* Register's printing can always hold his own.

He can do better than that.

He will get customers without hustling for them.

It costs money to be behind the times.

The Register's printing procures for you a favorable introduction.

It gives you a prosperous appearance.

It will bring an increase in your business.

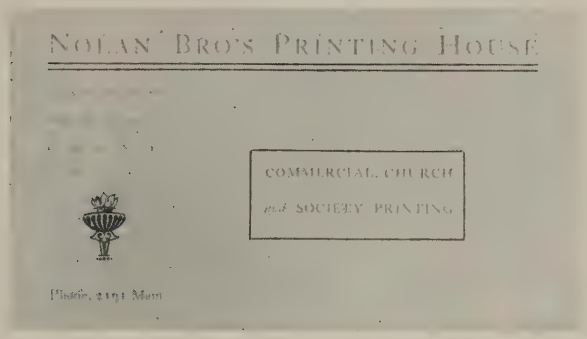
The Register does printing that escapes the waste basket.

Each *of* these reasons is a link in the chain of irrefutable argument that *The* Register's printing is superior.

4b

The engraver failed to reproduce the ornaments on the flaps and also the rules below each line set in Text at the top of pages, that were printed in light blue ink, but the reading is too good to omit and the skilled printer will readily be able to arrange ornaments in harmony with his own cultured taste.

What's wrong with this (No. 5) as a study in whiting-out? Violet and orange, the ornament and the rules under the first line, and enclosing the panel, being orange.



5

The margin around the job, which may not be shown in the reproduction, adds to the chaste effect.

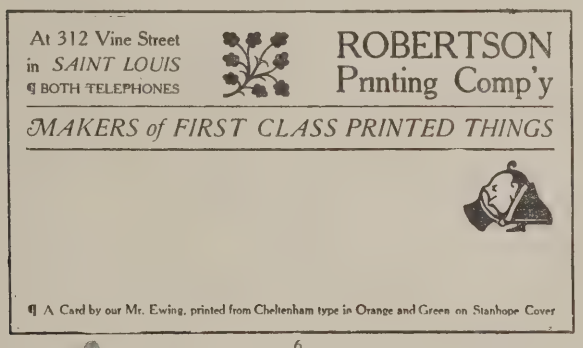
Dear Woodworth.

Accept thanks for kind words in last N. P.-J. These little notices are stimulants to things still higher in good printing.

Cordially yours,

'Nother card enclosed. EWING.

The ink color-scheme, as well as the names of the type and the stock, are given on the card (No. 6). It is not mentioned that the stock is light green. The rules and the canvasser's coat are orange. Another card with the same design announces that it is printed in orange and blue on homespun cover. The stock is cadet blue. The blank space is not wasted. The ornaments are so disposed as not to be



At 312 Vine Street

¶ A Card by our Mr. Ewing, printed from Cheltenham type in Orange and Green on Stanhope Cover

6

inharmonious. "Our Mr. Ewing"—what a nice little personal touch that gives the card! Some bosses wouldn't stand for it—the Robertson folks probably suggested it. I've heard men say that people don't give a hang who wrote this or that, who designed that and the other. So have you, but did you believe it? Who the ——— cares? is often the yawp of the mistaken cynic. People do care. To learn to know they care is a lesson in Publicity. I guess Mr. Ewing may consider himself stimulated some more.

The Roach Press, of Jacksonville, Ill., had a good idea for a mailing folder. There are two folds, which gives three places for two holes each, through which is passed a green ribbon to match the stock. The stamp's green, too, and bears a picture of that fine old printer, Ben Franklin. The announcement is brown and gold.

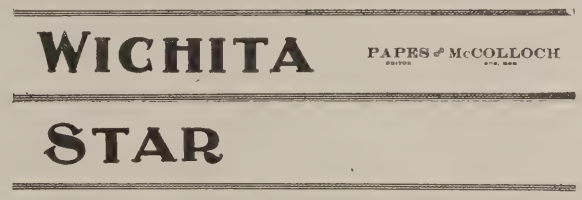
WICHITA, KAN.

To Harry A. Woodworth.

This is to remind you that I am still doing a little "u-ni-q." work at the old stand. This is our regular newspaper heading worked into a letterhead and envelope. Help yourself. Yours,

MOST EASY BUDD.

Now the word "Wichita" on this design, and two-thirds of the rules, are on the side of the letterhead where the letter is generally written. The word "Star" is, however, on the other side, the sheet being folded on the first fold so as to make it appear below the other word. This means, of course, that the word "Star" is printed upside down on the lower part of the other side. On the top of the other side, at the right hand, the word "The" is printed, and the fold is so made that it is the first word that strikes one upon its being taken out of the envelope. This word has rules above and below (extending across the back page) corresponding to those shown in the reproduction (No. 7). The job justifies the use



7

of the new hyphenated word "u-ni-q." The fault with the design is that when the letter is opened out for perusal the word "Wichita" is the only one connected with those of the editor and proprietor. I should certainly use the word "Star" again on the inner page and also utilize the space to the left, both from a motive of space-economy and for the sake of completing the job, and giving an additional interest to it when the last fold is lifted. I was getting Most Uneasy about Budd and am mighty glad to hear he is still living and kicking.

ARCADIA, FLA.

Harry A. Woodworth, Toronto, Canada.

DEAR SIR:—In compliance with my promise some time ago I send you with this the only advertising matter we have used lately with the exception of newspaper space.

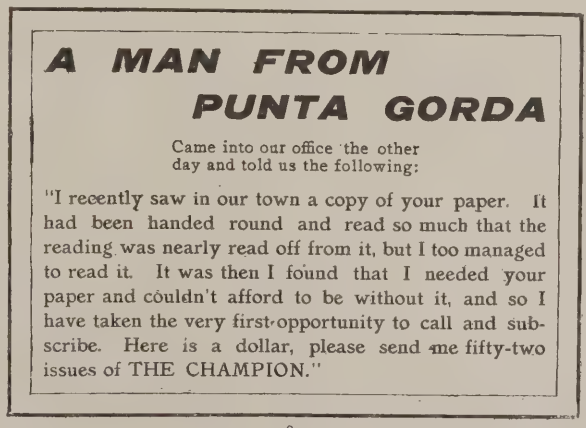
Your opinion of this card may not be the same as the people's down here, but following is a sample of how it was received in De Soto, Fla.: A drummer happening to see one in a barber shop asked permission to keep it, as it was the cleverest bit of advertising he had ever seen. The barber promptly called on me for another, because he wanted to keep one.

Two of our best advertisers, and heaviest users of "*Champion* Artistically Neat Printing," made special trips to our office to tell us that it was the best advertisement they had ever known. I don't know what the direct business result of this advertising was, but certain it is, our office has been worked almost to the limit on commercial work lately.

We are students of your department in the N. P.-J. each month, and derive many useful ideas therefrom. Yours truly,

ROYAL B. CHILD.

I believe that I should be entitled to some of the credit for the indirect and direct business results of the first *job* Mr. Child has printed with the aim of advertising his job office and his newspaper (No. 8). For a good while ago I,



A MAN FROM
PUNTA GORDA
Came into our office the other day and told us the following:
"I recently saw in our town a copy of your paper. It had been handed round and read so much that the reading was nearly read off from it, but I too managed to read it. It was then I found that I needed your paper and couldn't afford to be without it, and so I have taken the very first opportunity to call and subscribe. Here is a dollar, please send me fifty-two issues of THE CHAMPION."

8

National Printer-Journalist

A Journal for Printing and Allied Trades

Entered at the Chicago Post-office as Second-class Matter.

BENJAMIN B. HERBERT . . . . . EDITOR

Official Paper of the National Editorial Association.

PUBLISHED MONTHLY BY THE

NATIONAL PRINTER - JOURNALIST COMPANY

ADVERTISING RATES PROMPTLY FURNISHED UPON APPLICATION

The NATIONAL PRINTER-JOURNALIST is unequalled as an advertising medium in its field. No attention paid to postal card requests. Information cheerfully furnished to all patrons.

Subscribers and patrons will confer a favor on the National Printer-Journalist Company by sending in the names of responsible newsdealers who do not keep the monthly on sale regularly.

Manuscript sent in for publication must be accompanied by a letter of explanation and return postage.

CHICAGO, MAY, 1905

The second editorial page of this issue of the NATIONAL PRINTER-JOURNALIST was held open to the last moment to give the revised program and completed arrangements for the Twentieth Annual Convention of the National Editorial Association. The occasion is worthy this special consideration. The editor will have all the remainder of the year to talk to readers.

The merits, the attractive, instructive, and helpful things, to be told of articles, properties or merchandise, are as much to be remembered in writing advertisements as in writing effective, entertaining news stories.

It is the mission of the truly independent newspaper rising above personality and all preconceived notions, to seek the whole truth and to inform all, the ignorant as well as the learned, the erring, imprudent and benighted as well as the prudent and broadly-enlightened—seeking ever to make all better, stronger, happier, and of clearer understanding, nobler and more genuinely useful to themselves and all about them; and to an honest, efficient, good government "of the people, by the people, and for the people," in every school district, township, municipality and county.

Technicalities should be avoided in all newspaper writing. Leave these to scientific professional trade, or technical journals. Abraham Lincoln, when assured that one of the most learned Professors of Rhetoric in the Greatest University of the nation studying his speeches for their beauty, perfection, excellence and effectiveness of expression, and asked how he had attained to such perfection in the use of language, said, that, having never been taught and never having studied Rhetoric as a science, he could only account for this by a controlling passion, possessed from boyhood, for striving to bring within his understanding, and the clear comprehension of all others, whatever he heard or read. He did not know that he was taking the deepest lessons in true rhetoric while looking for clearness of understanding, of thought and of expression.

There has been a reorganization of the Columbia, Mo., *Herald,* of which more will be said in our June issue, but here we only wish to allude to the following sentiments, found in the "Platform of the new *Herald*:

It has no enemies to punish. It believes that abuse has no place in the columns of a newspaper. It has faith in the people. It will print the news. It will tell the truth. It will speak its own mind. It will have no master, save its own conscience—for a newspaper, like a man, should have a conscience and live by it.

Here is the right sort of a newspaper—independence—an independence that puts the utterances of the paper above the personal likes or dislikes, the entities or friendships of the publishers, editors or reporters, and that leads to the speaking of the truth, giving the news and meting out deserved praise or criticism, without fear, favor, or prejudice; guided only by a faith in, and a loyalty to, the people and a clear, enlightened judgment and an active, ever-heeded conscience, that is "void of offences towards God and Man," and that is reliable because unswerved by prejudice or by desire for glory, pelf, favor, friendship, revenge, or for place, and made broad and charitable by faith in all the people, to whom all true, loyal service is sought to be rendered, regardless of condition, position, creed, or "previous condition of servitude" to error, ignorance, poverty, selfishness, prejudice or wrong.

Senator C. Porter Johnson, of Oklahoma City, is an able man and an eloquent speaker, and in a brilliant and characteristic welcoming address to the Oklahoma Press Association on April 24th, he voiced the sentiment of every editor and of every citizen of the Territory, when he said: "I congratulate you that it will soon be your pleasure and privilege to entertain the National Association of editors, the greatest organization of brains on earth, and to give them an opportunity to witness the marvelous developments of this heavenly-endowed Territory." He said many other things wise, and instructive, that will appear in the June issue of this journal; but we quote this much here only for the purpose of saying, that it will be the effort of the sixty-two associations affiliated in the National body to send the ablest and most representative members as delegates, and it will be the ambition of every delegate from every State in the Union, to maintain the high opinion in which the National Editorial Association is held by the intelligent, broad-minded people of Oklahoma, composed of the best and most progressive citizens from every Commonwealth of this Great Republic.

Direct, clearly stated truth is the first essential and the very essence of all eloquence and of all effective, soul-enthralling, and action-inspiring writing. Good words well written, simple, frank, candid and high-minded help, not only to a clear understanding, but they win respect, confidence and reliance, advance every worthy cause and make the readers, and the writers, as well, by reflex influence, better. There is a wonderful uplift in words simply and fittingly written, whether in the news, advertising, or editorial departments of a newspaper. Chaste words make for chastity, pure words for purity, simple words for simplicity, candid, truthful, just, nobler words, for candor, truthfulness, justice, nobleness, right thinking, correct living, and for wise, generous deeds. Guard your pens and the words they write.

PROGRAM 20TH ANNUAL CONVENTION NATIONAL EDITORIAL ASSOCIATION, GUTHRIE.

June 7—2 P. M.—Address of Welcome, by Gov. T. B. Ferguson, on behalf of the people and newspapers of the Territory. The Governor is a newspaper man, being the editor of the Watonga *Republican.*

Address of Welcome, on behalf of the City, by Mayor J. W. Duke, and Hon. O. R. Fegan, President of the Commercial Club. Response to Addresses of Welcome.

Wednesday, June 7-8 P. M.—Convention called to order; President's Address. Announcement of Committees.

Annual Poem, "Lisping Leaves, Anniversary Rhymes," by W. E. Pabor, Pabor Lake, Avon Park, Fla., to be read by his daughter-in-law, Mrs. Frank G. Pabor.

Address by Capt. Richmond Pearson Hobson.

Paper by Col. John Dymond of Louisiana *Planter and Sugar Manufacturer;* "Some Printing House Economics." Discussions following.

"U. S. Postal Laws and Policies," Hon. H. A. Castle, ex-Auditor U. S. Post Office, Washington, D. C.

"The Science of Modern Business Building," A. F. Sheldon, Pres. School Scientific Salesmen.

Wednesday evening, June 7—Reception by the people of Guthrie at the City Hall, to the National Editorial Association, ending with light refreshments and a ball.

Thursday—8-9 A. M.—"Libel and Privilege," by Mr. D. H. Butler of the *Legal News,* Lincoln, Neb.

"Woman in Journalism," by Miss Clay of the *Democrat,* Huntsville, Ala.

Paper by C. E. Wood, of Colorado Springs, Colo., "Observations by the Way."

"How to Secure and Maintain Circulation," by Mr. H. B. Varner of the *Dispatch,* Lexington, N. C.

Thursday—2 P. M.—Report of Credentials Committee and all other committees; Resolutions, Discussions.

Address by Prof. J. W. Carr, Superintendent Schools, Anderson, Ind., "The Public Schools and the Public Press."

Paper by Mr. J. H. Potts, of the Troy *Times,* Troy, N. Y., "The Social Service of the Press."

Paper by Mr. H. R. Gilstrap of Chandler, O. T., "The New State and Its Newspapers."

June 8—Thursday afternoon, at 2:30, reception to the ladies

8 P. M.—Memorial Exercises

Thursday evening, at 9:20, following the Memorial service at the Opera House, reception by the Scottish Rite Masons of Oklahoma and Indian Territory.

June 9—Friday morning from 7:30 to 9 a general circuit of the city by street car, carriages and other conveyances.

Friday, 9 A. M.—"Muzzles in Pennsylvania," by Mr. J. S. Benn, of the Philadelphia *North American.*

Reports of Committees.

Question Box.—Questions Answered and Discussed.

Address by Wm. Allen White.

"Newspaper Diplomacy—Tell the Truth," by Wm. Southern, Jr., of the *Examiner,* Independence, Mo.

Friday, 2 P. M.—Final Proceedings; Selection of next place of meeting; election of officers; announcements as to itinerary and entertainments, resolutions of thanks, etc., etc.

At 6 p. m. train leaves for Enid, Oklahoma, where the Editors are entertained on the evening of the 9th.

June 10—Forenoon of the 10th, at Lawton and Ft. Sill, Oklahoma. Afternoon of the 10th, El Reno, Oklahoma.

Evening of the 10th, entertainment at Oklahoma City.

June 11—Sunday, at 101 Ranch.

June 11, 1905—On the Famous 101 Ranch, near Bliss, Okla.

GRAND PARADE.

Indians and Cowboys in Native Dress—2,000 Indians, 250 Cowboys.

Buffalo Hunt and Killing—A Herd of Genuine Buffaloes.

Speech by Indian Chief—Cattle Round up and Branding 5,000 Head.

Roping Contest for Championship of Southwest—Large Prizes—Gold Medal and Cash.

Broncho Riding—Valuable Prizes.

Cowboy Sports and Pastimes, with Contest for valuable prizes.

Lucile Mulhall, Champion Lady Rider and Roper of the World, will exhibit daring feats of horsemanship with her horse, Governor. She will rope and throw a wild steer.

Picket, the Noted Texas Negro, will jump from the back of a running horse onto the neck of a wild Texas steer, catch him by the nose with his teeth and throw the steer to the ground. The most wonderful feat ever attempted by man.

Grand Sham Battle—Between U. S. Regulars, Cowboys and Indians, with burning of Immigrant Wagon Train.

Grand Spectacular Exhibition—Illustrating the Rush of the Opening of the Cherokee Strip.

Indian Dance Sports and Pastimes, with contest for valuable prizes.

Music will be furnished by several of the best bands of Oklahoma.

June 12—Monday at the great Cleveland, Okla., oil fields; at Vinet, Muskogee and Wagner, I. T., leaving Muskogee for South McAlester on Monday evening the 12th, from where they will leave on the night of the 17th for Dallas and San Antonio, Texas, on the M. K. & T. Railway, thence over the Southern Pacific to Southern California, San Francisco and Portland.

ARRANGEMENTS FOR TEXAS, CALIFORNIA AND OREGON.

JOHNSTOWN, OHIO, April 27, 1905.

B. B. Herbert, Chicago, Ill.

DEAR MR. HERBERT:—The "little book" was issued about April 10th, and 197 delegates have already paid their per capita and considering the fact that the convention is almost six weeks distant, I regard this as a favorable indication that the Guthrie meeting will be largely attended. Many delegates do not decide to go until the last moment and some associations have not yet selected delegates.

Our Texas friends are preparing to "show us" at Dallas, Houston, San Antonio and El Paso. The Mayor of El Paso, under date of April 20th, writes: "There are imitations, but El Paso hospitality is the genuine article." I am sure that all will want to take at least the Texas trip and will be highly entertained and pleased.

The California program is about complete and includes a reception at Riverside; at Los Angeles, Santa Monica and Ocean Park, Pasadena and Mt. Lowe; Santa Barbara, a visit to the missions there and a bath in the ocean; Del Monte and a night at Santa Cruz; the Big Trees; Palo Alto; an inspection of San Francisco, Chinatown, Cliff House, Golden Gate Park and Mt. Tamalpais. Five days in California. Rufus P. Jennings, Secretary of the California Promotion Committee, is in charge of this entertainment and will surely see that the N. E. A. is well cared for.

Those who wish to return from California and cut out the Portland and Colorado trip may do so, but should at once write Geo. T. Nicholson, G. P. A., Santa Fe R'y., Chicago, Ill., enclosing application for pass from San Francisco to Chicago. Attend to this at once. Those who accompany the regular party will need only to provide themselves with transportation to and from their homes to St. Louis.

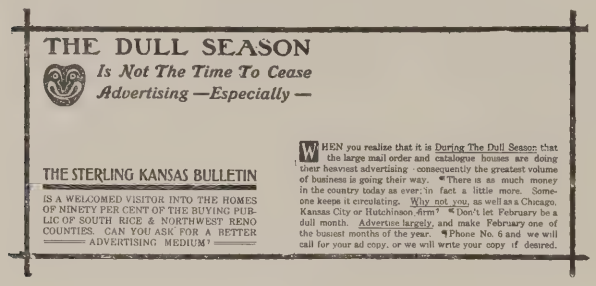
The Portland trip will be made by the Shasta route from San Francisco. Three days will be spent at the Lewis and Clark Exposition and sight seeing in Oregon. Stops will be made en route home at Salt Lake City, Colorado Springs, Cripple Creek and Denver. Our Colorado friends are looking forward to our visit with a desire to be good. The itinerary following the 20th Convention is surely interesting and attractive.

Let me urge the Executive Committeemen to attend promptly to the remittance of the per capita for their delegates to the Treasurer, J. Irwin Steel of Ashland, Pa., and see that all vacancies are filled. It is important that this be early done to the end that a proper knowledge may be had of the size of the party and adequate preparations made.

Each day brings me an average of fifty letters, but no apologies are needed in writing. I will cheerfully be of all possible service to the delegates. That's what you pay me for, good people, so fire your questions in and get your wedding garments ready.

Very respectfully,
WILLIAM A. ASHBROOK,
Cor. Sec'y N. E. A.

The word "Especially" seems particularly in the predicament of a fish out of water. It does not mate with the properly-displayed remark about the dull season, and it's too far from the small type completing the sentence, which seems to have more connection with the block of composition in the lower



THE DULL SEASON
Is Not The Time To Cease
Advertising —Especially —
THE STERLING KANSAS BULLETIN
IS A WELCOMED VISITOR INTO THE HOMES OF NINETY PER CENT OF THE BUYING PUBLIC OF SOUTH RICE & NORTHWEST RENO COUNTIES. CAN YOU ASK FOR A BETTER ADVERTISING MEDIUM?
WHEN you realize that it is During The Dull Season that the large mail order and catalogue houses are doing their heaviest advertising consequently the greatest volume of business is going their way. ¶There is as much money in the country today as ever; in fact a little more. Someone keeps it circulating. Why not you, as well as a Chicago, Kansas City or Hutchinson firm? ¶Don't let February be a dull month. Advertise largely, and make February one of the busiest months of the year. ¶Phone No. 6 and we will call for your ad copy, or we will write your copy if desired.

13a

right hand corner. Possibly if "Especially" were sunk a half-inch or so, the proper connection would be more quickly grasped, and the general appearance would not be hurt. Through the statement concerning the advertising of the mail order and catalogue houses might be challenged by an advertising man, I like the wording of the job very much, as I believe in dull season advertising, and in local advertising as an offset to outside mail order competition.

THIS ENVELOPE CONTAINS
A Blotter
WITH THE COMPLIMENTS OF
The Sterling Kansas Bulletin
ANOTHER ONE WILL COME TO YOU NEXT MONTH

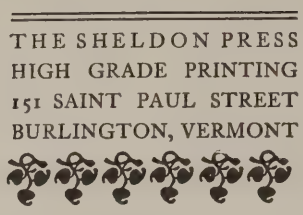
13b

And here is the corner of the envelope in which the blotter came (No. 13b). This envelope should surely awake interest in this blotter—and in coming ones. Heavy rules and coat of the beau in red; balance in green.

Other work of Mr. Crossan on which he especially wishes criticism will have to be considered later. I'd like, sometime, to reproduce one of the covers of the *Cooper Courier*—the one of the chap-book order, with the panel whose ornaments are rendered particularly effective by the red of the stock showing through. But of course it cannot be reproduced from the original colors. If you have a black and white proof, send it along, and please specify the exact cover stock and inks used.

If the customer likes the job, a great point is gained. But if you know that he likes what he ought not to like, try to make him like what you know he ought to like. Both you and the customer will be better pleased in the long run if this is done. But be sure you know!

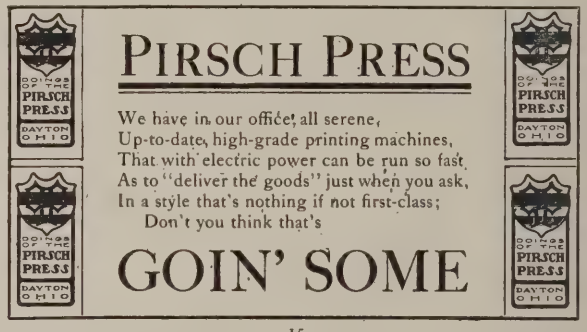
Will J. Cota, of Burlington, Vt., has honored my request for the envelope corner I tore in my haste to read a late letter (No. 14). Brown and green—ornaments green. Margin—half an inch at the top; an inch at the side. This is modern printing. Note the simplicity of the ornamentation, for all its abundance. Mr. Cota has gone back to Wells,



14

Richardson & Co. He writes: "I shall still continue to read your department with interest, and keep in touch with what the fellows are doing even if I cannot contribute myself." The "fellows" will miss Mr. Cota if he doesn't contribute.

One of those stand-up double desk cards, with the white letters, on a black ground, which the Pirsch Press sends out every little while (I guess they were the first to put out a "Do It Now" card, which was of the same fashion) has the motto, "That's Goin' Some" on the black side. And on the other is what is reproduced as No. 15. And a clear-eyed, strong-

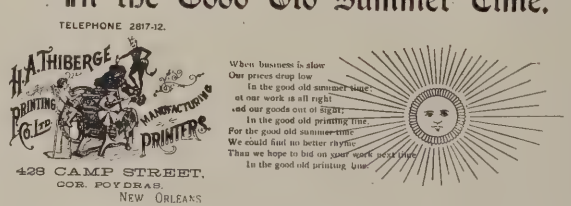


PIRSCH PRESS
We have in our office, all serene,
Up-to-date, high-grade printing machines,
That with electric power can be run so fast
As to "deliver the goods" just when you ask,
In a style that's nothing if not first-class;
Don't you think that's
GOIN' SOME

15

sinewed job it is too. Colors: Surrounding rules, the orange of the westering sun. Bands back of the double "P" mark, and underscoring rule, the green of the grass. The balance, the brown of Mother Earth. A pretty job in the original colors, but the poetry is certainly the limit—no rhyme and very little reason. Apparently all you have to do is to drop a dollar in the slot, give your order, and these high-grade, terribly high-geared machines do the job and act as a delivery auto. (For your asking does not influence the sheet delivery, of course.) You presumably have the finished product at your place of business in the time it takes for a flash of sheet-lightning, all this work being done without disturbing the presses' serenity. Despite the pleasing lilt of the last line, this is my advice, and if I were czar, I'd see it was carried out—by some one else:—Crown the printer with undying laurels, but kill the bard.

David C. Silve, New Orleans, La., is a new contributor who signs himself "a doer of work that's O. K."—a pretty good advertising phrase, of the strict literalness of which Mr. Silve seems to be a little doubtful, for he asks me to "please criticise the weak spots and faults" in the samples he sends



"In the Good Old Summer Time."

Than we hope to bid on your work next time
In the good old printing line.

16

me. The blotter in blue and red (No. 16) has more "O. K.-ness" than weakness and faultiness, part of it being whited out in a very commendable manner. The sun and its rays and the devil are red, of course; so is the roller and disc; so, in the unique name-plates, are the words, "H. A. Thiberage" "Co., Ltd." and "Printers." I should have much preferred to have seen the abbreviations "Co., Ltd." in the same color as "Printing;" it would have been better display. I don't like the address lines at all. Such composition is out of date, and the spacing is poor. As to the jingle, it's rather catchy; the discrepancy in the rhyme being rather cleverly pointed out in the latter portion. Other work, which is big with promise, and whose weak spots and faults can be easily remedied, will have to be considered later, as Mr. Silve's work arrived long after his letter.

Yes, it's pleasant to get a letter like this from a good printer whose work you've criticised adversely and favorably, but whichever it was, always with a friendly feeling. And I guess Friend Biggers understands:

CORSICANA, TEX.

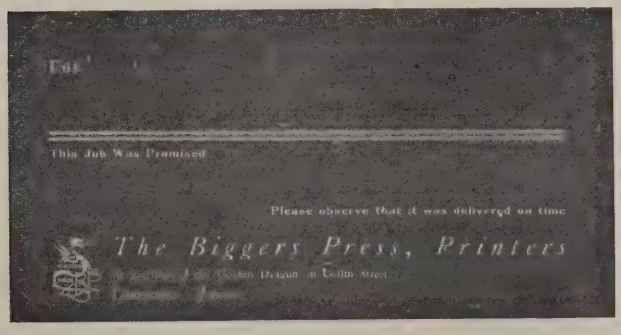
Dear Friend Woodworth.

I want to tell you that your last criticisms are appreciated. These things help a man who is trying to do something; these little things, I tell you they are wonderfully big when put in the way you do.

By today's mail I am sending you a portfolio of samples, and would be glad if you would keep all my samples in the big hand-made envelope. In this batch are some that were sent you before, and I attach one of the old ones referred to, to show you that we are doing better printing all the time; know you will like the new prints best. Hope you are doing well and that you will be at the head of "More Work Through Publicity" department for a long time—even till the little man who will some day be a contributor is big enough. I have reference to Hal Biggers, a very fine boy, named after two good men and printers, Roorbach and Marchbanks. If you will print this picture of this future contributor of the NATIONAL PRINTER-JOURNALIST I'll send it in. Yours truly,

BIGGERS.

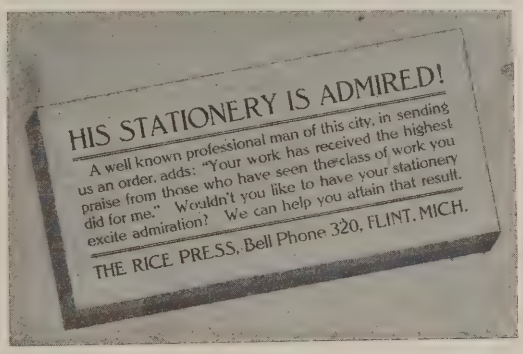
Speaking of the N. P.-J., I'm sure we'll be glad and proud to print the picture of "a coming man in this department." He should be a winner, if there's anything in heredity, for Mrs. Biggers has shown herself an artist in the delicate hand-coloring with which she has embellished some of her husband's work; and we all know what *that* is. And if there's anything in a name, one of the Hals will forgive the poor pun when I opine that the boy's will not be a roorbach. The samples submitted were put into the big hand-made envelope, whence they will be removed from time to time; but, to use classic diction, the engraver fell down on the last samples Mr. Biggers sent, and I'm afraid he'd throw a fit if I sent him this orange stock. Although I greatly appreciate the improvement in the Biggers' work, it always struck me as having individuality, and that of a pleasant kind. And the Biggers' reproduction I will make this month (No. 17) is one



17

which I have kept for a long time—since the Golden Dragon was simply a "devil," and was not entrusted (as shown on the recent work) with the tools of the trade. This job is in aluminum on red stock, and it makes a very clever use of the public's predilection for punctuality. It will be likely to strike favorably the man who really believes in punctuality, and it will be a gentle reminder to the other kind—you all know him. He's the man that's in such a fearful rush for a job—he must have it on the minute—and you try to give it to him on the minute, at whatever inconvenience to yourself. Perhaps you even delay a quieter man's job to be sure to get his out on time, he is so insistent. And then when he gets the job, it seems from his actions that the next day, or the next week, or the next month, would really have done just as well. And he's generally anything but punctual as to pay. Oh, how we have longed to be in a country "where there ain't no ten commandments" so that we could slay that man—and slay him right on time. But this little sentence, so politely worded, should "help some" with such a customer.

This (No. 18) is the latest from the Rice Press, Flint, Mich. A beautiful blue is the blotter. Slantwise in the center of a wealth of blue is this panel, the type being printed



HIS STATIONERY IS ADMIRED!
A well known professional man of this city, in sending us an order, adds: "Your work has received the highest praise from those who have seen the class of work you did for me." Wouldn't you like to have your stationery excite admiration? We can help you attain that result.
THE RICE PRESS, Bell Phone 320, FLINT, MICH.

18

over one printing of white. And a wealth of blue is wonderfully impressive. You who have seen the sky can realize this. The rules which give the block effect are brown. Thank you for remembering me so often as once a month, Mr. Rice.

THE RING OF CASH.

The ring of cash, that tells of profits in the counting room, should have more sweetness to the workman who wants steady employment or advancement than the tick of the clock that tells of the quitting hour.

BARK UP USEFUL GAME.

The dog that puts in all his time barking at skunks will never tree any possums. It is the same with the newspaper man who devotes all his energies to barking about the skunks that no one can reform and no one wants to attack. Instead, let him bark up the useful game—the circulation, the advertising and the job work, as well as the commercial enterprises of the town, the local industries and institutions. Let him devote his time to the support of good principles, needed improvements, good government, security and a square deal for all, through which his fellow-men may enjoy life, liberty and the pursuit of the good, the true, the beautiful and all that brings peace, confidence, the feeling of safety and the resulting prosperity, contentment and happiness.

EDITORIAL NOTES AND POINTS

BY BENJAMIN B. HERBERT, CHICAGO, ILL.

IT may be that attention has already been called in these pages to the splendid features shown in a recent issue of the Corning, N. Y., *Evening Leader,* but it will do good to call the same to mind once more. One feature is the admirably brief but complete record by months of all the important events of the previous year. It is none too early now for newspapers to commence to prepare for the presentation of such a record at the close of this year. The work on an annual number is made easier by tabulating facts and figures as the weeks pass. It is wise, not only to keep in mind and to gather throughout the year items, events and illustrations to be used in the souvenir, but also, to keep tab on needed additions for the improvements in the office and the service, and to put aside the money, as it can be spared, to meet the expenses thereof. The *Evening Leader* was able to tell its interested readers, this year, of many improvements, the installation of a new twelve-page press, a double magazine linotype and many additions to the job department on the second floor of its new addition and one of the roomiest and best lighted press rooms. The *Leader* is noted for the completeness of its neighborhood news department.

The Arcadia Valley, Mo., *Enterprise* has a department of "Editorial Comment" set in double column on its first page. These comments are brief and many of them relate to articles of special interest found on other pages of the paper. The *Enterprise* also wisely advertises its job department prominetly by pointed talks in bordered two column squares, with matter set in eight or ten point, in its paper. These features are both to be commended.

Satisfying subscribers, advertising patrons and job printing customers pays though the cost and trouble may seem arduous or expensive at the time.

A wise newspaper man will have as much regard for the appearance of his paper on account of his advertisers as for the satisfaction of himself or his readers. Even diamonds hidden in the mud present little attractiveness and only throw out an occasional sparkle. Newspaper advertisements should be diamonds of scintillating attractiveness, ever emitting purest rays of light and they should to be effective, be set in pure gold and the newspaper should be golden, or genuine gold as to worthiness, popularity, intrinsic value and appearance.

Modest worth is excellent but hidden treasures get neither use nor attention. The world is too busy with its own affairs to seek out worth even of the highest merit. It is wise to make your work, your newspaper or your printing better than any other and then to advertise, blaze the way, open a path, through the forests of competition and distracting interests, and invite the world to walk therein. People must be told the way and the real value of the things to be found at the end of the path. It is the advertised man who gets the office, the advertised paper that gets the subscribers and the advertised job office that gets the work, provided there is worthiness, merit or value back of the advertising.

Talk about the circulation of your own paper and be sure that the circulation is such as to stand publicity. Talk about the splendid features of your own paper and be sure that the features are as excellent in every way as they can be made. Talk about the execllent equipment of your office and the ability of your workmen and be sure that they are such as not to shame your highest praise. But never talk about the inferiority of any of your competitors. Let your competitors do their own advertising. Their faults will be discovered without any direct aid from you, especially if your paper and your office constantly present greater excellences, are thoroughly advertised and made generally known; but comparisons are odious if made by the one to be benefited.

The newspaper man and the commercial job printer both have to do with all kinds of individuals and with many differing grades and groups of men in all kinds of employment and should never forget the environments of each. It is environment, as much as birth and education in the schools, that influences all lives and we must deal with men as they are and understand their differing view points if we would entertain, instruct, please or influence them or win either their permanent patronage or enduring confidence and esteem. We can not drive them from what they are or from the influences that surround them, though we may be able to broaden their views and gradually lead them to the adoption of new ideas. Suggestion is the great power and this must be through information, through description of differing ways and better things. It has been said that suggestion is the greatest power in advertising. Desirable articles must be described and their uses, desirability and advantages must be set forth in an entertaining and attractive manner, ever keeping in view the environment of those sought to be reached. Advertising is an important part of the newspaper and, in most particulars, does not differ much from the other departments, all having the like objects of informing, entertaining, pleasing and lastly, when we come to the editorial department, of convincing, persuading and of influencing to action.

As a catch line above the heading on the first page, the Davis County, Utah, *Argus* runs the words, "If you wish to reach the people of Davis County, advertise in the *Argus*—everybody's paper." At the left of the heading is a brief statement as to the circulation and to the right, these words, "*Our Aim*:—To bring before the public the wonderful resources of Davis County; to record the news comprehensively, and to avoid treading on innocent toes."

This idea of using the space above and at the ends of the head for such matter—if neatly set and arranged—does not seem objectionable and certainly such brief statements are impressive and ought to prove effective.

BRISTOL, CONN., April 19, 1905.

Mr. B. B. Herbert,
Editor National Printer-Journalist,
Chicago, Ill.

DEAR SIR:—I have noticed in the program of the National Editorial Convention that the big day at Miller Brothers' ranch is on Sunday, June 11th. The little book sent out by the corresponding secretary, Mr. Ashbrook, says that it is expected that 25,000 people will be present on that day, which will be a day of Indian sports, buffalo hunt, and other performances which it seems to the writer are not exactly suited for an observance of the Sabbath, even according to the more liberal western ideas. Inasmuch as this convention is a National Editorial Convention, drawing delegates from every state in the Union, eastern and central states as well as western states, and inasmuch as whatever is done at the National Editorial Association Convention is printed in nearly all of the newspapers of the land, it seems to the writer that it would be very much to be desired that this entertainment at Miller Brothers' ranch should occur on some other day of the week than on Sunday.

I realize that this is an invitation from the owners of the ranch to attend this entertainment which they have kindly arranged for the pleasure of the visiting editors. I think it is most kind in the Miller Brothers to arrange this entertainment, but I do feel that the day chosen is entirely the wrong day.

Respectfully yours,
ARTHUR S. BARNES,
President Connecticut Edit. Assn.

It is customary when editors or Presidents are out on Editorial excursions or hunting trips, to allow great liberty and to adopt, on such occasions, for those, who during the year are confined closely to offices and desks, the words of the Great Teacher, who, when criticised for leading his disciples through the fields and gathering and eating the God provided grain on the Jewish Sabbath, declared that, "The Sabbath was made for man and not man for the Sabbath." Yet there was no intention of violating anyone's conscience in providing for the entertainment at 101 Ranch. It was found impossible to arrange for any other day. It is just at the season of the Oklahoma harvest and it was found impossible to secure men or horses or the time, on any other day of the week. It has been quite customary for the editors to travel in the cars on Sunday when on excursions and to stop and view the wonders of nature enroute. One of the most impressive occasions in the history of the association was a trip from Leadville to Colorado Springs on Sunday. The party stopped at Cascade Canon and, after viewing the leaping waterfalls, the beetling cliffs and the riven rocks, the editors returned to the cars and joined in singing, with the spirit and with deeper, clearer understanding, "Rock of Ages Cleft for Me, Let Me Hide Myself in Thee." A similar incident happened while the National Editorial Association delegates were on a trip through the Canadian Alps. The train was delayed by the washout of a bridge and embankment, and while waiting, all gathered on the beautiful grounds and lawn on the Mountain side at Glen Springs and engaged in religious songs and worship. Our heart thrills to this day with the thought of the glorious surroundings and of the words of that noble editor, Past President Walter Williams of Columbia, Mo., who spoke as one inspired. God got very near to the hearts of the editors that day.

There are churches at Bliss where the editors can worship and it will be entirely proper to arrange for a service in the open air in which all can join. It would be a grand idea, in the midst of the vast extent of plains on the edge of the 101 Ranch, containing, in itself eighty-seven thousand acres, of richest lands, surrounded by waving grass and grain, ripe unto the harvest, by the herds of cattle from a thousand knolls, and the tents of the Indians, for the soldiers, cowboys, ranchers, citizens of Oklahoma, Indian Territory and Kansas and the editors from every state in the Union, to take an hour for worship of the Great All Father, and for communion together in regard to His works, mercies and wonders.—EDITOR.

GOVERNMENT PRINTING ENVELOPES.

LA MOURE, N. DAK., April 8, 1905.

Editor National Printer-Journalist, Chicago, Ill.

DEAR SIR:—I hand you herewith copy of a resolution which was adopted unanimously and with considerable enthusiasm by the North Dakota Press Association at its regular biennial meeting, held in Bismarck, N. D., Feb. 17-18, 1905.

The injustice complained of affects, in a greater or less degree, nearly every printer in the United States, and would seem to be a proper subject for general discussion and concerted action. It will probably occur to you that if the government may properly furnish printed envelopes to customers throughout the entire country, there is no logical reason why it should not furnish a general line of printed stationery.

I will be glad if you will publish the resolution in the forthcoming issue of your excellent journal, and also treat the subject editorially as you may see fit. Yours very truly,

W. C. TAYLOR, Sec'y N. D. P. A.

Resolutions adopted by the North Dakota Press Association at its biennial meeting held at Bismarck, February 18, 1905.

Whereas, The president has directed attention in his annual message to the extravagance with which the government printing office is conducted; and

Whereas, As a marked example of this extravagance we cite the fact that the government is engaged in the business of printing envelopes for private customers all over the United States at a price which barely covers the cost of material used and which leaves no return to the government for the high-priced labor necessary to turn out the work:

Resolved, That this is manifestly unfair to the printers of the United States and that the government has no more right to do this work than it would have to enter into competition with dealers in groceries, dry goods or hardware.

Resolved, That the North Dakota Press Association requests the members from this State in the Senate and the House of Representatives to use their best efforts to have the government printing office discontinue this class of work.

Resolved, That copies of this resolution be sent to His Excellency, President Roosevelt, the senators and representatives from this State and the superintendent of the government printing office.

BUSINESS NOTES

This Department is conducted for the benefit of advertisers, and expresses their claims and views

A BOOKLET entitled "A Master Printers' Monologue," issued by the Challenge Machinery Company, of Grand Haven, Mich., deserves very high praise as a work of art and no less commendation for its uniqueness and pithiness in the way of putting things. It is really refreshing from a literary point of view, and fascinating and direct in its statements. It uses the attractive monologue method of presenting the claims of "The Expansion System of Printer's Blocks" in a way that entertains while enforcing the truths conveyed. Hence, taken all in all, it is first-class advertising. Fine deckle-edge stock is used, the typography is of the highest order and the presswork, done on the Challenge—Gordon Job Press—is without fault, flaw or blemish. It enforces, in its whole makeup and execution the high value of artistic printing accompanied by good writing or happy expression. It is worthy of study as an instructive example.

The Inland Type Foundry, in its insert this month, presents an attractive showing of its popular McClure series. It is a face in every way up to the Inland standard of excellence, and is one of those "all round," general purpose letters which are coming to be so highly prized by the craft.

The spring number of *The Type Founder,* published by Barnhart Bros. & Spindler, Chicago, is devoted to presenting in most attractive form that foundry's Mission series and Caslon Old Roman. The number shows some handsome two color designs.

Chas. Hellmuth, of New York and Chicago, agent for Kast & Ehinger's inks, is sending out some attractive and convincing fac-simile testimonials from users of their extra half-tone black No. 6288.

"We make nothing but cutting machines," is the statement made in a richly printed circular just issued by the Oswego Machine Works, Oswego, N. Y., "and these in sixty sizes and styles, all generally in stock for instant shipment." This company has had thirty-four years of experience in the manufacture of cutters.

"A Money-Making System for the Employing Printer" is the title of a neat little volume just published by Eden B. Stuart, of the Statesman Printing and Publishing Company, Marshall, Michigan. The book goes into the details of every branch of the printing business, outlining a complete system for keeping watch of the cost of every job, giving forms for tickets and all other blanks needed to carry the work from start to finish. The system is worked out for the larger class of printing offices, but has the merit of being easily adaptable to smaller concerns. Mr. Stuart has entered a field not wholly unoccupied, yet where the need of just such systems as this is an urgent one. The best we can wish for the little book is that it may bring many an employing printer out of the darkness of slipshod, unbusiness-like ways into the light of system and its attending benefits.

The subject of electrically welded steel chases has just been worked up into attractive booklet form by Barnhart Bros. & Spindler, Chicago. The book combines into sixteen pages a happy combination of hard facts, interesting description, artistic typography and faultless presswork. It is just the kind of advertising matter that brings large returns to those who send it out.

The new weight plan of selling job faces of type by the pound, recently adopted by Barnhart Brothers & Spindler, is fully and pleasingly set forth and illustrated by the "Red, White and Blue" insert appearing in this issue of the NATIONAL PRINTER-JOURNALIST. It has a flavor of genuine patriotism as well as of a "square deal."

The April number of *Profitable Advertising* (Boston) is more than usually full of matter which will be of interest to the printer and publisher. This magazine has the remarkable charm of bringing something fresh and enlivening to every man who reads it, no matter how well informed he may be—something which he is sure to feel that he could not afford to have missed.

The Post Color Press Co., 192 Dearborn Street, Chicago, is putting upon the market an attachment for platen presses whereby two colors may be printed in one impression from a single form. The sample of work sent out would indicate that the process is a success, and it will surely be welcomed by printers who have large runs of color work.

In another part of this issue there appears a new letter called "Washington Text." This series is made in fourteen sizes from 6 to 96 point inclusive, by the Keystone Type Foundry, of Philadelphia and New York. The appearance of this face as shown on this handsome insert will surely appeal to the artistic tastes of every printer. It has been some time since the foundries have brought out anything new in the way of a text letter, and we predict that Washington will receive hearty acceptance among printers generally.

The features of a type are not all shown in its face, which is on the top of its body, and looks directly upward for its impressions. There is a beard at the bottom and sides of the face, and this is also its neck, and slopes easily to the shoulder upon which it rests. The face has a counter, which is the depression between the lines; and its body-mark or stem is the heavy upright line, or lines. The serifs are the short lines projecting at right angles to the stem as a sort of finish, and are of various forms. They have much to do with the appearance of the face, and change with its style. The hair-line connects or prolongs the stems. The kern, most frequent in italics and scripts, is that portion of the face which projects beyond its body. The pin-mark is the small indentation made by the pin, which assists in dislodging the type from the mold, and usually bears the cypher or name of the founder. The body of a type is that part between the shoulder and the feet; and the feet are made by planing out remains of the broken jet, which was formed in the orifice in the mold through which the molten metal was forced. The nicks are the grooves in the lower part of the body, on its front in American, English and German type, and on its back in French. The handsome Mission face just put out by Barnhart Bros. & Spindler will show you most of these things in an admirable way. This face has the long ascenders; is a pleasing and distinctive character suitable for choice work.

A new plan of billing job type is announced by Barnhart Brothers & Spindler, which is certainly worthy of commendation. The plan is to charge for job type by the pound, so that the customer pays for what he gets. This certainly seems to be a squarer deal than the somewhat hit or miss method of charging by fonts. The types are classified into first, second and third class, designated by red, white and blue labels, and when any number of fonts of a certain class and size are ordered, they will be put on the scales and weighed at one time, and the weight will be charged. In the labels, the Company has worked a little of patriotism into business by adopting the colors of "Old Glory," the finest material thing that this country possesses, because it stands for "liberty, equality and justice."

Speaking of patriotism, it seems to be manifesting itself among type founders east as well as west. It will be noticed by the new "Washington" type face insert shown by the Keystone of Philadelphia that the Keystone Type Foundry is getting out a patriotic series in honor of America's greatest leaders and authors. These faces have a clear, bold, attractive expression that awakens the artistic spirit of every true printer. Sentiment has place in good printing and the type faces that do honor to the greatest of American patriots, and to the writers of the greatest of American classics, whose every poem or book thrilled with American loyalty and spirit, seem naturally glorified and beatified by the sentiments that inspired the heroes and writers in whose honor the types are designed and named.

A handsome little booklet just issued by the Mergenthaler Linotype Company, set entirely in Cheltenham Old Style, gives some interesting bits of history in connection with the designing of that now famous letter. The book will be of interest to any printer so fortunate as to secure a copy, both as a specimen of artistic printing and as revealing some of the many problems which confront the type designer. The body of the matter is in twelve point Cheltenham, set on the linotype, together with showings of six, eight, ten and eleven point set up in the same way. The booklet is printed in red and black, on handsome buff laid paper, deckle edges, with a "Cheltenham" watermark. The cover is an effective design in purple and gold. In a note accompanying the booklet the Mergenthaler Company states that the Cheltenham face was originally designed for, and at the request of that company.

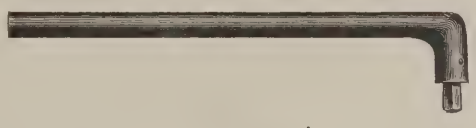
The "Century" types of the American Type Founders Company have won a substantial and leading reputation among printers. The "Century" booklet showing these types in use, is not only a gem as a specimen of fine printing, but is a practical education as well. The "Century Expanded" shown in this issue of the NATIONAL PRINTER-JOURNALIST, in eight sizes, from six to eighteen point, commends itself to any practical or experienced printer for its strength, clearness and beauty—gracefulness of contour and appearance without the use of fine hair lines or hanging letters that are easily injured and that detract from the wearing quality of the type. Long wear and good, reliable serviceableness are two prominent features of the "Century Expanded" that will not be overlooked by the thrifty, intelligent workman.

Easy legibility, without weariness to the eyes, or a strain on the nerves, is the highest consideration for a type face in this age of much reading and of much advertising. The "Century Expanded" almost reads itself, especially is this true of the 12 and 14 point sizes that will be found especially effective in giving the valuable advertising news stories of the merchants, either in the columns of the newspaper or in circulars, leaflets or booklets.

A new, low-priced cylinder press is just being put on the market by the Challenge Machinery Company, Grand Haven, Michigan. It is called the Diamond, and is designed for the publisher whose edition has outgrown the hand press. The Diamond is a low-priced, reliable machine with a regular ink fountain; the cylinder revolves in journals and the bed traveling same as in a high-priced press, and running in steel pinions, thus the impression and the distribution of ink are both first-class. The really unique feature is a movable blanket which is brought on the cylinder only for the impression and is out of the way when the bed makes the return. In the power machine the bed is driven by a crank motion and gives motion to the whole mechanism. It is the simplest practical printing press made, as the non-essentials are all discarded. We understand the orders are rapidly coming in as the country printer at once recognized its value. If you are tired of the hand press side of the business, the Diamond will give a happy relief.

"TRUTH COMETH TO THE LIGHT."

The original "Right-Angle Quoin Key," here illustrated, was created and put on the market by the Wickersham Quoin Company fifteen months ago. It has a square steel-center (movable and reversible), with rounded point, which readily enters the square holes in cams, and is especially adapted to all Wickersham Quoins, Morton Lock-Ups, and Stephens Expansion Locks, which *do not slide* when expanding and locks by *one insertion* and *one turn* of the key. One size of key fits all; thus fewer keys and no delays.



CYLINDER PRESSMAN'S KEY.

Indispensable when Quoins are at back of form, or where height of space is limited. Length 10 inches.

We advise printers, who have not received one, to write to the Wickersham Quoin Company, Fort-Hill Square, Boston, Mass., for a copy of their latest booklet with illustrations and prices of their Modern Locking Devices, which they make in large variety, for all composing and pressroom requirements. These ingenious bits of mechanism, results of long experiment, are of wonderful power and utility—combining every advantage, without the defects found in other implements. The great number now in use, and the rapidly-increasing demand in this and other countries, is convincing testimony of their superior merits.

HISTORY REPEATS ITSELF.

In the first centuries of the printing art the printer designed and cast his own type. The modern printer is invited to do the same with the aid of an Automatic Type Machine, advertised on page — of this issue. The first of these machines that has crossed the Alleghany mountains is now on exhibition at 337 Dearborn street, Chicago, by the United Printing Machinery Co. More than thirty machines are in use in the East, eighteen of them in New York City. The *Herald, Journal, World, Evening Post, Eagle* and *Morning Telegraph* of New York City are making their own display type. The United Printing Machinery Company has been organized to manufacture and sell inventions designed to reduce the cost of producing printing, and its advertisements, which are to appear regularly hereafter in the NATIONAL PRINTER-JOURNALIST, will prove to be profitable reading.

Among the Associations

"In Unity is Strength"

THE Massachusetts Press Association held its regular quarterly business session at the United States Hotel, Boston, on April 10th. The attendance was excellent and a deep interest, in the affairs of the Association, manifested. President Fairbanks presided and the regular routine business was transacted. National Committeeman Chandler reported as to the meeting of the Executive Committee of the National Editorial Association at Indianapolis. President Fairbanks, who also attended this Indianapolis meeting, supplemented the report with further remarks as to the proceedings and the arrangements for the Annual Convention at Guthrie, and then called on Past-Pres. B. B. Herbert, editor of the NATIONAL PRINTER-JOURNALIST, Chicago. Mr. Herbert congratulated the association on the commendable spirit manifested and the large attendance for a merely business session, presenting no particular program. He referred briefly to his recent attendance upon several western State Press Association conventions and the progressive spirit shown thereat. Everywhere a most encouraging progress is shown in the work, papers and discussions of, and interest and attendance at, press associations. Everywhere there is a marked advance in newspaper making, and a wonderful growth and prosperity among newspapers and in newspaper circulation.

He said, that, in addresses before other associations, he had taken occasion, frequently, to refer to meetings and banquets of the Massachusetts and Suburban Press Associations that he had been privileged to enjoy, especially one banquet, where Mrs. Julia Ward Howe, the author of the Battle Hymn of the Republic, was numbered among the guests and a spirit of broad patriotism found eloquent expression.

Such references to attendance on these occasions were always greeted with interest and enthusiasm, showing the deep fraternal feeling that has grown up among the members of the different press associations in far distant states of the Union. He spoke briefly of a recent visit to Guthrie, Okla., and other places in that Territory, of the wonderful improvement and progress made there in fifteen years, especially in the matter of schools and the developing a perfect, complete system of education, not only literary, or of the mind, but industrial, of the whole man. The schools of this new Southwest were beginning at the highest point of modern, all-around education, to which the East had reached. He referred to the enthusiasm manifested at Guthrie, and throughout Oklahoma and Texas over the approaching convention and tour of the editors as delegates to the National Editorial Association from every State of the Union—an enthusiasm second only to that awakened by the visit of the President of the United States. He then outlined, briefly, the National Editorial Association program and itinerary and the local entertainments arranged at Guthrie, at 101 Ranch, throughout Oklahoma cities, at Houston, Dallas, and the ancient historic City of San Antonio in Texas, and then on to Los Angeles, and of the continuance of the editorial trip up the new Pacific Coast Line through Santa Barbara and other points of equal interest, and on to San Francisco, with a probable side trip to the great and wonderful Yosemite Valley, and then on to the Lewis and Clark Exposition at Portland, Oregon, where a warm reception awaited the editors. After seeing the Exposition in this wonderland of the Pacific Coast and enjoying the courtesies extended by her enterprising people, who ever remember with affection those who come bringing tidings from the old homes over the Rockies—from New England, the cherishing mother of western industries, enterprise, learning and advancement; from New York, Pennsylvania, and Ohio, Indiana and Illinois, centers of the Nation's accumulated capital, the builders of railroads, the developers of statesmen and the manufacturers of steel with which to girdle the earth and to supply the shafts and wheels, and all the machinery for tunneling the mines and furnishing shops and factories; from the chivalric Southeast, from all the middle West, and the rich and mighty Mississippi Valley —the editors will return by four different routes enabling all to see unvisited wonders of the great Northwest, of Utah and Colorado.

Mr. Herbert pronounced the program and the itinerary provided for this, the twentieth annual convention of the National Editorial Association, among the completest, most attractive and promising, in instruction and in intelligent pleasure of the many notable ones, in the history of the organization. Following his remarks, arrangements were discussed as to State delegates and a resolution adopted that delegates must report not later than May 10th, as to their intention with regard to attendance so as to give time to notify alternates in time to arrange to take the places of any one unavoidably kept at home.

A resolution was passed to pay the actual money expended by the Member of the Executive Committee meeting at Indianapolis and other business pertaining to local matters of the Association transacted. The Association then adjourned to accept an invitation of the Edison Electric Illuminating and Power Company of Boston for an automobile ride to inspect its new power plants and electrical exposition of the Company. One touring automobile was furnished that carried thirty-eight of the editors, while the remainder of the party were accommodated with smaller automobile carriages. It was the good fortune of the editor of this paper to be one of the occupants of the large carriage which was mounted by means of a step-ladder and from which a splendid view of the city was obtained as the different streets were traversed. The large new power house reached, the party were conducted through the offices and then treated to a sumptuous collation, after the enjoyment of which, the work of inspection of the plant was entered upon. This new light and power station, with an ultimate generating capacity of sixty thousand kilowatts, is in South Boston, just a short distance beyond Port Point Channel, which was crossed on a long and substantial stone bridge, from which a view was obtained of the manner in which railroad yards are made and acres added to the city's area, by the "filling in" process, driving the waters back by newly-made lands. All of rich and aristocratic Back Bay Boston is on made land, the work of a

half a century ago, but the work still goes on and it seems as though nearly one-half of the city, and some of the most valuable properties, are made up of lands wrested from the sea. This electric plant is a wonder in modern electric engineering and manufacturing construction. The site is on a plot of land 810 feet by 1,300 feet, so situated that the coal is carried from boats in Boston harbor, automatically, by an endless concave trough-like, thirty-six-inch belt conveyor, with a maximum capacity of 700 tons of coal per hour. There is no shoveling coal into the furnace, under the mammoth boilers, for it is carried up and dropped into great automatic furnace feeders and descends by gravitation.

In front of and above each row of eight boilers the coal bunker into which the conveyor belt empties has a capacity of 44 tons of coal, good for 1½ days' operation at full capacity. From the bunkers this coal passes to Roney stokers with 110 sq. ft. of grate surface per 500-hp boiler. These stokers are driven by induction motors.

When the coal is consumed there is no shoveling out of ashes.

Down into the basement beneath each boiler projects a brick, concrete and steel ash chamber, which receives the ashes as they fall from the grate above. The bottom of each ash chamber, which is about 8½ ft. above the basement floor, opens by mechanical means so that the ashes may drop by their own weight into either a cart or conveyor underneath.

In general structure the new station is built entirely of concrete, brick, stone, tile and steel from foundation to roof. The main walls of the station, both exterior and interior, are of brick, and the exterior walls, especially on the harbor front, have heavy stone trimmings that give a decidedly ornamental effect. At the harbor end of the turbine room, which juts out a little beyond the boiler room, there is a great arched window whose keystone bears a figure of Mercury, and just above this figure comes the word Edison beneath the letters MCMIII. At either side of this window is a great metal globe.

As to its interior, the new station is divided into the boiler house, the turbine house and the switch house by heavy brick walls that run parallel with the greater dimension of the building. The boiler house thus formed has interior floor dimensions of about 146 by 630 ft. In the steam turbine house the width is about 65 ft. and the length 642 feet. The front or harbor end of the section of the station called the switch house is devoted to offices, and back of these offices the space on each floor available for switching purposes measures approximately 28 by 562 ft.

It would be instructive, if not interesting, to editors and printer readers, to go into details as to the mammoth boilers, turbines, dynamos and all the wonderful appliances and machinery of this great plant, but results, rather than methods, are the concern of the makers of newspapers and the printers of all the wonderful literature of business.

There are four of these electric power plants in Boston and a visit was paid to one other of these, known as the third, or Atlantic Avenue Station, situated on the harbor front at the foot of Pearl, on the very spot where English tea ships were hastily unloaded, free of charge, about one hundred and thirty-two years ago, or in December, 1773. Here, further ideas were obtained as to the completeness and magnitude of the machinery and plants and the wonderful perfection of appliances necessary to serve, with the electric fluid, for all modern uses, a thickly-populated country extending about two hundred and fifty miles North, South and West. A visit to the exhibit of the company, following, gave the editors some idea of the hundreds of uses to which electricity is applied, from driving thousands of trolley cars over everywhere-penetrating trolley lines, to doing the week's washing or welding type chases; from lighting a great city and many lesser cities, to the advertising of wares, with wonderfully-arranged, many-colored, self-changing lights, or the operating of a fan or even rocking a cradle. It used to be said that "The hand that rocks the cradle rules the world," but now, if cradles were any longer rocked, all that would be necessary would be to touch a button, and the electricity would do the rest. But what is electricity? One cannot see, hear, taste or handle the fluid, but only know of it through its effects, its manifestion of power and light. The story is told of a young infidel who boasted, in the presence of an elderly minister. The old divine, after patiently enduring the boastful words of the young atheistic philosopher, finally said: "You only believe in what you can see or test with your senses? You certainly have the shortest belief and the least of knowledge of any one whom I have met. Can you even see, hear, taste or handle pain? Yet I presume that you would not deny that pain exists?" In this day the preacher would have found a more apt illustration in the everywhere-used electric fluid, and yet of which no one knows anything except only of the results it produces.

ILLINOIS PRESS ASSOCIATION.

Office of the Secretary.

JERSEYVILLE, ILL., April 13, 1905.

B. B. Herbert, Chicago, Ill.

FRIEND HERBERT:—The Illinois Press Association is to meet at the Lexington Hotel, Chicago, May 24th, 25th and 26th. The 24th and 25th will be given over to the program, and the 26th will be taken up with visiting the white City, as that beautiful place of amusement and entertainment has extended an invitation to the Illinois Press Association, the Chicago Press Club, the Milwaukee Press Club, and all the papers of Chicago, to take part in the exercises of an informal opening Friday, the 26th, as the opening to the public will take place Saturday, the 27th, so we will only have two days' program. It has been customary for the supply people up there to give us a theatre party. Can you see some of them about this and arrange it so that we can get a theatre party for Thursday night? I think there will be no trouble in finding some good theatre among the many that would be glad to do this for at least a half rate, or less, because many of them are sending out printed matter asking us to run it for them, for which they agree to give us plenty of tickets. If we could arrange to have a theatre party Thursday night, and then a hurrah time all day Friday, I believe it would bring a lot of our people up there. Your friend,

J. M. PAGE.

[The theatre party will be attended to, all right, but as the editor has just returned from New York City the arrangements could not be completed so as to be announced here.]

OUTLINE OF PROGRAM—MAY 24-25-26.

Wednesday, May 24, 1905, 10 a. m.—

Prayer.

Appointment of Committees.

President's Address.....John M. Rapp

Wednesday, 2 p. m.—

Relation of the Editor to the Politician.....
.....A. W. Charles, *Democrat,* Carmi

Auxiliary Associations .....
.....Miss Mary Davidson, *Republican,* Carthage

Home Print vs. Patents..H. F. Downing, *Enquirer,* Virginia

Advertising Rates.....W. L. Fay, *Journal,* Jacksonville

Thursday, May 25th, 10 a. m.—

BOSTON PRESS ASSOCIATION.

OFFICERS ELECTED FOR THE ENSUING YEAR:

President—W. L. Terhune, *Boot and Shoe Recorder.*
First Vice-President—H. G. Lord, *Textile World Record.*
Second Vice-President—Henry Lewis Johnson, *Printing Art.*
Third Vice-President—E. B. Pillsbury, *Grocers' Magazine.*
Executive Committee—F. F. Cutler, *Shoe and Leather Reporter.*
F. H. Palmer, *Education.*

Special Postal Committee—Chairman, Henry Lewis Johnson, *Printing Art.* Hon. Aaron C. Dowse, *New England Grocer.* Hon. Robert Luce *Press and Printer.* Sec'y Committee, Robert Mitchell Floyd, *Trade Press List.*

The address by Hon. Robert Luce on "The Editorial End of a Trade Newspaper" brought out a most hearty response from all present.

The general discussion following, on trade paper topics, was of a pronounced educational character, everyone taking away some new or beneficial idea.

Monday, April 10 was a cold day, says the Hartford Daily *Courant,* but the paper on "Vote Buying in Connecticut" warmed things up a bit at the spring meeting of the Connecticut Editorial Association, held at the Hotel Hartford, Hartford, Conn. The paper was read by J. A. Bolles of the New Milford *Gazette* at the morning session and brought out a rather sharp reply from George C. Woodruff of the Litchfield *Enquirer,* who didn't think things were as black as they were painted.

Mr. Bolles said that the vote buying at the present day was not confined to the small town, but the evil was greatest there on account of the inequality in representation in the Legislature, which made the expenditure of money more effectual in such localities than in the cities. As a rule, he declared, one in four of the country voters could be induced to sell his vote. This meant that if a very rich man desired to go to the United States Senate he could, by the use of money in the small places, defeat rivals having less of this world's goods. Votes in the country towns were eagerly sought and brought the highest prices.

Mr. Bolles referred to the statement of Rev. Dr. Newman Smyth that $150,000 was spent during the recent contest for the United States Senate and the speaker declared that another man a prominent politician, had put the amount at not less than $500,000. Mr. Bolles in closing gave his remedy for the present situation which was the giving up of the present plan of representation. Country editors had an opportunity and a call to duty in courageously fighting for the change which was sure to come.

Then Mr. Woodruff had his innings, in which he objected to giving the state such a black name. He knew something of the size of the vote for sale from having served on the democratic state central committee. Litchfield county was as bad in this respect as any section of the state, but he didn't think there was as much vote buying as in the Barnum days of twenty years ago. If the country newspapers went into the business of tackling this question they would simply gather in a collection of libel suits.

C. H. Scholey of the Shore Line *Times* of Guilford thought that politics should be kept out of the meetings of the association and H. B. Hale of the East Hartford *Gazette* agreed with him, but President A. S. Barnes of the Bristol *Press* thought that the papers should tell the truth regarding any public matter. He didn't believe they would lose a dollar by doing it, either.

Thomas S. Pratt of Rockville read a paper of interest on "Typesetting Machines, with Especial Reference to the Monotype."

F. H. Wall of the Hartford *Times* and F. E. Norton of the *Courant* were elected to membership. The members had dinner at the hotel after the adjournment of the morning session.

Mr. Scholey presented the report of the special committee on legislation, which had to do with a bill regulating liquor license advertising and the taxing of bill boards.

H. B. Hale of the East Hartford *Gazette* gave a brief talk at the afternoon session on "Newspapers in Jamaica." This talk was accompanied by the passing around of copies of several papers which he had secured on his visit to the island, papers which justified by their appearance his remark that after seeing them the members of the association would have more pride in their own publications. The Jamaica papers certainly were not very high types of the printer's art. Mr. Hale said that in Kingston there were two daily papers that went to press at 8 o'clock at night and were called morning papers. There were also three weeklies there, one having a circulation of 4,000, the largest in the island. This paper, the *Times,* was published Saturday morning and work on it was begun at an early hour the preceding Monday morning. The proprietor and the editor were Englishmen and the telegraph man was a Scotchman, but all of the reporters were colored. The compositors were also colored. The editor received the equivalent of $11.25 a week. Living expenses, in the main, however, were cheaper than in this country. Mr. Hale gave interesting figures relative to advertising rates and answered a number of questions regarding the newspaper business in Jamaica and other matters as to the life in the island.

George C. Woodruff of the Litchfield *Enquirer,* who is the Connecticut member of the executive committee of the National Editorial Association, spoke regarding the program of the coming national convention, which is to be held at Guthrie, Okla. The plan was for the delegates to meet on June 6 at the Terminal Hotel at St. Louis and leave for Guthrie, where they would arrive the next day. Two days, June 7 and 8, would be given to the meetings of the convention. On the next day visits would be made to points of interest in the territory and an invitation had been extended to visit on the following day the Miller ranch, where there was much of interest to be seen. As the day selected was Sunday, some of those present thought that another should be chosen, but it was explained that that was the best day for the people on the ranch to show its points and as they had selected this day the only thing in order was for those to accept it who desired to do so. The next step would be a trip to Texas and it was desired that all go there. After that the party

would separate. Some would go to the coast by way of Los Angeles and a portion of those would continue as far as Portland, Ore.

There was some talk regarding the program for the summer meeting, and it was finally left with the understanding that it would be held at Lake Compounce, where President Barnes of Bristol desired it held. If this plan is carried out Bristol will also receive the attention of those who attend, the president acting as escort in showing them the places of interest in the third-rail town. At the summer meeting it is planned to take up the question of a Hudson River trip, probably to be taken in September, between the summer and fall meetings of the association. This trip was proposed as a substitute for one or the other of these meetings, but the sentiment was against cutting down the number of meetings, especially the giving up of the October meeting which is always an important one. The delegates who are expected to go to the national convention are W. C. Sharpe of the Seymour *Record*. Mr. Hale and President Barnes, the last named being the alternate of Mr. Scholey, who cannot attend.

EMPLOYING PRINTERS' ASSOCIATION OF THE SOUTHWEST.

The following resolutions were passed unanimously by the Employing Printers of the following States and Territories: Missouri, Kansas, Colorado, Texas, Iowa, Arkansas, Oklahoma, Indian Territory, Louisiana, Tennessee, Mississippi and Arizona assembled in convention, Kansas City, April 10, 1905:

Resolved, That we are unalterably opposed to the inauguration of the eight-hour day in our respective offices, and that under no circumstances will we submit to it, and that we will oppose it even to the extent of opening all our offices, believing that an attempt to enforce it will work to the detriment, both of employer and employe and against public interests.

That all demands for the eight-hour day prior to January 1st next or thereafter shall be resisted according to the tenor of this resolution.

Resolved, That any member of this organization who is now conducting a closed shop and who may desire to open the same shall have the moral and financial assistance of this association to accomplish that end, it being understood, however, that nothing in this resolution shall interfere with the honorable discharge of obligations now in force.

Resolved, That the Executive Committee of this organization is instructed, with power, to act to devise ways and means at once for supplying the demands for machine operators and compositors.

Resolved, That we pledge our hearty coöperation to the United Typothetæ of America in combating the demands for the eight-hour day, and solicit their coöperation in the same work undertaken by our association.

Resolved, That a copy of these resolutions be transmitted to the proper officials of the United Typothetæ of America and to the International Typographical Union.

THE ARKANSAS ASSOCIATION.

The Arkansas Association held a winter meeting, strictly for business, Jan. 10th and 11th at Little Rock. Among other proceedings the following resolutions were unanimously adopted.

W. W. Turner offered the following resolution, which was unanimously adopted:

"WHEREAS, Our brother, W. W. Folsom, editor and proprietor of the Hope *Gazette,* is one of the oldest and most highly respected members of this association, having filled the position of president of the same with credit to himself and satisfaction to the organization; and

"WHEREAS, The National Editorial Association, at its last meeting, held in St. Louis in May last, elected Bro. Folsom to the position of first vice-president of that body, thus placing him in line for president of the national association; therefore, be it

Resolved, By the Arkansas Press Association, in convention assembled, That our thanks are due and hereby tendered to the National Editorial Association for the honor conferred upon our Bro. Folsom, upon our association and our state, by his election as first vice-president of that body; and be it further

Resolved, That we regard Bro. Folsom as eminently fit and worthy to be president of the national association, and so believing, we present his name to that body for election at the next annual meeting, and hereby pledge him our earnest and undivided support."

THE ANNUAL N. E. A. POEM.

From the *Pineapple,* Pabor Lake, Avon Park, Fla.

The editor of the *Pineapple* is expected to prepare and read, as he has done for the last dozen years or so, the Annual Poem for the National Editorial Association, of which he is a life member and has the honor of being poet-laureate. He has chosen for the title of the one to be read this year, "Lisping Leaves, Anniversary Rhymes" in commemoration of the twentieth year of the association. It is a three part production; the first a nature study, the second its application to the "leaves" issued by the press, the third in honor of the founder of the Association, Hon. B. B. Herbert of the NATIONAL PRINTER-JOURNALIST. He has also written a song, "The N. E. A. Banner," to be sung to the tune of the "Star Spangled Banner," on the excursion train enroute to the Lewis & Clark Exposition at Portland.

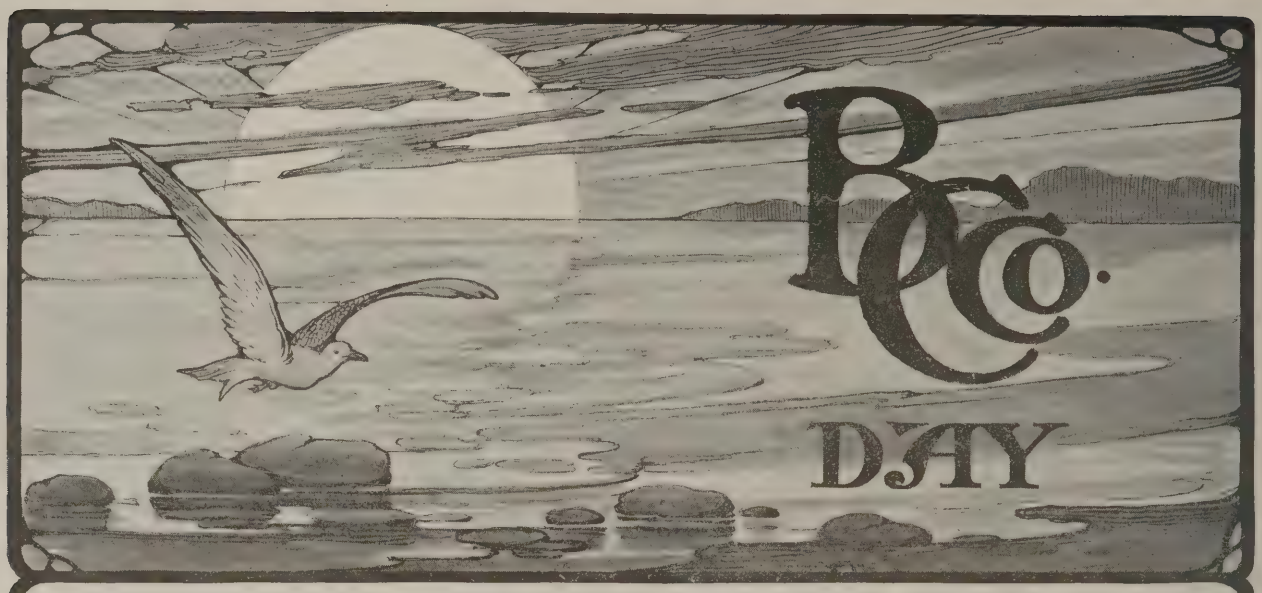
CASH PRIZES OFFERED FOR ESSAYS.

ONE OF $50.00, TWO OF $25.00, FIVE OF $10.00, A NUMBER OF $5.00

The most serious troubles experienced in pressrooms are caused by static electricity. These troubles exist at all seasons, but are most annoying in cold weather. Unless the troubles are acute, the average pressman is apt to dis-believe that his enemy—static electricity—is at fault. Static electricity causes difficulties in register, in delivery, in jogging, and in offset. In rapid rotary presses it causes frequent breaks in the web, deflects the reel of paper, blocks the delivery at the folders and in the receiving boxes. These troubles are less apparent at slower speeds, and pressmen frequently lessen the output to overcome them. Most of the slip-sheeting done is made necessary by static electricity, drawing the sheets together tightly. Slip sheeting is often avoided by carrying less ink than would be necessary if static electricity did not affect the paper, thus deteriorating the quality of the work.

The United Printing Machine Company, contracting agent for the Chapman Electric Neutralizer, offers a prize of $50.00 for the best essay on the "Losses Entailed on the Printer Through Static Electricity," $25.00 each for the second and third best, $10.00 each for the five next best, and $5.00 for each essay that is published. The successful essays must recite specific instances of losses, stating the nature of the troubles, with conditions, makes of presses, and style of work, and careful estimates of the monetary equivalents of losses—in other terms, what is wanted, is a carefully detailed analysis of the direct and indirect losses sustained.

The winners of the prizes will be announced in the July trade papers. All essays must be received before June 1, 1905, and must be addressed to W. H. Chapman, care of United Printing Machinery Co., 132 Nassau St., New York City.



THE night operation of an engraving plant is expensive. It costs more than running the same plant with the same number of men during the day. These points were carefully considered before our night service was inaugurated *but we decided it was the thing to do.* The Barnes-Crosby night service is a success. The time of production is materially shortened. The advantages are fully appreciated, especially by the printing fraternity, whose orders must usually be "rushed." Presses are not "tied up" because engravings do not arrive when promised. If your orders are placed with Barnes-Crosby Company they will be taken care of "right."

OUT-OF-TOWN-BUSINESS

Our out-of-town trade is of such importance that it is handled in an entirely separate department from local business, a feature of great value to our customers. Each order receives its full share of careful attention all through the various processes. Information, suggestions, prices may be had for the asking.

If you use engraving, send for our "B.-C. Co. Budget." If you use stock cuts, send twenty-five cents to our Chicago house for a catalog. Please write on your letter-head.

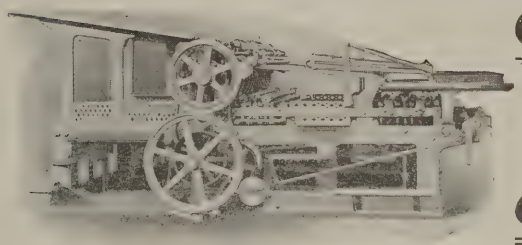
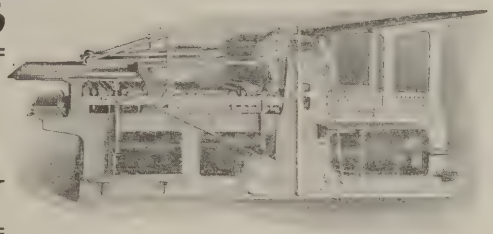
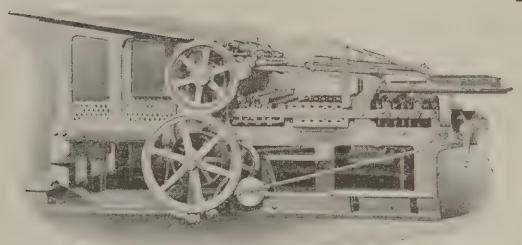
TREND OF THE TIMES

MR. FRANK A. MUNSEY ORDERS 10 CENTURY PRESSES

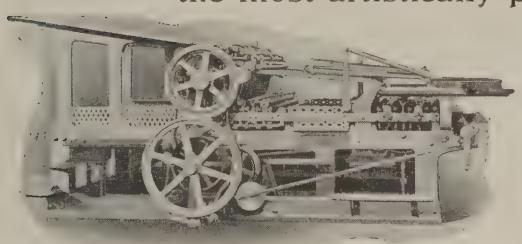






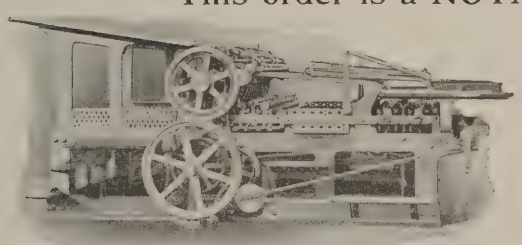
To replace 10 other modern presses but 3 years old.

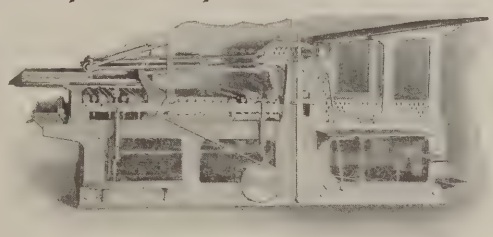
Mr. Munsey is aiming to so improve the typographical appearance of his magazine as to make it the most artistically printed periodical in the United States.



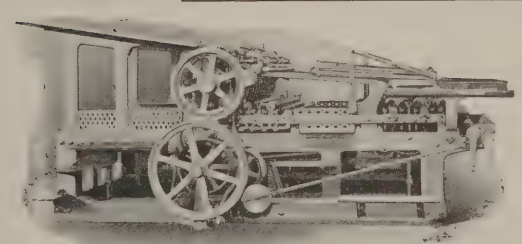
To that end he has selected the CENTURY PRESS as the machine best adapted to the production of superfine black and three color work at high speed.

This order is a NOTABLE one because in open competition with all other two revolution presses QUALITY and EFFICIENCY took precedence over price.





Mr. Munsey asked not How Much? BUT HOW EFFICIENT AND BOUGHT CENTURYS.



THE CAMPBELL COMPANY

Wants and For Sale.

Advertisements will be inserted in this column at the rate of 25 cents a line, ten words to the line. Copy must reach this office no later than the 20th of the month preceding date of publication. Cash must accompany order.

FOR SALE—PRINTING MATERIAL

FOR SALE—8 and 11 point Modern Roman Newspaper Type, new, at 25 cents per lb. EMPIRE TYPE FOUNDRY, Deleavn, N. Y.

FOR SALE—100 pounds 6 point, 200 pounds 8 point, O. S. Quantity of job type. Ask for proofs. JAMES VICK'S SONS, Rochester, N. Y.

MISCELLANEOUS

FOR SALE—Whole or part interest in trade journal, nine years old, and literary monthly, both in Chicago. Owner, preferring literary work, might remain as editor. Good chance for printer, with plant, advertising solicitor or business manager. $1,000 to $5,000 needed. Address, Magazine, care National Printer-Journalist.

LIVE STOCK AND POULTRY CUTS—Catalogues free if you write upon your business stationery. Chas. L. Stiles, Columbus, Ohio.

A COLD SIMPLEX STEREOTYPING OUTFIT, $17.00 and up, produces the finest book and job plates, and your type is not in danger of being ruined by heat. Simpler, better, quicker, safer, easier on the type and costs no more than papier-mache. Also two engraving methods costing only $5.00, with materials, by which engraved plates are cast in stereo metal from drawings, made on cardboard. "Ready-to-use" cold matrix sheets, $1.00 Come and see me if you can; if not, send postage for literature and samples. HENRY KAHRS, 240 East Thirty-third Street, New York.

FOR SALE—$700, 29 x 41, four-roller Campbell; front fly delivery. In good shape. Running every day. Address, "K.B.," National Printer-Jour.

THE VAN BIBBER ROLLER CO., Sixth and Vine Sts., Cincinnati, will give you *the best rollers* that can be made for any season or press. Our facilities are the best, and we use the latest Gatling Gun and compressed air apparatus. It pays you to have good rollers, and they count more in presswork than anything else. In writing or shipping, "Cincinnati" is sufficient. Everybody knows us.

ANYBODY CAN MAKE CUTS with my simple transferring and etching process. Nice cuts, from prints, drawings or photos, are easily and quickly made by the unskilled on common sheet zinc. Price of process, $1. All material costs, at any drug store, about 75 cents. Circulars and specimens for stamp. THOS. DAY, Box P, Windfall, Ind. My Simplex Mailer only $5, send for circular.

FOR SALE—Republican Weekly in one of the best county seat towns of 7,000 in Ohio. County and city strongly republican. Good legal patronage. Gross business in 1904 over $6,000. Splendid field. Circulation over 2,000, the largest of any paper in the county. Excellent opportunity. Don't write unless you have $2,000 cash to invest. Address "C. N.," care National Printer-Journalist, Chicago, Ill.

JOB PRINTERS—Investigate my trade-getting plan. Fully explained, $1.00. Circular free. F. H. COOK, 930 W. 36th, Los Angeles, Cal.

A Letter to Master Printer

Niles, Ohio, May 15th, 1905

Master Printer,

New York City,

Dear Sir:-

One of our salesmen writes us that you are looking for a press "absolutely simple in construction, one which will do all kinds of printing, and does not require plates."

There is such a press, and, although we do not make it, we take pleasure in directing your attention to it. It may be obtained of any supply house. It is commonly known as the Washington hand press. It seems to us to fill your requirements to a nicety. Your requirements are not difficult to supply.

Every advance in output beyond the Washington hand press has involved some loss of simplicity and some limitations in the kind of work that may be done on one machine. Just in proportion as printers are willing to put up with these objections, they have attained speed, economy and eveness of work, until we are now able to offer them machines which give a guaranteed output of 5,000 sheets per hour in one or two colors, finely done. But happy must be the man who; like you, cares not for these things, and who must, therefore be financially independent of his business, and able to conduct it at a loss.

Sincerely yours,

THE HARRIS AUTOMATIC PRESS CO.

NOTE (Not for Master Printer)—Our Chicago Office has been removed to No. 317 Dearborn Street, ground floor, where the craft are invited to gather and see the wheels go round.

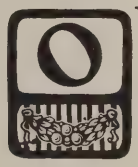
SECOND CHAPTER ON

WOOD TYPE

Cut on End-grain Wisconsin ROCK MAPLE



UR WOOD TYPE is cut on the very best endwood WISCONSIN ROCK MAPLE—the HARDEST and TOUGHEST AMERICAN WOOD THAT GROWS. Don't be deceived by talk of "pasture-grown stock" for Wood Type: that's a term which we originated in connection with our Engraving Wood years ago. A clear yellow is also not essential in Wood Type. Pine is yellow and free from defects, but it isn't hard, and neither is Eastern pasture-grown Maple hard. There is no Maple so hard and tough as Rock Maple grown in Wisconsin. It does not make first-class Engraving Wood, because it is too tough and too hard. Twenty-five years experience enables us to select the best material for each particular article we make. Our Engraving Woods are made now, and always have been made, of Eastern pasture-grown stock because a fine and uniform soft texture is desirable in engraving blocks and hardness and toughness are not desirable. But Wood Type requires both toughness and hardness and these qualities unite in the highest degree in Wisconsin Maple.

We are supplying the world with the finest Wood Type ever made and we guarantee the height to be within .001 of an inch, which we believe no other manufacturer can do. We have just perfected a device which insures this accuracy, and have applied for a patent on this machine. Try any Wood Type and lay it on a flat surface and see if the letters vary the thickness of a thin cardboard. If they do, look for the maker's stamp on the capital A's and see if it is our make; you will find that it is not. Test our Wood Type in this way and see if it is not absolutely perfect. We invite the comparison of our Wood Type with that made by other manufacturers. Our Wood Type and Modern Printing Office Furniture are for sale by every first-class dealer in the world. Send for complete catalogs.

A valuable Printer's Line Guage free to every printer. Ask for it. It is the handiest little tool ever found around a print shop.

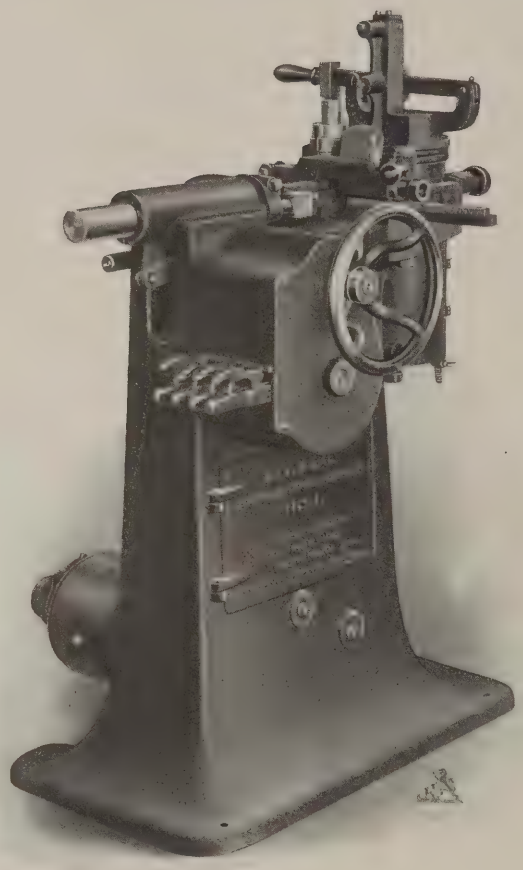
Sixteenth Street and Ashland Avenue, Chicago

AUTOMATIC TYPE MACHINE



THE time is not far distant when this machine will be universally accepted as a utility equal in value in the composing room with the Linotype and Monotype, completing the emancipation of the printer from the typefounder. The printer who buys type in large quantities is a rarity. The printer who will buy job type, unless he operates on a small scale, will also be a rarity.

AS A CONVENIENCE—¶ To command without delay unlimited supplies of type at a nominal cost. ¶ To reduce cost of job and body type to the same level, and be in a position to cater to the demand of the customer for an unusual type face without expending all the profit in buying type. ¶ To **never** be short of "sorts." ¶ To make "picking" a lost art. ¶ To make every pound of type in a case do its work. (The effectiveness of every font of type you buy of a type founder is 25 per cent. less than its weight.) ¶ To be able to turn every pound of disused, obsolete, or worn out type in your office into live usable faces. ¶ To be able to cast figures, other characters, and spaces and quads to irregular widths to save justification in tabular work. ¶ To pay for just what you use, and not for a lot of characters every font contains that are rarely used. ¶ To save distribution on many special jobs on which unusual quantities of type have been used, which may not be required again within a reasonable time. (Distribution costs easily 20 per cent. of the cost of composition.) ¶ To be able to use type on long runs, saving the cost of electrotyping. ¶ To be able to afford to keep jobs standing without "picking" from them or creating a shortage in your cases, again saving electrotyping and resetting.

These advantages make this machine a profitable investment, even if every pound of type it casts costs the user as much as he now pays the type founder.

AS A DIRECT ECONOMY.—Type of all bodies, from 6 to 36 point inclusive, cast on this machine averages the same cost per pound, **and that cost is from 15 cents to 20 cents per pound,** according to conditions, the major part being for metal, a constant asset. In large fonts the type founders' price for 6 point job type is 85 cents per pound, and for 36 point is 44 cents per pound. This is particularly interesting to the publisher who is about to buy a new dresss or a printer starting a new business, as well as to the printer who buys only $400 worth of type in a year. **Here is a great direct economy, but always the indirect economies are greater.**

THE MACHINE.—The machine makes a complete type at one movement, of sizes from 6 to 36 point inclusive, equal in quality and accuracy in height, body, set, and line to the best product of the type foundries. Any unskilled, intelligent person can make perfect type on it after a few days' instruction. For each change of character only one simple adjustment is required. The space occupied is 30 x 45 inches; the weight, 800 pounds; the power, ¼ horse. The product is from 50 to 60 pounds per nine-hour day, including 80 matrix changes.

MATRICES.—Matrices for 350 sizes and styles of popular and standard type faces are ready, and are added to daily. These are rented by the day, or sold at a price less than one-tenth of the cost of a set of matrices to the type founder. Matrices are kept in stock in New York, and will be kept in stock in Chicago. Special type faces will be cut for users of the machine who furnish the designs, for their exclusive use.

A PERFECTED MACHINE.—These machines have been in use for three years. Not an advertisement was printed until every difficulty had been overcome. We refer to the users of thirty machines sold during this test period. They are satisfied. The display type used by the *Herald*, *Journal*, *World*, *Eagle*, *Evening Post*, *Morning Telegraph*, *Iron Age*, (2) *Dry Goods Economist*, *American Machinist*, *Greenwich Press*, *I. H. Blanchard Co.*, *D. H. Ahrend Co.*, *Philip Hano & Co.*, all of New York; *Williams & Wilkins Company*, *W. J. C. Dulany Co.*, *Herald*, *American*, *Baltimore Automatic Addressing Co.*, all of Baltimore; *Times-Dispatch*, Richmond, Va.; *Mirror*, Altoona, Pa.; *Inquirer*, and *Geo. F. Lasher*, Philadelphia; *Chicago American*, Chicago; *Examiner*, San Francisco; *Examiner*, Los Angeles; *American*, Boston, is almost entirely the product of these machines.

PRICES Two prices have been fixed for this machine: One for use without restriction; the other—a moderate price—for use of the machine and its product in the user's establishment only. In the first instance, the price is based on continuous use—a typefounding proposition. In the second, the price enables the printer to secure the economies and conveniences of the machine by operating it as occasion demands.

OTHER ECONOMIZERS: Dux Feeding Machines, Maley Iron Block, Chapman Electric Neutralizer, American Roller-Washing Machine, Victor Steel Die Embossing Press, Combination Punch and Eyelet Fasteners, Spark's Round Hole, Slot Hole and Crimping Machines, and everything for Stereotyping, Engraving and Electrotyping.

South Africa: John Dickinson & Co., Cape Town. Others elsewhere.

The Monotype

THE samples of Monotype work on the two following pages, and the letter from the Geo. W. Gibbons & Sons Co., of Philadelphia, together emphasize very strongly two advantages of the Monotype which are unshared by any other mechanical type-setter.

In the first place it is very clearly demonstrated that the Monotype handles with ease intricate tabular work, such as can be profitably produced by no other machine on the market, and handles it better than can the most skilful of hand compositors.

In the next place it is just as clearly demonstrated that the quality of all Monotype matter is of the very highest, not nearly as good as, but better than, hand composition, and incomparably superior to the work of any other machine.

It is no wonder, then, that the Geo. W. Gibbons & Sons Co. and other Monotype users find it easy to retain their high-class magazine-work contracts.

Dear Sirs:-

The two Monotype machines placed in our composing room in July, 1903, are setting up the matter for eleven monthly and two quarterly magazines, besides considerable work for the trade.

We have sent you under separate mail some samples of intricate tabular matter that could not be profitably produced by any other machine nor done so well by hand. Among the samples is a page from the Wanamaker Book Catalogue; the print is beyond criticism, though the type had withstood 75,000 impressions.

The saving of time in make-ready is, in our opinion, one of the strongest points in favor of the Monotype, and as we are enabled to cast new type for our cases, a very expensive feature of our business is eliminated.

The fact that we use new type in every issue of our various journals makes them look sharp and clean, an appearance not noticeable in similar magazines. This, together with the ease and speed in which corrections can be made, is an unbeatable factor in retaining this work.

Yours very truly,

G.W.G.-F.P.

The No. 43 Optimus, a Small Press for Big Printing. Three Rollers Good as Four

Our new No. 43 Optimus is attracting much attention. At the Exposition of the International Printing and Stationers' and Allied Trades, recently closed in London, England, it was granted the highest award, a silver medal and diploma. No. gold medals were given.

No other printing press of its size approaches No. 43 in versatility. Its new patented inking arrangement is a revelation, and has brought about a revolution in presses of this size. We get better distribution and larger ink roller surface, in proportion to the size of the form, with three form rollers, than can be found on the large two-revolutions of any make. Form rollers and table rollers are interchangeable. The cost of composition is reduced 25 per cent. Speed is increased, and you have a small press that can do big printing, with quantity and quality included. (Cut shows distribution.)

In addition to its own peculiar devices, No. 43 has all the advantages of our other well known Optimus presses, including our patent ball and socket bed motion, unequaled printed-side-up front delivery, reversing mechanism, safety gripper mechanism, patent slider mechanism, impression trip, cutter, jogger, and counter.

It is built in one size only, and prints a 25x38 sheet. Runs easily and quietly at 2500.

THE GLOBE ENGRAVING & ELECTROTYPE COMPANY'S
Scale of Prices for Half-Tones, Zinc Etchings, and Electrotypes.
Place the block or plate on the lower left-hand corner of the Scale, follow the curved line above the upper right-hand corner of the block to the columns of figures. On long narrow plates, not indicated on the Scale, the price is determined by the curved line directly above the extreme length of the cut. In estimating the cost of half-tones, add ¼ inch to the length and width for bevel.
HALF-TONE—From Photographs or Wash Drawings furnished. (without alteration or extra work on copy or plate)
square finish, mounted on wood, charged as per first and largest figures on Scale; larger than 8x10, 15c. per sq. in.
Half-Tones, finer than 150 line screen, 25% extra.
Duplicate Half-Tones from original negatives, 25% less.
Retouching, altering or improving copies, or grouping photographs, 75c. per hour.
Vignetting, hand tooling or wood-cut finish, 75c. per hour.
Extra negatives for half-tone groups, ½ Scale price.
Anchoring Half-Tones on blocks, 10c. per anchor extra.
Extra proofs and proofs in colors, 60c. per hour.
ZINC ETCHING—From Black and White Line Drawings or Prints furnished.
(without alteration to copy or plate) mounted on wood, charged as per second figures on Scale; larger than Scale, 5c. per sq. in.
When a number of plates, under minimum size, are reproduced at one operation, the Scale price rules for the plate as etched, with an extra charge of 10c. each for blocking; minimum charge, 25c.
Reproductions from lithograph copy, script and penmanship, and etchings of color plates to register, 50% extra.
Reproductions of book, catalogue or music pages, over 50 plates, 10% less; over 100 plates, 15% less; over 200 plates, 20% less than Scale price.
Metal Base Cored, for either zinc or half-tone, 4c. per square in. extra; minimum, 25c.
Unmounted Plates, ½c. per sq. in. less than Scale.
ELECTROTYPING—From Cuts or Forms furnished.
mounted on wood, charged as per third and smallest figures on Scale; larger than Scale, 2c. per sq. in
Electrotypes from Half-Tones, 25% extra. Nickel-types, 50% extra.
Metal Base Cored, double Scale price.
Solid Metal Base, three times Scale price.
Mortising on Wood, outside, 10c.; inside, 15c.; on Metal, outside, 15c.; inside, 25c.
This Scale subject to revision without notice.

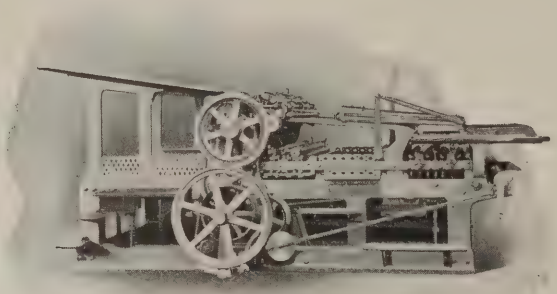
The CENTURY PRESS



IT'S ADVANTAGES

HIGHER SPEED than is possible with any other press without loss of efficiency.

THE ONLY PRESS promising PERFECT REGISTER of sheet to cylinder and of cylinder to bed.

SUPER DIGESTION OF INK before it reaches the ink table.

STRENGTH AND DELICACY OF IMPRESSION combined with time saving devices and an assured permanence in Makeready.

REASONS FOR THEM

The Locking Pin Bed Movement. Perfect squeeze between Bed and Cylinder.

Immovable continuous Register Racks and Gearing. Radially closing grippers with Instantaneous Front Guide Action.

Rotary Distribution with Fountain Trip Attachment.

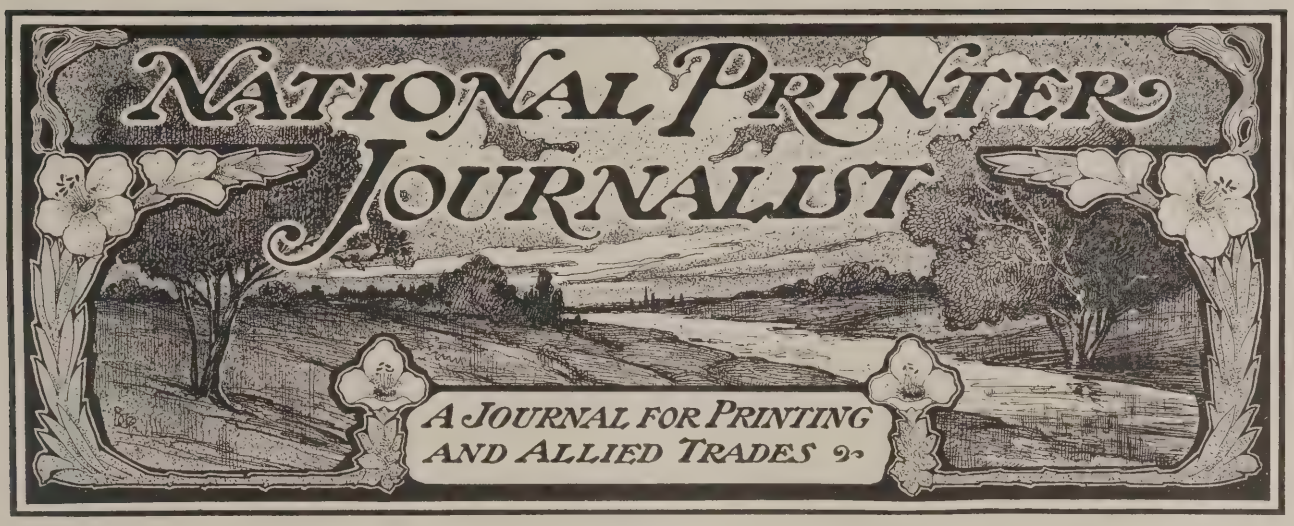
Eccentric Lift Impression Mechanism, with Automatic Compensator.

RESULTS: High Quality at High Speed.

THE CAMPBELL COMPANY

HENRY A. WISE WOOD, President

334 Dearborn St., CHICAGO 1 Madison Ave., NEW YORK



Volume Twenty-two Chicago, June, 1905 Number Six

AN AMERICAN NEWSPAPER'S DIAMOND ANNIVERSARY.

THE ALBANY, N. Y., EVENING JOURNAL, ESTABLISHED BY THURLOW WEED, CELEBRATES THE ROUNDING OUT OF ITS SEVENTY-FIFTH YEAR.

COMPARATIVELY few newspapers in the United States will be able, for many years in the future, to imitate the Albany *Evening Journal* in celebrating the Diamond Anniversary of its founding; still the lessons of this occasion are none the less interesting and important.

Seventy-five years is a long time in the history of a newspaper, although the lifetime of one gentleman, at one time its editor—who was present and took a prominent part and told, in a most fascinating and instructive manner, the paper's history—spanned the whole period.

When we go back to 1830, the year of the founding of the *Journal*, and consider the conditions then as contrasted with those of today, we can scarcely comprehend the wonders that have been worked out in the three quarters of a century. Then there were no railroads worthy of the mention, no telegraphs or telephones, no news bureaus or associations, no cylinder or power printing presses, and there are single newspapers today that have many times more readers than was the combined circulation of all the American newspapers then in existence.

There is scarcely any ground of comparison between the news service and the methods of production and publication existing then and now. Six of the largest cities of the United States now contain a population as great as was then the population of the whole Nation. Chicago was then a very small village. St. Louis had only about six thousand inhabitants. Cincinnati, the then proud Queen City of the West, had less than twenty-five thousand people, and Cleveland only about one thousand. The cities now occupied by the great cities of St. Paul, Minneapolis, Kansas City, San Francisco, and a hundred other great municipalities, now the centers of industry, commerce and learning, the pride and glory of rich commonwealths, were unknown spots in an unbroken wilderness, or else known only as the camping places of a few hardy explorers. General Jackson was the President over this then pioneer Nation, now the greatest in the world, then with twelve million inhabitants, mostly settled east of the Alleghanies, now extending from ocean to ocean and to the isles of the seas. Yet it was at the beginning of the great political upheaval that filled the next thirty-five years with mighty events and made the present conditions possible, and in these events the *Journal* took a leading and most prominent part and exerted a powerful influence. Thurlow Weed, the founder of the paper, was a most discreet and able newspaper man and equally discreet, able and powerful as a practical politician.

The paper is now owned by his grandson, William Barnes, Jr., and the occasion showed that he is a worthy successor to the founder, in the high esteem in which he is held by all connected with the publication.

One of the pleasing incidents was the presenting to him of a handsome loving cup, an illustration of which is given herewith. On its face is a finely-engraved portrait of President Barnes, in a miniature first page of the *Evening Journal* surrounded with the inscription: "Presented to William Barnes, Jr., by the attaches of the *Journal* Company, on the occasion of the seventy-fifth anniversary of the Albany *Evening Journal*, March 22, 1905." On the reverse side are engraved these words: "To our President: May the days of yourself and family be ever filled with pleasure and prosperity."

The cup is of pure Colonial pattern, as shown, and was designed, manufactured and engraved by the International Silver Company, Meriden, Connecticut. There was much, connected with the celebration, banquet and speeches, of broad, general interest and worthy of especial consideration by newspaper makers.

The *Journal* and its founder helped to make and record history in a successful manner and the characteristics of the paper's founder and his methods, as told in incidents related on this occasion form subjects for useful study, and practical examples worthy to be followed in judicious newspaper management.

The menu of the banquet was in the style of a copy of the *Journal* and on the cover were portraits of Thurlow Weed and his grandson, the present owner. The historic and instructive facts were brought out in the addresses made. The first speaker was Mr. Frederick W. Seward, son of the late William H. Seward, Secretary of State under Abraham Lincoln, and one who had been Lincoln's leading rival for the nomination for President at the ever memorable Chicago convention in 1860. President Barnes said in his introduction of Mr. Seward:

"Mr. Seward became the editor of the *Journal* shortly before the Chicago convention of 1860, at which it was earnestly hoped and expected by the people of Albany and by the *Journal* that his father would be nominated for the Presidency. Mr. Seward sat quietly in his office waiting the news from Chicago. The faithful wire reported, after the ballot was taken, that Abraham Lincoln had been nominated for President.

"Not knowing exactly what to say, in his disappointment of the moment, but in that steadfast loyalty to the party which the *Journal* has constantly followed (Applause), he wrote out with a trembling hand: 'For President, Abraham Lincoln' stuck the slip of paper into the little wooden box that used to run up to the composing room, and pulled the string. Old Jacob Winne, the foreman of the composing room, took it out, looked at it, put on his specs, looked at it again, and then blurted out down the tube: 'Mr. Seward, what's this d——— name you've sent up here for President?"

"Gentlemen, I introduce to you Mr. Seward."

MR. SEWARD'S ADDRESS.

Mr. Seward said in part:

"I think I may claim to be a contemporary of the Evening *Journal*. We were both born in the same year, and so are both 75 years old. Newspapers often speak of their 'contemporaries,'—but it rarely happens that two contemporaries remain, as we have, for three-quarters of a century in constant accord.

"Among the earliest recollections of my boyhood is that of Thurlow Weed. He was a frequent visitor at Bement's Hotel on State street, where my father had rooms during the Legislative session, and I often saw their heads together as they sat before the fire in the hotel parlor, conferring over topics that were entirely beyond my comprehension. He was then a tall, dark-haired young man, as vigorous and active as his grandson is now. Young as he and the *Journal* both were he was already an acknowledged power in the State. The word 'boss' had not then been applied to political leaders, but he was already called 'the dictator' and 'the old man.'

"He has told me since that his salary at that time was about $750 a year, and that he supported his family on it. I do not believe there is a 'boss' in the country who can do that now.

"The wildest dreams of my ambition did not then extend so far as to imagine that I should ever get to be an editor and proprietor in the Evening *Journal*. Yet within the next twenty years that also came to pass.

"My first instructions in journalism from Mr. Weed were very simple. He said: 'I will give you two rules, to begin with. First, never write anything without some definite point and purpose. Second, when you have written it, take your pen and go over it, to see how many words and sentences you can strike out and how much you will thereby improve the article.'

"Another thing I speedily learned. In going through college, and studying law, I had been under the impression that, besides some practical ideas, I had also accumulated a good deal of useless information on a variety of subjects. But I soon found that, on a daily paper, every scrap of knowledge, every particle of information on any topic, is sure to be needed, and some day or other to come into play.

"Several other journals originated in the Journal office—among them Horace Greeley's *Jeffersonian* and the *Log Cabin*, which was the predecessor of the *Tribune*. One conference that I was present at is still bearing fruit. It was as to the wisdom or feasibility of starting another morning paper in New York. The field seemed to be already full. Nobody could compete with the *Tribune* in advocating reform and progress. Nobody could rival the *Herald* in gathering news—good, bad and indifferent—from all over the world. Henry J. Raymond insisted that there was a middle ground between the two, and he intended to occupy it. The tall *Times* building at Long Acre Square is a standing monument to his sagacity and success.

"It is forty-four years now since I left the Evening *Journal* to enter upon other duties.

"Our country has now come to be considered the especial home of the press. It has here its highest freedom of speech, its broadest field of action, its widest circle of readers, and its greatest power of reflecting and moulding public opinion. If these United States had never done anything else for the world, they have conferred a priceless boon upon humanity in establishing and maintaining for a century as a fundamental principle of government, the freedom of the press."

Loving Cup Presented to Wm. Barnes, Jr.

SENATOR DEPEW'S TALK.

Senator Depew spoke on "Thurlow Weed as I Knew Him," and gave numerous personal reminiscences of the great editor and leader. Among other things, he said:

"In the winter of 1862 I was a member of the Legislature, with Henry G. Raymond as Speaker. There began early in the session between the Speaker and myself a close friendship. Mr. Weed and Mr. Raymond were very intimate, and through Mr. Raymond I saw a great deal of our leader that winter. His directing mind was behind every measure of importance and the inspiration of every caucus, and yet he never appeared openly as directing, commanding or advising.

"He was not the masterful leader who will brook no opposition and is offended by advice. He invited the leaders of both houses to his residence, and was a most courteous listener to their program and plans. The talking was mostly done by others; but every now and then a suggestion so wise would drop from Mr. Weed that it was accepted as a solution. He did not display the slightest pride in having his view adopted, but won by rather deprecating its acceptance, except after the fullest discussion and mature deliberation.

In fact, he would often advise coming again the next day before it was done.

"The pride of the leaders of the Senate and the Assembly was never injured. On the contrary, it was strengthened. The statesman at the capital in advocating and carrying out the program which gave him fame in his district and possibly in the State, with the promise of future promotion, never gave the slightest credit to Mr. Weed, and in many instances his mind had been so deftly moved that he had not the slightest doubt of the divine inspiration in himself."

THE ADVERTISING END.

By A. Q. Miller, Belleville, Kansas, *Telescope.**

REVENUE of a newspaper office is generally from three sources: Advertising, job printing and subscriptions. In the average well regulated newspaper office the receipts from the advertising end are greater than those from either of the other departments, and in many cases double.

The early newspapers carried no advertising whatever. The first advertisement is said to have appeared in a German newspaper in the 16th century. When advertising was first introduced in New York, before advertising agencies were known, and the power of printer's ink was an uncertain quantity, advertisements appeared in New York papers for a shilling a week, irrespective of length. An advertisement in those days was an advertisement, whether long or short. No legal rate was established then and publishers did not have to go before the board of county commissioners and make a bid to do the county work at a fraction of the legal rate in order to get it away from a socalled "unscrupulous competitor." In late years advertising has been reduced to a science—it has developed until today it is recognized as the motive power that moves the wheels of business of the civilized world. Every modern business firm today figures on its advertising appropriation as an investment, the same as clerk hire, rent and insurance. It has grown to be a necessity and has come to stay. The billion dollars a year that is spent annually for advertising in the United States alone attests this fact, the two million square feet of bill board surface covered in New York city emphasizes the proposition, and the spending of $4,000 for a single page advertisement in an American magazine demonstrates beyond question the permanency and stability of the advertising idea. To the skeptical it is only necessary to refer them to John Wanamaker who spends a thousand dollars a day in the Philadelphia newspapers, or W. L. Douglass, whose newspaper advertising, and that alone, elected him governor of a state in the face of an opposition majority of 80,000. The fact that some of the most conservative and successful business institutions of the country, buy thousands of pages of magazine space in the leading publications at a rate of from $2,000 to $4,000 a page, should have a tendency to knock the wind out of the little two-by-four fellow who settles back in his chair with his feet on the stove, waiting for business, and says: "Oh, I don't have to advertise—everybody knows me."

The advertising of any paper can be materially increased by a systematic campaign in its field. It is largely a matter of education and I might say enthusiasm. Like measles, it is contagious. Every publisher here has seen veritable newspaper graveyards converted into profitable advertising fields —profitable alike to both publisher and advertiser. I have in mind now, in an adjoining county, a town, which a few years ago, from a newspaper standpoint, was a dead one. Today the publisher of either paper can go out almost any week in the year and get the material for a twelve to sixteen page newspaper. It is needless to say these publishers are enthusiasts; they are imbued with their subject; they believe in it. No solicitor can sell to the best advantage goods about which he is skeptical. It is difficult to make a customer believe in a proposition that you do not believe in yourself. This simply means that an advertising solicitor should be more than on speaking terms with his calling; he should know more about the advertising question than his customer; it means that he should be able to advise and inform him in the art; to present the strong selling points of his customer's wares, write his advertising copy, and if need be map out his advertising campaign. Get the confidence of an advertiser—and keep it. Treat him fairly. Honesty is the best policy—I have tried both and know. Be interested in his business, in the success of his advertising. Inquire about results. Point out wherein advertising did the work. Handle his copy carefully, see that the foreman gives the position contracted for and that the advertising is well displayed. The typographical impression the advertisement makes on the advertiser is one of the strong points in holding him. Use the news columns of your paper to point out successful sales of customers made possible by the use of printer's ink. Don't overlook the fact that the interests of publisher and advertiser are inseparably linked—the history of one is the index of the other.

In the main, there is no royal road to success in the securing of advertising. Like anything else, it represents lots of hard work. With many publishers it is not so much a question of idealism as it is a race with the wolf. The conditions of the field must be accepted and met. Methods that will succeed in one field will not necessarily win in another. Find out the strong points of your publication and talk them to advertisers. It is a mighty poor newspaper that does not excel in something. If you have not the largest quantity of circulation in the county possibly you have a better quality of subscribers whose purchasing power is greater. Perhaps your paper has been established longer than your competitor's, or circulates more among the very class of people the advertiser desires to reach. Furthermore, you have your audience and your competitor has his. It is evident that the advertiser cannot talk to your audience through the other paper. Convince him that your readers are the very ones he wants to reach. As an illustration, call his attention to the fact that if he were going to advertise Bibles he would not do it through the columns of the *Police Gazette,* neither would he select the *Christian Herald* as a proper medium through which to advertise sporting goods. Point out that the grocer who sells 20 pounds of granulated sugar for a dollar appeals to a greater per cent of readers than a jeweler who is advertising diamonds. In a word, use all legitimate means to prove that your publication is the particular one that he is looking for and you will land the contract.

When a publisher sells advertising space he sells a certain definite influence upon a certain number of people. The greater number of people reached, and the greater their purchasing power, the more valuable the advertising space, which takes us to the question of rates. This is something that few publishers agree on. The magazines of large circulation get from four to five cents per inch per thousand circulation. The weekly newspaper is conceded to be more valuable than the daily because the life of the publication is longer. The actual cost of advertising in a weekly newspaper of ten to fifteen hundred circulation is 4 to 5 cents per inch, and a conservative estimate as to a proper rate to charge is 10 cents per inch for the first thousand circulation and 5 cents per inch for each additional thousand. If this rate does not fit the individual case of each publisher present an appeal may be taken.

PRINTING AND LAWS IN BABYLONIA, 2250 B. C.

EARLY METHODS OF PRINTING AND PUBLICATION

By A. L. Hennessey, 1067 Argyle St., Chicago.

A LATE volume issued by the University of Chicago Press, detailing results of recent explorations in Babylonia, throws interesting light on the literature and methods of publication of a civilization considerably more than four thousand years old.

Hamurabi, 2250 B. C., was a conspicuous Assyrian ruler who appears to have sought not only conquest but the internal improvement of his kingdom. He is identified with Amraphel, king of Shinar, who, in the time of Abraham, joined forces with Chedorlaomer and two other kings and defeated an alliance of five kings in the region of the Dead Sea, among their captives being Abraham's relative, Lot.

To attain what he considered righteous government, this potentate promulgated a civil code consisting of two hundred and eighty-two articles. These he claimed to have received from the Sun-God and he had the incident of his meeting that deity recorded by means of an engraving. The circumstance is very similar to that of Moses, seven hundred and fifty years later, receiving the Ten Commandments from the hand of Jehovah, as recorded in the ancient Hebrew chronicles.

Printing, or what served for printing in those days, was one of the old arts whose beginnings were lost in the antiquity of Persia or in a still older civilization, that of the Accadians, an Iranian race, that centuries before, had developed ideographic writing, doubtless from some still older form. From theirs cuneiform writing was an evolution. The latter was syllabic and as an invention must be considered one of the most consequential of those of the people of Mesopotamia. In its time it proved so practical and became so widespread that it left an impress upon the literature and peoples of contiguous nations, including the Hebrews, sufficiently strong to furnish a key to its resuscitation after having been buried in oblivion for above twenty-five hundred years.

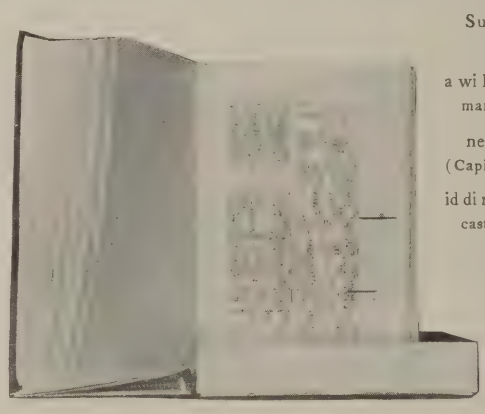
The printing office in that age evidently resembled very closely the workshop of a maker of tombstones of the present time. Hamurabi's code with its prelude and closing remarks, which included some very laudatory suggestions regarding the sovereign and his philanthropies, occupied forty-four columns, eight feet long, upon a block of diorite, a volcanic stone closely resembling granite. The lines read from left to right and were probably cut with an instrument of bronze, that, with the exception of gold and silver, being the only metal mentioned in the document. Fragments of the stone containing portions of the code found elsewhere indicate that the edition consisted of several copies at least, and these were exposed in different cities of the kingdom where they might readily be consulted.

Babylonia had courts and judges but every man seems to have been his own lawyer. The laws related to commercial transactions, property rights, marriage, inheritances, slaves, crime, construction of houses, boats, and irrigation canals, and other every-day matters, all of which indicated that the subjects of Hamurabi were very ordinary people. They might have been a little severe in the matter of punishments, for example, requiring the death penalty for stealing sheep, but then not many generations have passed since similar laws were abolished in some modern countries, Scotland for example.

The people of Mesopotamia at that time had various gods, Anu, Bel and Ea principally, who were not at all jealous, and as idols were not in evidence and no Sunday was recognized, the first, second and fourth commandments were superflous. They got along very well, however, operating on the basis of the unwritten seven. When a man's oath was challenged, he was thrown into a river. The presiding deity of the stream then took immediate action on his case. If he survived, he was innocent of perjury. Similar methods employed in dealing with witches were known to English law not many centuries ago.

Hamurabi's estimate of himself was very high and he desired his fame and laws to last. His ambition seems to have been accomplished. His works span the ages of history. His publications were brought out in permanent form. He secured the best printing material available at the time and no doubt employed the best printers in his dominions, but, like the modern representatives of the craft, they made mistakes. Sometimes the spacing was bad, and at times a wrong syallable was inserted, or the editor stumbled on a declension. Then the proofreader made his marks upon the work. Correcting the proof however was a difficult proposition. To delete a doublet was practical but outs and transpositions made trouble. The errors that still remain work serious confusion in the brain of that modern creation, the Assyriologist. Punctuation had not then been invented to produce stumbling blocks for the reader, and no comma ever switched a law from the line of its intent to wreck it on a technicality.

THE FIRST LAW OF THE CODE OF HAMURABI, FAC SIMILE, TRANSLITERATION, INTERLINEATION AND FREE TRANSLATION.



Sum ma a wi lun
If man
a wi lam u ub bi ir ma
man to accuse
ne ir tam e li su
(Capital) crime upon
id di ma la uk ti in su
cast not establish
mu ub bi ir su
accuser
id da ak
shall be put to deatn

If a man bring an accusation against a man, and charge him with a (capital) crime, but cannot prove it, he, the accuser, shall be put to death.

It may be noted incidentally that while this first law seems cruel and crude in the extreme, yet, reading between the lines, there is clearly discernible the embryo of the Golden Rule, in negative form it is true, but in the negative form only can it be given when attempt is to be made at its enforcement. Developed, this basic principle would read: A man shall have done unto him what he would wish to have done unto another.

WORTH $4.00 A YEAR.

EAST HARTFORD, CONN.

Editor National Printer-Journalist.

1319 *West Ravenswood Park, Chicago, Ill.*

DEAR SIR:—Enclosed find $2 for one year's subscription. It ought to be $4.00. Your valuable publication is the cause of my pushing forward with more spunk and ambition, to follow out suggestions of others. Without the NATIONAL PRINTER-JOURNALIST, the *Gazette* would be a "dead letter."

H. B. HALE, Publisher *Gazette.*

EDITORIAL NOTES AND POINTS

BY BENJAMIN B. HERBERT, CHICAGO, ILL.

EASTER is coming, each year, to be more generally observed throughout the United States. It is a day filled with sweetness and hope, with the glory of nature's annual resurrection, as well as with the Christian's hope, that, in some form, is as old as the earliest recorded time in the history of the human race. Job, in that oldest and sublimest of epics, declared that "though worms destroy this body, yet in my flesh shall I see God."

The springing of the grass from the dead earth, the unfolding of the buds, leaves, blossoms and flowers; the breaking of the butterflies from the coccoons, the unlocking of the streams, all speak of new life and joy. It is not a wonder that a spring festal occasion was observed among the northern peoples from the most primitive days when worship was paid to the Sun God and to the Goddess Oestra, from whose name has been borrowed the appellation for the Christian anniversary.

It is proper that the press should partake of the prevailing spirit of the season and occasion, and enter into the prevailing joys, and help to swell the waves of rejoicing and glad, good feeling among all the people. Special Easter numbers that reach this office show that the newspaper publishers have not been unmindful of their relations to their readers as sharers in all their hopes and sentiments.

The *Republican,* of Bradford, Stark County, Illinois, decorated its Easter number with Easter lilies and showed, on its first page, in a very neatly, lily-bordered halftone, the painting by Alexander Ender, of the "Holy Women at the Tomb," of the Risen Lord and Saviour.

The first and last pages were printed in black and red and a very attractive display of Easter announcements and advertisements showed that the efforts to please and to keep in touch with the prevailing spirit were appreciated. Several additional pages were devoted to Easter stories and appropriate miscellany and poetry. There were articles touching all human life and success. Among the mottoes, in one quoted article, the following were especially appropriate to a newspaper: "Push;" "Take pains;" "Be Up to Date;" "Aspire to greater things."

Arbor Day was celebrated in every school of the great Empire State of New York, on March 5th, and our old friend, Past President A. O. Bunnell, made timely his issue of the Danville *Advertiser,* of March 4th, by publishing the inspiring and instructive "Discourse on Trees," by Henry Ward Beecher; A poem "Planting a Tree," by Lucy Larcom; "The Forest School at Chalattenburg;" "Stories About Trees," and a pleasingly-written account of Brooklyn's Children's Day," written by H. W. Frerrin. We lived in Brooklyn for two years and came to know something about how all-absorbing and how delightful the children's "anniversary day"—held the latter part of May or the early part of June—has become. The page containing these articles was illustrated with pictures of trees and with an illustration, showing the marching children, in Brooklyn, carrying banners.

The point is, to make the newspaper seasonable with joyous examples and lessons that may open to useful improvements, pleasures and employments. The poem of "Planting a Tree," in its beautiful stanzas suggested how editors are planning thoughts and ideas that are to take root, grow, bloom and bear fruit through the oncoming years in thousands of minds and souls. "He who plants a tree, plants a joy: Plants a comfort that will never cloy. Every day a fresh reality." How true is this of one who plants, in the minds of the people, inspiring, practical ideals of better and higher living, doing and being.

The growth of newspaper plants is one of the increasing wonders of this nation and of the age. Printing in all departments, like travel and transportation, seems to more than keep pace with increased facilities. Newspapers that, fifteen years ago, bought their paper one or two bundles at a time or by the ream, now buy by the carloads or, like the Kansas City *Star,* operate a paper mill to supply their own paper.

It is now the *Daily Union,* of Schenectady, New York, that congratulates itself on such an increased business as to have demanded a new press of the most perfect type ever built, with the capacity for printing and folding twenty-four thousand papers an hour, and Schenectady is one of the small cities of the country. There is scarcely a month that we do not have the opportunity of recording the installation of from one to a score of new presses, each with a capacity of from six thousand to eighty or a hundred thousand complete papers an hour, and there is no let up, apparently. The same proportional increase is found in job printing offices as well. Did you ever stop to think how many skilfully-made, nicely, perfectly-finished and carefully-adjusted parts are required for a modern printing press? The *Union* says that there are just 31,783 parts that make up its finished newspaper press. Each of these parts had to be made by pattern and measure, not by any actual fitting, so that all the parts —made, probably by a hundred or more different machinists working separately and without any comparing or any consultation, or any necessity therefor—will each fit in its own place to the nicety of a hair, or the thousandth part of an inch, and perform its task to perfection, without jar or friction, to work perfectly when the power, from the mysterious electric fluid, is turned on. The *Union* not only has a new press but a new building, with all the modern equipments. We have often remarked that, next to an up-to-date equip-

ment, a well-arranged, well-lighted, centrally-located, prominent and attractive building is one of the essentials to complete success in newspaper making and publishing. A live newspaper gives prominence to the building in which it is published, so that, in our large cities, we see constantly erected mammoth modern structures which will accommodate not only the newspaper but hundreds and thousands of men seeking desirable offices, or places of business. The old New York *Tribune* Building, which was considered mammoth and a wonderful monument of the paper and its founder, when first built, has been outgrown and is now to be enlarged by adding eight or ten more stories. We live in an age of light and wonders and the newspaper buildings are becoming the light towers of civilization as well in towering heights as in the lights that stream with a hundred fold more of completeness, and enlightening power from the printing presses.

Economy of time is a very important matter, too often lost sight of, in printing and newspaper offices. Though "time is money" it is sometimes more valuable than the money that can be earned. Its proper use is necessary to meet promises to customers and to retain good will and business, and to avoid the very unsatisfactory and injurious reputation of lying, of making promises, only to break them. A thorough and effective organization is next to economy of time. There must be harmony and helpfulness among all departments of business in which there is so much of detail, and so many possibilities for mistakes, errors, accidents and delays as exist in newspaper making, in publishing or in commercial or job printing. Each must be loyal as well as able or skilled; each must know his work and feel a personal interest and pride in it and an individual responsibility therefor. There are many fall-downs between the composing and pressroom or the pressroom and bindery, because of a lack of mutual coöperation, clear understanding and a mutual good feeling.

We have all been taught from childhood that the "Gospel" means good news or glad tidings, and the word is so defined by Webster. Every newspaper, then, should certainly be a gospel messenger, a bearer of all good news and glad tidings, and what is news but knowledge or information? We are very anxious to impress our beliefs, our views of life, government, of time and of eternity upon others, and to establish our "orthodoxy" our "right opinions"—which are right because our people, our nation, our church, our fathers, and ourselves have held them—upon all other peoples and kindreds, tribes and nations. It would be far better to give the good news, to impart glad tidings and reliable knowledge, and let the "doxies" take care of themselves. Trying to compel other people to believe and other people, tribes and nations to adopt the same views, has occasioned more misery, injustice, violence, scourgings, crucifixions, stripes, martyrdoms, woes and bloodshed, than have all other dire causes combined. It is about time that the world, and all the people in it, learned to be "busy about imparting the good news, the glad tidings, filling the minds of men with helpful, uplifting, life-giving information or knowledge founded on reason, revelation and experience, and leave the results to be worked out through the wonder working power of this same good news or knowledge. It is certain that all people cannot be alike, believe alike, think alike, or live alike, but all can do, in a rational manner, by others as they would be done by, can be honest and true in life, and in the imparting of the good news or knowledge, the desire of all.

We boast of ourselves as enlightened, as being the most advanced in civilization of all races, nations and tribes of the Earth, and it is probably well to believe so, but it would be better to be and to keep so. The fact is, however, that in our self-righteousness, in our zeal to make others instead of ourselves good, we are becoming the most indolatrous nation on the face of the Earth—worshipping wealth, position and power and stopping at neither dishonesty, betrayals, trickery, corruption, oppression, injustice, violence nor at direct or indirect murder or manslaughter, in efforts to attain to our gods of pelf and place. The man who never misses a possible dollar that can be obtained by socalled business methods, fair or unfair, so long as he keeps out of the clutches of the law; the man who gathers and keeps the most of this world's goods, power or honor, stands highest under our new orthodoxy of greed and ambition.

When visiting 101 Ranch in Oklahoma, Mr. Joe Miller told us something of some of the simple ideals and practices of the Indians with whom he has to deal, and 147 of whom are his landlords or the owners of the lands which he rents. One of these ideals is that the one who gives away the most to the others is the greatest and noblest. On certain feast days, those who possess money, goods and property make a practice of distributing all they have to others. Money, horses and other property are given away with pleasure and pride. He related an incident that occurred in his presence. A bright young squaw who had given away two or three hundred dollars, realizing that others had given more and yet fired with the religion and rivalry of giving, arose and said: "It is true that many of you have given more than I, but I want you to know that my heart is just as great for giving as the heart of any one of you. I have given all that I had, except what I have on, and if any one needs and wants my blanket, such an one can have it."

We are very anxious to make the Indians like ourselves, yet they, in their simplicity, are the greatest sufferers from the white man's greed, treachery, dishonesty and poisoned whiskey sold to rob them of their senses, their rights and their property. At another time an Indian, under the permit or law of the Government, had sold a portion of his land and was to receive his money. He insisted that this should be paid to Mr. Miller, whom he owed for provisions and cattle bought, and that after Mr. Miller had paid himself, he could turn over the remainder. Mr. Miller took the money, at the Indian's request, went through the account as shown in his books and, after deducting the amount due, paid over the balance. He noticed that the Indian seemed dissatisfied about something, so Mr. Miller asked what was the matter, if he had not paid him enough. The Indian replied that he had paid him enough and too much and, putting his hand over his heart, said that he felt bad here. He then called Mr. Miller's attention to the fact that on a certain occasion he had sold him a beef that was not down on the book, and for which he had not taken pay. Mr. Miller accepted the pay for the forgotten beef and the Indian went away happy. After listening to these, and other incidents, showing that the Indian found it much more pleasant and more worthy to give than to receive, to scatter abroad to others than to horde for self-pride and glory; that he ever showed unswerving honesty, even when tempted with money that he could legally retain, we wondered whether or not the Indian, in his

simplicity, was not nearer than his pale-faced brother —who uses every possible device and gold-brick, and oppressive, violent, monopolistic method known in modern business, to keep up riches beyond all possible or imaginary needs—to the teaching of One who said: "But, woe unto you who are rich! For ye have received your consolation. Woe unto you that are full! for ye shall hunger.

"Give to every man that asketh of thee and of him that taketh away thy goods ask not again. And as ye would that men should do to you, do ye also to them likewise."

There has been enough told of late of Christian business methods of "Frenzied Finance" to make it unnecessary to repeat here; but as we write, the whole of Chicago, where we now live, is in terror from mob violence, assaults and murders on the public streets, through a sympathetic strike, all over a difference and dispute as to a few cents a day additional wages to less than a score of people now engaged in the trouble. The right of men peaceably to manage their own affairs is disputed, their places of business are picketed, and those who wish to work in places voluntarily abandoned by the strikers, are assaulted, beaten and murdered. Property is destroyed, business is ruined and those who are in no way connected with the quarrel, and even strangers passing through the city, suffer in property, person and life, even more than those between whom the quarrel exists. This is only one manifestation of the "orthodoxy" of greed to which we want to convert the Indians and make them like ourselves. We have lived either in New York or Chicago; part of the time in one city and part of the time in the other, for the past fifteen years; most of the time in the latter city; and have witnessed hundreds of such manifestations. Now the employers on one side and the employes on the other side, among the printers all over the United States, are accumulating funds and making preparations for a general strike and civil war in that trade throughout the whole land. Yet we are very anxious to convert the heathen and make all the world like ourselves.

We remember that the Great Teacher once said, to a group of men professing to be extremely religious, favored of Heaven and better than all other mortals: "Woe unto you, Scribes and Pharisees, hypocrites! for ye compass sea and land to make one proselyte, and when he is made, ye make him two-fold more the child of hell than yourselves." Making people good, by our standards, is sometimes to make them two-fold more the children of hell than they were before.

The point then, for newspaper editors and publishers, is not to indulge too much in exploiting the all-ruling "orthodoxy" of greed, glitter and pretense, but, on the contrary, to give the facts, the truths, the good news, that informs, helps and inspires. None but good, helpful news is fit to print. Leave the creeds and the doctrinaires to the doctors, and throw the physic of everlastingly trying to regulate other people's business and lives to the dogs. Try only to make others wise and happy through knowledge imparted or occurrences and experiences narrated, and through personal rights proclaimed and enforced, and to make yourself good, candid and true. Tell the truth if the heavens fall, and let the doctrinaires, the doctrines and preconceived notions, if endangered or dangerous to the rights or well being and happiness of men, stand from under.

Every editorial and every advertisement should contain something that will cling to the mind as a strong "Poor Man's Plaster" sticks to the back that is to be strengthened.

It used to be said of old time that "the law of supply and demand governs trade," but the monopolistic proverb is "Lessen the supply and increase the price and the profits."

As we have once before suggested, it was probably the advertiser, in part at least, whom Solomon had in mind when he proclaimed the great truth: "There is that scattereth and yet increaseth; and there is that withholdeth more than is meet, but it tendeth to poverty." However, wise liberality is profitable to every department of business. Have good men in your employ, and pay them well. Only good men will stand liberal payment. The slothful, incompetent, disloyal workman will only be rendered the more useless thereby. Very few men can wisely use more than they honestly earn. Be liberal as to up-to-date and the most serviceable machinery, types, equipment and appliances for the purposes required, but be economical in their care and use, and penurious, if that be possible, as to the time the costly machinery is idle. Keeping the wheels moving is the only way to get returns on large investments.

Never be "out of sorts" in your composing room, nor in your business office either. Being "out of sorts" results in a fearful loss of time and energy and causes a nervous wear and strain on all concerned.

Here is an old, often-repeated story of Horace Greeley and the man who stopped his paper, that is going the rounds once more and that is too good not to reprint for new newspaper men, and especially for new subscribers to newspapers, who overvalue their importance and overestimate the right to dictate to the editor:

An acquaintance met Horace Greeley one day, and said: "Mr. Greeley, I've stopped your paper."

"Have you?" said the editor. "Well, that's too bad." And he went his way.

The next morning Mr. Greeley met his subscriber again, and said: "I thought you had stopped the *Tribune*."

"So I did."

"Then there must be some mistake," said Mr. Greeley, "for I just came from the office and the presses were running, the clerks were as busy as ever, the compositors were hard at work, and the business was going on the same as yesterday and the day before."

"Oh," ejaculated the subscriber, "I didn't mean that I had stopped the paper; I stopped only my copy of it, because I didn't like your editorials."

"Pshaw!" retorted Mr. Greeley. "It wasn't worth taking up my time to tell me such a trifle as that. My dear sir, if you expect to control the utterance of the *Tribune* by the purchase of one copy a day, or if you think to find any newspaper or magazine worth reading that will never express convictions at right angles with your own, you are doomed to disappointment."

"The simple life" does not mean idleness. It is a protest against the misdirection of our energies, the devoting to follies, to fashion, to socalled society and hurtful, overworked amusements; to dissipation, intemperance and gluttony, those powers of body, mind and soul that need change, a healthier development, a restful, intelligent recreation, through inspiring fields of thought, study and contemplation.

The recreation of a man comes not through idleness but through bringing into play neglected faculties amidst healthful and cheerful surroundings. The votaries of no other callings stand in more need of this all-around healthful exercise and development than do

the desk men among newspaper workers and the printers confined during the working hours to the case or the composing machine. Editing, writing, business management, bookkeeping, proofreading and typesetting are all employments that tell on the brain and the whole nervous system. It is probably on this account that these workers frequently take to the use of tobacco or liquor, that only stimulate but never repair the wasting tissues, nerves or brains. These stimulants should be avoided and trips in the open air, excursions into the country, or work in gardens, fields or lawns, communion with and the study of nature in her beauties, and all the manifestations of Benevolent Wisdom, should be substituted in place thereof. It would be fortunate if every editor, writer and printer had some healthy, soul-inspiring hobby to take up his thought and send a thrill of new life throughout body, mind and soul during his leisure hours.

Promptness is one of the essential to render business pleasing, to the keeping out of many vexations, worries and fault-findings and to bring any success that is worth while. Yet, despite all the wise proverbs and teachings, along this line, most of us are inclined to put off "to a more convenient season" that never comes, what ought to be done at once. Type that ought to be distributed is left standing until there is room for no more dead matter and until, in order to set up a galley, or a job of printing, the whole office has to be searched over for sorts. The charging up of advertisements, or of the job tickets, is put off until money is wanted, and the work is then hurried through and slighted, and mistakes and losses occur. The preparation of matter is put off until the cry comes for "more copy," and then all that is necessary in looking up data and verifying statements and in composition or writing must be done with a rush, leaving no time for correction or revision. Slovenliness in style, in accuracies as to facts and in quotations and in the use of words results. Correspondence is neglected until it becomes a burden and, often, until desirable news, advertising or business is lost. Of course, there has been great improvement since the introduction of typewriters—and small must be the business or office in which one will not pay a hundred fold—yet there is vast room for improvement. Every letter deserves a prompt, polite and judiciously-worded reply. It is doubtful if any other branch of the business, among newspaper publishers and printers, has been more neglected than that of writing business letters.

There is much talk about originality though there is nothing that is really new or original under the sun. Yet there is individuality and every paper should impress this on every page and in every paragraph. We make new garments from cloth that is furnished, give character to garments, and make them to fit and adorn the persons for whom intended. There are worlds of facts, incidents and thoughts ever at hand. They may not be new but they can be shown in new form, be beautified by new images, glorified by new thought, sentiment, inspiration and new application and be made to bear the impress of the convictions of the heart and intellect of the editors. In this sense there may be a newness, a brightness, new character, thought and beauty shown even in the selections or clippings that are made, but as a rule, every item that goes into a newspaper should be put into a new garment and stamped with the character of the controlling mind of the newspaper. Every fact or thought, worth the while, awakens some new thought or theory or some new application suited especially to the day, the publication and to the readers.

W. S. Cappeller, of the Mansfield, Ohio, *News,* a Past President of the National Editorial Association, was recently elected president of the Mansfield Chamber of Commerce for the third year. Mr. Cappeller also recently made a subscription of $3,000 on behalf of the *News,* to a Mansfield hospital. A broad-minded active, useful editor is not without honor in his own country. The members of the National Editorial Association will not be surprised at Mr. Cappeller's liberality and will be pleased to know that his prosperity is such as to justify such liberality.

Albert Vittum, publisher of the Beverly, Mass., *Times,* having attained to the full development and possession of a newspaper office, plant and facilities for getting out an up-to-date, modern newspaper, wisely invited his patrons and friends and the great public to come and make glad with him. This showed a generous impulse, and generous impulses are nearly always wise.

Thousands accepted the invitation and visited the office and saw with their own eyes, the interesting process of the making of a newspaper, from the time the news was written until it was put through various stages and at last run off on the big presses and distributed to the readers.

Few newspapers in cities twice the size of Beverly, have better offices, plants or facilities for getting out a modern daily newspaper than has the Evening *Times.* The paper is housed in the Savings Bank building, one of the finest business structures in the city. The building itself which is a gem from an architectural point of view is of the English Renaissance type. The exterior is finished in repressed red brick with white marble trimmings and presents a striking appearance. The columned main entrance is finished in white with Mexican mahogany doors, while the floor of the main entrance is made of marble mosaic with a green marble border.

The office is twenty-five by ninety feet, with basement of the same size, giving roomy and well lighted quarters. The front of the office is enclosed with Pollard plate glass windows in which are displayed the news bulletins giving the happenings of interest from all parts of the globe. Above the entrance is an electric sign, "The Times."

The business office is admirably arranged, and presents the appearance of a bank. At the right of the entrance is a long quartered oak counter with a lattice screen of bronze metal behind which are the desks of the business manager, the bookkeepers, stenographers and office assistants. Here are found the filing devices, thoroughly up to date and other appliances for carrying on the business department of the paper.

In the rear of the business office are the private offices of the editors and advertising managers. This main office is separated from the composing room by a glazed screen.

The composing room is perfect in its appointments, with splendid light and every convenience for getting out a newspaper. Here is to be found the battery of linotype machines and here most of the visitors found a subject of absorbing interest. The deft fingered operators were busily engaged on "copy" for the paper and the visitors took home with them a "line of type" bearing their name, a pleasing souvenir of their visit to the Times office.

The composing room with its advertising department, the make-up tables, the cut cabinets and other accessories of a newspaper office were all viewed with much attention.

Directly in the rear of the composing room is the office for the reporters, well lighted, convenient and with every facility for the caring and the writing of copy for the news end of the paper. All the reporters are provided with typewriters and have every other help to hustle.

The library, that indispensable adjunct to a modern newspaper office, is also located in the news room. Here is the electrical department where all the supplies are kept; quarters for the files of the paper from its first issue, quarters for the apparatus used to prepare metal for the linotype; the auxiliary gasoline engine, to be used in emergencies, and a platform for the storage of the big rolls of paper.

NEWSPAPER CRITICISMS

BY O. BYRON COPPER, DE SOTO, WIS.

Address all Communications for this Department to De Soto, Wis.

THE subject of ready-prints or no ready-prints is one in which every modern country newspaper maker is more or less interested. It was not so very many years ago that the "patent inside" was the accepted thing in country newspaperdom; but the rapid change of conditions which even the past decade has seen ushered in, has seemed to some, at least, to call for an equally radical change in the local newspaper. For instance, the vast wildwoods of the middle west, heretofore untenanted save by wolves and wild-cats, have been swept aside by the intrepid march of American enterprise and progress, and in their place now, stretching free and far o'er this immense section are the rich and fertile estates of the American farmer. And abroad over the territories once dotted by lowly log houses and straw-covered stables, magnificent mansions and improved outbuildings have been reared heavenward, marking the comfortable habitations of the present agriculturist and his flocks. And in late years there has sprung up all over this blessed country of ours, an intricate network of telephone lines, so completely connecting these spacious country homes, that no sooner has a rural district event transpired than it is flashed from house to house, the farmer thereby receiving information of local occurrences equally as readily as can the country editor in his sanctum.

This fact might suggest the inevitable passing of the country weekly, or, the practicability of the ready-print even unto this great day; but one thing it surely does indicate beyond a doubt is that the modern country editor, in order to enhance and maintain the success of his publication, under present conditions, must possess the energy and literary talent to write and maintain an interesting, entertaing editorial department. It is surprising how many country publishers are not alive to this fact; and there are many others, who being alive to it, yet labor under the erroneous impression that politics is the only subject which should be aired editorially. The political welfare of our country is always a very important topic, and one to which no true patriot can be totally indifferent; but there are, however, many other matters of life of equal importance and of equal adaptability as an editorial subject.

Modifying the supposition that the ready-print is yet in tune with the public demand, is the fact of the rural free mail delivery system, which has been inaugurated within recent years, and which, with its multifarious routes branching from every city and village, bring into actualization a free daily mail for almost every farmer in the land. This, of course, is a veritable boon to the daily publication, for today nearly every rural inhabitant reads his daily, but it has been known to prove the exact opposite to some local weeklies, whose rural subscribers under the free delivery system were unable to receive their papers so promptly as under the old system of star routes and postoffices.

Nevertheless, the time of the passing of the country weekly newspaper, if that time is ever to come upon us, is not yet here; as is cogently evidenced by the fact that smaller towns are supporting their own weekly papers today than was the case ten years ago, conclusively idicating an increase instead of a decrease in the number of weekly publications. So long as man remains finite will the demand for the local news reduced to cold type continue; and just so long will those men be busy, who make it their business to supply this demand.

But the conclusion of the whole matter must be, the old-time news ready-print is a back number and must, sooner or later, give way to the more popular all-home-print pages, in order to insure a successful continuity of the country newspaper business; but in many instances, where the extreme annual income will not admit of the employment of the working force and machinery requisite for the publication of an exclusive local product, the ready-print is yet an absolute necessity, and will continue so for several years to come. But the wise country editor who is thus compelled by circumstances to retain the use of ready-prints, will see to it that his patent pages are made up of departments relative to agriculture, stock husbandry, gardening, household hints, etc., with perhaps a story and a column or two of strictly state news, since all these are yet of interest to rural readers, despite the fact of their daily mail and telephones.

From Hector, Minn., comes a copy of a tiny amateur journal published by Rex Strom, a lad of about fourteen years, who, we take it, is also editor, compositor and printer of his magazine, which is so often the case in the amateur world. How many of us who have gone on into the professional field had our earlier experiences in amateur journalism? *The Missionary Enterprise* is a monthly publication, leaning toward the Seventh Day Adventist faith. Editor Rex, since his early childhood, we understand, evinced considerable talent and a remarkable liking for literature and the closely allied art of printing; and for a lad of his years he is certainly quite fluent with his pen and neat and painstaking in his type-creations. The little magazine is most legibly impressed upon a good weight white print, enclosed within a folio of red print as a cover. Some handsome faces enter into the display, and strictly artistic styles are maintained throughout, but the little turkey-gobbler ornament employed in a central position on the cover page, could scarcely be appropriate except for the Thanksgiving, and possibly Christmas, numbers.

Some of our readers certainly have not forgotten what we have in past instalments been called upon to say relative to the Fairfax, (Mo.) *Forum*. We have from time to time in the past said pretty things about the *Forum*, because it surely deserved nothing worse, and we could do no more now than reiterate our words of November, 1903. Everything about this publication is gotten up so neatly and so carefully that the whole is praiseworthy. There is, however, a noticeable defect in the impression on this copy at hand—'tis just a trifle weak, brother. We wish to make special mention of the contents of this paper, which are somewhat original in their excellence. There is only one local correspondent's letter that we see; all the rest of the four local pages, besides those of the two-full-page insert, being occupied by headed news fea-

tures, an exceptionally great amount of local news and observations, and the displayed ads of local business institutions. The contents are such, by virtue of their character and literary style, that they present an interesting aspect to any one—even with our limited time we could not resist the temptation to peruse a column or two of the "General News and Observations," and found them interesting although we don't know a single soul within forty miles of Fairfax, Missouri. The *Forum's* ad man is "pure gold," and therefore has not depreciated any in value since we last heard from him, in substantiation of which we are showing one or two of his creations (No. 1-2). In the first example doubtless "the fledgling," which is "just out" was "ordered in," hence we shall have to abide by it; but in any case it should have been dropped another line lower, and we believe it would have been an improvement to have omitted the ornaments and underscoring below the first line in the ad, showing the parallelogram up nearer to this line and transposing the two rules to a position just over the address, where the short dash appears. We note, too, from the misspelled name, "Fletcher" in this ad that our advice has not been followed yet pertaining to the

Spring & Summer Millinery
GRAND OPENING
Thursday, Friday and Saturday,
April 13th, 14th, 15th
Next in importance to the Easter Egg, with the Newly Hatched Chick, comes Mrs. Fletcher's Easter Hats. They are also "chic," and like the escaped fledgling, "Just Out!" Those in search of Beauty should call and try on the New Shapes.
MRS. M. E. FLETCHER
Broadway—First Door North of the Corner Drug Store, Fairfax, Mo.

No. 1.

proofing of these ads. In the second specimen we would rather have seen "1st" and "2nd" spelled out.

The *Enterprise,* published by Frank I. Sage and O. W. Little at Alma, Kansas, wisely makes a specialty of "correspondence," publishing each week news-letters from nineteen or twenty localities within their field. In the issue of March 3, last, twenty-two different communities were represented. These letters are made up in the six columns constituting the paper's initial page, beneath a rather unsightly heading which runs thus: "From Our County Reporters." As we have said many times before, among the many good features in country newspaper making, none is more thoroughly commendable than this local correspondence feature, because none is more materially beneficial to the periodical's success. You are probably a printer and possibly have kicked and cussed no little when you were setting up the items from some country correspondent, and if you have never been hundreds of miles away from the place of your nativity where you received the old home paper, which contained news from your home locality, then you are not yet prepared to fully appreciate the real value of such a feature in a newspaper. In commenting upon their local news service, Editors Sage and Little said editorially:

"Last week the *Enterprise* had news from nineteen points in the county. This week twenty-two localities are represented by live correspondents. We thank them all. Nowadays it is not a question of how cheap, but how good. You can get newspapers from 10 cents to a dollar a year and whatever the price, you are paying all they are worth. The *Enterprise* is $1.50 a year. We ask that because we believe it is worth it and because we try to make it so every week."

And here is another sound sentiment expressed. Any six-column quarto weekly replete with the abundance of information contained in the contents of such a paper as the Alma *Enterprise* is surely worth one dollar and a half of any reader's money. In fact, $1.50 the year is little enough for any publication. The reader who isn't able and willing to pay that much for the home news ought not to have a newspaper; and the editor who isn't able and willing to make his publication well worth that much to his readers ought to get out of the newspaper business. We have had just enough experience in newspaper making to know that it is well worth a dollar and a half for annual subscription to get any kind of a newspaper out fifty-two times the year, and it is nobody's else fault but the newspaper fraternity's that the price of publications is so generally low. Why don't the newspaper men of this country enter into a national agreement and fix a uniform price for all publications?

Evidently someone has gotten facetious again and sends us a copy of something entitled, *"Sunday Cosmopolitan,"* dated Sherman, Texas, March 5, 1905. If this were the *ne plus ultra* of Sunday papers, then God forbid that another should ever be issued. It is a four-column folio,

CARPETS
THE REASON WE ARE SELLING SO MANY CARPETS THIS SPRING, IS BECAUSE:
1ST
We have an Extra Large Line of Samples From Which You May Select
2ND
We are putting the prices right down so that here ings is made easy for you

printed, head to tail, on ready-prints. A trifle over a column and a half—just a slim galley of bourgeois—constitutes all of the *Cosmopolitan's* reading matter on the home-printed side. The last page, which, unlike the first page, is printed right end up with the ready-print, is a veritable conglomerated mass of ads, ornate and otherwise, anywise, likewise even lugubrious in appearance—that is, they give a fellow a mournful feeling. "A contribution to the monstrosity museum" is the inscription which our sportive contributor has penned at the upper margin. It is a wonder that anyone who knows how to get out a paper at all, could not do better than this—or perhaps the greatest wonder is that anyone who knows enough to print a paper in any fashion, could make such an extreme botch of it! However, we are not conversant with the conditions under which this periodical is created, and therefore do not wish to be too severe in our criticism. The advertising patronage accorded the *Cosmopolitan* is flattering, indeed, being almost seven-eighths of its local space. Let us pray—that there is future improvement in store for this little publication!

Next on the program is the Holly *Advertiser,* published by Patterson Bros., at Holly, Michigan. It is a seven-column quarto with ready-printed interior. It has the appearance of being the product of an up-to-date printing machine, but one cannot always judge correctly as to the press by the paper's appearance. That reminds us of a photographer we once knew. He was much praised and patronized because of the excellent quality of his pictures. In speaking of his product, one of his competitors said: "Ah,

yes; your work is good; but then, anyone can do good work with a good equipment—you, of course, have a first-class lens." "You bet I have," the first artist replied. "Come and take a look at it; it's an old piece of junk I picked up for a song in a Minneapolis pawn shop." And just so it is with typographical artists—a master mechanic can do good work with "any old thing" in way of equipment. But this must not be construed as an argument in favor of "any old thing." The Holly *Advertiser* is printed with a perfect impression and with perfect ink-distribution, which gives it a fine appearance despite the three columns of displayed ads on the first page. The title line is a dandy, but we are unable to say as much for that bold condensed Gothic employed as heads. The *Advertiser's* news-service is commendable, especially the numerous correspondent's news-letters, and the face used in heads for these is excellent. The practice, however, of putting periods after individual heads is obsolete, and not only unsightly but utterly useless. Discontinue it! There is an immense variety of faces displayed throughout the pages of this sheet and some of them are excellent, while others, especially those ragged, distorted, senseless characters used for double-column heads, are extremely bad. The ad compositor needs to familiarize himself more thoroughly with modern typographical styles and schemes; his creations are a trifle behind the times. One of his most conspicuous faults is spotting up his work and throwing his display lines out of center with punctuation marks, especially long-tailed commas, for which there is utterly no use nor excuse.

Now here's this Stanton (Neb.) *Register*. We know that we have reviewed it before, because we distinctly remember that commendable, yet faulty, "First National Bank" ad, which, by the way, has not had executed upon it the suggestions for improvement which we must certainly have advanced in our former criticism; but it has sustained a nasty onslaught from the "sort-puller" which has left it in a decidedly sorrowful condition! We do not, however, remember the *Register* in its present four-column octavo form, which makes a handy, neat little paper. The make-up wants to remember, however, to keep all of his ads to the right of the page, and the ad man wants to exercise a little more pains with his creations—or at least we "want" these things attended to before we again get a glimpse of this sheet, whose departments of news are all pretty praiseworthy, and its advertising support liberal.

The *Tribune,* published at Holton, Jackson county, Kansas, has many good features about it, including a good impression, neat typographical styles and faces, excellent news service, an entertaining department of "Personal Mention," an able editorial column, several local news letters, and many ads. There are of course, other features in this publication that we do not like, and believing that the *Tribune's* proprietors desire to know "the worst," we will also enumerate a few of these latter features. We will at first confine ourselves to the little things: For instance there's that big, bold period after *"Tribune"* in the title. Not a very "little thing" after all; absolutely purposeless and certainly not in the least ornamental. The promiscuous manner in which the ads are distributed here and there, broadcast over the paper's pages, doesn't suit us—would rather see them neatly assorted to the right-hand side of the page. There is nothing elaborate or grotesque about these ads, however, therefore we rather like them as typographical specimens—they look like good, serviceable ads. The heads over the correspondence are a trifle too large to look well, especially separated as they are from the matter by those senseless little monkey-dashes and dates.

The Laurel *Advocate,* that prosperous, six-column weekly by C. E. Nevin, which purports to give "all the news for all the people all the time" at a "Dollar-fifty the Year," at Laurel, Nebraska, also has been reviewed in these columns before, and we are sure deserved all the praise we may have accorded it. It's a "peach of a paper," presenting a clean front page of exclusive pure reading matter. On the afternoon of the sixteenth of last March the *Advocate* issued "wearing of the green"—that is, it came out with its four local pages and supplement printed (and printed well, too) in the color of the Fenians; and we know all about it, because the Laurel *Advocate* fellows wisely believe in letting us know about such things. We think it made a pretty nice St. Patrick's Day edition. And, talk about ads! Of the twenty-four columns comprising this sheet, all but eight were occupied by huge, finely-gotten-up local ads. The business men of Laurel, Nebraska, (newspaper men not excepted) are of the right sort—that's conclusively demonstrated!

The Kellogg (Minn.) *Enterprise* is not a stranger to this department, as we were about to say, but, preferably, one of our new acquaintances. It is a five-column quarto, fairly well started upon its second volume, only. Frankly, it's not much of a newspaper, either; and we make this statement, not wishing to discourage Editor McDonough, but rather with a view to spurring him on to greater achievement. There is quite a creditable amount of home-town news in the *Enterprise's* pages, and now the editor should secure and establish a dozen (or say half that many) bright correspondents in surrounding localities, and inaugurate a good editorial department. Then he can dispense with all that plate now in use, and which, in its striking contrast in size of face and appearance of impression, compared to the regular ten-point Roman, of which the paper's dress is composed, so conspicuously mars what would otherwise be a very handsome front page, since the make-up is wholly neat and correct. The *Enterprise* has just about all the advertising it can support, very handily, and the compositor of this puts up several very neat effects. The ad which is marked is a good creation, but a trifle too ornate to be remarkable. The "Cement Building Block Co." ad, shown in reproduction No. 3, is a far better specimen, because it is less grotesque and plainer, and therefore more legible. This example is especially commendable because of the fine distribution of white. As a closing word we would suggest that Editor McDonough read his ad-proofs more carefully, as there are several typographical errors in this specimen shown.

"A favorite with the people," the Guthrie, Oklahoma, *Daily Leader,* is another one of those publications on whose regular mailing lists our name and address has somehow or other found a complimentary position. Thanks! A veritable "newspaper fiend" like ourselves is always pleased with the opportunity to scan new periodicals. This is the daily, by the way, about which Editor Herbert himself has written at some length in the last issue of the JOURNALIST. We were about to complain that the old rascal hadn't left us anything to say; but we don't know about that. One could write a long time and yet, perhaps, not tell all there is commendable about the Guthrie *Daily Leader.* Mechanical make-up is neat and correct, and the use of DeVinne condensed as head lines gives a pleasing effect. The advertisement composition is not in the least grotesque, but plain, simple and therefore serviceable. The news and special feature departments are thorough and up to the present, and the editorial columns deserve especial praise for their keen freshness and able handling of timely topics. There is one detail which we have noticed in the several copies of this sheet which have reached us, anent which we must speak, and that is that each paper has been folded very unevenly, thus lending

a slovenly aspect to the otherwise creditable product. The fault in the machine to which this is due should be corrected.

The "besetting sin" of the Tecumseh (Mich.) *News* is the "friendliness" with which the displayed ads circulate with the pure reading matter. Of course, that's what every advertiser wants; but it is impossible for the publisher of a ready-printed quarto to concede to this want and at the same time maintain anything like a decent makeup to his sheet. To be sure it would require considerable figuring to make up the Tecumseh *News* with the advertisements all collected neatly to the right-hand sides of pages 4, 5 and 6, exclusively; but it could be done, and, from a technical viewpoint at least, until it is done the Tecumseh *News* will remain far from perfect. When the average reader picks up a newspaper that has an ad here and there and here and there a column or two of reading matter, the usual result is that he becomes disgusted in searching vainly for that part of the paper's contents which he desires to peruse, and throws it down with curses, never giving one of the ads a pleasant look. Hence the advertiser who has sought publicity by insisting upon a position "next to pure reading matter," has lost the objective end, after all. But it goes altogether differently when the publication's contents are all neatly and carefully classified and published as nearly as possible in the same position each week. The reader picks up the sheet, turns immediately to the desired department, devours it, and then, with patience untried and temper unruffled, his eye wanders lovingly over the rest of the page in a journey of good feeling and general admiration, when lo and behold! it encounters the subtle, hypnotic displayed lines, and being in a perfectly passive, susceptible condition, the printed suggestions have every possible advantage. There are ads, of course, which will be read before straight matter; but it is not to be supposed that such beguiling influence enters often into the ads of the ordinary country weekly. The Tecumseh *News* is a fairly good paper, with an abundance of news, personal mention, some correspondence and a few editorials, and it is handsomely and distinctly finished in the press. The ads are all strong, serviceable specimens, but lack originality and artistic treatment. Notwithstanding our oft-repeated (and as oft-reprinted) verdict anent borderless ads, we must say that of "The New York Store" set exclusively in various sizes of the DeVinne series, borderless, is the best ad specimen in this sheet. It possesses a dignity which is difficult to excel.

The Morning Press, Bloomsburg, Pa., "Columbia county's favorite daily," observed the dawn of its third anniversary on March 18th last, by issuing a grand thirty-two page special edition, and a very creditable effort it was, too. A sort of brief review of the three years the *Press* has been in existence forms a very appropriate and interesting leading article of this special edition, illustrated with half-tone likenesses of the *Press* publishers, Messrs. C. T. Vanderslice and Paul R. Eyerly. It seems that "Three years ago *The Morning Press* was launched upon the journalistic sea amid the doubts and misgivings of the publishers' warmest friends," and consisted then of only four pages, which were adequate in accommodating all the news and advertisements. But today four thousand guaranteed subscribers read the *Press's* six to eight pages daily, and in speaking of this healthy growth the *Press's* editor divulges a little newsaper "success secret," which should be of more than passing interest to readers of this department of THE NATIONAL PRINTER-JOURNALIST. He says:

"The Circulation of the *Press* exceeds by far that of any paper—daily or weekly—in this Congressional district. And one naturally wonders thereat. It is not because the *Press* has a better field than many other papers, but rather that *the publisher's ideas of what a progressive daily should be, have coincided with the views of the people,* and the result has been a success."

We came near omitting mention of one of the most, if not *the* most, important features in this special edition, a cut of which also graced this article on the *Press's* history, and that is the fact that *The Morning Press's* third anniversary was marked by the installation of a new Duplex Web Perfecting Press, a most valuable addition to the equipment. And here on the second page we note pictures of five of the *Press's* business and reportorial staff. But the reader must not get the impression that this article about *The Morning Press* took up the whole of this thirty-two page edition, for on the contrary it contained many other elaborate articles, emphasized with glowing full-page-width heads, and profusely illustrated; an abundance of news and an abundance of ads, all very creditably composed and arranged. In closing we must add a compliment to the *Press's* type equipment, which is far above that of the average lesser daily, in point of choice and style of face. Post Old Style enters considerably into the ad composition, while Jensen Condensed and Caslon Italic are employed, exclusively, and to very good advantage, in the headings. In closing, we wish the Bloomsburg *Morning Press* many more joyous "birthday anniversaries," and hope that we may be privileged to have such evidences of these prospective many, as we have had of this one, in this commendable "third anniversary special."

Very few country weeklies put up a neater initial page than that of the Nunda (Ills.) *Herald.* It does a fellow's eyes good to take a good, long look at it! The *Herald* is a seven-column, eight-page sheet, and the title itself is in the identical face employed for all other headings in the sheet, exclusively, and which predominates in all of the displayed work, namely, DeVinne Condensed. A cleaner, neater, more artistic effect cannot be imagined. At each side of the title is an oblong box of wave rule, one of which contains these words:

"Readers of the Herald say they like it because it prints all the news,"

and the other this equally effective statement:

"Advertisers in Herald say they like it because it produces cash results."

The date line, then, is in a bold Roman, so nearly resembling the DeVinne that no inharmony is created, and it rests between two head rules, as usual, with the *heavier* one above, as we have always advocated. The first, third, fifth and seventh columns are begun with bold, double-subheaded heads, while the second, fourth and fifth columns start out with neat, clean, modest heads enclosed in a wave rule border. By this description the reader will see that there is no wonder that this front page of the Nunda *Herald* receives our hearty endorsement, since it exactly accords with our ideal as preached and advocated from time to time in these columns. There is not, of course, an ad on this page, and the other locally printed pages are almost equally commendable; in fact, the critic who could find many faults with the *Herald* would have to be a chronic kicker—a pessimist in the fullest sense of the term.

From a copy of the Thief River (Minn.) *Press* at hand, we take it that D. A. and J. A. McDonald's paper, the Thief River Falls *Review,* previously commented upon at length in this department, has absorbed one of its local competitors and is continuing the two under the present name. While the present publication is an excellent one, retaining many of the commendable features noted in the former McDonald products, as we remember the Thief River Falls *Review,* it was a brighter, less "rusty," (if we may be permitted the use of that term) sheet than this *Press.* However, we would that all the newspapers in the land were up

to the standards of the Thief River *Press,* which is a six-column quarto, printed entirely "at home." Contents are gratifying, advertisement patronage generous and all mechanical ends very creditable, as is characteristic of the McDonalds. This circulation statement at the opening of the editorial column is exemplary and highly gratifying:

D. A. McDonald, being first duly sworn, deposes and says, that he is one of the publishers of the *Thief River Press,* a newspaper published weekly at Thief River Falls, Minn., and that the circulation of said paper is more than 1,450 complete copies each week. (Signed)

D. A. McDonald.

State of Minnesota, County of Red Lake—ss.

Subscribed and sworn to before me this 28th day of February, 1905. Wilhelm Michelet,

(seal) Notary Public.

This certifying to the circulation, is, we believe, one of the very important matters of successful newspaper making which is too often ignored or neglected by the smaller, as well as by some of the bigger, publications. It doesn't make any difference if your circulation does not exceed 500 copies, a sworn statement thereof will make this 500 worth nearly as much to you as a mere claim of twice that amount.

Those of our readers who were interested in the review and comparison, in the March instalment, of the three ad specimens submitted by W. H. Hooper, of Oakland, California, will also find the following letter of more or less interest:

Oakland, Calif., April 21, 1905.

O. Byron Copper, De Soto, Wis.

Dear Sir:—I wish to thank you very heartily for your good words concerning the ads I sent in for review in the March number of that most excellent magazine—the National Printer-Journalist—and I beg to assure you that I thoroughly appreciate it, although I am quite late with my acknowledgment. Had you seen me most any evening this last month at about midnight, with a paint-brush or a roll of wall paper in my hand, you would certainly have thought that lack of time was my most valid excuse.

Your criticisms of those three ads were quite fair indeed (of course I think so, for you gave my ad first place, 98 per cent) and we are greatly encouraged over the fact that you scored us so highly.

I am sending you, under separate cover, proofs of ads I have selected from my latest efforts. Should any of these be worthy of notice would be pleased to have you review them. Very sincerely yours,

H. H. Hooker.

1367 11th St.

These new ad specimens which Brother Hooper submits are quite so worthy of note that we only regret that it is not practicable to show them all in this instalment—we're showing the biggest half of them, however, (Nos. 4 to 7).

BROADWAY at THIRTEENTH

No. 5.

Nos. 5 and 6 are perhaps the best in this collection, although we have no fault to find especially with the other two shown, but in the two "J. T. Moran" ads and that of the "Misses Coakley and Klein," we have a few objections which we can plainly state without taking up the space with their reproduction herewith. The larger of these two "Moran" ads is the better, and its only defect is the superfluous perpendicular rules at both ends of the head and tail panels. The smaller "Moran" ad is out of kelter chiefly at the top. We are sure that Compositor Hooker, with his keen sense of the correct, artistic order of things, must have realized this fact himself, just as every compositor does at times regarding his own creations, without seeing just at the moment how the defect could be obviated. We ourselves have experienced this, feeling, and especially in the line of job work, where the same order was duplicated, under the same conditions and with only the same material we have often been able to greatly improve that which we originally deemed as good as it could

be made with the available material. The fact of such cases is, two thoughts, that is, two mental type designs, cannot be born at once without the assistance of an obstetrician (in the form of a critic, for instance). One idea has to mature, or die, before there is room for the other one, sometimes. Now, as to this "Moran" example. It is set in Gothic, and Gothic being one of the plainest faces possible—one of the most easily formed and most *natural* types—therefore, it never looks well unless used naturally, and just as simply as type can be set. The "long-line-short-line" scheme of type composition is the most common, because the most natural method, and this is the scheme in which Gothic is at its best. It does however compete with anything else in appearance when employed in the "flush" style, that is if the lines run flush naturally and without the artificial means of leter-spacing. This, to our mind, at least, explains why the upper portion of this ad under discussion is unsatisfactory. The milliner's ad, aforementioned, is just a trifle crowded toward the top, because the street address is a trifle too big and prominent. We understand why Mr. Hooker did this; but believe however that sufficient force would have been secured from the employment of caps of the same Roman in which the following lines appear. Otherwise this is a very pleasing product.

Anna, Ill., April 28, 1905.

O. Byron Copper, De Soto, Wis.

Dear Sir:—Find enclosed a trio of ads for your criticism. Sent you some of my ads about three months ago, but suppose that they found the waste basket. Ad No. 8 was rearranged from Ad No. 9; which do you consider the better? I have a tendency to overpanelling, in my ad composition; but the business men here like it, so they have to be pleased first. Hope you can find the space for a few words to me. I have had to get all I know out of the trades papers, so you see what it means to me. Yours respectfully,

Leon E. Werr, Foreman.

No! No! Our good friend Werr, don't you ever believe such ads as yours would ever meet with that proverbial, hackneyed, waste-basket fate, if they ever come in range of the writer's critical gaze—we've got our eye continually "peeled" for just such specimens as they with which to illustrate these monthly "splurges." Your signature bears a familiar aspect, but for the life of us, we cannot remember having reviewed your ads, unless it "Werr" in the May issue, which at the time of this writing has not yet reached us; but let that go, and we'll do our duty by you now. There's not much of a choice between your ads Nos. 8 and 9; but

by virtue of its more out of the ordinary style, and the position which it must necessarily occupy in the paper, which would naturally render it the more attractive, we therefore prefer No. 8. Both are excellent, serviceable advertisements. No. 10, however, is more beautiful than either of these first mentioned. In point of intrinsic advertising worth, and highest qualities of art, this specimen we consider wellnigh perfect. We would suggest a pica's white margin all around inside the central panel, but otherwise this design is whited

No. 8.

out elegantly, displayed perfectly, and is highly legible and pleasing throughout. And after all is said and done, the secret of this advertisement, is its typographical success, as an advertisement, is its typographical simplicity. We disagree with Brother Werr regarding his "tendency to over-panelling." We cannot see that such is his tendency; but if it were, he is wise in submitting to the inevitable and resolving to please the patron, first of all. By the submission of these ads, as reproduced herewith, Mr. Werr, in view

Alden's
Newest Creations
In Ladies' Shirt Waist Suits and Skirts are on display.
The very latest thing out in skirts is the UMBRELLA SKIRT as shown in this illustration
We show this skirt in beautiful shade of brown (the season's most popular color,) and also a black mohair sicilian, splendid value and an excellent wearing skirt sold everywhere for $6. our price is only..... $5
We also show at this price ($5) a skirt of same material as above, in brown and black, 29 gores stitched to a fine fadow fit hips, plaited, very full ... $5
Umbrella Skirt.
Silk Shirt Waist Suits.
We make an elegant showing of these suits in all of the better shades for the season, blue, black, brown and red, solid and two toned effects, at $12, $15, $16.50 and..... $18
A specially desirable and useful suit is one we show in a two toned brown effect of extra good quality taffeta silk which can be worn either as a jacket suit or a shirt waist suit. The collar fastens to the waist with a false front of the silk, making a natty and stylish shirt waist; or worn without the collar over your regular shirt waist it is a very pretty jacket suit..... $18
Panama Cloth.
This material is so extremely stylish and popular that it is almost impossible to obtain it in the piece at any price. We have the skirts made of it in blue, black and brown, each a creation of the skilled tailor's art..... $5 to $10
This skirt, with 72 gores, stitched as shown here to a graduated line below the hips plaited full, very fine quality black Panama.... $10
72 Gore Skirt.

perfect front pages imaginable. That fact that it is solid does not, in our mind, detract from its beauty nor effectiveness. It gives more reading matter to the space, and the face of the type is sufficiently large to be easily read, despite the absence of leads. The interior of the paper is ready-printed. Page 4 of the local print consists of 3 1-3 columns of displayed advertisements and approximately 1½ columns

of legal notices, the residue being given over to editorial matter. These ads are made up according to Hoyle—graduating from the smaller ones at the top, to the larger ones at the bottom and all neatly and properly rounded up at the right hand side of the page. The editorials are indicative of their author's wisdom and freedom from trite thoughts and hackneyed editorial topics. The fifth page proves the practicability of our persistent preaching that to keep the first page clear from advertising is a very desirable possi-

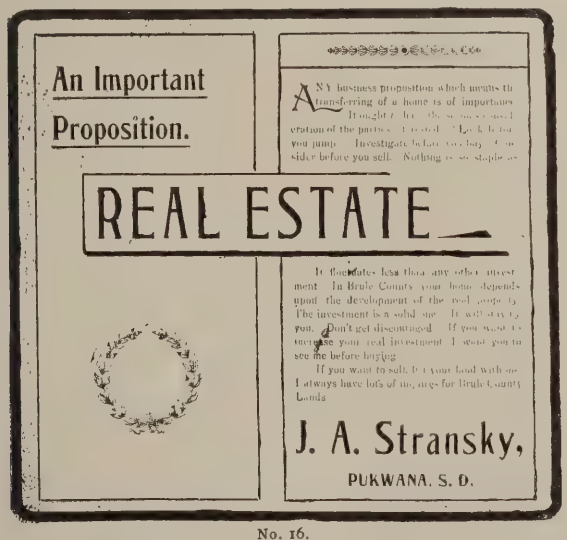
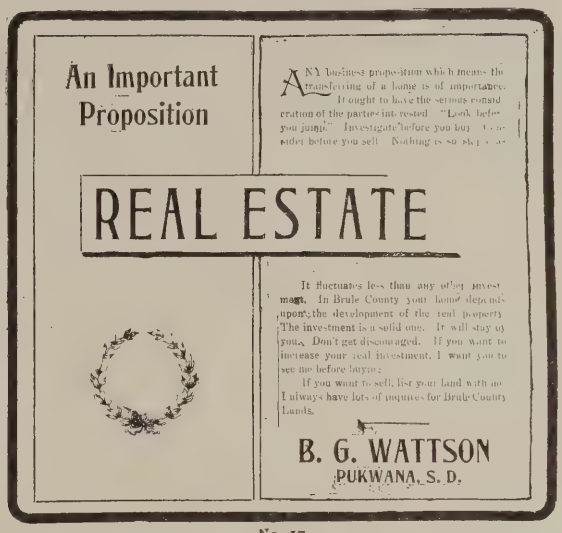
bility. This page is made up exclusively of displayed ads, and the whole thing, surveyed either collectively or individually, presents such an attractive, such a diversified, spicy aspect that we wager a brand new makeup rule that it is never overlooked by the readers of the Spalding *Enterprise*. The last page is made up exclusively of advertisements, also, of which something over a column consists of straight-matter notices. The *Enterprise* is crowned with an excellent impression, which sets off to advantage Mr. Mallory's beautifully displayed creations, upon not a single one of which is it possible to say the compositor has failed to produce a veritable masterpiece. Foreman Mallory's whiting out, display and artistic treatment are all extremely high grade, and his fine control over details is delightful. At random we have selected a number of his examples for reproduction herewith, (Nos. 11 to 15) which we think will go a long way toward demonstrating that Mr. Kavanaugh's excuses for his type equipment were wholly uncalled for, although we fully appreciate, as intimated elsewhere in this instalment, a less skillful compositor than Mr. Mallory, would probably have



No. 16.

made the apologies quite necessary. Before leaving the discussion of this contribution, permit us to recommend that all publishers who are desirous of improving their publications, and desire a standard "Copper-bottomed" model to go by, should negotiate with Messrs. Kavanaugh and Mallory for a specimen copy of their admirable sheet which should be hung up in the sanctum for frequent and valuable reference.

Some time ago the following letter was forwarded to us from Chicago, but the papers had gone astray in the mails, or become mislaid, so we wrote Editor Wentzy for another copy, which he forwarded together with another letter. Both



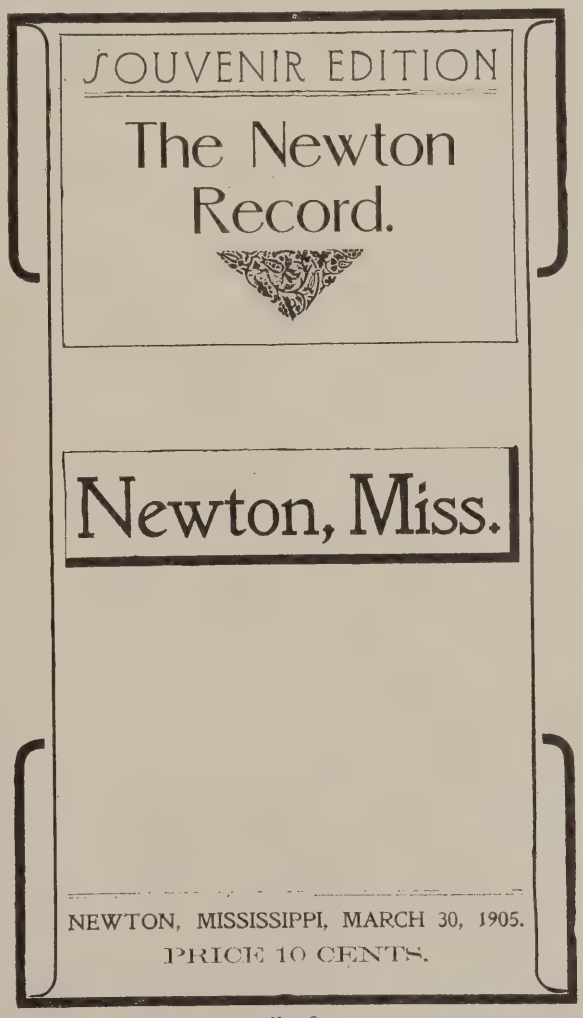
No. 17.

of these letters contain enough interesting facts to warrant of their reproduction. Here is the first:

PUKWANA, So. DAK., Dec. 12, 1904.

National Printer-Journalist, Chicago, Ill.

GENTS:—I enclose you—rather mail you under separate cover—a copy of the *Press-Reporter* for criticism. The paper is published in a



No. 18.

town of a little less than 300 population. I have made a sworn statement of 1,250 circulation. The population of this county is about 5,000

The paper's circulation less than eight years ago when I purchased it was about 250. During flourishing final proof times the *Reporter* was brought into existence, and after two years of prosperity I bought the paper and consolidated it with the *Press*. I think there are less than a half dozen weeklies in South Dakota with a better circulation than my paper enjoys. I think, too, that my pride in calling attention to this fact is pardonable. Of course you understand that a print shop in a town (not county seat) of less than 300 is usually moderately equipped and the *Press-Reporter* is not an exception to the rule, though we quit three years ago using "armstrong power." We would like such suggestions as your artist may feel disposed to give us. Very respectfully,

HARRY WENTZY.

Then comes the second epistle, as follows:

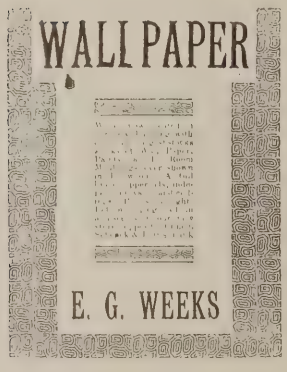
PUKWANA, So. DAK., April 13, 1905.

O. Byron Copper, De Soto, Wis.

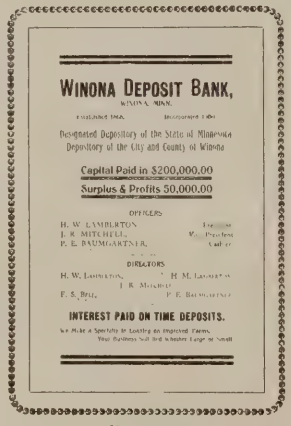
MY DEAR SIR:—Through mistake the copies of the *Press-Reporter* were sent direct to the NATIONAL PRINTER-JOURNALIST. I am anxious to make the paper as good as the town will warrant, and any suggestions that you will make will be received with appreciation. I expect soon to discard all the body type, and use a dress of brevier, for local as well as editorial. You will realize, when you consider the size of the town, that it is hard to get up a respectable local page, and we are not always overburdened with advertising as at present. Conditions have been such here that 10-point has been none too small to fill up a local page, and the shortage of space could be overcome by using the type solid, which has been my practice the past year. Our county has a population of five thousand, with five newspapers to supply the people's wants. Until two years ago we had seven papers, but the result was inevitable and there are now five left. We are now printing fifty quires, which I think is a reasonably good showing, considering the population of the town and county. Very respectfully,

HARRY WENTZY.

We got this far when we took up the copy of the Pukwana *Press-Reporter* at hand and began to study it. In-



No. 19.

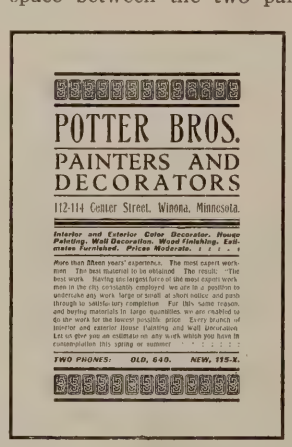


No. 21.

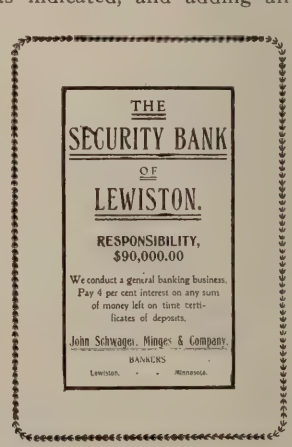
stantly our eye rested upon a long editorial entitled, "Be Cheerful." Of course it looked too lengthly for a newspaper critic to tackle; still our eye caught a word or two in the hasty glance bestowed upon the page that interested us; so we began to peruse it and immediately we forgot that we were *working*—performing a duty for hire—but rather felt that we were indulging in a pleasure voluntarily—and so we were. The editorial was of the right sort—with a cogent serious style, spiced with keen wit and humor, and in spirit dealt with a fact of the utmost importance to all mankind—because it was a fact of life—incidentally divulging the author's close knowledge of humanity and human ways and needs. When we had finished not only this one editorial, but the whole editorial department, we felt, as Editor Wentzy's subscribers must have, that the time devoted to its reading had been profitably spent. For the organ of a town as small as Pukwana, the *Press-Reporter* is a remarkably creditable product, and its present sworn circulation of 1,250, representing an increase of 1,000 within the past eight years, is a material manifestation of the people's appreciation of it. Despite the excuses which Editor Wentzy has filed in the foregoing letter, we cannot excuse those displayed ads on the introductory page, because there is an abundance of room on the three other locally-printed pages for the present advertising patronage, even though extensive as it is. Press-work on this publication is first-class, and the advertisement composition is considerably better than the ordinary, the sheet being defective chiefly in point of makeup, which may be corrected easily by following the rules exploited generally

No. 20.

throughout these columns. We are reproducing an ad (No. 16) from the *Press-Reporter,* which, while showing artistic skill and constructive ability on the part of its creator, yet prompts the offering of a few improvement recommendations: The two main panels are too widely separated; the space of a nonpareil intervening between the two would have been adequate and proper, or at the most not over a pica. The underscoring of the words, "An Important Proposition," should have been omitted and the two lines drawn together a trifle closer, by raising the lower line, and both lines centered. The pointer ending "Real Estate" is also superfluous and obsolete, and its omission would necessitate a shortening of the lower and heavier rule forming the bottom side of this "connecting link," in order to preserve the desired slant effect at the open end. Now, by removing a portion of the space between the two panels, as indicated, and adding all



No. 22.



No. 23.

removed to that on the right, we very desirably gain greater side margins of white. Then the little ornate panel at the top might be dispensed with to advantage, and the name, "J. A. Stransky," reduced to thirty (30) point caps and

lowered to a position nearer the address line, which in turn would give adequate horizontal margins. The period after "Proposition" and the comma after "Stransky" are both quite unwarranted. In specimen No. 17 we show this ad rearranged according to the foregoing suggestions. This last specimen was "set" according to the methods employed in the typographical school, as outlined in a late article in this magazine—with paste-pot and scissors, hence the improvised name of "B. G. Wattson" in place of "J. A. Stransky." We wish to call attention to the bold two-point dash we have inserted over the name and address, and had we seen our way clear in resetting the upper squib of straight matter, we would have substituted a plain Roman initial for the Anglo-like "A." There are other things—both good and bad—about the *Press-Reporter,* upon which we fain would touch—but this instalment "waxeth great."

A souvenir edition which comes from the Newton, (Miss.) *Record* is a most commendable idea. The following letter from Mr. Geo. F. Long, although it does not explain who its author is, it does explain with whom the idea originated and by whom it was actualized:

NEWTON, MISS, April 10, 1905.

O. Byron Copper, De Soto, Wis.

DEAR SIR:—I am mailing you today, under separate cover, a pamphlet—"Newton, Miss."—and want you to criticise it. The shape, matter and purpose of the pamphlet are all original ideas of mine, and the work, from soliciting the ads to pasting on the cover, is nearly all mine. The editor of the *Record* furnished some of the reading matter, set the front cover and his own ad. On account of cut-up rollers the presswork is not of the best, as you will note, without the aid of a magnifying glass. Yours truly, GEO. F. LONG.

The souvenir edition, sub-titled "Newton, Miss.," consists of a forty-page pamphlet bound in paper covers. The contents comprise a review—retrospective, introspective and prospective—of the city, every alternate page being an ad. In the entire, the pamphlet represents one of the best all-around advertisements for the city of Newton and its enterprising business men that could be contrived. Mechanically the booklet is a credit to the print-shop of which it is a product. Despite the fact of the bad rollers, as above disclosed, the print measures up above the average, and as a rule the displayed work is high grade. With each page encompassed with a one-point rule, and neat, tasteful faces and styles employed generally, this souvenir is a souvenir, indeed, and a great credit to its authors. We have taken great pleasure in examining and reading our copy, and the facts and figures exploited within it have more than half impressed us with a desire to become annexed as one of such a prosperous, up-to-date community as that of which this brochure is the explicit exponent. And this, after all, is the chief purpose of the pamphlet—to increase the population of the town, thereby benefiting it and every man and enterprise within it—a most noble purpose! No. 18 is a reproduction of the cover page.

On a memo head of very fine material, with envelope to match, come the following brief missive, introducing the *Gazette,* a six-column quarto weekly published at Elmwood, Ill.:

ELMWOOD, ILLINOIS, April 13, 1905.

O. Byron Copper, De Soto, Wis.

Under separate cover you will find copy of *Gazette,* which we would be glad to have you criticise. We have lately adopted the plan of setting all matter solid instead of running an insert; the necessity of doing either is very obvious by a glance at the ad columns.

Very truly yours, "GAZETTE."

In our review of the Nunda, (Ill.) *Herald* in this instalment we declare that few country weeklies present a neater front page than it does, but we are rather inclined to believe that in this Elmwood *Gazette,* from the same rich state, we have one of that few, notwithstanding the fact, as mentioned above, that it is set solid. As to this question of running matter solid, we never had any serious objections to it, especially as regards appearance, for if made up well a page of solid matter in our opinion compares favorably with the leaded page. The only legitimate objection against the running of matter solid is that it is thus a trifle more illegible; but no one could have any serious trouble in making out every word of the *Gazette,* because the print is superlatively well executed. This introductory page in style and makeup is exactly that which we have always considered strictly ideal for country weeklies—the whole aspect is so clean, so neat, so modest and unsensational. It gives the sheet such a dignified individuality and carries such an impression of reliability with it. The head-lines in eight-point Studley, exclusively, constitute the only job-face on this page. If those publishers who persist in running displayed ads on their front pages, and setting their heads even as large as eighteen and twenty-four point bold condensed, as we frequently see it, could behold this Elmwood *Gazette,* they certainly would have a sermon—a veritable object-lesson (if that term can properly be applied to the good) not to be soon forgotten. The other three home-printed pages are equally commendable from all points of view—contents, composition, makeup and impression—and each advertisement is a fine example of up-to-date material and the highest degree of skillful workmanship. Nos. 19 and 20 are reproductions of two faultless ads from this publication. The earnest typo needs only to scrutinize them to learn something from them. They demonstrate the fact that their creator is, beyond a doubt, one of the foremost typographical artists of this artistic-typographical age, and to see them is to admire them. A review of the Elmwood *Gazette* would be incomplete without due mention of its excellent news service and the fine work of its editor: The entire front page and all the straight matter space on the fourth and fifth pages is given over chiefly to local news, and all of it is correctly and volubly written. On the last page appears a goodly number of newsletters from surrounding country correspondents. In our estimation, the lack of an editorial department is all that bars this newspaper from the brand of perfection.

"Last, but not least," we have been favored with a copy of the Winona, (Minn.) *Republican-Herald's* big, twenty-eight-page Easter edition issued April 15, 1905. By way of introduction, Mr. Scott Laird, the business manager writes:

WINONA, MINN., April 18, 1905.

O. Byron Copper, De Soto, Wis.

DEAR SIR:—We are sending you under separate cover special copy of the Easter edition of the Winona *Republican-Herald.* This is the first special edition that has ever been issued in Winona at Easter time, and any comments that you may make upon the same will be greatly appreciated. We are herewith enclosing stamped envelope and wish you would kindly send us the clipping. Yours truly,

THE REPUBLICAN AND HERALD PUB. CO.

It is rather surprising to learn that "This is the first special edition ever issued in Winona at Easter time"—for to look at the commendable excellence and completeness of this one on our desk, one would naturally conclude that the publication of special Easter editions was a long accustomed part of the Winona *Republican-Herald's* general routine of work. This special edition is made up of three seven-columned sections, namely: Section one, pages one to twelve; section two, pages thirteen to twenty; section three, pages twenty-one to twenty-eight. Section one consists of an excellent amount, and, we take it, the general run of news; the second section is comprised of special articles and a delightful pageful of able editorials, punctured with two halftones showing views of the paper's "big press," while the last of these three sections contains as a leading article very interesting facts about the *Republican-Herald's* steady improvement, its equipment, etc., all illustrated and entertainingly presented, and supplemented with a volume of other equally pleasing matter.

And best of all, these three sections are each generously supplied with ads of every sort of business, none of them smaller than quarter-page, scarcely, and many of them occupying half-page and full-page positions, and they are as varied in style of type and design as they are in the businesses they represent; but all are fine examples of high-grade composition. (Nos. 21-22-23.) The news service of the *Republican-Herald* is peerless, its editorial style refined and educated, and in typographical styles, makeup, presswork, and ad-composition, few dailies are brought up to as high standards. The pages of this sheet all go as evidence to prove the complete and modern equipment of the plant from which they are issued, as further exploited in the special articles in this special Easter-time edition. It would be impossible in a brief criticism like this to cite and commend all the good features with which this ponderous publication is replete—a whole special four-page article would be necessary to fully describe and praise it—but we will conclude, congratulating the Republican-Herald Publishing Company upon the success of their publication generally and upon the success of this special edition in particular.

"OUR COUNTRY COUSINS"*

BY COL. W. G. STERRETT, DALLAS NEWS.

BY the country cousins, as I take it, is meant that element of the newspaper fraternity which is fortunate, or unfortunate, as one wants to view it, who does not live in large towns, or to be more specific, that element which so far has not arrived at the high station of managing editors or the higher station of writing things for the managing editor to change, mutilate and cut in the excerise of that deep and vast wisdom which seems alone to be vouchsafed in this life to managing editors. In other words, the term here applied is meant to enfold the men who publish the weekly papers in the smaller towns, the men who write editorials, keep the books, if any are kept, buy the necessaries of the office, aid in setting up the type, in running the press, dunning the subscribers, backing up the leaders of the party, hurling anathemas at those who are sacrilegiously inclined toward the platform, and aided to some extent alone in these labors by the boy hired in the office. There is something in the term that I confess I do not like. It carries with it a disparagement of those to whom it is applied. That is a general or popular way of looking at it. The town dandy and the town belle in speaking of the country cousins invariably leave the intimation or suggestion that there is a difference between them and him or her. There is the accent on the country, that the aforesaid cousin, if a male, is earthy, incases his feet in thick leather, wears goat whiskers and is lacking both in culture and that refinement which strict attention to the uses of good breeding inculcates, or if the cousin is a girl, that she is good, raw, thick about the waist and so frightfully timid as to create the impression that she has lived mostly where they milk the cows, and hence knows more about weaning calves and setting hens than she does about the ideal which a high-flying social civilization of the female sort feel it necessary to worship in order to be all that woman should be.

"When a man in our business seriously speaks of an editor in a smaller town as his 'country cousins,' he means right then and there to declaim his superiority over his friend in the knowledge of the world, in his higher refinement and, all in all, in his better citizenship. But rarely is the term applied in this way. It is applied jocularly in most cases, and then it becomes almost affectionate because it is a term of most friendly intimacy. In Texas few of us have not been 'country cousins.' Some of us may flatter ourselves that we have moved to the city, or that the town has grown to a city around us, but we have no cities in Texas. We have good large towns, many larger in our minds than they really are, but we really have no cities. So we can safely say we are all 'country cousins,' if distinctions are to be based on the size of the towns, but it may be that those who write on the great dailies of the State are to be goatherded from the sheep who work on the weeklies. If this is a distinction, it is well made, for while we have no cities, as cities are counted in this age, we have newspapers as great in every way as men ever published in the largest of cities.

"As I have no pecuniary interest in any newspaper, and am now, as I have always been, no more on the paper with which I am connected than any other paid employe, I can, without incurring the suspicion of boasting, say that we have the best daily papers in Texas of any State in the south, and to those who are not fascinated with sensational newspapers, we have as good as are published in this Union. I am not giving credit to the men who make them thus, for I look at these papers with no particular pride in the personal genius which gives them birth. I draw no distinction between the men who issue them and the men who issue the weekly papers. I look farther behind them, both of them, and clap my hands in real pride and joy to know that my people demand what they get, that is, newspapers of the highest and most respectable character, and will have nothing less. And yet the editors are not without credit for they taught the people in the first place the worth of respectable journalism and the people now demand it of them. The newspaper is not as the genius of the individuals make it; they are as the people will. No editor, however great, can set at defiance their literary tastes, their demand for news, but in a proper shape, and their inexorable law, that decency shall always be observed in the columns of his paper.

"The editor and worker on the daily paper is as the editor and worker on the weekly paper. The former can no more be his master than can the latter. Each must serve his master—the public—or each must die in his business. Hence there is no distinction between them. Certainly not enough for either to consider the other a whit inferior. Each aids the other to the extent that if one were to go out of existence the other would grope in darkness. The daily man furnishes the news of the world to the weekly man. Without the daily man, the weekly man would find it hard sledding to keep going unless he condemned himself to everlasting local discussion.
